EDITORS' PREFACE.

In these pages, appearing under the title of "Half-Hours with the Freethinkers," are collected in a readable form an abstract of the lives and doctrines of some of those who have stood foremost in the ranks of Freethought in all countries and in all ages; and we trust that our efforts to place in the hands of the poorest of our party a knowledge of works and workers—some of which and whom would otherwise be out of their reach—will be received by all in a favorable light. We shall, in the course of our publication, have to deal with many writers whose opinions widely differ from our own, and it shall be our care to deal with them *justly*, and in all cases to allow them to utter in their own words their essential thinkings.

We lay no claim to originality in the mode of treatment—we will endeavor to cull the choicest flowers from the garden, and if others can make a brighter or better boquet, we shall be glad to have their assistance. We have only one object in view, and that is, the presenting of free and manly thoughts to our readers, hoping to induce like thinking in them, and trusting that noble work may follow noble thoughts. The Freethinkers we intend treating of have also been Free Workers, endeavoring to raise men's minds from superstition and bigotry, and place before them a knowledge of the real.

We have been the more inclined to issue the "Half-Hours with the Freethinkers" in consequence, not only of the difficulty which many have in obtaining the works of the Old Freethinkers, but also as an effective answer to some remarks which have lately appeared in certain religious publications, implying a dearth of thought and thinkers beyond the pale of the Church. We wish all men to know that great minds and good men *have* sought truth apart from faith for many ages, and that it is because few were prepared to receive them, and many united to *crush* them, their works are so difficult of access to the general mass at the present day.

BIOGRAPHY

OF

THOMAS HOBBES.

This distinguished Freethinker was born on the 5th of April, 1588, at Malmesbury; hence his cognomen of "the philosopher of Malmesbury." In connection with his birth, we are told that his mother, being a loyal Protestant, was so terrified at the rumored approach of the Spanish Armada, that the birth of her son was hastened in consequence. The subsequent timidity of Hobbes is therefore easily accounted for. The foundation of his education was laid in the grammar school of his native town, where most probably his father (being a clergyman) would officiate as tutor. At the age of fifteen he was sent to Oxford. Five years of assiduous study made him proficient as a tutor; this, combined with his amiability and profound views of society, gained him the respect of the Earl of Devonshire, and he was appointed tutor to the Earl's son, Lord Cavendish. From 1610 to 1628, he was constantly in the society of this nobleman, in the capacity of secretary. In the interval of this time he travelled in France, Germany, and Italy; cultivating in each capital the society of the leading statesmen and philosophers. Lord Herbert, of Cherbury, the first great English Deist, and Ben Jonson, the dramatist, were each his boon companions. In the year 1628, Hobbes again made the tour of the Continent for three years with another pupil, and became acquainted at Pisa with Galileo. In 1631 he was entrusted with the education

of another youth of the Devonshire family, and for near five years remained at Paris with his pupil.

Hobbes returned to England in 1636. The troublous politics of this age, with its strong party prejudices, made England the reverse of a pleasant retirement, for either Hobbes or his patrons; so, perceiving the outbreak of the Revolution, he emigrated to Paris. There in the enjoyment of the company of Gassendi and Descartes, with the *elite* of Parisian genius, he was for awhile contented and happy. Here he engaged in a series of mathematical quarrels, which were prolonged throughout the whole of his life, on the quadrature of the circle. Seven years after, he was appointed mathematical tutor to the Prince of Wales, afterwards Charles II. In 1642, Hobbes published the first of his principal works, "De Cive, or Philosophical Rudiments Concerning Government and Society." It was written to curb the spirit of anarchy, then so rampant in England, by exposing the inevitable results which must of necessity spring from the want of a coherent government amongst a people disunited and uneducated. The principles inculcated in this work were reproduced in the year 1651, in the "Leviathan, or the Matter, Form, and Power of a Commonwealth, Ecclesiastical and Civil;" this, along with a "Treatise on Human Nature," and a small work on "The Body Politic," form the groundwork of the "selfish schools" of moral philosophy. As soon as they were published, they were attacked by the clergy of every country in Europe. They were interdicted by the Pontiffs of the Roman and Greek Church, along with the Protestants scattered over Europe, and the Episcopal authorities of England. Indeed, to such an extent did this persecution rise, that even the royalist exiles received warning that there was no chance for their ostracism being removed, unless "the unclean thing (Hobbes) was put away from their midst." The young prince, intimidated by those ebullitions of vengeance against his tutor, was obliged to withdraw his protection from him, and the old man, then near seventy years of age,

was compelled to escape from Paris by night, pursued by his enemies, who, according to Lord Clarendon, tracked his footsteps from France. Fortunately for Hobbes, he took refuge with his old protectors, the Devonshire family, who were too powerful to be wantonly insulted. While residing at Chatsworth, he would no doubt acutely feel the loss of Descartes, the Cardinal de Richelieu, and Gassendi; in the place of those men he entered into a warm friendship with Cowley, the poet, Selden, Harvey, the discoverer of the circulation of the blood, Charles Blount, and the witty Sir Thomas Brown.

In 1654, he published a "Letter upon Liberty and Necessity;" this brief tractate is unsurpassed in Freethought literature for its clear, concise, subtle, and demonstrative proofs of the self-determining power of the will, and the truth of philosophical necessity. All subsequent writers on this question have largely availed themselves of Hobbes's arguments, particularly the pamphleteers of Socialism. It is a fact no less true than strange, that Communism is derived from the system of Hobbes, which has always been classed along with that of Machiavelli, as an apology for despotism. The grand peculiarity of Hobbes is his method. Instead of taking speculation and reasoning upon theories, he carried out the inductive system of Bacon in its entirety, reasoning from separate generic facts, instead of analogically. By this means he narrowed the compass of knowledge, and made everything demonstrative that was capable of proof. Belief was consequently placed upon its proper basis, and a rigid analysis separated the boundaries of Knowing and Being. Hobbes looked at the great end of existence and embodied it in a double axiom. 1st. The desire for self-preservation. 2nd. To render ourselves happy. From those duplex principles which are inherent in all animals, a modern politician has perpetrated a platitude which represents in a sentence the end and aim of all legislation, "the greatest happiness for the greatest number." This is the *ultimatum* of Hobbes's philo-

sophy. Its method of accomplishment was by treating society as one large family, with the educated and skilled as governors, having under their care the training of the nation. All acting from one impulse (self-preservation,) and by the conjoint experience of all, deriving the greatest amount of happiness from this activity. Hobbes opposed the Revolution, because it degenerated into a faction; and supported Charles Stuart because there were more elements of cohesion within his own party, than amongst his enemies. It was here where the cry of despotism arose; the "Roundheads" seeing they could not detach the ablest men from the King's party, denounced their literary opponents as "lovers of Belial, and of tyranny." This was their most effective answer to the "Leviathan." In after years, when the Episcopal party no longer stood in need of the services of Hobbes, they heaped upon him the stigma of heresy, until his *ci-devant* friends and enemies were united in the condemnation of the man they most feared. Mr. Owen, in his scheme of Socialism, took his leading idea on non-responsibility from Hobbes's explanation of necessity, and the freedom of the will. The old divines had inculcated a doctrine to the effect that the "will" was a separate entity of the human mind, which swayed the whole disposition, and was of itself essentially corrupt. Ample testimony from the Bible substantiated this position. But in the method of Hobbes, he lays down the facts that we can have no knowledge without experience, and no experience without sensation. The mind therefore is composed of classified sensations, united together by the law of an association of ideas. This law was first discovered by Hobbes, who makes the human will to consist in the strongest motive which sways the balance on any side. This is the simplest explanation which can be given on a subject more mystified than any other in theology.

A long controversy betwixt Bishop Bramhall, of Londonderry, followed the publication of Hobbes's views on Liberty and Necessity. Charles II. on his restora-

tion, bestowed an annual pension of £100 on Hobbes, but this did not prevent the parliament, in 1666, censuring the "De Cive" and "Leviathan," besides his other works. Hobbes also translated the Greek historian, Thucydides, Homer's Odyssey, and the Illiad. The last years of his life were spent in composing "Behemoth; or, a History of the Civil Wars from 1640 to 1660," which was finished in the year he died, but not published until after his death. At the close of the year 1679, he was taken seriously ill. At the urgent request of some Christians, they were permitted to intrude their opinions upon his dying bed, telling him gravely that his illness would end in death, and unless he repented, he would go straight to hell. Hobbes calmly replied, "I shall be glad then to find a hole to creep out of the world." For seventy years he had been a persecuted man, but during that time his enemies had paid him that tribute of respect which genius always extorts from society. He was a man who was hated and dreaded. He had reached the age of ninety-two when he died. His words were pregnant with meaning; and he never used an unnecessary sentence. A collection of moral apothegms might be gathered from his table-talk. When asked why he did not read every new book which appeared, he said, "If I had read as much as other men, I should have been as ignorant." His habits were simple; he rose early in the morning, took a long walk through the grounds of Chatsworth, and cultivated healthful recreation. The after part of the day was devoted to study and composition. Like Sir Walter Raleigh, he was a devoted admirer of the "fragrant herb." Charles II.'s constant witticism, styled Hobbes as "a bear against whom the Church played their young dogs, in order to exercise them."

If there had been a few more similar "bears," the priestly "dogs" would long since have been exterminated, for none of them escaped unhurt from their encounters with the "grizly" of Malmesbury, except it was in the mathematical disputes with Dr. Wallis.

He was naturally of a timid disposition: this was the result of the accident which caused his premature birth, and being besides of a reserved character, he was ill-fitted to meet the physical rebuffs of the world. It is said that he was so afraid of his personal safety, that he objected to be left alone in an empty house; this charge is to some extent true, but we must look to the mitigating circumstances of the case. He was a feeble man, turned the age of three-score and ten, with all the clergy of England hounding on their dupes to murder an old philosopher because he had exposed their dogmas. It was but a few years before, that Protestants and Papists had complimented each other's religion by burning those who were the weakest, and long after Hobbes's death, Protestants murdered, ruined, disgraced, and placed in the pillory Dissenters and Catholics alike, and Thomas Hobbes had positive proof that it was the intention of the Church of England to *burn him alive*, on the stake, a martyr for his opinions. This, then, is a sufficient justification for Hobbes feeling afraid, and instead of it being thrown as a taunt at this illustrious Freethinker, it is a standing stigma on those who would re-enact the tragedy of persecution, if public opinion would allow it.

Sir James Mackintosh says:* "The style of Hobbes is the very perfection of didactic language. Short, clear, precise, pithy, his language never has more than one meaning, which never requires a second thought to find. By the help of his exact method, it takes so firm a hold on the mind, that it will not allow attention to slacken. His little tract on human nature has scarcely an ambiguous or a needless word. He has so great a power of always choosing the most significant term, that he never is reduced to the poor expedient of using many in its stead. He had so thoroughly studied the genius of the language, and knew so well how to steer between pedantry and vulgarity, that

* Second Dissertation: Encyclopædia Brit., p. 318.

two centuries have not superannuated probably more than a dozen of his words."

Lord Clarendon describes the personal character of Hobbes as "one for whom he always had a great esteem as a man, who besides his eminent parts of learning and knowledge, hath been always looked upon as a man of probity, and a life free from scandal."

We now proceed to make a selection of quotations from the works of this writer, commencing with those on the "Necessity of the Will," in reply to Bishop Bramhall.

"The question is not whether a man be a free agent —that is to say, whether he can write, or forbear, speak, or be silent, according to his will; but whether the will to write, and the will to forbear, come upon him according to his will, or according to anything else in his own power. I acknowledge this liberty, that I can *do*, if I *will*, but to say, I can *will* if I *will*, I take to be an absurd speech." Further replying to Bramhall's argument, that we do not learn the "idea of the freedom of the will" from our tutors, but we know it intuitively, Hobbes says, "It is true very few have learned from tutors that a man is not free to will; nor do they find it much in books. That they find in books that which the poets chaunt in the theatres, and the shepherds on the mountains, that which the pastors teach in the churches, and the doctors in the universities; and that which the common people in the markets, and all the people do assent unto, is the same that I assent unto; namely, that a man hath freedom to do if he will; but whether he hath freedom to will, is a question which it seems neither the Bishop nor they ever thought of.....A wooden top that is lashed by the boys, and runs about, sometimes to one wall, sometimes to another, sometimes spinning, sometimes hitting men on the shins, if it were sensible of its own motion, would think it proceeded from its own will, unless it felt what lashed it. And is a man any wiser when he runs to one place for a benifice, to another for a bargain, and troubles the world

with writing errors, and requiring answers, because he thinks he does it without other cause than his own will, and seeth not what are the lashings which cause that will?"

Hobbes casually mentions the subject of "praise or dispraise," in reference to the will; those who are old enough will remember this was one of the most frequent subjects of discussion amongst the earlier Socialists. "These depend not at all in the necessity of the action praised or dispraised. For what is it else to praise, but to say *a thing is good*? Good, I say, for me, or for somebody else, or for the State and Commonwealth. And what is it to say an action is good, but to say it is as I would wish, or as another would have it, or according to the will of the State—that is to say, according to the law? Does my lord think that no action could please me, or the commonwealth, that should proceed from necessity? Things may be therefore necessary, and yet praiseworthy, as also necessary, and yet dispraised, and neither of them both in vain; because praise and dispraise, and likewise reward and punishment, do, by example, make and conform the will to good or evil. It was a very great praise, in my opinion, that Vellerius Paterculus gives Cato, where he says that he was good by nature, '*et quia aliter esse non potuit.*'—'And because he could not do otherwise.'" This able treatise was reprinted, and extensively read about twenty years ago; but, like many other of our standard works, it is at present out of print.

The "Leviathan" is still readable, a bold masculine book. It treats everything in a cool, analytic style. The knife of the Socialist is sheathed in vain; no rhapsody can overturn its impassioned teachings. Rhetoric is not needed to embellish the truths he has to portray, for the wild flowers of genius but too frequently hide the yawning chasms in the garden of logic. It is not to be expected that this book will be read now with the interest with which it was perused two centuries ago; then every statement was impugned,

every argument denied, and the very tone of the book called forth an interference from parliament to stop the progress of its heresies. Now the case is widely different, and the general tenor of the treatise is the rule in which are illustrated alike the works of the philosophers and the dreams of the sophists (priests.) We give part of the introduction. "Nature (the art whereby God hath made and governs the world) is, by the art of man, as in many other things, so in this also, imitated, that it can make an artificial animal. For seeing life is but a motion of limbs, the beginning whereof is in some principal part within; why may we not say, that all automata (engines that move themselves by springs and wheels, as doth a watch) have an artificial life? For what is the heart but a spring; and the nerves but so many strings; and the joints but so many wheels, giving motion to the whole body, such as was intended by the Artificer? Art goes yet further, imitating that rational and most excellent work of nature, man. For by art is created that great leviathan, called a Commonwealth, or State, which is but an artificial man though of greater stature and strength than the natural, for whose protection and defence it was intended, and the sovereignty of which is an artificial soul, as giving life and motion to the whole body. To describe the nature of this artificial man, I will consider

"1st. The *matter* thereof, and the *artificer*, both which is man.

"2nd. *How*, and by what *covenants* it is made; what are the *rights* and *just* power or authority of a sovereign; and what it is that *preserveth* and dissolveth it.

"3rd. What is a Christian Commonwealth.

"Lastly, what is the kingdom of darkness.

"The first chapter treats of 'Senses.' Concerning the thoughts of man, I will consider them first singly, and afterwards in train, or dependence upon one another. Singly, they are every one a representation, or appearance, of some quality or accident of a body without us, which is commonly called an object. Which

object worketh on the eyes, ears, and other parts of a man's body, and by diversity of working, produceth diversity of appearances. The original of them all is that which we call sense, for there is no conception in a man's mind, which hath not at first totally or by parts been begotten upon the organs of sense; the rest are derived from that original."

Speaking of "Imagination," Hobbes says, "That when a thing lies still, unless somewhat else stir it, it will lie still forever, is a truth no one doubts of. But that when a thing is in motion, it will eternally be in motion, unless somewhat else stay it, though the reason be the same—namely, that nothing can change itself—is not so easily assented to. For men measure not only other men, but all other things, by themselves; and because they find themselves subject after motion to pain and lassitude, think everything else grows weary of motion, and seeks repose of its own accord—little considering whether it be not some other motion, wherein that desire of rest they find in themselves consisteth.....When a body is once in motion, it moveth (unless something else hinder it) eternally, and whatsoever hindereth it, cannot in an instant, but in time, and by degrees, quite extinguish it; and as we see in the water, though the wind cease, the waves give not over rolling for a long time after; so also it happeneth in that motion which is made in the internal parts of man, then, when he sees, dreams, etc. For after the object is removed, or the eye shut, we still retain an image of the thing seen, though more obscure than when we see it.....The decay of sense in men waking, is not the decay of the motion made in sense, but an obscuring of it, in such manner as the light of the sun obscureth the light of the stars; which stars do no less exercise their virtue, by which they are visible in the day, than in the night. But because amongst many strokes which our eyes, ears, and other organs receive from external bodies, the predominant only is sensible; therefore the light of the sun being only predominant, we are not affected with the

actions of the stars.....This decaying sense, when we would express the thing itself (I mean fancy itself), we call imagination, as I said before, but when we would express the Decay, and signify the sense is fading, old, and past, it is called Memory ; so that imagination and memory are but one thing, which, for divers considerations, hath divers names."*

Such is the commencement of this celebrated book ; it is based upon materialism; every argument must stand this test upon Hobbes's principles, and characteristically are they elaborated. Hobbes ("De Cive") says of the immortality of the soul, "It is a belief grounded upon other men's sayings, that they knew it supernaturally; or that they knew those who knew them, that knew others, that knew it supernaturally." A sparkling sneer, and perhaps the truest answer to so universal an error. Dugald Stewart, in his analysis of the works of Hobbes, says, † "The fundamental doctrines inculcated in the political works of Hobbes, are contained in the following propositions :—All men are by nature equal, and, prior to government, they had all an equal right to enjoy the good things of this world. Man, too, is by nature, a solitary and purely selfish animal; the social union being entirely an interested league, suggested by prudential views of personal advantage. The necessary consequence is, that a state of nature must be a state of perpetual warfare, in which no individual has any other means of safety than his own strength or ingenuity ; and in which there is no room for regular industry, because no secure enjoyment of its fruits. In confirmation of this view of the origin of society, Hobbes appeals to facts falling daily within the cycle of our experience. "Does not a man (he asks) when taking a journey, arm himself, and seek to go well accompanied? When going to sleep, does he not lock his doors?" Nay, even in his own house, does he not lock his chests? Does he not

* Leviathan. Ed. 1651.

† Dissertation on the Progress of Ethical Science, p. 41.

there accuse mankind by his action, as I do by my words?" For the sake of peace and security, it is necessary that each individual should surrender a part of his natural right, and be contented with such a share of liberty as he is willing to allow to others; or, to use Hobbes's own language, "every man must divest himself of the right he has to all things by nature; the right of all men to all things, being in effect no better than if no man had a right to anything." In consequence of this transference of natural rights to an individual, or to a body of individuals, the multitude become one person, under the name of a State, or Republic, by which person the common will and power are exercised for the common defence. The ruling power cannot be withdrawn from those to whom it has been committed; nor can they be punished for misgovernment. The interpretation of the laws is to be sought, not from the comments of philosophers, but from the authority of the ruler; otherwise society would every moment be in danger of resolving itself into the discordant elements of which it was at first composed.—The will of the magistrate, therefore, is to be regarded as the ultimate standard of right and wrong, and his voice to be listened to by every citizen as the voice of conscience."

Such are the words of one of Hobbes's most powerful opponents. Dr. Warburton says, "The philosopher of Malmesbury was the terror of the last age, as Tindal and Collins are of this. The press sweats with controversy; and every young churchman militant would try his arms in thundering on Hobbes's steel cap." This is a modest acknowledgment of the power of Hobbes, from the most turbulent divine of the eighteenth century.

Victor Comyin gives the following as his view of the philosophy of Hobbes:—"There is no other certain evidence than that of the senses. The evidence of the senses attests only the existence of bodies; then there is no existence save that of bodies, and philosophy is only the science of bodies.

"There are two sorts of bodies: 1st, Natural bodies, which are the theatre of a multitude of regular phenomena, because they take place by virtue of fixed laws, as the bodies with which physics are occupied; 2nd, Moral and political bodies, societies which constantly change and are subject to variable laws.

"Hobbes's system of physics is that of Democritus, the atomistic and corpuscular of the Ionic school.

"His metaphysics are its corollary; all the phenomena which pass in the consciousness have their source in the organization, of which the consciousness in itself is simply a result. All the ideas come from the senses. To think, is to calculate; and intelligence is nothing else than an arithmetic. As we do not calculate without signs, we do not think without words; the truth of the thought is in the relation of the words among themselves, and metaphysics are reduced to a perfect language. Hobbes is completely a nominalist. With Hobbes there are no other than contingent ideas; the finite alone can be conceived; the infinite is only a negation of the finite; beyond that it is a mere word invented to honor a being whom faith alone can reach. The idea of good and evil has no other foundation than agreeable or disagreeable sensations; to agreeable or disagreeable sensation it is impossible to apply any other law than escape from the one and search after the other; hence the morality of Hobbes, which is the foundation of his politics. Man is capable of enjoying and of suffering; his only law is to suffer as little, and enjoy as much, as possible. Since such is his only law, he has all the rights that this law confers upon him; he may do anything for his preservation and his happiness; he has the right to sacrifice everything to himself. Behold, then, men upon this earth, where the objects of desire are not superabundant, all possessing equal rights to whatever may be agreeable or useful to them, by virtue of the same capacity for enjoyment and suffering. This is a state of nature, which is nothing less than a state of war, the anarchy of the passions, a combat in which every man is arrayed

against his neighbor. But this state being opposed to the happiness of the majority of individuals who share it, utility, the offspring of egotism itself, demands its exchange for another, to wit, the social state. The social state is the institution of a public power, stronger than all individuals, capable of making peace succeed war, and imposing on all the accomplishment of whatever it shall have judged to be useful, that is, just."

Before we dismiss the father of Freethought from our notice, there remains a tribute of respect to be paid to one whom it is our duty to associate with the author of the "Leviathan," and who has but just passed away—one man amongst the British aristocracy, with the disposition of a tribune of the people, coupled with thoughts at once elevated and free, and a position which rendered him of essential service to struggling opinion. This man saw the greatness, the profound depth, the attic style, and the immense importance of the works of Hobbes, along with their systematic depreciation by those whose duty it should be to explain them, especially at a time when those works were not reprinted, and the public were obliged to glean their character from the refutations (so called) by mangled quotations, and a distorted meaning. Impelled by this thought, and anxious to protect the memory of a philosopher, his devoted disciple, at a cost of £10,000, translated the Latin, and edited the English works of Hobbes, in a manner worthy alike of the genius of the author, and the discernment of his editor. For this kindness, a seat in Parliament was lost by the organization of the clergy in Cornwall. The name of this man was Sir William Molesworth. Let Freethinkers cherish the memory of their benefactor.

We now take our leave of Thomas Hobbes. He had not the chivalry of Herbert; the vivacity of Raleigh; the cumulative power of Bacon; or the winning policy of Locke. If his physical deformities prevented him from being as daring as Vane, he was as bold in thought and expression as either Descartes, or his young friend Blount. He gave birth to the brilliant constellation of

genius in the time of Queen Anne. He did not live to see his system extensively promulgated; but his principles moulded the character of the men who formed the revolution of 1688, equally as much as Hume established the Scotch and German schools of philosophy; and Voltaire laid the train by which the French Revolution was proclaimed. Peace to his memory! It was a stormy struggle during his life; its frowns cannot hurt him now. Could we believe in the idea of a future life, we should invoke his blessings on our cause. That cause which for near two hundred years has successfully struggled into birth, to youth, and maturity. Striking down in its onward course superstitions which hath grown with centuries, and where it does not exterminate them, it supplies a purer atmosphere, and extracts the upas-sting which has laid low so many, and which must yet be finally exterminated. The day is rapidly dawning when our only deities will be the works of genius, and our only prayer the remembrance of our most illustrious chiefs.

A. C.

BIOGRAPHY

OF

LORD BOLINGBROKE.

Henry St. John, Lord Bolingbroke, was born in his family seat at Battersea, on the 1st of October, 1672, and died there on November 15th, 1751, in his 79th year. He was educated by a clergyman in an unnatural manner, and speedily developed himself accordingly. When he left Oxford, he was one of the handsomest men of the day—his majestic figure, refined address, dazzling wit, and classic eloquence, made him irresistibly the "first gentleman in Europe." Until his twenty-fourth year, he was renowned more for the graces of his person, and the fascination of his wild exploits, rather than possessing a due regard to his rank and abilities. His conduct, however, was completely changed when he became a Member of Parliament. The hopes of his friends were resuscitated when they discovered the aptitude for business—the ready eloquence, and the sound reasoning of the once wild St. John. He soon became the hardest worker and the leader of the House of Commons. The expectations of the nation rose high when night after night he spoke with the vivacity of a poet, and the profundity of a veteran statesman on public affairs. In 1704, he received the seals as Secretary-of-War, and was mainly instrumental in gaining Marlborough's victories, by the activity with which he supplied the English General with munitions of war. On the ascendency of the Whigs, St. John re-

signed his office, and retired into privacy for two years, when the Whig administration was destroyed, and St. John re-appeared as Secretary for Foreign Affairs. His greatest work now was the negotiation of the treaty of Utrecht. This treaty was signed by St. John (then Lord Bolingbroke,) he being sent to Paris as the British Plenipotentiary, and was hailed by the Parisians as a guardian angel. To such an extent was this feeling manifested, that when he visited the theatres every one *rose* to welcome him. So long as Queen Anne lived, Bolingbroke's influence was paramount, but associated with him was the Earl of Oxford, in opposition to the Whig party, and serious differences had arisen between the rivals. Oxford was dismissed four days before the Queen's death, and Bolingbroke officiated in his place, until Oxford's vacancy was filled, which all expected would be given to himself. A stormy debate in the Privy Council so agitated the Queen, that it shortened her life, and the Council recommended the Earl of Shrewsbury as Premier, and with him the Whigs.

With the accession of George, came the impeachment of Bolingbroke by the victorious Whigs. Knowing that it was their intention to sacrifice him to party revenge, and that his accusers would likewise act as his judges, he wisely withdrew himself to France. The Pretender held a mimic court at Avignon, and a debating society at Lorraine, entitled a Parliament. He offered Bolingbroke the office of Secretary of State, which was accepted by him; and it was only at this time that the emanations of the exiled Stuart's cabinet possessed either a solidity of aim, or a definite purpose. If Louis XIV. had lived longer, he might have assisted the Pretender, but with his death expired the hopes of that ill-fated dynasty. Bolingbroke strove to husband the means which the Chevalier's friends had collected, but the advice of the Duke of Ormond was listened to in preference to Bolingbroke's. The results which Bolingbroke foretold—proceeding rashly, and failing ignominously—both occurred. The insur-

rection broke out, and failed—no other end could have been anticipated. Intrigues were fast coiling themselves around the secretary; he was openly blamed for the reverses in Scotland—but he was alike careless of their wrath or its issue. One morning Ormond waited upon him with two slips of paper from the Pretender, informing him that his services were no longer required. After his dismissal he was impeached by the lackeys of the Pretender under seven heads, which were widely distributed throughout Europe. There is this anomaly in the life of Bolingbroke, witnessed in no other Englishman: In one year he was the most powerful man in England — Secretary of State — an exile—and then in the same year he occupied a similar office to one who aimed at the English throne, and was impeached by both parties.

For several years he occupied himself in France with philosophical pursuits—until the year 1723 — when he received a pardon, which allowed him to return to England, but still his sequestered estates were not returned, and this apology for a pardon was negotiated by a bribe of £11,000 to the German Duchess of Kendal—one of the king's mistresses.

Alexander Pope was Bolingbroke's constant correspondent. Pope had won the applause of England by his poems, and was then considered the arbiter of genius. Voltaire occupied a similar position in France. Since Pope first laid the copy of his greatest epic at the feet of Bolingbroke, and begged of him to correct its errors, he had gradually won himself that renown which prosperity has endorsed. But what a unity in divergence did those philosophers present! The calm moralism of Pope, his sweet and polished rhyme, contrasted with the fiery wit and hissing sarcasm of the Frenchman, more trenchant than Pope's, yet wanting his sparkling epigrams. The keen discernment of both these men saw in Bolingbroke a master, and they ranked by his side as twin apostles of a new and living faith. It was the penetration of true greatness which discerned in the English peer that sublimity of intel-

lect they possessed themselves, without the egotism of an imbecile rival. Bolingbroke had cherished the ethics of one, and restrained the rancor of the other — and both men yielded to him whose system they worshipped; and this trinity of Deists affords the noblest example which can be evoked to prove the Harmony of Reason amidst the most varied accomplishments. Although Pope's name occurs but seldom in the history of Freethought—while that of Bolingbroke is emblazoned in all its glory, and Voltaire is enshrined as its only Deity—yet we must not forget that what is now known as the only collection of St. John's works (the edition in five volumes by Mallet,) were written for the instruction of Pope—sent to him in letters—discussed and agreed to by him—so that the great essayist is as much implicated in them as the author of the Dictionary. It is said, "In his society these two illustrious men felt and acknowledged a superior genius; and if he had no claim to excellence in poetry—the art in which they were so pre-eminent—he surpassed them both in the philosophy they so much admired."

For ten years after this period, he devoted himself to various political writings, which were widely circulated; but we must waive the pleasure at present of analyzing those, and confine our attention to the alliance between Pope and Bolingbroke, in the new school of philosophy.

Bolingbroke's principal friends were Pope, Swift, Mallet, Wyndam, and Atterbury. The first three were most in his confidence in regard to religion: and although Pope was educated a Roman Catholic, and occasionally conformed to that hierarchy (and like Voltaire, for peace, died in it,) yet the philosophical letters which passed between Pope and St. John, fully established him as a consistent Deist—an honor to which Swift also attained, although being a dignitary of the Church: but if doubts arise on the subject, they can easily be dispelled. General Grimouard, in his "Essai sur Bolingbroke," says that "he was intimate with

the widow of Mallet, the poet, who was a lady of much talent and learning, and had lived upon terms of friendship with Bolingbroke, Swift, Pope, and many other distinguished characters of the day, who frequently met at her house." The General adds, that the lady has been frequently heard to declare, that these men were all equally deistical in their sentiments (que c'etait une societe de purs deistes;) that Swift from his clerical character was a little more reserved than the others, but he was evidently of the same sentiments at bottom.

There is a remarkable passage in one of Pope's letters to Swift, which seems rather corroborative of the General's. He is inviting Swift to come and visit him. "The day is come," he says, "which I have often wished, but never thought to see, when every mortal I esteem is of the same sentiments in politics and religion." Dr. Warton remarks upon this paragraph "At this time therefore (1733) he (Pope) and Bolingbroke were of the same sentiment in religion as well as politics;"* and Pope writing to Swift is proof sufficient that Bolingbroke, Swift, and himself, were united in opinions. Wherever Swift's name is known, it is associated with his spleen on account of his not being elevated to the Episcopal Bench, when he was promised a vacancy, which was reserved for him; but Queen Anne absolutely refused to confer such a dignity upon the author of "Gulliver's Travels"—that profound satire upon society and religion; and this occurring at a time when his energetic services were so much needed in defence of the government he so assisted by pamphleteering, satire, and wholesale lampoons. Mr. Cooke says, "The Earl of Nottingham, in the debate upon the Dissenters' Bill, chiefly founded his objection to the provision that the Bishops should have the only power of licensing tutors, upon the likelihood there was that a man who was in a fair way for becoming a Bishop, was hardly suspected of being a

* Cook's Life of Bolingbroke, 2nd vol., p. 97.

Christian." This pointed allusion to Swift passed without comment or reply in a public assembly, composed in a great measure of his private friends and associates. This seems to intimate that the opinion of his contemporaries was not very strong in favor of Swift's religious principles." This may suffice to prove the unanimity of sentiment existing among this brilliant coterie—one a political Churchman—another the greatest poet of his age—the third, the most accomplished statesman of his country. Although they were united in religious conviction, it would have been certain ruin to any of the confederates if the extent of their thoughts had reached the public ear. The Dean wrote for the present—the poet for his age—and the peer for the immediate benefit of his friends, and a record for the future. But they were all agreed that some code of ethics should be promulgated, which should embody the positive speculations of Bolingbroke, with the easy grace of Pope—the elaborate research of the philosopher with the rhetoric of the poet. Swift coalesced in this idea, but was, to a certain extent, ignorant of its subsequent history. It was not thought prudent to trust Mallet and others with the secret. For this purpose the "Essay of Man" was designed on the principles elaborated by Bolingbroke in his private letters to Pope. It was Bolingbroke who drew up the scheme, mapped out the arguments, and sketched the similes—it was Pope who embellished its beauties, and turned it into rhyme. Doctor Warton, the editor of Pope, also proves this:—"Lord Bathurst told the Doctor that he had read the whole of the 'Essay on Man' in *the handwriting of Bolingbroke*, and drawn up in a series of propositions which Pope was to amplify, versify, and to illustrate." If further proofs are required, that Bolingbroke was not only a co-partner but coadjutor with Pope, it is found in the opening of the poem, where the poet uses the plural in speaking of Bolingbroke—

"Awake, my St. John, leave all meaner things
To low ambition, and the pride of kings.
* * * * *

Laugh when we must, be candid when you can,
And vindicate the ways of God to man."

This is sufficient to prove the partnership in the poem, and from the generally acknowledged fact of his connection, we have no hesitation in declaring that this poem is the grand epic of Deism, and is as much the offspring of Bolingbroke, as his own ideas when enunciated by others. There is not a single argument in the Essay but what is much more elaborated in the works of Bolingbroke, while every positive argument is reduced to a few poetic maxims in the Essay. We may as well look here for Bolingbroke's creed, rather than amongst his prose works. There is, however, this difference, that in the Essay there is laid down an ethical scheme of positivism—*i. e.*, of everything in morals which can be duly tested and nothing more: while in the prose writings of Bolingbroke, the negative side of theology is discussed with an amount of erudition which has never been surpassed by any of the great leaders of Freethought. The first proposition of the Essay is based on a postulate, upon which the whole reasoning is built. Overthrow this substratum, and the philosophy of the Essay is overturned—admit it, and its truth is evident; it is—

"What can we reason but from what we know?"

This is equivalent to saying that we can only reason concerning man as a finite part of an infinite existence, and we can only predicate respecting what comes under the *category of positive knowledge;* we are therefore disabled from speculating in any theories which have for a basis opposition to the collected experience of mankind. This was a position laid down by Bolingbroke to escape all the historical arguments which some men deduce from alleged miraculous agency in the past, or problematical prophecy in the future. It likewise shows the untenable nature of all analogy, which presumes to trace an hypothetical first cause, or personal intelligence, to account for a supposed

origin of primeval existence, by which nature was caused, or forms of being first evolved. Although it may be deemed inconsistent with the philosophy of Bolingbroke to admit a God in the same argument as the above, we must not forget that in all speculative reasoning there must be an assumption of some kind, which ought to be demonstrated by proof, or a suitable equivalent in the form of universal consent. Yet in the case of the God of the Essay, we look in vain for the attributes with which Theists love to clothe THEIR God, and we can but perceive inexorable necessity in the shape of rigid and unswerving laws, collected in one focus by Pope, and dignified with the name of God; so that the difference betwixt a Deist of the old, and an Atheist of the modern school, is one of mere WORDS—they both commence with an assumption, the Atheist only defining his terms more strictly, the subject-matter in both instances being the same. The only difference being, the one deceives himself with a meaningless word, the other is speechless on what he cannot comprehend. The Essay shows a scheme of universal gradation, composed of a series of links, which are one entwined within the other—every rock being placed in its necessitated position—every plant amidst its growth bearing an exoteric similitude to itself—every animal, from the lowest quadruped to the highest race of man, occupying a range of climate adapted to its requirements. The Essay here is scientifically correct, and agrees with the ablest writers on necessity. A German philosopher, renowned alike for rigid analysis and transcendent abilities as a successful theorist, observes, "When I contemplate all things as a whole, I perceive one *nature*, one *force:* when I regard them as individuals, many forces which develop themselves according to their inward laws, and pass through all the forms of which they are capable, and all the objects in nature are but those forces under certain limitations. Every manifestation of every individual power of nature is determined partly by itself, partly by its own preceding manifestations, and partly

by the manifestations of all other powers of nature with which it is connected; but it is connected with all, for nature is one connected whole. Its manifestations are, therefore, strictly necessary, and it is absolutely impossible to be other than as it is. In every moment of her duration nature is one connected whole, in every moment must every individual be what IT IS, because all others are what they are, and a single grain of sand could not be moved from its place, without, however imperceptibly to us, changing something throughout all parts of the immeasurable whole. Every moment of duration is determined by all past moments, and will determine all future movements, and even the position of a grain of sand cannot be conceived other than it is, without supposing other changes to an indefinite extent. Let us imagine that grain of sand to be lying some few feet further inland than it actually does; then must the storm-wind that drove it in from the sea-shore have been stronger than it actually was; then must the preceding state of the atmosphere, by which this wind was occasioned, and its degree of strength being determined, have been different from what it actually was, and the preceding changes which gave rise to this particular weather, and so on. We must suppose a different temperature from that which really existed—a different constitution of bodies which influenced that temperature. How can we know that in such a state of weather we have been supposing, in order to carry this grain of sand a few yards further, some ancestors of yours might not have perished from hunger, cold, or heat, long before the birth of that son from whom you are descended, and thus you might never have been at all, and all that you have done, and all that you ever hope to do, must have been hindered, in order that a grain of sand might lie in a different place."* The whole of the first book is devoted to the necessitated condition of man in relation to the universe. In one portion there is a succession of beau-

* Fichte's "Destination of Man," pp. 8, 9.

tiful similes, portraying the blissful state we are in, instead of being gifted with finer sensibilities, or a prescience, which would be a curse.

Pope, although an ardent disciple of Bolingbroke, did not entirely forsake the prejudices of childhood; he still indulged in a bare HOPE of a future life, which his master, with more consistency, suppressed. So that when the poet rhymed the propositions of St. John, he pointed them with "hope" in an eternal future; for that speculation which was still *probability* in his day, is now nearly-silenced by modern science. But we must not confound the ideas of futurity, which some of the Deists expressed, with those of Christianity. They were as different as the dreams of Christ and Plato were dissimilar. Pope "hoped" for a future life of intellectual enjoyment devoid of evil, but the heaven of the gospel is equally as necessary to be counterbalanced by a hell, as the existence of a God requires the balancing support of a devil. We therefore can sympathise with the description of a heaven, the poor Indian looked for:—

"Some safer world in depths of woods embraced,
Some happier island in the watery waste;
Where slaves once more their native land behold,
Nor fiends torment, nor *Christians thirst for gold.*
To be—contents his natural desires,
He asks no angels' wings, no seraphs' fires,
But thinks, admitted to that equal sky,
His faithful dog should bear him company."

Pope durst not emphatically deny the future-life theory, so he attacked it by elaborating a physical instead of a spiritual heaven. So heterodox a notion of the Indian's future sports, is not to be found in theology, especially as he pictures the Indian's sports with his dog. Here was a double blow aimed at Christianity by evolving a "positive" idea of future pleasures, and the promulgation of sentiments anti-Christian.—Again he attacks them for unwarrantable speculation in theology, when he says—

"In pride, in reasoning pride our error lies."

This is a corollary to the first proposition, "What can we reason but from what we know?" The only predicate we can draw from this is, the undoubted fact we have no right to profess to hold opinions of that, upon which we cannot have any positive proof. The last line of the first book has been generally thought open to attack. It relates to necessity—"Whatever is, is right"—and is not to be viewed in relation to society as at present constituted, but to the physical universe.

The second book deals with man in relation to himself as an individual; the third as a member of society, and the last in respect to happiness. Throughout the whole Essay the distinctions arising from nature and instinct are defined and defended with vigor and acuteness. Both are proved to be equally great in degree, in spite of the hints constantly thrown out in reference to "God-like Reason *versus* Blind Instinct." We confess our inability to discern the vaunted superiority of the powers of reason over those of its blinder sister. We see in the one matchless wisdom—profound decision—unfailing resource—a happy contentment as unfeigned as it is natural. On the other hand, we see temerity allied with cowardice—a man seeking wisdom on a watery plank, when every footmark may serve him for a funeral effigy; political duplicity arising from his confined generalization of facts; a desire to do right, but checked by accident and cunning—everywhere uneasy—always fatal. If the Christians' fables were true, we might say that Adam and Eve were originally in possession of Instinct and Reason, and fell by listening to the promptings of volition, instead of the unswerving powers of the brutes, and for a hereditary punishment was cursed with a superabundance of reason. For with all our intellectual prerogatives, we have yet failed to arrive at a definite course of action which should influence our conduct. The Essay, speaking of Government by Christianity, says:—

"Force first made conquest, and that conquest law,
Till superstition taught the tyrant awe.
* * * * *
She taught the weak to bend, the proud to pray,
To power unseen, and mightier far than they:
She, from the rending earth and bursting skies,
Saw Gods descend and fiends infernal rise.
Here *fixed* the dreadful, there the blessed abodes,
Here *made her* devils, and weak HOPE HER GODS.
Gods partial, changeful, passionate, *unjust*,
Whose *attributes* were *rage*, *revenge*, or *lust*.
Such as the souls of cowards might conceive,
And formed like tyrants; tyrants would BELIEVE.
Zeal then, not charity, became the guide,
And HELL was *built* IN *spite*, and HEAVEN IN PRIDE."

And again—

"For modes of faith let graceless zealots fight,
His can't be wrong whose life is in the right."

The Essay concludes with an invocation to Bolingbroke—whom Pope styles, "my guide, philosopher, and friend." Such is the conclusion of the most remarkable ethical poem in any language. It is the Iliad of English Deism. Not a single allusion to Christ—a future state of existence given only as a faint probability—the whole artificial state of society satirized—prayer ridiculed, and government of every kind denounced which does not bring happiness to the people. The first principle laid down is the corner-stone of materialism—"What can we reason but from what we know?"—which is stated, explained, and defended with an axiomatic brevity rarely equalled, never surpassed—with a number of illustrations comprising the *chef d'œuvre* of poetic grace, and synthical melody combined with arguments as cogent as the examples are perfect.

It stands alone in its impregnability—a pile of literary architecture like the "Novum Organan" of Bacon, the "Principia" of Newton, or the Essay of Locke. The facades of its noble colonnades are seen extending their wings through the whole sweep of history, con-

stituting a pantheon of morals, where every nation sends its devotees to admire and worship.

Let us now turn to the philosophical works of Bolingbroke. By the will of Bolingbroke he devised this portion of his manuscripts to David Mallet, the poet, for publication. The noble Lord's choice is open to censure here. He knew the character of Mallet, and could expect little justice from him who should have been his biographer. The MSS. were all prepared for the press long before Bolingbroke died. In this original state, they were addressed to Pope. When published they appeared as "Letters or Essays addressed to Alexander Pope, Esq." The political friends of St. John wished their suppression, fearing that they would injure his reputation by being anti-Christian. A large bribe was offered by Lord Cornbur if Mallet would destroy the works. He, no doubt, thinking more money could be made by their publication, issued them to the world in 1754, but without giving a biography or notes to the books, his work being simply correcting the errors of the press. True, there existed no stipulation that he should write the Life of Bolingbroke, but no one can doubt that such was the intention of the statesman, when he bequeathed to him property which realized £10,000 in value. Every one knows the huge witticism of Dr. Johnson, who accused Bolingbroke of cowardice, under the simile of loading a blunderbuss, and then leaving a Scotchman half-a-crown to fire it when he was out of the way. When those posthumous works appeared, the grand jury of Westminster presented them to the judicial authorities as subversive of religion, morality, and government. They were burnt by the common hangman.

With difficulty we give a quotation from Bolingbroke's ideas of a Future Life. In vol. IV., p. 348, he says, "I do not say, that to believe in a future state is to believe in a vulgar error; but this I say, it cannot be demonstrated by reason: it is not in the nature of it capable of demonstration, and no one ever returned that irremediable way to give us an assurance of the fact."

Again, he speaks personally in reference to himself, Pope, and Wollaston, whom he had been opposing :—

"He alone is happy, and he is truly so, who can say, Welcome life whatever it brings! welcome death whatever it is! If the former, we change our state. * * * * * That you, or I, or even Wollaston himself, should return to the earth from whence we came, to the dirt under our feet, or be mingled with the ashes of those herbs and plants from which we drew nutrition whilst we lived, does not seem any indignity offered to our nature, since it is common to all the animal kind: and he who complains of it as such, does not seem to have been set, by his reasoning faculties, so far above them in life, as to deserve not to be levelled with them at death. We were like them before our birth, that is nothing. So we shall be on this hypothesis, like them too after our death, that is nothing. What hardship is done us? Unless it be a hardship, that we are not immortal because we wish to be so, and flatter ourselves with that expectation.

"If this hypothesis were true, which I am far from assuming, I should have no reason to complain, though having tasted existence, I might abhor non-entity. Since, then, the first cannot be demonstrated by reason, nor the second be reconciled to my inward sentiment, let me take refuge in resignation at the last, as in every other act of my life: let others be solicitous about their future state, and frighten or flatter themselves as prejudice, imaginative bad health—nay, a lowering day, or a clear sunshine shall inspire them to do: let the tranquillity of my mind rest on this immovable rock, that my future, as well as my present state, are ordered by an Almighty Creator, and that they are equally foolish, and presumptuous, who make imaginary excursions into futurity, and who complain of the present."

Lord Bolingbroke died in the year 1751, after a long and painful illness, occasioned by the ignorance of a quack. While lying on his death-bed he composed a discourse, entitled "Considerations on the State of the

Nation." He died in peace—in the knowledge of the truth of the principles he had advocated, and with that calm serenity of mind, which no one can more fully experience than the honest Freethinker. He was buried in the church at Battersea. He was a man of the highest rank of genius, far from being immaculate in his youth, brave, sincere, a true friend, possessed of rich learning, a clear and sparkling style, a great wit, and the most powerful Freethinker of his age.

A. C.

BIOGRAPHY

OF

CONDORCET.

In the history of the French Revolution, we read of a multitude of sections, each ruled by a man, and each man representing a philosophy. Not that each man was the contriver of a system, but the effervescence of one. As true as Robespierre was the advocate of Rousseau, as Marat was the Wilkes of Paris, as Danton was the Paine, and Mirabeau the expediency-politician of reflex England, so true is it that Condorcet was the type of the philosophic Girondists, the offspring of Voltaire. The two great schools of metaphysics fought out the battle on the theatre of the Constituent Assembly, in a spirit as bitterly uncompromising as when under different phraseological terms, they met in the arguments of the School-men, or further in the womb of history, on the forum of Athens. It is a fact no less true than singular, that after each mental excitement amongst the *savans*, whether in ancient or in modern times, after the literary shock has passed away, the people are innoculated with the strife, and, destitute of the moderation of their leaders, fight for that doctrine which they conceive oppresses their rights. The French Revolution was one of those struggles. It gave rise to epoch-men. Not men who originated a doctrine, but those who attempted to carry it out. Condorcet was one of those men. He was the successor of Voltaire in the Encyclopædic warfare. The philosopher amongst the orators. Destitute of the amazing versa-

tility of the sage of Ferney, he imbibed the prophet's antipathy to superstition, and after a brilliant career, fell in the wild onslaught of passion. The Revolution was the arena on which was fought the battle involving the question whether Europe was to be ruled for a century by Christianity or Infidelity. The irresolution of Robespierre lost to us the victory of the first passage of arms, equally as decisive as Lafayette in 1830, and Lamartine in 1848, being Liberals, lost in each case the social Republic by their vacillating policy. The true Freethinkers of that age were the Girondists. With their heroic death, the last barrier to despotism disappeared; the Consulate became the only logical path for gilded chains and empire. With the ostracism of the Republicans by Napoleon the Little, a parallel is completed between the two eras of French history.

The family name of Condorcet was Caritat. His father was a scion of an aristocratic family, and an officer in the army. The son who gave honor to the family, was born in the year 1743, at Ribemont, in Picardy. His father dying early, left his son to be educated with his wife, under the guardianship of his brother, the Bishop of Lisieux, a celebrated Jesuit. The mother of Condorcet was extremely superstitious, and in one of her fanatic ecstacies, offered up her son at the shrine of the Virgin Mary. How this act was performed we cannot relate; but it is a notorious fact that until his twelfth year, the embryo philosopher was clothed in female attire, and had young ladies for companions, which, M. Arago says, "accounts for many peculiarities in the *physique* and the *morale* of his manhood." The abstinence from all rude, boyish sports, checked the proper muscular development of his limbs; the head and trunk were on a large scale, but the legs were so meagre that they seemed unfit to carry what was above them; and, in fact, he never could partake in any strong exercises, or undergo the bodily fatigues to which healthy men willingly expose themselves. On the other hand, he had imbibed the

tenderness of a delicate damsel, retaining to the last a deep horror for afflicting pain on the inferior animals.

In 1775, he entered the Jesuit Academy at Rheims. Three years afterwards, he was transferred to the College of Navarre, in Paris, and soon made himself the most distinguished scholar there. His friends wished him to enter the priesthood, not knowing that even in his seventeenth year he had embraced the Deism of the age.

At the age of nineteen he left college, and immediately published a series of mathematical works, which established his fame. Shortly after this, the Academy of Sciences chose Condorcet for their assistant secretary. In the year 1770 he accompanied D'Alembert in a tour through Italy, making a call for some weeks at Ferney, where he was delighted with the company of Voltaire, and was duly recognised as one of the Encyclopædists; and, on his return to Paris, became the literary agent of his great leader.

A Quarterly Reviewer, writing on Voltaire and Condorcet, says of the former, "When he himself, in these latter days, was resolved to issue anything that he knew and felt to be pregnant with combustion, he never dreamt of Paris—he had agents enough in other quarters; and the anonymous or pseudonymous mischief was printed at London, Amsterdam, or Hamburgh, from a fifth or sixth copy in the handwriting of some Dutch or English clerk—thence, by cautious steps, smuggled into France—and then, disavowed and denounced by himself, and, for him, by his numberless agents, with an intrepid assurance which, down to the last, confounded and baffled all official inquisitors, until, in each separate case, the scent had got cold. Therefore, he sympathized not at all with any of these, his subalterns, when they, in their own proper matters, allowed themselves a less guarded style of movement."

On one occasion, Condorcet's imprudence extorts a whole series of passionate remonstrants from him and his probable confidants—but the burden is always the same—"Tolerate the whispers of age! How often

shall I have to tell you all that no one but a fool will publish such things unless he has 200,000 bayonets at his back? Each Encyclopædist was apt to forget that, though he corresponded familiarly with Frederick, he was not a King of Prussia; and, by-and-by, not one of them more frequently made this mistake than Condorcet—for that gentleman's saint-like tranquillity of demeanor, though it might indicate a naturally languid pulse, covered copious elements of vital passion. The slow wheel could not resist the long attrition of controversy; and when it once blazed, the flame was all the fiercer for its unseen nursing. 'You mistake Condorcet,' said D'Alembert, 'he is a volcano covered with snow.'"

When Turgot became Minister of Marine, he gave Condorcet a post as Inspector of Canals; from this he was subsequently promoted to the Inspector of the Mint. When Turgot was replaced by Necker, Condorcet resigned his office.

In 1782 he was elected one of the forty of the Academy of Sciences, beating the Astronomer, Bailly, by *one* vote. In the next year, D'Alembert, his faithful friend, died, leaving him the whole of his wealth; his uncle, the bishop, likewise died in the same year, from whom he would receive a fresh accession of property. Shortly after this time, Condorcet married Madame de Grouchy—also celebrated as a lady of great beauty, good fortune, and an educated Atheist. The marriage was a happy one. The only offspring was a girl, who married General Arthur O'Connor, uncle to the late Feargus O'Connor, an Irish refugee who was connected with Emmett's rebellion.

During the excitement of the American War of Independence, Condorcet took an active part in urging the French Government to bestow assistance in arms and money, upon the United States; after the war was concluded, he corresponded with Thomas Paine, who gradually converted him to the extreme Republican views the "illustrious needleman" himself possessed, which, in this case, rapidly led to the *denouement* of

1791, when he was elected a member of the Legislative Assembly by the department of Paris. In the next year he was raised to the rank of President by a majority of near one hundred votes. While in the Assembly, he brought forward and supported the economical doctrines of Adam Smith, proposed the abolition of indirect taxation, and levying a national revenue upon derivable wealth in amount according to the individual, passing over all who gained a livelihood by manual labor. He made a motion for the public burning of all documents relating to nobility — himself being a Marquis. He took a conspicuous place in the trial of the king; he voted him guilty, but refused to vote for his death, as the punishment of death was against his principles. The speech he made on this occasion is fully equal to that of Paine's on the same occasion.

When the divergence took place between the Jacobins and Girondists, Condorcet strove to unite them; but every day brought fresh troubles, and the position of the Seneca of the Revolution was too prominent to escape the opposition of the more violent faction.

Robespierre triumphed; and in his success could be traced the doom of his enemies. An intercepted letter was the means of Condorcet's impeachment. Deprived of the support of Isnard, Brissot, and Vergniaud, the Jacobins proscribed without difficulty the hero whose writings had mainly assisted in producing the Revolution. His friends provided means for his escape. They applied to a lodging-house keeper, a Madame Vernet, if she would conceal him for a time; she asked was he a virtuous man—yes, replied his friend, he is the——stay, you say he is a good man, I do not wish to pry into his secrets or his name. Once safe in this asylum, he was unvisited by either wife or friends; morever, such was the hurry of his flight, that he was without money, and nearly without books.

While in this forced confinement, he wrote the "Esquisse d'un Tableau Historique des Progres de l'Esprit Humain," and several other fragmentary essays. In

this work he lays down a scheme of society similar to the "New Moral World," of Robert Owen. Opposing the idea of a God, he shows the dominion of science in education, political economy, chemistry, and applies mathematical principles to a series of moral problems. Along with the progress of man he combined the progress of arts—estimating the sanatory arrangements of our time, he prophecied on the gradual extension of longevity, amongst the human race; and with it, enjoyments increased by better discipline in gustatorial duties. He has similar views on the softer sex to M. Proudhomme (his immediate disciple,) and, in the close of the work, Condorcet announced the possibility of an universal language, which is daily becoming more assimilated to modern ideas.

The guillotine had not been idle during the few weeks of Condorcet's retreat. Fancying that (if discovered) he might be the means of injuring his benefactress, he resolved to escape from the house of Madame Vernet. Previous to doing this, he made his will. M. Arago, describing this epoch in his closing days, says :—

"When he at last paused, and the feverish excitement of authorship was at an end, our colleague rested all his thoughts anew on the danger incurred by his hostess. He resolved then (I employ his own words) to quit the retreat which the boundless devotion of his tutelar angel had transformed into a paradise. He so little deceived himself as to the probable consequences of the step he meditated—the chances of safety after his evasion appeared so feeble—that before he put his plan into execution he made his last dispositions. In the pages then written, I behold everywhere the lively reflection of an elevated mind, a feeling heart, and a beautiful soul. I will venture to say, that there exists in no language anything better thought, more tender, more touching, more sweetly expressed, than the 'Avis d'un Proscrit a sa Fill.' Those lines, so limpid, so full of unaffected delicacy, were written on that very day when he was about to encounter volun-

tarily an immense danger. The presentiment of a violent end almost inevitably did not disturb him—his hand traced those terrible words, *Ma mort, ma mort pro chaine!* with a firmness which the Stoics of antiquity might have envied. Sensibility, on the contrary, obtained the mastery when the illustrious proscribed was drawn into the anticipation that Madame de Condorcet also might be involved in the bloody catastrophe that threatened him. *Should my daughter be destined to lose all*—this is the most explicit allusion that the husband can insert in his last writing."

"The Testament is short. It was written on the fly-leaf of a 'History of Spain.' In it Condorcet directs that his daughter, in case of his wife's death, shall be brought up by Madame Vernet, whom she is to call her second mother, and who is to see her so educated as to have means of independent support either from painting or engraving. 'Should it be necessary for my child to quit France, she may count on protection in England from my Lord Stanhope and my Lord Daer. In America, reliance may be placed on Jefferson and Bache, the grandson of Franklin. She is, therefore, to make the English language her first study.'"

Such was the last epistle ever written by Condorcet. Notwithstanding the precautions taken by his friends, he escaped into the streets—from thence having appealed in vain to friends for assistance, he visited some quarries. Here he remained from the 5th to the evening of the 7th of April, 1794. Hunger drove him to the village of Clamart, when he applied at an hostelry for refreshment. He described himself as a carpenter out of employment, and ordered an omelet. This was an age of suspicion, and the landlord of the house soon discovered that the wanderer's hands were white and undisfigured with labor, while his conversation bore no resemblance to that of a common artificer. The good dame of the house inquired how many eggs he would have in his dish. Twelve, was the answer. Twelve eggs for a joiner's supper! This was heresy against the equality of man. They de-

manded his passport—he had not got one—the only appearance of anything of the sort was a scrap of paper, scrawled over with Latin epigrams. This was conclusive evidence to the village Dogberries that he was a traitor and an aristocrat. The authorities signed the warrant for his removal to Paris. Ironed to two officers they started on the march. The first evening they arrived at Bourg-la-Reine, where they deposited their prisoner in the gaol of that town. In the morning the gaoler found him a corpse. He had taken a poison of great force, which he habitually carried in a ring. Thus ended the life of the great Encyclopædist—a man great by his many virtues—who reflected honor on France by his science, his literary triumphs, and his moral heroism. He had not the towering energy of Marat, nor the gushing eloquence of Danton, neither had he the superstitious devotion to abstract ideas which characterized the whole course of Robespierre's life. The oratory of Danton, like that of Marat, only excited the people to dissatisfaction; they struck down effete institutions, but they were not the men to inaugurate a new society. It is seldom we find the pioneers of civilization the best mechanics. They strike down the forest—they turn the undergrowth—they throw a log over the stream, but they seldom rear factories, or invent tubular bridges.

Amongst the whole of the heroes of the French Revolution, we must admire the Girondists, as being the most daring, and, at the same time, the most constructive of all who met either in the Constituent Assembly or the Convention. The Jacobin faction dealt simply with politics through the abstract notions of Rousseau: but of what use are "human rights" if we have to begin *de novo* to put into operation?—rather let us unite the conservative educationalism of Socialism with the wild democracy of ignorance. Politics never can be successful unless married to Socialism.

It was not long after Condorcet's death, before the Committee of Public Instruction undertook the charge of publishing the whole of his works. For this they

have been censured on many grounds. We consider that it was one of the few good things accomplished by that Committee. There is nothing in the works of this writer which have a distinctive peculiarity to us; few great writers who direct opinion at the time they write, appear to posterity in the same light as they did to a public inflamed by passion, and trembling under reiterated wrongs. When we look at the works of D'Holbach, we find a standard treatise, which is a land-mark to the present day; but at the time the "System of Nature" was written, it had not one tithe the popularity which it now enjoys; it did not produce an effect superior to a new sarcasm of Voltaire, or an epigram of Diderot. Condorcet was rather the co-laborer and *literateur* of the party, than the prophet of the new school. Voltaire was the Christ, and Condorcet the St. Paul of the new faith. In political economy, the doctrines of the English and Scotch schools were elaborated to their fullest extent. Retrenchment in pensions and salaries, diminution of armies, equal taxation, the resumption by the State of all the Church lands, the development of the agricultural and mechanical resources, the abolition of the monopolies, total free trade, local government, and national education; such were the doctrines for which Turgot fought, and Condorcet popularized. If they had been taken in time, France would have escaped a revolution, and Europe would have been ruled by peace and freedom. It may be asked, who brought about the advocacy of those doctrines, for they were not known before the middle of the eighteenth century? They were introduced as a novelty, and defended as a paradox. France had been exhausted by wars, annoyed by *ennui*, brilliant above all by her genius, she was struck with lassitude for her licentious crimes. There was an occasion for a new school. Without it, France, like Carthage, would have bled to death on the hecatomb of her own lust. Her leading men cast their eyes to England; it was then the most progressive nation in existence. The leading men of that country were in-

timate with the rulers of the French; the books of each land were read with avidity by their neighbors; a difference was observable between the two; but how that difference was to be reconciled was past the skill of the wisest to unravel. England had liberal institutions, and a people with part of the substance, and many of the forms, of Liberalism, along with a degree of education which kept them in comparative ignorance, yet did not offer any obstacles to raising themselves in the social sphere. Before France could compete with England, she had to rid herself of the feudal system, and obtain a Magna Charta. She was above four centuries behind-hand here. She had to win her spurs through revolutions, like those of Cromwell's and that of 1688, and the still greater ones of Parliament. The Freethinkers of England prepared the Whig revolution of William, by advocating the only scheme which was at the time practicable, for of the two—the Protestant and the Catholic religion—the former is far more conducive to the liberties of a people than the latter, and at the time, and we may also say, nearer the present, the people were not prepared for any organic change. This being the case, it is not to be wondered at that the French Revolution was a failure as a constructive effort; it was a success as a grand outbreak of power; showing politicians where (in the future) to rely for success. The men who undertook to bring about this Revolution are not to be censured for its non-success. They wished to copy English institutions, and adapt them to those of the French; for this purpose, the Continental League was formed, each member of which pledged himself to uproot, as far as lay in his power, the Catholic Church in France. A secret name was given to it—L'Infame —and an organized attack was speedily commenced. The men at the head of the movement, besides Voltaire and Frederick, were D'Alembert, Diderot, Grim, St. Lambert, Condillac, Helvetius, Jordan, Lalande, Montesquieu, and a host of others of less note. Condorcet, being secretary of the Academy, corresponded

with, and directed the movements of all, in the absence of his chief. Every new book was criticised—refutations were published to the leading theological works of the age; but by far the most effective progress was made by the means of poems, essays, romances, epigrams, and scientific papers. The songs of France at this era were written by the philosophers; and this spirit was diffused among the people. In a country so volatile and excitable as the French, it is difficult to estimate too highly the power of a ballad warfare. The morality of Abbots and Nuns were sung in strains as rhapsodical, and couplets as voluptuous as the vagaries of the Songs of Solomon.

Much discretion was required, that no separate species of warfare should be overdone, lest a nausea of sentiment should revert upon the authors, and thus lead to a reaction more sanguinary than the force of the philosophers could control. In all those cases Condorcet was the prime mover and the agent concerned. He communicated with Voltaire on every new theory, and advised him when and how to strike, and when to *rest*. In all those matters Condorcet was obeyed. There was a smaller section of the more serious philosophers who sympathized with, yet did not labor simultaneously for the common cause—those men, the extreme Atheists—clever but cautious—men who risked nothing—Mirabeau and D'Holbach were the types of this class. It is well known that both Frederick, Voltaire, and Condorcet opposed those sections, as likely to be aiming at too much for the time.

When it was considered prudent to take a more decided step, the Encyclopædia was formed. Condorcet had a principal part in this work, which shook priestcraft on its throne; it spread consternation wherever it appeared, and was one of the main causes of the great outbreak. No one can sufficiently praise a work of such magnitude; nor can any one predicate when its effects will cease.

In the "Life of Condorcet," by Arago, there is a curious extract copied from a collection of anecdotes,

said to oe compiled from his note-books, and dignified with the title of "Memoires de Condorcet." It relates to a conversation between the Abbe Galiana and Diderot, in which it is said Condorcet acquiesced. The subject is the fair sex :—

Diderot.—How do you define woman?

Galiana.—An animal naturally feeble and sick.

Diderot.—Feeble? Has she not as much courage as man?

Galiana.—Do you know what courage is? It is the effect of terror. You let your leg be cut off, because you are afraid of dying. Wise people are never courageous—they are prudent—that is to say, poltroons.

Diderot.—Why call you woman naturally sick?

Galiana.—Like all animals, she is sick until she attains her perfect growth. Then she has a peculiar symptom which takes up the fifth part of her time. Then come breeding and nursing, two long and troublesome complaints. In short, they have only intervals of health, until they turn a certain corner, and then *elles ne sont plus de malades peut-etre—elles ne sont que des reilles.*

Diderot.—Observe her at a ball, no vigor, then, M. l'Abbe?

Galiana.—Stop the fiddles! put out the lights! she will scarcely crawl to her coach.

Diderot.—See her in love.

Galiana.—It is painful to see anybody in a fever.

Diderot.—M. l'Abbe, have you no faith in education?

Galiana.—Not so much as in instinct. A woman is habitually ill. She is affectionate, engaging, irritable, capricious, easily offended, easily appeased, a trifle amuses her. The imagination is always in play. Fear, hope, joy, despair, and disgust, follow each other more rapidly, are manifested more strongly, effaced more quickly, than with us. They like a plentiful repose, at intervals company; anything for excitement. Ask the doctor if it is not the same with his patients. But ask yourself, do we not all treat them as we do sick

people, lavish attention, soothe, flatter, caress, and get tired of them?

Condorcet, in a letter, remarking on the above conversation, says :—"I do not insist upon it as probable that woman will ever be Euler or Voltaire; but I am satisfied that she may one day be Pascal or Rousseau." This very qualification, we consider, is sufficient to absolve Condorcet from the charge of being a "woman hater." His opponents, when driven from every other source, have fallen back on this, and alleged that he viewed the sexes as unequal, and that the stronger had a right to lord it over the weaker. But which is the weaker? Euler and Voltaire were masculine men. A woman to be masculine, in the true sense of the word, is an anomaly, to be witnessed with pain. She is not in a normal condition. She is a monster. Women should live in society fully educated and developed in their physical frame, and then they would be more feminine in proportion as they approach the character of Mary Wollstonecraft. They have no right to domineer as tyrants, and then fall into the most abject of slaves. In each of the characters of Pascal and Rousseau, was an excess of sensibility, which overbalanced their other qualities, and rendered their otherwise great talents wayward, and, to a certain extent, fruitless. The peculiarity of man is physical power, and intellectual force; that of woman is an acute sensibility. Condorcet, then, was justified in expressing the opinions he avowed upon the subject.

In a paper, in the year 1766, read before the "Academy," on "Ought Popular Errors to be Eradicated?" Condorcet says, "If the people are often tempted to commit crimes in order that they may obtain the necessaries of life, it is the fault of the laws; and, as bad laws are the product of errors, it would be more simple to abolish those errors than to add others for the correction of their natural effects. Error, no doubt, may do some good; it may prevent some crimes, but it will occasion mischiefs greater than these. By put-

ting nonsense into the heads of the people, you make them stupid; and from stupidity to ferocity there is but a step. Consider—if the motives you suggest for being just make but a slight impression on the mind, that will not direct the conduct—if the impressions be lively, they will produce enthusiasm, and enthusiasm for error. Now, the ignorant enthusiast is no longer a man; he is the most terrible of wild beasts. In fact, the number of criminals among the men with prejudices (Christians) is in greater proportion to the total number of our population, than the number of criminals in the class above prejudices (Freethinkers) is to the total of that class. I am not ignorant that, in the actual state of Europe, the people are not, perhaps, at all prepared for a true doctrine of morals; but this degraded obtuseness is the work of social institutions and of superstitions. Men are not born blockheads; they become such. By speaking reason to the people, even in the little time they give to the cultivation of their intellect, we might easily teach them the little that it is necessary for them to know. Even the idea of the respect that they should have for the property of the rich, is only difficult to be insinuated among them—first, because they look on riches as a sort of usurpation, of theft perpetrated upon them, and unhappily this opinion is in great part true—secondly, because their excessive poverty makes them always consider themselves in the case of absolute necessity—a case in which even very severe moralists have been of their mind—thirdly, because they are as much despised and maltreated for being poor, as they would be after they had lowered themselves by larcenies. It is merely, therefore, because institutions are bad, that the people are so commonly a little thievish upon principle."

We should have much liked to have given some extended quotations from the works of Condorcet; but, owing to their general character, we cannot extract any philosophic formula which would be generally interesting. His "Lettres d'un Theologien" are well

deserving of a reprint; they created an astounding sensation when they appeared, being taken for the work of Voltaire—the light, easy, graceful style, with deeply concealed irony, the crushing retort and the fiery sarcasm. They made even priests laugh by their Attic wit and incongruous similes. But it was in the "Academy" where Condorcet's influence was supreme. He immortalized the heroes as they fell, and pushed the cause on by his professional duties. He was always awake to the call of duty, and nobly did he work his battery. He is now in the last grand sleep of man—the flowers of poesy are woven in amarynth wreaths over his tomb. A. C.

BIOGRAPHY

OF

SPINOZA.

Baruch Spinoza, or Espinoza, better known under the name of Benedict Spinoza (as rendered by himself in the Latin language,) was born at Amsterdam, in Holland, on the 24th of November, 1632. There is some uncertainty as to this date, as there are several dates fixed by different authors, both for his birth and death, but we have adopted the biography given by Dr. C. H. Bruder, in the preface to his edition of Spinoza's works. His parents were Jews of the middle, or, perhaps, somewhat humbler class. His father was originally a Spanish merchant, who, to escape persecution, had emigrated to Holland. Although the life of our great philosopher is one full of interesting incidents, and deserves to be treated fully, we have but room to give a very brief sketch, referring our readers, who may wish to learn more of Spinoza's life, to Lewes's "Biographical History of Philosophy," *Westminster Review*, No. 77, and "Encyclopædia Brittannica," p. 144. His doctrines we will let speak for themselves in his own words, trusting thereby to give the reader an opportunity of knowing who and what Spinoza really was. One man shrinks with horror from him as an Atheist. Voltaire says, that he was an Atheist, and taught Atheism. Another calls him "a God-intoxicated man." We present him a mighty thinker, a master mind, a noble, fearless utterer of free and noble thoughts, a hard-working, honest, in-

dependent man; as one who, two centuries ago, gave forth to the world a series of thinkings which have crushed, with resistless force, the theological shell, in the centre of which the priests hide the kernel "truth."

Spinoza appears in his boyhood to have been an apt scholar, and to have rapidly mastered the tasks set him by his teachers. Full of rabbinical lore he won the admiration of the Rabbi Moses Mortira, but the pupil rose higher than his master, and attempted to solve problems which the learned rabbis were content to reverence as mysteries not capable of solution. First they remonstrated, then threatened; still Spinoza persevered in his studies, and in making known the result to those around him. He was threatened with excommunication, and withdrew himself from the synagogue. One more effort was made by the rabbis, who offered Spinoza a pension of about £100 a-year if he would attend the synagogue more frequently, and consent to be silent with regard to his philosophical thinkings. This offer he indignantly refused. Reason failing, threats proving futile, and gold being treated with scorn, one was found sufficiently fanatic to try a further experiment, which resulted in an attempt on Spinoza's life; the knife, however, luckily missed its aim, and our hero escaped. At last, in the year 1660, Spinoza, being then twenty-eight years of age, was solemnly excommunicated from the synagogue. His friends and relations shut their doors against him. An outcast from the home of his youth, he gained a humble livelihood by polishing glasses for microscopes, telescopes, etc., at which he was very expert. While thus acquiring, by his own handiwork, the means of subsistence, he was studying hard, devoting every possible hour to philosophical research. Spinoza became master of the Dutch, Hebrew, German, Spanish, Portuguese, and Latin languages, the latter of which he acquired in the house of one Francis Van den Ende, from whom it is more than probable he received as much instruction in Atheism as in

Latin. Spinoza only appears to have once fallen in love, and this was with Van den Ende's daughter, who was herself a good linguist, and who gave Spinoza instruction in Latin. She, however, although willing to be his instructress and companion in a philological path, declined to accept his love, and thus Spinoza was left to philosophy alone. After his excommunication he retired to Rhynsburg, near the City of Leyden, in Holland, and there studied the works of Descartes. Three years afterwards he published an abridgment of the "Meditations" of the great father of philosophy, which created a profound sensation. In an appendix to this abridgment were contained the germs of those thinkings in which the pupil outdid the master, and the student progressed beyond the philosopher. In the month of June, 1664, Spinoza removed to Woorburg, a small village near the Hague, where he was visited by persons from different parts, attracted by his fame as a philosopher; and at last, after many solicitations he came to the Hague, and resided there altogether. In 1670 he published his "Tractatus Theologico-Politicus." This raised him a host of opponents; many writers rushed eager for the fray, to tilt with the poor Dutch Jew. His book was officially condemned and forbidden, and a host of refutations (?) were circulated against it. In spite of the condemnation it has outlived the refutations.

Spinoza died on the 21st or 22nd of February, 1677, in his forty-fifth year, and was buried on the 25th of February at the Hague. He was frugal in his habits, subsisting independently on the earnings of his own hands. Honorable in all things, he refused to accept the chair of Professor of Philosophy, offered to him by the Elector, and this because he did not wish to be circumscribed in his thinking, or in the freedom of utterance of his thoughts. He also refused a pension offered to him by Louis XIV., saying that he had no intention of dedicating anything to that monarch. The following is a list of Spinoza's works:—"Principiorum Philosophiæ Renati Descartes;" "Tractatus

Theologico-Politicus;" "Ethica;" "Tractatus Politicus;" "De Emandatione Intellectus;" "Epistolæ;" "Grammaticus Hebraeæ," etc. There are also several spurious works ascribed to Spinoza. The "Tractatus Politicus" has been translated into English by William Maccall, who seems fully to appreciate the greatness of the philosopher, although he will not admit the usefulness of Spinoza's logic. Maccall does not see the utility of that very logic which compelled him to admit Spinoza's truth. We are not aware of any other translation of Spinoza's works except that of a small portion of his "Ethica," by Lewes. This work, which was originally published in 1677, commenced with eight definitions, which, together with the following axioms and propositions, were reprinted from the *Westminster Review* in the *Library of Reason*:—

DEFINITIONS.

I. By cause of itself I understand that, the essence of which involves existence; or that, the nature of which can only be considered as existent.

II. A thing finite is that which can be limited (*terminari potest*) by another thing of the same nature—*ergo*, body is said to be finite because it can always be conceived as larger. So thought is limited by other thoughts. But body does not limit thought, nor thought limit body.

III. By substance I understand that which is in itself, and is conceived *per se*—that is, the conception of which does not require the conception of anything else as antecedent to it.

IV. By attribute I understand that which the mind perceives as constituting the very essence of substance.

V. By modes I understand the accidents (*affectiones*) of substance; or that which is in something else, through which also it is conceived.

VI. By God I understand the being absolutely infinite; that is, the substance consisting of infinite at-

tributes, each of which expresses an infinite and eternal essence.

Explication. I say absolutely infinite, but not in *suo genere;* for to whatever is infinite, but not in *suo genere*, we can deny infinite attributes; but that which is absolutely infinite, to its essence pertains everything which implies essence, and involves no negation.

VII. That thing is said to be free which exists by the sole necessity of its nature, and by itself alone is determined to action. But that is necessary, or rather constrained, which owes its existence to another, and acts according to certain and determinate causes.

VIII. By eternity I understand existence itself, in as far as it is conceived necessarily to follow from the sole definition of an eternal thing.

AXIOMS.

I. Everything which is, is in itself, or in some other thing.

II. That which cannot be conceived through another, *per aliud*, must be conceived, *per se.*

III. From a given determinate cause the effect necessarily follows, and *vice versa.* If no determinate cause be given, no effect can follow.

IV. The knowledge of an effect depends on the knowledge of the cause, and includes it.

V. Things that have nothing in common with each other cannot be understood by means of each other—that is, the conception of one, does not involve the conception of the other.

VI. A true idea must agree with its original in nature.

VII. Whatever can be clearly conceived as non-existent does not, in its essence, involve existence.

PROPOSITIONS.

I. Substance is prior in nature to its accidents.

Demonstration. Per definitions three and five.

II. Two substances, having different attributes, have nothing in common with each other.

Dem. This follows from def. three; for each substance must be conceived in itself and through itself; in other words, the conception of one does not involve the conception of the other.

III. Of things which have nothing in common, one cannot be the cause of the other.

Dem. If they have nothing in common, then (per axiom five) they cannot be conceived by means of each other; *ergo* (per axiom four,) one cannot be the cause of the other.—Q. E. D.

IV. Two or more distinct things are distinguished among themselves, either through the diversity of their attributes, or through that of their modes.

Dem. Everything which is, in itself, or in some other thing (per ax. one)—that is (per def. three and five,) there is nothing out of ourselves (*extra intellectum*, outside the intellect) but substance and its modes. There is nothing out of ourselves whereby things can be distinguished amongst one another, except substances, or (which is the same thing, per def. four) their attributes and modes.

V. It is impossible that there should be two or more substances of the same nature, or of the same attributes.

Dem. If there are many different substances they must be distinguished by the diversity of their attributes or of their modes (per prop. 4.) If only by the diversity of their attributes, it is thereby conceded that there is, nevertheless, only one substance of the same attribute; but if their diversity of modes, then, substance being prior in order of time to its modes, it must be considered independent of them—that is (per def. three and six,) cannot be conceived as distinguished from another—that is (per prop. four,) there cannot be many substances, but only one substance.—Q. E. D.

VI. One substance cannot be created by another substance.

Dem. There cannot be two substances with the same attributes (per prop. five)—that is (per prop.

two,) that have anything in common with each other; and, therefore (per prop. three,) one cannot be the cause of the other.

Corollary 1. Hence it follows that substance cannot be created by anything else. For there is nothing in nature except substance and its modes (per axiom one, and def. three and five.) Now, this substance, not being produced by another, is self-caused.

Corollary 2. This proposition is more easily to be demonstrated by the absurdity of its contradiction; for if substance can be produced by anything else, the conception of it would depend on the conception of the cause (per axiom four,) and hence (per def. three,) it would not be substance.

VII. It pertains to the nature of substance to exist.

Dem. Substance cannot be produced by anything else (per coroll. prop. six,) and is therefore the cause of itself—that is (per def. one,) its essence necessarily involves existence; or it pertains to the nature of substance to exist.—Q. E. D.

VIII. All substance is necessarily infinite.

Dem. There exists but one substance of the same attribute; and it must either exist as infinite or finite. But not finite, for (per def. two) as finite it must be limited by another substance of the same nature, and in that case there would be two substances of the same attributes, which (per prop. five) is absurd. Substance therefore is infinite.—Q. E. D.

"Scholium I.—I do not doubt but that to all who judge confusedly of things, and are not wont to inquire into first causes, it will be difficult to admit the demonstration of prop. 7, because they do not sufficiently distinguish between the modifications of substances, and substances themselves, and are ignorant of the manner in which things are produced. Hence it follows, that the commencement which they see natural things have, they attribute to substances; for he who knows not the true cause of things, confounds all things, and feigns that trees talk like men; that men are formed from stones as well as from seeds,

and that all forms can be changed into all other forms. So, also, those who confound the divine nature with the human, naturally attribute human affections to God, especially as they are ignorant of how these affections are produced in the mind. If men attended to the nature of substance, they would not, in the least, doubt proposition seven; nay, this proposition would be an axiom to all, and would be numbered among common notions. For by substance they would understand that which exists in itself, and is concerned through itself—*i. e.*, the knowledge of which does not require the knowledge of anything as antecedent to it. But by modification they would understand that which is in another thing, the conception of which is formed by the conception of the thing in which it is, or to which it belongs. We can have, therefore, correct ideas of non-existent modifications, because, although out of the understanding they have no reality, yet their essence is so comprehended in that of another, that they can be conceived through this other. The truth of substance (out of the understanding) lies nowhere but in itself, because it is conceived *per se*. If therefore any one says he has a clear idea of substance, and yet doubt whether such substance exist, this would be as much as to say that he has a true idea, and nevertheless doubts whether it be not false (as a little attention sufficiently manifests;) or if any man affirms substance to be created, he at the same time affirms that a true idea has become false, than which nothing can be more absurd. Hence it is necessarily confessed that the existence of substance, as well as its essence, is an eternal truth. And hence we must conclude that there is only one substance possessing the same attribute, which requires here a fuller development. I note therefore — 1. That the correct definition of a thing includes and expresses nothing but the nature of the thing defined. From which follows—2. That no definition includes or expresses a distinct number of individuals, because it expresses nothing but the nature of the thing defined; *ergo*, the definition of a tri-

angle expresses no more than the nature of a triangle, and not any fixed number of triangles. 3. There must necessarily be a distinct cause for the existence of every existing thing. 4. This cause, by reason of which anything exists, must either be contained in the nature and definition of the existing thing (viz., that it pertains to its nature to exist,) or else must be beyond it—must be something different from it.

"As therefore it pertains to the nature of substance to exist, so must its definition include a necessary existence, and consequently from its sole definition we must conclude its existence. But as from its definition, as already shown in notes two and three, it is not possible to conclude the existence of many substances —*ergo*, it necessarily follows that only one substance of the same nature can exist."

It will be necessary for the reader to remember that Spinoza commenced his philosophical studies at the same point with Descartes. Both recognized existence as the primal fact, self-evident and indisputable.

But while Descartes had, in some manner, fashioned a quality—God and God-created substance — Spinoza only found one substance, the definition of which included existence. By his fourth proposition ("of things which have nothing in common, one cannot be the cause of the other,") he destroyed the creation theory, because by that theory God is assumed to be a spirit having nothing in common with matter, yet acting on matter; and Lewes speaks of the fourth proposition in the following terms:—"This fallacy has been one of the most influential corruptors of philosophical speculation. For many years it was undisputed, and most metaphysicians still adhere to it. The assertion is that only like can act upon like; but although it is true that *like* produces (causes) *like*, it is also true that like produces *unlike;* thus fire produces *pain* when applied to our bodies; *explosion* when applied to gunpowder; *charcoal* when applied to wood; all these effects are unlike the cause."

We cannot help thinking that in this instance, the

usually thoughtful Lewes has either confused substance with its modes, or, for the sake of producing a temporary effect, has descended to mere sophism. Spinoza's proposition is, that *substances* having nothing in common, cannot act on one another. Lewes deals with several modes of the same substance as though they were different substances. Nay, more, to make his argument the more plausible, he entirely ignores in it that *noumenon* of which he speaks as underlying all phenomena, and uses each phenomenon as a separate existence. In each of the instances mentioned, however varied may be the modification, the essence is the same. They are merely examples of one portion of the whole acting upon another portion, and there is that in each mode which is common to the whole, and by means of which the action takes place.

Much has been said of Spinoza's "God" and "Divine Substance," and we must refer the reader to Definition Six, in which God is defined as being "infinite substance." Now, although we should be content to strike the word "God" out of our own tablet of philosophical nomenclature, as being a much misused, misrepresented, and entirely useless word, yet we must be very careful, when we find another man using the word, to get his precise definition, and not to use any other ourselves while in his company.

Spinoza, when asked "What name do you attach to infinite substance?" says, "God."—If he had said any other word we could not have quarrelled with him so long as he defined the word, and adhered strictly to the terms of his definition, although we might regret that he had not either coined a word for himself, or used one less maltreated by the mass. Spinoza said, "I can only take cognizance of one substance (of which I am part) having infinite attributes of extension and thought. I take cognizance of substance by its modes, and in my consciousness of existence. Every thing is a mode of the attribute of extension, every thought, wish, or feeling, a mode of the attribute of thought. I call this substance, with

infinite attributes, God." Spinoza, like all other thinkers, found himself overpowered by the illimitable vastness of the infinite when attempting to grasp it by his mental powers, but unlike other men he did not endeavor to relieve himself by separating himself from that infinite; but, knowing he was a part of the whole, not divisible from the remainder, he was content to aim at perfecting his knowledge of existence rather than at dogmatising upon an indefinable word, which, if it represented anything, professed to represent an incomprehensible existence far beyond his reach.

We ought not to wonder that in many parts of Spinoza's writings we find the word "God" treated in a less coherent manner than would be possible under the definition given in his "Ethics," and for these reasons:—Spinoza, from his cradle upwards, had been surrounded with books and traditions sanctified by the past, and impressed on his willing mind by his family, his tutors, and the heads of his church; a mind like his gathered all that was given, even more quickly than it was offered, still craving for more—"more light"—"more light"—and at last light came bursting on the young thinker like a lightning flash at dark midnight, revealing his mind in chains, which had been cast round him in his nursery, his school, his college, his synagogue. By a mighty effort he burst these chains, and walked forth a free man, despite the entreaties of his family, the reasonings of the rabbis, the knife of the fanatic, the curse of his church, and the edict of the state. But should it be a matter of surprise to us that some of the links of those broken chains should still hang on the young philosopher, and, seeming to be a part of himself, almost imperceptibly incline to old ways of thinking, and to old modes of utterance of those thoughts? Wonder not that a few links hang about him, but rather that he ever succeeded in breaking those chains at all. Spinoza, after his secession from his synagogue, became logically an Atheist; education and early impressions enlarged this into a less clearly-defined Pantheism;

but the logic comes to us naked, disrobed of all by which it might have been surrounded in Spinoza's mind. If that logic be correct, then all the theologies of the world are false. We have presented it to the reader to judge of for himself. Many men have written against it; of these some have misunderstood, some have misrepresented, some have failed, and few have left us a proof that they had endeavored to deal with Spinoza on his own ground. Maccall says, "In the glorious throng of heroic names, there are few nobler than Spinoza's. Apart altogether from the estimate we may form of his philosophy, there is something unspeakably interesting in the life and the character of the man. In his metaphysical system there are two things exceedingly distinct. There is, first, the immense and prodigious, but terrible mathematical skeleton, which his subtle intellect binds up and throws as calmly into space as we drop a pebble into the water, and whose bones, striking against the wreck of all that is sacred in belief, or bold in speculation, rattle a wild response to our wildest phantasies, and drive us almost to think in despair that thinking is madness; and there is, secondly, the divinest vision of the infinite, and the divinest incense which the intuition of the infinite ever yet poured forth at the altar of creation."

The "Treatise on Politics" is not Spinoza's greatest work; it is, in all respects, inferior to the "Ethics," and to the "Theologico-Political Treatise." But there are in politics certain eternal principles, and it is for setting forth and elucidating these that the Treatise of Spinoza is so valuable.

In the second chapter of that Treatise, after defining what he means by nature, etc., he, on the sixth section, proceeds as follows:—"But many believe that the ignorant disturb more than follow the order of nature, and conceive of men in nature as a state within the state. For they assert that the human mind has not been produced by any natural causes, but created immediately by God, and thereby rendered so

independent of other things as to have absolute power of determining itself, and of using reason aright. But experience teaches us more than enough, that it is no more in our power to have a sound mind than a sound body. Since, moreover, everything, as far as it is able, strives to conserve its being, we cannot doubt that if it were equally in our power to live according to the prescripts of reason, as to be led by blind desire, all would seek the guidance of reason and live wisely, which is not the case. For every one is the slave of the particular pleasure to which he is most attached. Nor do theologians remove the difficulty, when they assert that this inability is a vice, or a sin of human nature, which derives its origin from the fall of the first parent. For if it was in the power of the first man to stand rather than to fall, and if he was sound in faculty, and had perfect control over his own mind, how did it happen that he, the wise and prudent, fell? But they say he was deceived and tempted by the devil. But who was it that led astray and tempted the devil himself? Who, I ask, rendered this the most excellent of intelligent creatures so mad, that he wished to be greater than God? Could he render himself thus mad—he who had a sane mind, and strove as much as in him lay to conserve his being? How, moreover, could it happen that the first man in possession of his entire mental faculties, and master of his will, should be both open to temptation, and suffer himself to be robbed of his mind? For if he had the power of using his reason aright, he could not be deceived; for as far as in him lay, he necessarily sought to conserve his own being, and the sanity of his mind. But it is supposed he had this in his power, therefore he necessarily conserved his sane mind, neither could he be deceived. Which is evidently false from his history; and, consequently, it must be granted that it was not in the power of the first person to use reason aright, but that he, like us, was subject to passions."

Spinoza is scarcely likely to become a great favorite with the "Woman's Right's Convention." In his ninth

chapter of the same Treatise, he says, "If by nature women were equal to men, and excelled as much as they in strength of mind and in talent, truly amongst nations, so many and so different, some would be found where both sexes ruled equally, and others where the men were ruled by the women, and so educated as to be inferior to them in talent; but as this has never happened, we are justified in assuming that women, by nature, have not an equal right with men, but that they are necessarily obedient to men, and thus it can never happen that both sexes can equally rule, and still less that men be ruled by women."

Lewes, in his seventh chapter on Modern Philosophy, thus sums up Spinoza's teachings and their result. He says:—

"The doctrine of Spinoza was of great importance, if for nothing more than having brought about the first crisis in modern philosophy. His doctrine was so clearly stated, and so rigorously deduced from admitted premises, that he brought philosophy into this dilemma:—

"'Either my premises are correct; and we must admit that every clear and distinct idea is absolutely true; true not only subjectively, but objectively.

"'If so, my objection is true;

"'Or my premises are false; the voice of consciousness is not the voice of truth;

"'And if so, then is my system false, but all philosophy is impossible; since the only ground of certitude—our consciousness—is pronounced unstable, our only means of knowing the truth is pronounced fallacious.'"

"Spinozism or scepticism, choose between them, for you have no other choice.

"Mankind refused, however, to make a choice. If the principles which Descartes had established could have no other result than Spinozism, it was worth while inquiring whether those principles might not themselves be modified.

"The ground of discussion was shifted, psychology

took the place of ontology. It was Descartes's theory of knowledge which led to Spinozism; that theory must therefore be examined; that theory becomes the great subject of discussion. Before deciding upon the merits of any system which embraced the great questions of creation, the Deity, immortality, etc., men saw that it was necessary to decide upon the competency of the human mind to solve such problems. All knowledge must be obtained either through experience or independent of experience. Knowledge dependent on experience must necessarily be merely knowledge of *phenomena*. All are agreed that experience can only be experience of ourselves as modified by objects. All are agreed that to know things *per se*—*noumena*—we must know them through some other channel then experience. Have we or have we not that other channel? This is the problem."

"Thus, before we can dogmatize upon ontological subjects, we must settle this question—Can we transcend the sphere of our consciousness, and know things *per se*?"

"I."

BIOGRAPHY

OF

ANTHONY COLLINS.

Freethought, as developed in the Deistic struggles of the seventeenth century, had to battle for existence against the Puritanic reaction which took its second rise from the worn-out licentious age of the last of the Stuarts, and that of the no less dangerous (though concealed) libertinism of the Dutch king. A religious rancor also arose which, but for the influence of a new power, would have re-enacted the tragedy of religious persecution. But this rancor became somewhat modified, from the fact that the various parties now were unlike the old schismatics, who were each balanced at the opposite ends of the same pole—extreme Papacy on the one hand, and Fifth-monarchists on the other—when each oscillation from the Protestant centre deranged the balance of enthusiasm, and drove it to the farthest verge of fanaticism, until all religious parties were hurled into one chaos of disunion. Such were the frequent changes of the seventeenth century—but at its close the power of Deism had evolved a platform on which was to be fought the hostilities of creeds. Here, then, could not exist that commingling of sects, which were deducible in all their varied extravagance from the Bible. Theology had no longer to fight with itself, but with philosophy. Metaphysics became the Jehu of opinion, and sought to drive its chariot through the fables of the saints. The old doctrines had to be re-stated to meet new foes. For the

Papists, Nonconformists, and Brownists, were excluded to make way for the British Illuminati, who spread as much consternation through England as did the French Encyclopædists across Europe. The new field of action was only planned, for when Catholicism first opposed Protestantism, its leaders little thought what a Pandoric box it was opening—nor did the Divines of the latter sect ever doubt the finality of their own doctrines. They wished to replace one infallibility by another. And the same charge can be substantiated against Deism. When in this Augustan age the Free-thinking leaders, fresh from the trammels of Christism, first took the name of Moral Philosophers, they little knew they were paving the way for an Atheism they so much dreaded—a democracy more unbridled than their most constitutional wishes—a political economy to be tried for half a century, and then to be discarded —a revolutionary fervor which should plough up Europe, and then give place to a Communism, which the first founders of this national agitation would have gazed upon with amazement, and shrunk from with despair. Such is the progress of change. The rise of the Deistic movement may be defined in a sentence. It was the old struggle of speculative opinion shifting its battle-ground from theology to philosophy, prior to the one being discarded, and the other developed into positive science.

Amongst the most distinguished of these reformers, stands the name of Anthony Collins.

Who and what he was, we have little opportunity of knowing, save from the scattered notices of contemporaries; but sufficient is left on record to prove him one of the best of men, and the very Coryphæus of Deism. The twin questions of Necessity and Prophecy have been examined by him perhaps more ably than by any other liberal author. There are slight discrepancies in relation to the great events of his life. The Abbe Lodivicat says he was born June 21st, 1676, of a rich and noble family, at Heston, in Middlesex, and was appointed treasurer of the county; but another

account says "Hounslow," which we think was the more likely place. He was educated at Eton and Cambridge. He studied for the bar for sometime, but (being wealthy) ultimately renounced jurisprudence, while his youthful studies admirably fitted him for his subsequent magisterial duties. He was clever, honest, learned, and esteemed by all who knew his character. The elder D'Israeli says, "that he was a great lover of literature, and a man of fine genius, while his morals were immaculate, and his personal character independent."

The friendship of Locke alone is sufficient to stamp the character of Collins with honor, and he was one of the most valued friends of this great man. In a volume published by P. Des Maizeaux (a writer we shall have occasion to notice) in the year 1720, containing a collection of the posthumous works of Locke, there are several letters addressed to Collins which fully substantiate our opinion. Locke was then an old man, residing in the country, and Collins was a young man in London, who took a pleasure in executing the commissions of his illustrious friend. In one of them, dated October 29th, 1703, he says—"If I were now setting out in the world, I should think it my greatest happiness to have such a companion as you, who had a true relish of truth, would in earnest seek it with me, from whom I might receive it undisguised, and to whom I might communicate what I thought true, freely. Believe it my good friend, to love truth for truth's sake, is the principal part of human perfection in this world, and the seed-plot of all other virtue; and, if I mistake not, you have as much of it as ever I met with in anybody. What, then, is there wanting to make you equal to the best—a friend for any one to be proud of?"

During the following year the correspondence of Locke appears in a most interesting light—the affectionate inquiries, the kind advice, and the most grateful acknowledgments are made to Collins. On Sept. 11th, Locke writes:—"He that has anything to do

with you, must own that friendship is the natural product of your constitution, and your soul, a noble soil, is enriched with the two most valuable qualities of human nature—truth and friendship. What a treasure have I then in such a friend, with whom I can converse, and be enlightened about the highest speculations!" On the 1st of October he wrote Collins on his rapid decay, "But this, I believe, he will assure you, that my infirmities prevail so fast on me, that unless you make haste hither, I may lose the satisfaction of ever seeing again a man that I value in the first rank of those I leave behind me." This was written twenty-seven days before his death. Four days before his decease, he wrote a letter to be given to Collins after his death. This document is one of the most important in relation to the life of the great Freethinker—it irrefragably proves the falsity of everything that may be alleged against the character of Collins:—

"*Oates, August* 23, 1704.

For Anthony Collins, Esq.

Dear Sir—By my will, you will see that I had some kindness for * * * And I knew no better way to take care of him, than to put him, and what I designed for him, into your hands and management. The knowledge I have of your virtues of all kinds, secures the trust, which, by your permission, I have placed in you; and the peculiar esteem and love I have observed in the young man for you, will dispose him to be ruled and influenced by you, so of that I need say nothing. May you live long and happy, in the enjoyment of health, freedom, content, and all those blessings which Providence has bestowed on you, and your virtues entitle you to. I know you loved me living, and will preserve my memory now I am dead. * * * I leave my best wishes with you.

John Locke."

Such is the honorable connection which existed between Locke and Collins. Collins's first publication

was a tract, "Several of the London Cases Considered," in the year 1700. In 1707, he published an "Essay Concerning the Use of Reason on Propositions, the evidence whereof depends upon Human Testimony;" "in which," says Dr. Leland, "there are some good observations, mixed with others of a suspicious nature and tendency." It principally turned on the Trinitarian controversy then raging, and is of little interest now. In this year Collins united with Dodwell in the controversy carried on by Dr. Samuel Clarke. One of Clarke's biographers alludes to it thus: "Dr. Clarke's arguments in favor of the immateriality, and consequent immortality of the soul, called out, however, a far more formidable antagonist than Dodwell, in the person of Anthony Collins, an English gentleman of singular intellectual acuteness, but, unhappily, of Infidel principles. The controversy was continued through several short treatises. On the whole, though Clarke, in some instances, laid himself open to the keen and searching dialectics of his gifted antagonist, the victory certainly remained with the Divine." Of course it is only to be expected that such will be the opinion of an opponent—but it is further proof of Collins's ability and character. In 1703 appeared his celebrated "Discourses of Freethinking," which perhaps created the greatest sensation in the religious world (with the exception of the "Age of Reason") of any book published against Christianity. This book is as able a defence of the freedom of the expression of thought without penalty, as was ever published. It is divided into four sections. In the 1st, Freethinking is defined —in five arguments. In the 2nd, That it is our duty to think freely on those points of which men are denied the right to think freely: such as of the nature and attributes of God, the truth and authority of Scriptures, and of the meaning of Scriptures, in seven arguments and eleven instances. The third section is the consideration of six objections to Freethinking—from the whole of which he concludes (1) That Freethinkers must have more understanding, and that they must

necessarily be the most virtuous people. (2) That they have, in fact, been the most understanding and virtuous people in all ages. Here follows the names of a great number of men whom Collins classified as Freethinkers, and of whom we have no reason to be ashamed.

This book was answered by many divines, but none of them emerged from the contest with such Christian honors as the famous Dr. Bentley—considered England's greatest classical scholar. In the same year, the Dr. published his reply under the signature of "Phileleutheros Lipsiensis." The fame of Bentley was considered equal to Collins's; and it has always been represented that this reply completely crushed the Freethinker—nothing could be further from the truth. Bentley principally attacked the Greek quotations, and denounced Collins for his ignorance in not putting his (Bentley's) construction on every disputed word. For this reply, Bentley received the thanks of the University of Cambridge. In conection with this work, Collins is also charged with wilful deception —which has been reproduced in our own days by divines who perhaps never read a line of Collins. A French edition of the "Discourse" was translated under the personal inspection of Collins: and it is said that he altered the construction of several sentences to evade the charges brought against him by Bentley. Dr. Leland is particularly eloquent upon this; and the Rev. Mr. Lorimer, of Glasgow, triumphantly plagiarises the complaint of the men whose defects he can only imitate. There is another charge connected with Bentley and his friends, which it is desirous should be exposed. The elder D'Israeli says:—"Anthony Collins wrote several well-known works, without prefixing his name; but having pushed too far his curious and polemical points, he incurred the odium of a Freethinker—a term which then began to be in vogue, and which the French adopted by translating it, in their way—'a strong thinker,' or *esprit fort*. Whatever tendency to 'liberalise' the mind from the dog-

mas and creeds prevails in these works, the talents and learning of Collins were of the first class. His morals were immaculate, and his personal character independent; but the *odium theologicum* of those days combined every means to stab in the dark, till the taste became hereditary with some. I may mention a fact of this cruel bigotry which occurred within my own observation, on one of the most polished men of the age. The late Mr. Cumberland, in the romance entitled his 'Life,' gave this extraordinary fact. He said that Dr. Bentley, who so ably replied to Collins's 'Discourse,' when many years after he discovered him fallen into great distress, conceiving that by having ruined Collins's character as a writer for ever, he had been the occasion of his personal misery, he liberally contributed to his maintenance. In vain I mentioned to that elegant writer, who was not curious about facts, that this person could never have been ANTHONY Collins, who had always a plentiful fortune; and when it was suggested to him that this 'A. Collins' as he printed it, must have been ARTHUR Collins, the historic compiler, who was often in pecuniary difficulties, still he persisted in sending the lie down to posterity, without alteration, in his second edition, observing to a friend of mine, that 'the story, while it told well, might serve as a striking instance of his great relative's generosity; and that it should stand because it could do no harm to any but to ANTHONY Collins, whom he considered as little short of an Atheist.'" Such is a specimen of Christian honor and justice.

In 1715, appeared his "Philosophical Inquiry into Human Liberty." Dr. Clarke was again his opponent. The publication of this work marked an epoch in metaphysics. Dugald Stewart, in criticising the discussion on Moral Liberty between Clarke and Leibnitz, says, "But soon after this controversy was brought to a conclusion by the death of his antagonist, he (Clarke) had to renew the same argument, in reply to his countryman, Anthony Collins, who, following the footsteps of Hobbes, with logical talents not inferior to his mas-

ter (and with a weight of personal character in his favor to which his master had no pretensions,) gave to the cause which he so warmly espoused, a degree of credit amongst sober and inquiring politicians, which it had never before possessed in England." The following are the principal arguments of Collins in reference to Liberty and Necessity :—

First. Though I deny Liberty in a certain meaning of that word, yet I contend for Liberty, as it signifies *a power in man to do as he wills or pleases.*

Secondly. When I affirm *Necessity*, I contend only for *moral necessity;* meaning thereby that man, who is an intelligent and sensible being, is determined by his reason and senses; and I deny any man to be subject to such necessity as is in clocks, watches, and such other beings, which, for want of intelligence and sensation, are subject to an absolute, physical or mechanical necessity.

Thirdly, I have undertaken to show, that the notions I advance are so far from being inconsistent with, that they are the sole foundation of morality and laws, and of rewards and punishments in society, and that the notions I explode are subversive of them.

From the above premises, Collins sought to show that man is a necessary agent. (1) From our experience (through consciousness.) (2) From the impossibility of liberty. (3) From the consideration of the divine prescience. (4) From the nature and use of rewards and punishments. (5) From the nature of morality. Such were the principles on which the great question of Necessity has ever been advocated — from Hobbes to Collins, Jonathan Edwards to Mackintosh and Spencer. In the year 1704 Toland dedicated to him a new translation of Æsop's Fables. There are many anecdotes respecting Collins inserted in religious magazines, most of which are false, and all without proof. One of them, related in a most circumstantial manner, appears to be the favorite. It depicts Collins walking out in the country on a Sunday morning, when he meets a countryman returning from Church.

"Well, Hodge," says Collins, "so you have been enjoying the fresh breezes of nature, this fine morning."

The clown replied that "he had been worshipping nature's God," and proved it by repeating the substance of the Athanasian creed. Upon which Collins questions him as to the residence of his God: and for a reply is told that his God is so large, that he fills the universe; and so small that he dwells in HIS BREAST. This sublime fact, we are told, had more effect upon Collins's mind than all the books written against him by the clergy. When will sensible men reject such charlatanism?

The next great work of Collins was his "Discourse on the Grounds and Reasons of the Christian Religion," in two parts. The first containing some considerations on the quotations made from the Old in the New Testament, and particularly on the prophecies cited from the former, and said to be fulfilled in the latter. The second containing an examination of the scheme advanced by Mr. Whiston, in his essay towards restoring the true text of the Old Testament, and for vindicating the citations thence made in the New Testament, to which is prefixed an apology for free debate and liberty of writing. This book took the religious world by storm; it is even thought it struck more dismay amongst divines than his former essay on Freethinking. The book proceeds to show that Christianity is not proved by prophecy. That the Apostles relied on the predictions in the Old Testament, and their fulfilment in Jesus as the only sure proof of the truth of their religion; if, therefore, the prophecies are not thoroughly literal, and fulfilled distinctly, there can be no proof in Christianity. He then examines the principal prophecies, and dismisses them, as allegorical fables too vague to be of any credit. In less than two years no less than thirty-five books were published in reply to this work, written by the ablest and most influential theologians in England. In 1727 Collins published another large work, "The Scheme of Literal Prophecy Considered," in which he still further

defends his view principally against the sophistical reasoning of Whiston, and finally vanquished the whole of his opponents.

Perhaps no Freethinker, with the single exception of Hobbes, was so attacked during his life as Collins. Toland and Woolston were persecuted and driven into prison and poverty; but Collins, with his profusion of wealth, could oppose Christianity with applause—mingle in the gaiety of the Court—occupy a seat on the magisterial bench—be the welcome guest of the most liberal of the aristocracy, contemporary with others who even languished in prison for the propagation of similar sentiments. Since his day the clergy have grown wiser; THEN the most trivial pamphlet on the Deistic side created a consternation amongst the saints, and they strove who should be the first to answer it—indeed, it was considered a test of honor amongst the clergy to be eager in the exposure of Deism; but this style of warfare was discontinued after the lapse of a few years. The most discerning observers discovered that in proportion to the answers published against liberal works, the influence of the most powerful side decreased. Force, then, gradually interfered, and acts of Parliament were considered the only logical refutation of a philosophical heresy. The anomaly of our laws interfered again. Collins was RICH, and so must escape the fangs of the law. Thomas Woolston was POOR, so his vitals were pierced by laws which Collins escaped—yet both committed the same offence. In later times Gibbon traced the rise of Christianity, and about the same time Paine accomplished another portion of the same risk—and the Government which prosecuted the plebeian, flattered the patrician. But Collins's time was rapidly drawing nigh. On the 13th of December, 1729, he expired, aged fifty-three years; and to show the esteem in which his character was held, the following notice was inserted in the newspapers of the day—all hostile to his views, yet striving to make it appear that he was, after all, not so great an Infidel as his reputation honored him with :—"On

Saturday last, died at his house in Harley Square, Anthony Collins, Esq. He was a remarkably active, upright, and impartial magistrate, the tender husband, the kind parent, the good master, and the true friend. He was a great promoter of literature in all its branches; and an immoveable asserter of universal liberty in all civil and religious matters. Whatever his sentiments were on certain points, this is what he declared at the time of his death—viz., that he had always endeavored, to the best of his ability, to serve God, his king, and his country, so he was persuaded he was going to that place which God hath prepared for them that serve him, and presently afterwards he said, the Catholic religion is to serve God and man. He was an eminent example of temperance and sobriety, and one that had the true art of living. His worst enemies could never charge him with any vice or immorality."

With this character the Freethinkers have no right to be dissatisfied. The Abbe Lodivicat says, "His library was curious and valuable; always open to the learned, even to his opponents, whom he furnished with pleasure, both with books and arguments, which were employed in confuting him." Mr. D'Israeli says he has seen a catalogue of Collins's library, elaborately drawn up in his own handwriting, and it must have contained a splendid selection of books. This is proved by the correspondence with Locke, and the extensive number of quotations spread thoughout his published works.

By the death of Collins, and the defalcation of one who abused the name of a Deist, the cause of Freethought was impeded at the time when it most needed assistance. Collins had written a great number of tracts and larger works, intending them to be published after his death: one collection of eight octavo volumes of manuscript containing the attacks upon Christianity, by which he intended his name to be transmitted to posterity, were all arranged ready for publication as his posthumous works. To ensure their creditable appearance, and to reward a man whom he had

thought worthy of confidence, and one who professed to be a disciple of Collins, he bequeathed them to Des Maizeaux, then a popular author and editor. He had edited the correspondence of Locke and Collins, written the life of Bayle, and subsequently edited Toland. The idea of Collins was to give his work to Des Maizeaux for a recompense for the trouble of publishing them, while he would derive the whole profits of their sale, which no doubt would be very large. It appears that the widow of Collins was much younger than himself—in league with the Church of England; and was in rather a suspicious friendship with more than one clerical antagonist of her late husband. Des Maizeaux being worked upon conjointly by Mrs. Collins and a person named Tomlinson, was induced to accept a present of fifty guineas, and relinquished the possession of the manuscripts. It was not long, however, before his conscience accused him of the great wrong done to the memory of his benefactor, and to the Free-thinking cause. His regret was turned into the most profound compunction for his crime; and in this state of mind he wrote a long letter to one who had been a mutual friend to Collins and himself, acknowledging that he had done "a most wicked thing," saying—"I am convinced that I have acted contrary to the will and intention of my dear deceased friend; showed a disregard to the particular mark of esteem he gave me on that occasion; in short, that I have forfeited what is dearer to me than my own life—honor and reputation.....I send you the fifty guineas I received, which I do now look upon as the wages of iniquity, and I desire you to return them to Mrs. Collins, who, as I hope it of her justice, equity, and regard to Mr. Collins's intentions, will be pleased to cancel my paper."

This appeal (which proved that Des Maizeaux, if he was weak-minded, was not absolutely dishonest) had no effect on Mrs. Collins. The manuscripts were never returned. What their contents were, no one now can inform us. We are justified, however, in supposing

that as those eight volumes were the crowning efforts of a mind which in its youth was brilliant in no common degree, must have been even superior to those books which roused England from its dreamy lethargy, and brought about a revolution in controversy. Whether they touched upon miracles, or the external evidences, or the morals of Christism, is unknown. The curtain was drawn over the scene of demolition. Seven years after this time the controversy was reopened by Mrs. Collins, in the year 1737, on account of a report being current that Mrs. C. had permitted transcripts of those manuscripts to get abroad. The widow wrote some very sharp letters to Des Maizeaux, and he replied in a tone which speaks faithfully of the affection he still bore to Collins's memory. He concludes thus:—"Mr. Collins loved me and esteemed me for my integrity and sincerity, of which he had several proofs. How I have been drawn in to injure him, to forfeit the good opinion he had of me, and which, were he now alive, would deservedly expose me to his utmost contempt, is a grief which I shall carry to the grave. It would be a sort of comfort to me if those who have consented I should be drawn in, were in some measure sensible of the guilt towards so good, kind, generous a man."

Such is an epitome of the secret history of the MSS. of Anthony Collins. If we look at the fate of the MSS. of other Deists, we shall have good reasons for believing that some of the ablest writings, meant to give a posthumous reputation to their authors, have disappeared into the hands of either ignorant or designing persons. Five volumes, at least, of Toland's works, meant for publication, were, by his death, irretrievably lost. Blount's MSS. never appeared. Two volumes of Tindall's were seized by the Bishop of London, and destroyed. Woolston's MSS. met with no better fate. Chubb carefully prepared his works, and published them in his lifetime. Bolingbroke made Mallet his confidant, as Collins did by Des Maizeaux. The name of St. John produced £10,000 to Mallet;

but those works were left with the tacit acknowledgment that the Scotch poet should write a suitable life of the peer. The letter of Mallet to Lord Cornbury can only be compared to an invitation for a bid for the suppression of the "Philosophical Works" of St. John; and if this was not sufficient, we need only instance the apparent solicitation with which he stopped a well-known influential dignitary of the church on the day when the works were to appear, by pulling out his watch, and saying, "My Lord, Christianity will tremble at a quarter to twelve." We may be thankful to the pecuniary poverty of our opponents even for the possession of the first philosophy. Some of Hume's and Gibbon's works have not yet appeared. The MSS. of most of the minor Freethinkers disappeared with their authors. There is no doubt but what Robert Taylor left some valuable writings which cannot be recovered. Such is the feeble chance of great men's writings being published when they are no longer alive.

With regard to the literary claims of Collins. His works are logically composed and explicitly worded. He invariably commences by stating the groundwork of his opponent's theories, and from them deduces a great number of facts and axioms of a contrary character, and upon those builds his whole chain of argument. He is seldom witty—never uses the flowers of rhetoric, combining a most rigid analysis with a synthetic scheme, admitting but of one unswerving end. He was characteristically great in purpose. He avoided carrying forward his arguments beyond the basis of his facts. Whether in treating the tangled intricacies of necessity, or the theological quagmires of prophecy, he invariably explained without confusing, and refuted without involving other subjects than those legitimately belonging to the controversy. His style of writing was serious, plain, and without an undue levity, yet withal perfectly readable. Men studied Collins who shrunk from contact with the lion-hearted Woolston, whose brusque pen too often shocked those

it failed to convince. There was a timidity in many of the letters of Blount, and a craving wish to rely more on the witticisms of Brown, than was to be found in the free and manly spirit of our hero. To the general public, the abstruse speculations of the persecuted Toland were a barrier which his many classical allusions only heightened; and the musical syllables of Shaftesbury, with his style, at once so elevated, so pompous, and so quaint; or the political economic doctrines of Mandeville, all tended to exalt the name of Collins above those of his contemporaries and immediate successors; and posterity cannot fail to place his bust in that historic niche betwixt Hobbes—his master on one hand—and Bolingbroke, his successor, on the other. From the great St. John has descended in the true apostolical descent the mantle of Freethought upon Hume, Gibbon, Paine, Godwin, Carlile, Taylor, and Owen. And amongst this brilliant galaxy of genius, no name is more deserving of respect than that of Anthony Collins. A. C.

BIOGRAPHY

OF

DES CARTES.

Rene des Cartes Duperron, better known as Des Cartes, the father of modern philosophy, was born at La Haye, in Touraine, of Breton parents, near the close of the sixteenth century, at a time when Bacon was like the morning sun, rising to shed new rays of bright light over the then dark world of philosophy. The mother of Des Cartes died while he was but a few days old, and himself a sickly child, he began to take part in the battle of life with but little appearance of ever possessing the capability for action on the minds of his fellows, which he afterwards so fully exercised. Debarred, however, by his physical weakness from many boyish pursuits, he devoted himself to study in his earliest years, and during his youth gained the title of the young philosopher, from his eagerness to learn, and from his earnest endeavors by inquiry and experiment to solve every problem presented to his notice. He was educated in the Jesuits' College of La Fleche; and the monument erected to him at Stockholm informs us, "That having mastered all the learning of the schools, which proved short of his expectations, he betook himself to the army in Germany and Hungary, and there spent his vacant winter hours in comparing the mysteries and phenomena of nature with the laws of mathematics, daring to hope that the one might serve as a key to the other. Quitting, therefore, all other pursuits, he retired to a little village near Eg-

mont, in Holland, where spending twenty-five years in continual reading and meditation, he effected his design."

In his celebrated "Discourse on Method," he says, —"As soon as my age permitted me to leave my preceptors, I entirely gave up the study of letters; and, resolving to seek no other science than that which I could find in myself, or else in the great book of the world, I employed the remainder of my youth in travel —in seeing courts and camps—in frequenting people of diverse humors and conditions—in collecting various experiences; and, above all, in endeavoring to draw some profitable reflection from what I saw. For it seemed to me that I should meet with more truth in the reasonings which each man makes in his own affairs, and which, if wrong, would be speedily punished by failure, than in those reasonings which the philosopher makes in his study upon speculations which produce no effect, and which are of no consequence to him, except perhaps that he will be the more vain of them, the more remote they are from common sense, because he would then have been forced to employ more ingenuity and subtlety to render them plausible."

At the age of thirty-three Des Cartes retired from the world for a period of eight years, and his seclusion was so effectual during that time, that his place of residence was unknown to his friends. He there prepared the "Meditations," and "Discourse on Method," which have since caused so much pen-and-ink warfare amongst those who have aspired to be ranked as philosophical thinkers. He became European in fame; and, invited by Christina of Sweden, he visited her kingdom, but the rudeness of the climate proved too much for his delicate frame, and he died at Stockholm in the year 1650, from inflammation of the lungs, being fifty-four years of age at the time of his death.

Des Cartes was perhaps the most original thinker that France had up to that date produced; and, contemporary with Bacon, he exercised a powerful influence on the progress of thought in Europe; but although a

great thinker, he was not a brave man, and the fear of giving offence to the church and government, has certainly prevented him from making public some of his writings, and perhaps has toned down some of those thoughts which, when first uttered, took a higher flight, and struck full home to the truth itself.

The father and founder of the deductive method, Des Cartes still proudly reigns to the present day, although some of his conclusions have been over-turned, and others of his thinkings have been carried to conclusions which he never dared to dream of. He gave a strong aid to the tendency of advancing civilization, to separate philosophy from theology, thereby striking a blow, slow in its effect, and effectual in its destructive operation, on all priestcraft. In his dedication of the "Meditations," he says,—"I have always thought that the two questions of the existence of God, and the nature of the soul, were the chief of those which ought to be demonstrated rather by philosophy than by theology; for although it is sufficient for us, the faithful, to believe in God, and that the soul does not perish with the body, it does not seem possible ever to persuade the Infidels to any religion, unless we first prove to them these two things by natural reason."

Having relinquished faith, he found that he must choose an entirely new faith in which to march with reason; the old ways were so cumbered with priests and Bibles, that progression would have been impossible. This gave us his method. He wanted a starting point from which to reason, some indisputable fact upon which to found future thinkings.

"He has given us the detailed history of his doubts. He has told us how he found that he could, plausibly enough, doubt of everything except his own existence. He pushed his scepticism to the verge of self-annihilation. There he stopped: there in self, there in his consciousness, he found at last an irresistible fact, an irreversible certainty. Firm ground was discovered. He could doubt the existence of the external world, and treat it as a phantasm. He could doubt the ex-

istence of God, and treat the belief as a superstition. But of the existence of his own thinking, doubting mind, no sort of doubt was possible. He, the doubter, existed if nothing else existed. The existence that was revealed to him in his own consciousness, was the primary fact, the first indubitable certainty. Hence his famous *Cogito ergo Sum:* I think, therefore I am." (*Lewes's Bio. Hist. Phil.*)

Proceeding from the certainty of his existence, Des Cartes endeavors to find other equally certain facts, and for that purpose presents the following doctrine and rules for our guidance:—The basis of all certitude is consciousness, consciousness is the sole foundation of absolute certainty, whatever it distinctly proclaims must be true. The process is, therefore, rendered clear and simple: examine your consciousness—each distinct reply will be a fact.

He tells us further that all clear ideas are true—that whatever is clearly and distinctly conceived is true—and in these lie the vitality of his system, the cause of the truth or error of his thinkings.

The following are the rules he gave us for the detection and separation of true ideas from false, (*i. e.*, imperfect or complex):—

"1. Never to accept anything as true but what is evidently so; to admit nothing but what so clearly and distinctly presents itself as true, that there can be no reason to doubt it.

"2. To divide every question into as many separate parts as possible, that each part being more easily conceived, the whole may be more intelligible.

"3. To conduct the examination with order, beginning by that of objects the most simple, and therefore the easiest to be known, and ascending little by little up to knowledge of the most complex.

"4. To make such exact calculations, and such circumspections as to be confident that nothing essential has been omitted. Consciousness being the basis of all certitude, everything of which you are clearly and distinctly conscious must be true: everything which

you clearly and distinctly conceive, exists, if the idea of it involve existence."

In these four rules we have the essential part of one half of Des Cartes's system, the other, which is equally important, is the attempt to solve metaphysical problems by mathematical aid. To mathematics he had devoted much of his time. He it was who, at the age of twenty three, made the grand discovery of the applicability of algebra to geometry. While deeply engaged in mathematical studies and investigations, he came to the conclusion that mathematics were capable of a still further simplification, and of much more extended application. Impressed with the certainty of the conclusions arrived at by the aid of mathematical reasoning, he began to apply mathematics to metaphysics.

His ambition was to found a system which should be solid and convincing. Having searched for certitude, he had found *its basis* in consciousness; he next wanted a *method*, and hoped he had found it in mathematics. He tells us that "Those long chains of reasoning, all simple and easy, by which geometers used to arrive at their most difficult demonstrations, suggested to him that all things which came within human knowledge, must follow each other in a similar chain; and that provided we abstain from admitting anything as true which is not so, and that we always preserve in them the order necessary to deduce one from the other, there can be none so remote to which we cannot finally attain, nor so obscure but that we may discover them."

Acting out this, he dealt with metaphysics as we should with a problem from Euclid, and expected by rigorous reasoning to discover the truth. He, like Archimedes, had wished for a standing place from which to use the lever, that should overturn the world; but, having a sure standing place in the indubitable fact of his own existence, he did not possess sufficient courage to put forth the mighty power—it was left for

one who came after him to fairly attempt the overthrow of the world of error so long existent.

Cartesianism was sufficiently obnoxious to the divines to provoke their wrath; and yet, from some of its peculiarities, it has found many opponents amongst the philosophical party. The Cartesian philosophy is founded on two great principles, the one metaphysical, the other physical. The metaphysical is Des Cartes's foundation-stone—the "I think, therefore I am." This has been warmly attacked as not being logical. Des Cartes said his existence was a fact—a fact above and beyond all logic; lôgic could neither prove nor disprove it. The *Cogito ergo Sum* was not new itself, but it was the first stone of a new building—the first step in a new road: from this fact Des Cartes tried to reach another, and from that others.

The physical principle is that nothing exists but substance, which he makes of two kinds—the one a substance that thinks, the other a substance extended. Actual thought and actual extension are the essence of substance, so that the thinking substance cannot be without some actual thought, nor can anything be retrenched from the extension of a thing, without taking away so much of its actual substance.

In his physical speculations, Des Cartes has allowed his imagination to run very wild. His famous theory of vortices is an example of this. Assuming extension to be the essence of substance, he denied the possibility of a vacuum by that assumption; for if extension be the essence of substance, wherever extension is, there substance must be. This substance he assumes to have originally been divided into equal angular particles, each endowed with an equal degree of motion; several systems or collections of these particles he holds to have a motion about certain equi-distant points, or centres, and that the particles moving round these composed so many vortices. These angular particles, by their intestine motions, he supposes to become, as it were, ground into a spherical form;

the parts rubbed off are called matter of the first element, while the spherical globules he calls matter of the second element; and since there would be a large quantity of this element, he supposes it to be driven towards the centre of each vortex by the circular motion of the globules, and that there it forms a large spherical body such as the sun. This sun being thus formed, and moving about its own axis with the common matter of the vortex, would necessarily throw out some parts of its matter, through the vacuities of the globules of the second element constituting the vortex; and this especially at such places as are farthest from its poles; receiving, at the same time in, by these poles, as much as it loses in its equatorial parts. And, by these means, it would be able to carry round with it those globules that are nearest, with the greater velocity; and the remoter, with less. And, further: those globules which are nearest the centre of the sun, must be smallest; because, were they greater, or equal, they would, by reason of their velocity, have a greater centrifugal force, and recede from the centre. If it should happen that any of these sun-like bodies, in the centres of the several vortices, should be so incrusted and weakened, as to be carried about in the vortex of the true sun: if it were of less solidity, or had less motion than the globules towards the extremity of the solar vortex, it would descend towards the sun, till it met with globules of the same solidity, and susceptible of the same degree of motion with itself: and thus, being fixed there, it would be for ever after carried about by the motion of the vortex, without either approaching any nearer to, or receding from the sun, and so become a planet. Supposing, then, all this, we are next to imagine that our system was at first divided into several vortices, in the centre of each of which was a lucid spherical body; and that some of these being gradually incrustated, were swallowed up by others which were larger, and more powerful, till at last they were all destroyed and swallowed up by the biggest solar vortex, except some few

which were thrown off in right lines from one vortex to another, and so became comets. It should also be added, that in addition to the two elements mentioned above, those particles which may yet exist, and be only in the course of reduction to their globular form, and still retain their angular proportions, form a third element.

This theory has found many opponents; but in this state of our work we conceive our duty to be that of giving a simple narrative of the philosopher's ideas, rather than a history of the various criticisms upon those ideas, the more especially as our pages scarcely afford room for such a mode of treatment.

Having formed his method, Des Cartes proceeded to apply it. The basis of certitude being consciousness, he interrogated his consciousness, and found that he had an idea of a substance infinite, eternal, immutable, independent, omniscient, omnipotent. This he called an idea of God: he said, "I exist as a miserably imperfect finite being, subject to change—ignorant, incapable of creating anything—I find by my finitude that I am not the infinite; by my liability to change that I am not the immutable; by my ignorance that I am not the omniscient: in short, by my imperfection, that I am not the perfect. Yet an infinite, immutable, omniscient, and perfect being must exist, because infinity, immutability, omniscience, and perfection are applied as correlatives in my ideas of finitude, change, etc. God therefore exists: his existence is clearly proclaimed in my consciousness, and therefore ceases to be a matter of doubt any more than the fact of my own existence. The conception of an infinite being proved his real existence, for if there is not really such a being I must have made the conception; but if I could make it I can also unmake it, which evidently is not true; therefore there must be externally to myself, an archetype from which the conception was derived." * * * * * "All that we clearly and distinctly conceive as contained in anything is true of that thing."

"Now, we conceive clearly and distinctly that the existence of God is contained in the idea we have of him: *ergo*—God exists."—(*Lewes's Bio. Hist. Phil.*)

Des Cartes was of opinion that his demonstrations of the existence of God "equal or even surpass in certitude the demonstrations of geometry." In this opinion we must confess we cannot share. He has already told us that the basis of all certitude is consciousness—that whatever is clearly and distinctly conceived, must be true—that imperfect and complex conceptions are false ones. The first proposition, all must admit, is applicable to themselves. I conceive a fact clearly and distinctly, and, despite all resistance, am compelled to accept that fact; and if that fact be accepted beyond doubt, no higher degree of certainty can be attained, That two and two are four—that I exist—are facts which I never doubt. The *Cogito ergo Sum* is irresistible, because indubitable; but *Cogito ergo Deus est* is a sentence requiring much consideration, and upon the face of it is no syllogism, but, on the contrary, is illogical. If Des Cartes meant "*I*" am conscious that I am not the whole of existence, he would be indisputable; but if he meant that "*I*" can be conscious of an existence entirely distinct, apart from, and external to, that very consciousness, then his whole reasoning from that point appears fallacious.

We use the word "I" as given by Des Cartes. Mill, in his "System of Logic," says, "The ambiguity in this case is in the pronoun I, by which in one place is to be understood *my will:* in another *the laws of my nature.* If the conception, existing as it does in my mind, had no original without, the conclusion would unquestionably follow that '*I*' had made it—that is, that the laws of my nature had spontaneously evolved it; but that my *will* made it would not follow. Now, when Des Cartes afterwards adds that I cannot unmake the conception, he means that I cannot get rid of it by an act of my will, which is true; but is not the proposition required. That what some of the laws of my nature have produced, other laws, or those same laws

in other circumstances, might not subsequently efface, he would have found it difficult to establish."

Treating the existence of God as demonstrated from the *a priori* idea of perfection and infinity, and by the clearness of his idea of God's existence, Des Cartes then proceeds to deal with the distinction between body and soul. To prove this distinction was to him an easy matter. The fundamental and essential attribute of substance must be extension, because we can denude substance of every quality but that of extension; this we cannot touch without at the same time affecting the substance. The fundamental attribute of mind is thought; it is in the act of thinking that the consciousness of existence is revealed; to be without thought would be to be without consciousness.

Des Cartes has given us, among others, the axiom "That two substances are really distinct when their ideas are complete, and no way imply each other. The idea of extension is complete and distinct from the idea of thought, which latter is also clear and distinct by itself. It follows, therefore, that substance and mind are distinct in essence."

Des Cartes has, from the vagueness of some of his statements, subjected himself to the charge of asserting the existence of innate ideas, and the following quotations will speak for themselves on the subject:— "When I said that the idea of God is innate in us, I never meant more than this, that Nature has endowed us with a faculty by which we may know God; but I have never either said or thought that such ideas had an actual existence, or even that they were a species distinct from the faculty of thinking.....Although the idea of God is so imprinted on our minds, that every person has within him the faculty of knowing him, it does not follow that there may not have been various individuals who have passed through life without ever making this idea a distinct object of apprehension; and, in truth, they who think they have an idea of a plurality of Gods, have no idea of God whatever." This seems explicit as negativing the charge of holding the

doctrine of innate ideas; but in the *Edinburgh Review* several passages are given, amongst which is the following:—"By the word idea I understand all that can be in our thoughts; and I distinguish three sorts of ideas—adventitious, like the common idea of the sun, framed by the mind, such as that which astronomical reasoning gives of the sun; and innate, as the idea of God, mind, body, a triangle, and generally all those which represent true, immutable, and eternal essences." With regard to these rather opposite statements, Lewes says, "If Des Cartes, when pressed by objections, gave different explanations, we must only set it down to a want of a steady conception of the vital importance of innate ideas to his system. The fact remains that innate ideas form the necessary groundwork of the Cartesian doctrine.....The radical error of all ontological speculation lies in the assumption that we have ideas independent of experience; because experience can only tell us of ourselves or of phenomena; of noumena it can tell us nothing..... The fundamental question, then, of modern philosophy is this—Have we any ideas independent of experience?"

Des Cartes's disciples are of two classes, the "mathematical cultivators of physic," and the "deductive cultivators of philosophy." The first class of disciples are far in advance of their chief, and can only be considered as having received an impulse in a true direction. The second class unhesitatingly accepted his principles, and continued his thinking, although they developed his system in a different manner, and arrived at stronger conclusions than Des Cartes's courage would have supported. Some of the physical speculations of Des Cartes have been much ridiculed by subsequent writers; but many reasons may be urged, not only against that ridicule, but also against the more moderate censure which several able critics have dealt out against the intellectual character of Des Cartes. It should be remembered that the theories of all his predecessors were mere conjectural speculations respect-

ing the places and paths of celestial bodies, etc. Innumerable hypotheses had been formed and found useless; and we ought rather to look to what Des Cartes did accomplish under the many difficulties of his position, in respect to the then state of scientific knowledge, than to judge harshly of those speculations, which, though attended with no beneficial result to humanity at large, were doubtless well intended by their author. He was the first man who brought optical science under the command of mathematics, by the discovery of the law of refraction of the ordinary ray through diaphanous bodies; and probably there is scarcely a name on record, the bearer of which has given a greater impulse to mathematical and philosophical inquiry than Des Cartes. Although, as a mathematician, he published but little, yet in every subject which he has treated he has opened, not only a new field for investigation, but also a new road for the investigators to proceed by. His discovery of the simple application of the notation of indices to algebraical powers, has totally remodelled the whole science of algebra. His conception of expressing the fundamental property of curve lines and curve surfaces by equations between the co-ordinates has led to an almost total supersedence of the geometry of the ancients. Contemporary with Galileo, and with a knowledge of the persecution to which that father of physics was being subjected by the Church, we are tempted to express our surprise that Des Cartes did not extend the right hand of fellowship, help, and sympathy to his brother philosopher; but it is, nevertheless, the fact, that either jealous of the fame of Galileo (as some have alleged,) or from a fear of being involved in the same persecutions, Des Cartes abstained from visiting the astronomer, although travelling for some time near his place of abode in Italy. Lewes, in his "Life of Des Cartes," says, "Des Cartes was a great thinker; but having said this we have almost exhausted the praise we can bestow on him as a man. In disposition he was timid to servility. While promulgating the proofs of the ex-

istence of the Deity, he was in evident alarm lest the Church should see something objectionable in them. He had also written an astronomical treatise; but hearing of the fate of Galileo he refrained from publishing, and always used some chicanery in speaking of the world's movement. He was not a brave man; he was also not an affectionate one. There was in him a deficiency of all finer feelings. But he was even-tempered, and studious of not giving offence."

We are tempted, after a careful perusal of the life and writings of Des Cartes and his contemporaries, to be of opinion that he was a man who wished to be considered the chief thinker of his day, and who shunned and rejected the offers of friendship from other philosophers, lest they, by being associated with him, should jointly wear laurels which he was cultivating solely to form a crown for himself. Despite all, his brow still bears a crown, and his fame has a freshness that we might all be justly proud of, if appertaining to ourselves.

We trust that in these few pages we have succeeded in presenting Des Cartes, to such of our readers who were unacquainted with his writings, sufficiently well to enable them to appreciate him, and to induce them to search further; and at the same time we hope that those better acquainted with him will not blame as for the omission of much which they may consider more important than the matter which appears in this little tract. We have endeavored to picture Des Cartes as the founder of the deductive method, as having the foundation-stone of all his reasoning in his consciousness.

"I."

BIOGRAPHY

OF

M. DE VOLTAIRE.

François Marie Arouet, better known by the name of Voltaire, was born at Chatenay, on the 20th of February, 1694. By assuming the name of Voltaire, young Arouet followed the custom, at that time generally practiced by the rich citizens and younger sons, who, leaving the family name to the heir, assumed that of a fief, or perhaps of a country house. The father of M. de Voltaire was treasurer to the Chamber of Accounts, and his mother, Margaret d'Aumart, was of a noble family of Poitou. The fortune which the father enjoyed, enabled him to bestow a first-class education upon the young Arouet, who was sent to the Jesuits' College, where the sons of the nobility received their education. While at school, Voltaire began to write poetry, and gave signs of a remarkable genius. His tutors, Fathers Poree and Jay, from the boldness and independence of his mind, predicted that he would become the apostle of Deism in France. This prediction he fulfilled. "Voltaire was," says Lord Brougham, "through his whole life, a sincere believer in the existence and attributes of the Deity. He was a firm and decided, and an openly declared unbeliever in Christianity; but he was, without any hesitation or any intermission, a Theist." His open declaration of disbelief in the inspiration of the Bible, and his total rejection of the dogmas of Christianity, laid him open to the malignant attacks and misrepresentations of the priest-

hood and the bigots of Europe; and so strong were they, that his life was continually in danger. Lord Brougham, in his "Men of Letters of the Time of George III.," says:—"Voltaire's name is so intimately connected in the minds of all men with Infidelity, in the minds of most men with irreligion, and, in the minds of all who are not well-informed, *with these qualities alone*, that whoever undertakes to write his life and examine his claims to the vast reputation which all the hostile feelings excited by him against himself have never been able to destroy, or even materially to impair, has to labor under a great load of prejudice, and can hardly expect, by any detail of particulars, to obtain for his subject even common justice at the hands of the general reader."

Voltaire was born in a corrupt age, and in a capital where it was fashionable to be immoral. When he left College, he was introduced by his own godfather, the Abbe de Chateauneuf, to the notorious Ninon de l'Enclos, who, at her death, left him by will two thousand livres to purchase books. In estimating the character of Voltaire, a due consideration must be had for the period in which he lived, and of the nature of the society amidst which he was reared. He lived twenty years under the reign of Louis XIV., and during the whole of the reign of the infamous Louis XV., when kings, courtiers, and priests set the example of the grossest immorality. It was then, as Voltaire said, "that to make the smallest fortune, it was better to say four words to the mistress of a king, than to write a hundred volumes."

Voltaire's life, from his youth upwards, was a stormy one. After he left College, his father, finding him persist in writing poetry, and living at large, forbade him his house. He insisted upon his son binding himself to an attorney. But his restless disposition quite unfitted him for regular employment, and he soon quitted the profession. He early made the acquaintance of the most celebrated men of his time, but his genius, his wit, and his sarcasm, soon raised up numerous ene-

mies. At the age of twenty-two, he was accused of having written a satire upon Louis XIV., who was just dead, and was thrown into the Bastile. But he was not cast down. It was here that he sketched his poem of the "League," corrected his tragedy of "Œdipus," and wrote some merry verses on the misfortune of being a prisoner. The Regent, Duke of Orleans, being informed of his innocence, restored him to freedom, and granted him a recompense. "I thank your royal highness," said Voltaire, "for having provided me with food; but I hope you will not hereafter trouble yourself concerning my lodging."

Voltaire, with his activity of mind, and living to so great an age, must necessarily produce many works. They are voluminous, consisting of history, poetry, and philosophy. His dramatic pieces are numerous, many of which are considered second only to Shakspeare's. "Œdipus," "Zadig," "Ingenu," "Zaire," "Henriade," "Irene," "Tancred," "Mahomet," "Merope," "Saul," "Alzire," "Le Fanatisme," "Mariamne," "Gaston de Foix," "Enfant Prodigue," "Pucelle d'Orleans," an essay on "Fire," the "Elements," "History of Charles XII.," "Lectures on Man," "Letters on England," "Memoirs," "Voyage of Sacramentado," "Micromegas," "Maid of Orleans," "Brutus," "Adelaide," "Death of Cæsar," "Temple of Taste," "Essay on the Manners and Spirit of Nations," "An Examination of the Holy Scriptures," and the "Philosophical Dictionary," are works that emanated from the active brain of this wit, poet, satirist, and philosopher.

In 1722, while at Brussels, Voltaire met Jean Baptiste Rousseau, whose misfortunes he deplored, and whose poetic talents he esteemed. Voltaire read some of his poems to Rousseau, and he in return read to Voltaire his "Ode addressed to Posterity," which Voltaire, it is asserted, told him would never arrive at the place to which it was addressed. The two poets parted irreconcileable foes.

In 1725, Voltaire was again shut up in the Bastile, through attempting to revenge an insult inflicted upon

him by a courtier. At the end of six months he was released, but ordered to quit Paris. He sought refuge in England, in 1726. He was the guest in that country of a Mr. Falconer, of Wandsworth, whose hospitality he remembered with affection so long as life lasted. Voltaire was known to most of the wits and Freethinkers of that day in England. At this early age he was at war with Christianity. "His visit to England," says Lamartine, "gave assurance and gravity to his incredulity; for in France he had only known libertines—in England he knew philosophers." He went to visit Congreve, who had the affectation to tell him that he (Congreve) valued himself, not on his authorship, but as a man of the world. To which Voltaire administered a just rebuke by saying, "I should never have come so far to see a gentleman!"

Voltaire soon acquired an ample fortune, much of which was expended in aiding men of letters, and in encouraging such youth as he thought discovered the seeds of genius. The use he made of riches might prevail on envy itself to pardon him their acquirement. His pen and his purse were ever at the service of the oppressed. Calas, an infirm old man, living at Toulouse, was accused of having hung his son, to prevent his becoming a Catholic. The Catholic population became inflamed, and the young man was declared to be a martyr. The father was condemned to the torture and the wheel, and died protesting his innocence. The family of Calas was ruined and disgraced. Voltaire, assuring himself of the innocence of the old man, determined to obtain justice for the family. To this end he labored incessantly for three years. In all this time, he said, a smile did not escape him for which he did not reproach himself as for a crime. His efforts were successful. Nor was this the only cause in which he was engaged on the side of the weak and the wronged against the powerful and the persecuting. His whole life, though maligned as an Infidel and a scoffer, was one long act of benevolence. On learning that a young niece of Corneille languished in a condi-

tion unworthy of his name, Voltaire, in the most delicate manner, invited her to his house, and she there received an education suitable to the rank that her birth had marked for her in society. "It is the duty of a soldier," he said "to succor the niece of his general."

Voltaire lived for a time at the Court of Frederick the Great of Prussia, and for many years carried on a correspondence with that monarch. He quarrelled with the king, and left the court in a passion. An emissary was despatched to him to request an apology, who said he was to carry back to the king his answer *verbatim*. Voltaire told him that "the king might go to the devil!" On being asked if that was the message he meant to be delivered? "Yes," he answered, "and add to it that I told you that you might go there with him." In his "Memoirs," he has drawn a most amusing picture of his Prussian Majesty. He also says, "Priests never entered the palace; and, in a word, Frederick lived without religion, without a council, and without a court."

Wearied with his rambling and unsettled mode of living, Voltaire bought an estate at Ferney, in the Pays des Gex, where he spent the last twenty years of his life. He rebuilt the house, laid out gardens, kept a good table, and had crowds of visitors from all parts of Europe. Removed from whatever could excite momentary or personal passion, he yielded to his zeal for the destruction of prejudice, which was the most powerful and active of all the sensations he felt. This peaceful life, seldom disturbed except by the threats of persecution rather than persecution itself, was adorned by those acts of enlightened and bold benevolence, which, while they relieve the sufferings of certain individuals, are of any service to the whole human race. He was known to Europe as the "Sage of Ferney." After an absence of more than twenty-seven years, he re-visited Paris in the beginning of 1778. He had just finished his play of "Irene," and was anxious to see it performed. His visit was an ovation. He had out-

L. of C.

lived all his enemies. After having been the object of unrelenting persecution by the priests and corrupt courtiers of France for a period of more than fifty years, he yet lived to see the day when "all that was most eminent in station or most distinguished in talents—all that most shone in society, or most ruled in court, seemed to bend before him." At this period he, for the first time, saw Benjamin Franklin. They embraced each other in the midst of public acclamations, and it was said to be Solon who embraced Sophocles.

Voltaire did not survive his triumph long. His unwearied activity induced him, at his great age, to commence a "Dictionary" upon a novel plan, which he prevailed upon the French Academy to take up. These labors brought on spitting of blood, followed by sleeplessness, to obviate which he took opium in considerable quantities. Condorcet says that the servant mistook one of the doses, which threw him into a state of lethargy, from which he never rallied. He lingered for some time, but at length expired on the 30th of May, 1778, in his eighty-fifth year.

It was the custom in those days, and prevails to a considerable extent even in our own time, for the religious world to fabricate "horrible death-beds" of all Freethinkers. Voltaire's last moments were distorted by his enemies after the approved fashion; and notwithstanding the most unqualified denial on the part of Dr. Burard and others, who were present at his death, there are many who believe these falsehoods at this moment. Voltaire died in peace, with the exception of the petty annoyances to which he was subjected by the priests. The philosophers, too, who wished that no public stigma should be cast upon him by the refusal of Christian burial, persuaded him to undergo confession and absolution. This, to oblige his friends, he submitted to; but when the cure one day drew him from his lethargy by shouting into his ear, "Do you believe the divinity of Jesus Christ?" Voltaire exclaimed, "In the name of God, Sir, speak to me no

more of that man, but let me die in peace!" This put to flight all doubts of the pious, and the certificate of burial was refused. But the prohibition of the Bishop of Troyes came too late. Voltaire was buried at the monastery of Scellieres, in Champagne, of which his nephew was abbot. Afterwards, during the first French Revolution, the body, at the request of the citizens, was removed to Paris, and buried in the Pantheon. Lamartine, in his "History of the Girondists," p. 149, speaking of the ceremony, says :—

"On the 11th of July, the departmental and municipal authorities went in state to the barrier of Charenton, to receive the mortal remains of Voltaire, which were placed on the ancient site of the Bastile, like a conqueror on his trophies; his coffin was exposed to public gaze, and a pedestal was formed for it of stones torn from the foundations of this ancient stronghold of tyranny; and thus Voltaire when dead triumphed over those stones which had triumphed over and confined him when living. On one of the blocks was the inscription, '*Receive on this spot, where despotism once fettered thee, the honors decreed to thee by thy country*'..... The coffin of Voltaire was deposited between those of Descartes and Mirabeau—the spot predestined for this intermediary genius between philosophy and policy, between the design and the execution."

The aim of Voltaire's life was the destruction of prejudice and the establishment of Reason. "Deists," said W. J. Fox in 1819, "have done much for toleration and religious liberty. It may be doubted if there be a country in Europe, where that cause has not been advanced by the writings of Voltaire." In the Preface and Conclusion to the "Examination of the Scriptures," Voltaire says :—

"The ambition of domineering over the mind, is one of the strongest passions. A theologian, a missionary, or a partisan of any description, is always for conquering like a prince, and there are many more sects than there are sovereigns in the world. To whose guidance

shall I submit my mind? Must I be a Christian, because I happened to be born in London, or in Madrid? Must I be a Mussulman, because I was born in Turkey? As it is myself alone that I ought to consult, the choice of a religion is my greatest interest. One man adores God by Mahomet, another by the Grand Lama, and another by the Pope. Weak and foolish men! adore God by your own reason.....I have learnt that a French Vicar, of the name of John Meslier, who died a short time since, prayed on his death-bed that God would forgive him for having taught Christianity. I have seen a Vicar in Dorsetshire relinquish a living of £200 a-year, and confess to his parishioners that his conscience would not permit him to preach the shocking absurdities of the Christians. But neither the will nor the testament of John Meslier, nor the declaration of this worthy Vicar, are what I consider decisive proofs. Uriel Acosta, a Jew, publicly renounced the Old Testament in Amsterdam; however, I pay no more attention to the Jew Acosta than to Parson Meslier. I will read the arguments on both sides of the trial, with careful attention, not suffering the lawyers to tamper with me; but will weigh, before God, the reasons of both parties, and decide according to my conscience. I commence by being my own instructor.....I conclude, that every sensible man, every honest man, ought to hold Christianity in abhorrence. 'The great name of Theist, which we can never sufficiently revere,' is the only name we ought to adopt. The only gospel we should read is the grand book of nature, written with God's own hand, and stamped with his own seal. The only religion we ought to profess is, 'to adore God, and act like honest men.' It would be as impossible for this simple and eternal religion to produce evil, as it would be impossible for Christian fanaticism not to produce it.....But what shall we substitute in its place? say you. What? A ferocious animal has sucked the blood of my relatives. I tell you to rid yourselves of this beast, and you ask me what you shall put in its place! Is it you that put this

question to me? Then you are a hundred times more odious than the Pagan Pontiffs, who permitted themselves to enjoy tranquillity among their ceremonies and sacrifices, who did not attempt to enslave the mind by dogmas, who never disputed the powers of the magistrates, and who introduced no discord among mankind. You have the face to ask what you must substitute in the place of your fables!"

As will be seen by his exclamation on his death-bed, Voltaire was no believer in the *divinity* of Christ. He disbelieved the Bible *in toto*. The accounts of the doings of the Jewish kings, as represented in the Old Testament, he has unsparingly ridiculed in the drama of "Saul." The quiet irony of the following will be easily appreciated:—

Divinity of Jesus.—The Socinians, who are regarded as blasphemers, do not recognize the divinity of Jesus Christ. They dare to pretend, with the philosophers of antiquity, with the Jews, the Mahometans, and most other nations, that the idea of a god-man is monstrous; that the distance from God to man is infinite; and that it is impossible for a perishable body to be infinite, immense, or eternal. They have the confidence to quote Eusebius, Bishop of Cæsarea, in their favor, who, in his "Ecclesiastical History," book i., chap. 9, declares that it is absurd to imagine the uncreated and unchangeable nature of Almighty God taking the form of a man. They cite the fathers of the church, Justin and Tertullian, who have said the same thing: Justin in his "Diologue with Triphonius;" and Tertullian, in his "Discourse against Praxeas." They quote St. Paul, who never calls Jesus Christ, God, and who calls him man very often. They carry their audacity so far as to affirm, that the Christians passed three entire ages in forming by degrees the apotheosis of Jesus; and that they only raised this astonishing edifice by the example of the Pagans, who had deified mortals. At first, according to them, Jesus was only regarded as a man inspired by God, and then as a creature more perfect than others. They gave him

some time after, a place above the angels, as St. Paul tells us. Every day added to his greatness. He in time became an emanation, proceeding from God. This was not enough; he was even born before time. At last he was God consubstantial with God. Crellius, Voquelsius, Natalis, Alexander, and Hornbeck, have supported all these blasphemies by arguments, which astonish the wise and mislead the weak. Above all, Faustus Socinus spread the seeds of this doctrine in Europe; and at the end of the sixteenth century, a new species of Christianity was established. There were already more than three hundred.—[Philosophical Dictionary, vol. i. p. 405.

Though a firm and consistent believer in the being of a God, Voltaire was no bigot. The calm reasoning of the following passage does honor to its author:—

Faith.—Divine faith, about which so much has been written, is evidently nothing more than incredulity brought under subjection; for we certainly have no other faculty than the understanding by which we can believe; and the objects of faith are not those of the understanding. We can believe only what appears to be true; and nothing can appear true but in one of the three following ways—by intuition or feeling, as I exist, I see the sun; or by an accumulation of probability amounting to certainty, as there is a city called Constantinople; or by positive demonstration, as triangles of the same base and height are equal. Faith, therefore, being nothing at all of this description, can no more be a belief, a persuasion, than it can be yellow or red. It can be nothing but the annihilation of reason, a silence of adoration at the contemplation of things absolutely incomprehensible. Thus, speaking philosophically, no person believes the Trinity; no person believes that the same body can be in a thousand places at once; and he who says, I believe these mysteries, will see, beyond the possibility of a doubt, if he reflects for a moment on what passes in his mind, that these words mean no more than, I respect thee, mysteries; I submit myself to those who announce

them. For they agree with me, that my reason, or their own reason, believe them not; but it is clear that if my *reason* is not persuaded, *I* am not persuaded. I and my reason cannot possibly be two different beings. It is an absolute contradiction that I should receive that as true which my understanding rejects as false. Faith, therefore, is nothing but submissive or deferential incredulity. But why should this submission be exercised when my understanding invincibly recoils? The reason, we well know, is, that my understanding has been persuaded that the mysteries of my faith are laid down by God himself. All, then, that I can do, as a reasonable being, is to be silent and adore. That is what divines call external faith; and this faith neither is, nor can be, anything more than respect for things incomprehensible, in consequence of the reliance I place on those who teach them. If God himself were to say to me, "Thought is of an olive colour;" "the square of a certain number is bitter;" I should certainly understand nothing at all from these words. I could not adopt them either as true or false. But I will repeat them, if he commands me to do it; and I will make others repeat them at the risk of my life. This is faith; it is nothing more than obedience. In order to obtain a foundation then for this obedience, it is merely necessary to examine the books which require it. Our understanding, therefore, should investigate the books of the Old and New Testament, just as it would Plutarch or Livy; and if it finds in them incontestable and decisive evidences—evidences obvious to all minds, and such as would be admitted by men of all nations—that God himself is their author, then it is our incumbent duty to subject our understanding to the yoke of faith.—[Ibid, p. 474.

Prayer.—We know of no religion without prayers; even the Jews had them, although there was no public form of prayer among them before the time when they sang their canticles in their synagogues, which did not take place until a late period. The people of all nations, whether actuated by desires or fears, have

invoked the assistance of the Divinity. Philosophers, however, more respectful to the Supreme Being, and rising more above human weakness, have been habituated to substitute, for prayer, resignation. This, in fact, is all that appears proper and suitable between creature and Creator. But philosophy is not adapted to the great mass of mankind; it soars too highly above the vulgar; it speaks a language they are unable to comprehend. To propose philosophy to them, would be just as weak as to propose the study of conic sections to peasants or fish-women. Among philosophers themselves, I know of no one besides Maximus Tyrius who has treated of this subject. The following is the substance of his ideas upon it:—The designs of God exist from all eternity. If the object prayed for be conformable to his immutable will, it must be perfectly useless to request of him the very thing which he has determined to do. If he is prayed to for the reverse of what he has determined to do, he is prayed to be weak, fickle, and inconstant; such a prayer implies that this is thought to be his character, and is nothing better than ridicule or mockery of him. You either request of him what is just and right, in which case he ought to do it, and it will be actually done without any solicitation, which in fact, shows distrust of his rectitude; or what you request is unjust, and then you insult him. You are either worthy or unworthy of the favour you implore; if worthy, he knows it better than you do yourself; if unworthy, you commit an additional crime in requesting that which you do not merit. In a word, we offer up prayers to God only because we have made him after our own image. We treat him like a pacha, or a sultan, who is capable of being exasperated and appeased. In short, all nations pray to God; the sage is resigned, and obeys him. Let us pray with the people, and let us be resigned to him with the sage. We have already spoken of the public prayer of many nations, and of those of the Jews.—That people have had one from time immemorial, which deserves all our attention, from its resemblance

to the prayer taught us by Jesus Christ himself. This Jewish prayer is called the Kadish, and begins with these words :—" Oh ! God ! let thy name be magnified and sanctified ; make thy kingdom to prevail ; let redemption flourish, and the Messiah come quickly ! " As this Kadish is recited in Chaldee, it has induced the belief, that it is as ancient as the captivity, and that it was at that period that the Jews began to hope for a Messiah, a Liberator, or Redeemer, whom they have since prayed for in the seasons of their calamities. —[Ibid, vol. ii., p. 350.

Voltaire's contempt for the Bible led him to use the language of " holy writ " in the coarsest jokes ; though, perhaps, with such material, the jokes could not well be otherwise than *coarse.* The following letter he addressed to M. Baillon, Intendant of Lyons, on account of a poor Jew taken up for uttering contraband goods. This kind of writing obtained for Voltaire the title of " scoffer : "—

" Blessings on the Old Testament, which gives me this opportunity of telling you, that amongst all those who adore the New, there is not one more devoted to your service than myself, a certain descendant of Jacob, a pedlar, as all these gentlemen are, whilst he is waiting for the Messiah, waits also for your protection, which at present he has the most need of. Some honest men, of the first trade of St. Matthew, who gather together the Jews and Christians at the gates of your city, have seized something in the breeches pocket of an Israelitish page, belonging to the poor circumcised, who has the honour to tender you this billet, with all proper submission and humility. I beg leave to join my Amen to his at a venture. I but just saw you at Paris as Moses saw the Deity, and should be very happy in seeing you face to face. If the word face can any ways be applied to me, preserve some remembrance of your old eternal humble servant, who loves you with that chaste and tender affection, which the religious Solomon had for his three hundred Shunamites."

Voltaire's prodigious wit and sarcasm were so exuberant, that he expended them upon all people and all subjects—even *himself*, when occasion admitted of it, In one of his letters, addressed to the Elector Palatine, Sept. 9, 1761, he gives this excuse for not attending at the court :—

"I should really make an excellent figure amidst the rejoicings of your electoral highness. It was only, I think, in the Egypt of antiquity that *skeletons* were admitted to a place in their festivals. To say the truth, my lord, it is all over with me. I laugh indeed sometimes; but am forced to acknowledge that pain is an evil. It is a comfort to me that your highness is well; but I am fitter for an extreme unction than a baptism. May the peace serve for an era to mark the prince's birth; and may his august father preserve his regard for, and accept the profound respects of his little Swiss, VOLTAIRE."

In politics, Voltaire was not very far advanced. He seems to have had no idea of a nation without a *king*. A monarch who should not commit any very flagrant acts of tyranny, was as much as he appeared to desire. He evidently did not foresee the great revolution that was so soon to burst forth in France, but that he mainly contributed by his writings to bring it about, there can be no doubt. His influence upon the men of his time, both in France and Europe, is ably depicted by such writers as Lamartine, Quinet, and Brougham. Voltaire's was the one great mind of his day, whose thoughts engrossed the attention of all men. He was great by his learning, his genius, and his benevolence —and this man was the champion of Reason, the enemy of superstition, and an "Infidel."

Quinet, in his lectures on the Romish Church, says :—

"I watch, for forty years, the reign of one man who is in himself the spiritual director, not of his country, but of his age. From the corner of his chamber, he governs the kingdom of spirits; intellects are every day regulated by his; one word written by his hand travers-

es Europe. Princes love, and kings fear him; they think they are not sure of their kingdom if he be not with them. Whole nations, on their side, adopt without discussion, and emulously repeat, every syllable that falls from his pen. Who exercises this incredible power, which had been nowhere seen since the middle ages? Is he another Gregory VII.? Is he a Pope?—No—Voltaire."

We conclude our sketch with the eloquent words of Lamartine, who describes, in a few sentences, the inestimable services rendered to Freethought and intellectual progression by the Sage of Ferney:—

"If we judge of men by what they have *done*, then Voltaire is incontestably the greatest writer of modern Europe. No one has caused, through the powerful influence of his genius alone, and the perseverance of his will, so great a commotion in the minds of men; his pen aroused a world, and has shaken a far mightier empire than that of Charlemagne, the European empire of a theocracy. His genius was not *force* but *light*. Heaven had destined him not to destroy but to illuminate, and wherever he trod, light followed him, for Reason (which is *light*) had destined him to be first her poet, then her apostle, and lastly her idol." J. W.

BIOGRAPHY

OF

JOHN TOLAND.

In the Augustan age of Freethought, no British writer achieved more renown, or performed greater services to Biblical criticism, than John Toland. His life would fill a volume, while his works would stock a library. True to his convictions, he spoke like a man, and died as a hero. His books are strewn with classical illustrations, and deal so with abstract (and to us) uninteresting arguments, that we shall simply give a brief sketch of the life of this extraordinary man. He gave his thoughts to the scholars at the same time that Woolston addressed the people; conjointly they revolutionized opinion in our favor.

Toland was born on November 30, 1670, at Londonderry, in Ireland. It is said his registered name was "James Junius," another account says "Julius Cæsar;" but we have been unable to find any authentic date for either supposition, and whatever his name was registered, we have indisputable evidence that he was always called John Toland. We have less proof as to his parentage; some writers allege that he was the natural son of a Catholic priest; while others contend that he was born of a family once affluent, but at the time of his birth in very reduced circumstances. Whether this was the case or the reverse, young Toland received a liberal education. He was early taught the classics, studied in the Glasgow College; and on leaving Glasgow he was presented with letters of credit

from the city magistrates, highly flattering to him as a man and a scholar. He received the diploma of A.M. at Edinburgh, the day previous to the Battle of the Boyne. He finished his studies at the University of Leyden.

The first work of importance which Toland published, was a "Life of John Milton, containing besides the History of his Works, several extraordinary Characters of Men and Books, Sects, Parties, and Opinions." This work being violently opposed, was speedily followed by "Amyntor," or a defence of Milton's life, containing—1. A general apology for all writings of that kind. 2. A catalogue of books, attributed in the primitive times to Jesus Christ, his apostles, and other eminent persons, with several important remarks relating to the canon of Scripture. 3. A complete history of the Book, entitled "Icon Basilike, proving Dr. Gauden, and not King Charles I., to be the author of it," etc. Those works established the fame of Toland, as well as formed the groundwork for persecution, which hunted him even on his death-bed. In the year 1699 Toland collected, edited, and published, from the original MSS., the whole of the works of James Harrington, prefixed by a memoir of this extraordinary theorist. In his preface he says that he composed this work "in his beloved retirement at Cannon, near Bansted, in Surrey." From this, along with other excerpts scattered through his works, we cannot but infer that at the outset of his career he possessed a moderate competence of worldly wealth and social position. He says his idea was "to transmit to posterity the worthy memory of James Harrington, a bright ornament to useful learning, a hearty lover of his native country, and a generous benefactor to the whole world; a person who obscured the false lustre of our modern politicians, and equalled (if not exceeded) all the ancient legislators." This to us is an interesting fact, for it shows the early unanimity which existed between the earlier reformers in politics and those of theology. The supervision of the "Oceana" by Toland, bears the

same inferential analogy, as if Mr. Holyoake were the biographer and publisher of the "New Moral World" and its author. In 1700, he published "Anglia Libera; or, the Limitation and Succession of the Crown of England, explained and Asserted," etc. This book is concluded by the following apothegm, assuring the people "that no king can ever be so good as one of their own making, as there is no title equal to their approbation, which is the only divine right of all magistracy, for the voice of the people is the voice of God." In 1702, Toland spent some time in Germany, publishing a series of Letters to a friend in Holland, entitled "Some Remarks on the King of Prussia's Country, on his Government, his Court, and his numerous Palaces." About this time appeared "The Art of Governing by Parties;" this was always a favorite subject of the old Freethinkers, and is still further elucidated by Bolingbroke.

In 1707 he published a large treatise in English and Latin, as "A Philippic Oration, to incite the English against the French," a work I have never seen. We now return to an earlier date, and shall trace the use of his theological works. The first of note (1696) was "Christianity not Mysterious"—showing that there is nothing in the gospel contrary to reason, nor above it; and that no Christian doctrine can be properly called a mystery. As soon as this book was issued from the press, it was attacked with unmanly virulence. One man (Peter Brown) who was more disgustingly opposed to Toland than the rest, was made a bishop; and by far the greatest majority amongst the Anglican clergy, who attacked him, were all rewarded by honors and preferment. The author was accused of making himself a new Heresiarch; that there was a tradition amongst the Irish that he was to be a second Cromwell, and that Toland himself boasted that before he was forty years old, he would be governor over a greater country than Cromwell; and that he would be the head over a new religion before he was thirty. One of his opponents publicly stigmatises him as saying that he

(Toland) himself designed to be as great an impostor as Mahomet, and more powerful than the Pope; while the Puritans denounced him as a disguised Jesuit, and the Papists as a rancorous Nonconformist. To complete the comedy, the Irish Parliament condemned his book to be publicly burnt, some ecclesiastics loudly murmuring that the author should be burned with it; others, more moderate, were anxious that Toland should burn it himself, while at last they came to an unanimous resolution to burn it in front of the threshhold of his door, so that when the author appeared, he would be obliged to step over the ashes of his own book, which was accordingly done amid the brutal cheers of an ignorant and infuriated populace.

As a proof of the high esteem in which Toland was held by the *few* able and liberal men of the day, we extract the following account from the correspondence of John Locke and Mr. Molyneux.* The latter gentleman, writing to the former, says:—"I am told the author of 'Christianity not Mysterious' is of this country, and that his name is Toland, but he is a stranger in these parts, I believe. If he belongs to this kingdom, he has been a good while out of it, or I have not heard of any such *remarkable* man amongst us." In another letter, the same writer says:—"In my last to you, there was a passage relating to the author of 'Christianity not Mysterious.' I did not then think he was so near me as within the bounds of this city; but I find since that he has come over hither, and have had the favor of a visit from him. I now understand that he was born in this country, but that he has been a great while abroad, and his education was for some time under the great Le Clerc. But that for which I can never honor him too much, is his acquaintance and friendship to you, and the respect which upon all occasions he expresses for you. I propose a great deal of satisfaction in his conversation. I take him to be a candid Freethinker, and a good scholar. But there is

* Locke's posthumous works. Edited by Die Maizeaus.

a violent sort of spirit which reigns here, which begins already to show itself against him, and I believe will increase daily, for I find the clergy alarmed to a mighty degree against him. And last Sunday he had his welcome to this city, by hearing himself harangued against out of the pulpit, by a prelate of this country."

Mr. Locke, in return, says :—"For the man I wish very well, and could give you, if it needed, proofs that I do so. And therefore I desire you to be kind to him; but I must leave it to your prudence in what way and how far. For it will be his fault alone, if he proves not a very valuable man, and have not you for his friend." To this, Mr. Molyneux writes to Mr. Locke —"I look upon Mr. Toland as a very ingenuous man, and I should be very glad of any opportunity of doing him service, to which I think myself indispensably bound by your recommendation." Soon after this, Mr. Molyneux describes the treatment Toland underwent in Ireland. In another letter to Locke—"He has had his opposers here, as you will find by a book which I have sent to you. The author (Peter Brown) is my acquaintance, but two things I shall never forgive in his book: the one is the foul language and opprobrious names he gives Mr. Toland; the other is upon several occasions, calling in the aid of the civil magistrate, and delivering up Mr. Toland to secular punishment. This, indeed, is a killing argument, but some will be apt to say, that where the strength of his reason failed him, then he flies to the strength of his sword; and this reminds me of a business that was very surprising to many, the presentment of some pernicious books and their authors by the grand jury of Middlesex. This is looked upon as a matter of dangerous consequence, to make our civil courts judges of religious doctrines; and no one knows upon a change of affairs whose turn it may be next to be condemned. But the example has been followed in this country, and Mr. Toland and his book have been presented here by a grand jury, not one of whom I am persuaded ever read one leaf in 'Christianity not Mysterious.'

Let the Sorbonne forever now be silent; a learned grand jury, directed by as learned a judge, does the business much better. The Dissenters here were the chief promoters of this matter, but, when I asked one of them 'What if a violent Church of England jury should present Mr. Baxter's books as pernicious, and condemn them to the flames by the common executioner,' he was sensible of the error, and said he wished it had never been done." Mr. Locke, in his reply, coincides with his friend, and says, "The Dissenters had best *consider;* but they are a sort of men which will always be the same." A remark which 150 years has not failed in its truthfulness. Mr. Molyneux concludes his remarks in reference to Toland, as follows: —"Mr. Toland is at length driven out of our kingdom; the poor gentleman at last wanted a meal's meat, and the universal outcry of the clergy ran so strong against him, that none durst admit him to their tables. The little stock of money which he had was soon exhausted, he fell to borrowing, and to complete his hardships, the Parliament fell on his book, voted it to be burnt by the common hangman, and ordered the author to be taken into custody by the Serjeant-at-Arms, and to be prosecuted by the Attorney General. Hereupon he is fled out of this kingdom, and none here knows where he has directed his course." From this correspondence we glean the following facts:—

1. That John Locke and Mr. Molyneux were favorable to Freethought.
2. That (on Locke's authority) Toland possessed abilities of no common order.
3. That Toland was unjustly persecuted, and he met with the sympathy of the Liberals.

Toland, having received a foretaste of his country's vengeance, retired for two years to Germany, where he was welcomed by the first scholars of the age. Hearing that the House of Convocation, in London, was about to denounce two of his works as heretical ("Christianity not Mysterious," and "Amyntor,") he

hastened to England, and published two letters to the Prolucutor, which were never laid before Convocation. He insisted that he should be heard in his own defence before sentence was passed on his works; but as usual this wish was denied him. A legal difficulty prevented the bishops from prosecuting the works, and Toland gave the world a full account in his "Vindicius Liberius." The "Letters to Serena," written in a bold, honest, unflinching manner, were the next performances of Toland. The first letter is on "The Origin and Force of Prejudices." It is founded on a reflection of Cicero, that all prejudices spring from moral, and not physical sources, and while all admit the power of the senses to be infallible, all strive to corrupt the judgment, by false metaphor and unjust premises. Toland traces the progress of superstition from the hands of a midwife to those of a priest, and shows how the nurse, parent, schoolmaster, professor, philosopher, and politician, all combine to warp the mind of man by fallacies from his progress in childhood, at school, at college, and in the world. How the child is blinded with an idea, and the man with a word. The second letter is "A History of the Soul's Immortality Among the Heathens." A lady had been reading Plato's "Phædo," and remarked as to how Cato could derive any consolation from the slippery and vague suppositions of that verbiant dialogue. Toland, therefore, for her edification, drew up a list of the specifications of the ancients on the subject, analysing (in its progress) the varying phases of the fables of the Elysian fields, the Charons, the Styx, etc., deriving them all from the ancient Egyptians. Toland thought the idea had arisen among the people, like our witches, ghosts, and fairy stories, and subsequently defended by the philosophers, who sought to rule their passions by finding arguments for their superstitions, and thus the rise of their exoteric and esoteric doctrines were the first foundations of the belief in the immortality of the soul. The third letter is on "The Origin of Idolatry," or, as it might rather be called, a history of the follies of

mankind. He traces the causes, the origin, and the science of superstition—its phenomena and its devotees, proving that all the sacrifices, prayers, and customs of idolatry are the same in all ages, they only differ in language and adaptability of climate, and that with the fall of judicial astrology, idolatry received its greatest blow, for while men thought that priests could control destiny, they feared them—but this idea destroyed, it removed the terror which so long had existed as an immediate object betwixt the man and this sacerdotal tyrant.

In letter fourth, addressed "To a Gentleman in Holland, showing Spinoza's System of Philosophy to be without any principle or foundation," and in the concluding article, Toland argues that "motion is essential to matter, in answer to some remarks by a noble friend on the above." In the fifteenth section of this argument, Toland thus rebuts the allegation that were motion indissolubly connected with matter, there must be extension without surface for motion or matter to exert their respective powers upon. It is often used as an argument, that if a vase was filled with any commodity to the utmost extent, where would be the space for motion? We know that in a kettle of water, if there is no outlet for the steam (which is the motion of the water,) the kettle will burst. Toland says, "'You own most bodies are in actual motion, which can be no argument that they have been always so, or that there are not others in actual repose.' I grant that such a consequence does not necessarily follow, though the thing may itself be true. But, however, it may not be amiss to consider how far this actual motion reaches, and is allowed, before we come to treat of rest. Though the matter of the universe be everywhere the same, yet according to its various modifications it is conceived to be divided into numberless particular systems, vortices or whirlpools of matter; and these again are subdivided into other systems greater or less, which depend on one another, as every one on the whole, in their centres, textures, frame, and co-

herence. Our sun is the centre of one of the larger systems, which contains a great many small ones within the sphere of its activity, as all the planets which move about it; and these are subdivided into lesser systems that depend on them, as his sattelites wait upon Jupiter, and the moon on the earth; the earth again is divided into the atmosphere, ground, water, and other principal parts; these again into the vegetable, animal, and mineral kingdoms. Now, as all these depend in a link on one another, so their matter is mutually resolved into each other, for earth, air, fire, and water are not only closely blended and united, but likewise interchangeable, transformed in a perpetual revolution: earth becoming water, water air, air ether, and so back again in mixtures without end or number. The animals we destroy contribute to preserve us, till we are destroyed to preserve other things, and become parts of grass, or plants, or water, or air, or something else that helps to make other animals, and they one another, or other men, and these again into stone, or wood, or metals, or minerals, or animals again, or become parts of all these and of a great many other things, animals, or vegetables, daily consuming and devouring each other—so true it is that everything lives by the destruction of another. All the parts of the universe are in this constant motion of destroying and begetting, of begetting and destroying, and the greater systems are acknowledged to have their ceaseless movements as well as the smallest particles, the very central globes of the vortices revolving on their own axis, and every particle in the vortex gravitating towards the centre. Our bodies, however we may flatter ourselves, do not differ from those of other creatures, but like them receive increase or diminution by nutrition or evacuation, by accretion, transpiration, and other ways, giving some parts of ours to other bodies, and receiving again of theirs, not altogether the same yesterday as to-day, nor to continue the same to-morrow, being alive in a perpetual flux like a river, and in the total dissolution of our system at death to be-

come parts of a thousand other things at once, our bodies partly mixing with the dust and the water of the earth, partly exhaled and evaporated into the air, flying to so many different places, mixing and incorporating with numerous things.

"No parts of matter are bound to any one figure or form, losing and changing their figures and forms continually, that is being in perpetual motion, clipt, or worn, or ground to pieces, or dissolved by other parts, acquiring their figures, and these theirs, and so on incessantly; earth, air, fire, and water, iron, wood, and marble, plants and animals, being rarefied, condensed, liquified, congealed, dissolved, coagulated, or any other way resolved into one another. The whole face of the earth exhibits those mutations every moment to our eyes, nothing continuing one hour numerically the same; and these changes being but several kinds of motion, are therefore the incontestable effects of universal action. But the changes in the parts make no change in the universe; for it is manifest that the continual alterations, successions, revolutions, and transmutations of matter, cause no accession or diminution therein, no more than any letter is added or lost in the alphabet by the endless combinations and transpositions thereof into so many different words and languages, for a thing no sooner quits one form than it puts on another, leaving as it were the theatre in a certain dress, and appearing again in a new one, which produces a perpetual youthfulness and vigor, without any decay or decrepitness of the world, as some have falsely imagined, contrary to reason and experience; the world, with all the parts and kinds thereof, continuing at all times in the same condition.

"* * * * * But the species still continue by propagation, notwithstanding the decay of the individuals, and the death of our bodies is but matter going to be dressed in some new form; the impressions may vary, but the wax continues still the same, and indeed death is in effect the very same thing with our birth; for as to die is only to cease to be what we

formerly were, so to be born is to begin to be something which we were not before. Considering the numberless successive generations that have inhabited this globe, returning at death into the common mass of the same, mixing with all the other parts thereof, and to this, the incessant river-like flowing and transpiration of matter every moment from the bodies of men while they live, as well as their daily nourishment, inspiration of air, and other additions of matter to their bulk; it seems probable that there is no particle of matter on the whole earth which has not been a part of man. Nor is this reasoning confined to our own species, but remains as true of every order of animals or plants, or any other beings, since they have been all resolved into one another by ceaseless revolutions, so that nothing is more certain than that every material Thing is all Things, and that all Things are but manifestations of one."

In his reply to Wotton, who attacks those "Letters to Serena," Toland says they were addressed "to a lady, the most accomplished then in the world." The name of the lady will probably remain forever a mystery.

In 1718, he published the celebrated work "Nazarenus, or Jewish, Gentile, and Mahometan Christianity," which caused an immense sensation at the time it appeared, and led to his "Mangonentes" (1720,) a work singularly profound and effective. In the same year he gave the world "Tetradymus," containing "Hodegus, or the Pillar of Cloud and Fire," that guided the Israelites in the Wilderness, *not miraculous*, but a thing equally practiced by other nations; and "Clidophorus, or of the Exoteric and Esoteric Philosophy;" and "Hypatia." There is a long preface to those books, "from under an elm in Bensbury (or Chebem's camp,) on the warren at the south end of Wimbledon Common (1720.") About this time "Pantheisticon" appeared, written as a caricature on Church Liturgies, which Archdeacon Hare denounced as "downright Atheism."

Along with the above, Toland wrote a multitude of small pamphlets; he translated the fables of Æsop, and published a poem, entitled "Clito," which caused much excitement at the time; and, as it represented Toland's ideal character, we reprinted it in the London Investigator. His earlier political works were esteemed so valuable in the defence of the Protestant succession, and advancing the interests of the Elector, subsequently King of England, that in one of his visits paid to that Court, he was presented by the Electress with miniature portraits of herself and family.

The following is a catalogue of the works of Toland, which have never yet been published, and the works in which they are mentioned :—

1. The History of Socrates (in the Life of Harrington.)
2. Systems of Divinity Exploded. An Epistolary Dissertation. (Christianity not Mysterious.)
3. The History of the Canon of the New Testament. (Nazarenus.)
4. Republica Mosaica. (Nazarenus.)
5. A Treatise Concerning Tradition. (Tetradymus.)

There were several other works, part of them written, which passed into the hands of Lord Molesworth (we believe,) part of which were published (the "History of the Druids" and also "Giordano Bruno;") but whether they exist at the present time or not, we are unable to say.

There is also great difficulty in deciding as to the manner of Toland's life; of this, however, we are certain, that he caused great opposition in his own day, and he was patronised by able man. He edited an edition of Lord Shaftesbury's Letters, and published a work of that noble Lord's surreptitiously; he mingled amongst the German Courts, and appeared on terms of equality with the *elite* of the philosophers and the aristocracy. The brief memoir prefaced to one of his works is an epistolary document addressed to a noble Lord. His acquaintance with Locke, Shaftesbury, Col-

lins, Molesworth, and Molyneux, must have proceeded from other causes than his genius, or why was Toland exalted when Mandeville, Chubb, and the brave Woolston are never so much as alluded to? We consider that there is a strong probability that he was wealthy—or at least possessed of a moderate competence. His abilities were of a curious order. He seemed to be one of a school which rose about his time to advocate Freethought, but shackled by a dogma. His collegiate education gave him an early liking for the dead languages, and he carried out the notion of the ancients, that the exoteric or esoteric methods were still in force. From a careful perusal of the works of the "Fathers," and the contemporary books of the heathens, he fancied that all the superstitions in the world differed but in degree—that religion was but the organic cause of superstition, the arguments made for it by the philosophers to propitiate the vulgar. This idea (in the main) was agreed to by Woolston, although his violent "Discourses," which were addressed to the unlearned, contained within them the germ of their intrinsic popularity. Yet even Woolston's works, notwithstanding their bluff exterior, had something more within them than what the people could appreciate, or even the present race of Freethinkers can always understand; for underneath that unrivalled vein of sarcasm, there was in every instance an esoteric view, which comprehended the meaning by which the earlier Christians understood the gospels, and rendered them on the same scale as the works of the ancients. The renowned William Whiston was another who interpreted Scripture in a similar manner. All those writers would have been Swedenborgians if there had been no Freethought, while Whiston would have been an Atheist had there been no representative of that school. We do not consider Toland, then, as an absolute Deist. At that time, the age was not so far progressed as to admit a Biblical scholar into the extreme advanced list; and when a man has spent the whole of his childhood in a secta-

rian family, and his youth and early manhood in a University, it is an impossibility to throw off at one struggle the whole of his past ideas; he may be unfettered in thought, and valiant in speech, still there is the encyclopædia of years hanging upon him as a drag to that extreme development which he wishes, but cannot bring his passions to follow. Not that we would by any means observe that Toland was comparatively behind his age, but that even in his more daring works he still had a vague idea of Scripture being partly inspired, although overlaid with a mass of ecclesiastical verbiage.

It also seems a mystery how the works of Woolston could be condemned, his person seized, while in the case of Toland we hear of nothing but his works being burnt. Why was Convocation so idle? Why make idle threats, and let their victim ramble at large? Was it because the one had powerful friends and the other had none? or was it that in the earlier portion of the career of Toland, the invisible hand of Bolingbroke stayed the grasp of persecution? Or was Shaftesbury's memory so esteemed, that his friend was untouched? Those particulars we cannot learn, but they will take rank with other parallel cases, as when the same government prosecuted Paine, and gave Gibbon a sinecure, or nearer our own times when a series of men were imprisoned for Atheism, and Sir William Molesworth published similar sentiments without hindrance.

In the "History of the Soul's Immortality," Toland thus gives the explanation respecting the exoteric and esoteric doctrines of Pythagoras:—"Pythagoras himself did not believe the transmigration which has made his name so famous to posterity; for in the internal or secret doctrine he meant no more than the eternal revolution of forms in matter, those ceaseless vicissitudes and alterations which turn everything into all things, and all things into anything; as vegetables and animals become part of us, we become part of them, and both become parts of a thousand other things in the universe, each turning into water, water into air, etc.,

and so back again in mixtures without end or number. But in the external or popular doctrine he imposed on the mob by an equivocal expression that they should become various kinds of beasts after death, thereby to deter them the more effectually from wickedness..... Though the poets embellished their pieces with the opinion of the soul's immortality, yet a great number of them utterly rejected it · for Seneca was not single in saying :—

> 'Naught's after death, and death itself is naught,
> Of a quick race, only the utmost goal ;
> Then may the saints lose all their hope of heaven,
> And sinners quit their racky fears of hell.'"

We now dismiss JOHN TOLAND from our view. He was one of the most honest, brave, truthful, and scholastic of the old Deists. His memory will be borne on the wings of centuries, and if ever a true millennium does arise, the name of this sterling Freethinker will occupy one of the brightest niches in its Pantheon of Worthies. A. C.

BIOGRAPHY

OF

COMPTE DE VOLNEY.

Constantine Francis Chassebœuf, de Volney, was born on February 3rd, 1757, at Craon, in Anjou. His father, a distinguished advocate, not wishing his son to bear the name of *Chassebœuf*, resolved that he should assume that of *Boisgirais*. With this name Constantine Francis was first known in the world, studying at the College of Ancenis and Angers. He afterwards commenced his Oriental travels, changing his name to Volney. At the age of seventeen, finding himself his own master, and possessed of £50 a-year, inherited from his mother, he went to Paris, in order to study the sciences, preferring the study of medicine and physiology, although giving great attention to history and the ancient languages. On inheriting a legacy of £240, he visted Egypt and Syria, starting on foot, a knapsack on his back, a gun on his shoulder, and his £240, in gold, concealed in a belt. When he arrived in Egypt, he shut himself up for eight months in a Coptic monastery, in order to learn Arabic; after which he commenced his travels through Egypt and Syria, returning to France after an absence of four years, and publishing his "Voyage en Egypte et en Syrie," which was acknowledged by the French army, on their conquering Egypt, to be the only book "that had never deceived them." The French Government named him Director of Commerce and Agriculture in Corsica, but being elected a deputy of the tiers-etat of the Sene-

chausse of Anjou, he resigned the government appointment, holding the maxim, that a national deputy ought not in any way to be a pensioner. He opposed all secret deliberations, and wished to admit the constituents and the citizens. He was made secretary on the 23rd of November, 1790, and in the debates which arose upon the power of the king to determine peace and war, Volney proposed and carried the resolution that "The French nation renounces from this moment the undertaking any war tending to increase their territory." In 1792, he accompanied Pozzo di Borgo to Corsica, in compliance with invitations from many influential inhabitants, who sought his information. In Corsica he became acquainted with Napoleon Buonaparte, who was then an artillery officer; and some years after, hearing that Buonaparte had obtained the command of the army of Italy, Volney exclaimed, "If circumstances favor him, we shall see the head of a Cæsar upon the shoulders of an Alexander." When Volney returned to Paris, he published an "Account of the State of Corsica." He was afterwards appointed Professor of History, attracting large audiences; but the Normal School being suppressed, he embarked for the United States of America, in 1795. He was received by Washington, who bestowed publicly on him marks of honor and friendship. In 1798, Volney returned to France, and gave up to his mother-in-law the property which he was entitled to from the death of his father, which had just occurred. During his absence, he had been chosen a member of the Institute. Buonaparte also, on Volney's return, tried to win his esteem and assistance, soliciting him as colleague in the consulship. But he refused the co-operation, as also the office of Minister of the Interior.

Seldom do men find so many inducements to "accept office" as was offered to Volney; and seldom do men appear who are disinterested enough to reject the inducements then held out to him. Although he refused to work *with* the ruling powers of that day, he never ceased to work *for* the *people!* He occupied

himself till the last year of his life in giving to the world that literature which will never be forgotten.

It would be impossible to notice all the works written by such an indefatigable thinker as the "*heretic*" of our sketch. We ought to mention, however, that subsequently to his being made Peer of France, by Louis XVIII.; and when there existed an intention of crowning Louis, Volney published "The History of Samuel, the inventor of Royal Coronations." This book represents Samuel as an impostor, Saul as the blind instrument of sacerdotal cunning, and David as an ambitious youth. In September, 1791, Volney presented to the Assembly "The Ruins, or Meditations on the Revolutions of Empires," a book which will immortalize him in the memory of Freethinkers. The originality of style, and the eloquence of expression, cannot fail to interest all who read it. We give the following extracts, from the above work, but as it contains so much that ought to be read, we must return to the subject in another number:—

"Legislators, friends of evidence and of truth!

"That the subject of which we treat should be involved in so many clouds, is by no means astonishing, since, beside the difficulties that are peculiar to it, thought itself has, till this moment, ever had shackles imposed upon it, and free inquiry, by the intolerance of every religious system, been interdicted. But now that thought is unrestrained, and may develope all its powers, we will expose in the face of day, and submit to the common judgment of assembled nations, such rational truths as unprejudiced minds have by long and laborious study discovered: and this, not with the design of imposing them as a creed, but from a desire of provoking new lights, and obtaining better information.

"Chiefs and instructors of the people! you are not ignorant of the profound obscurity in which the nature, origin, and history of the dogmas you teach are enveloped. Imposed by force and authority, inculcated by education, maintained by the influence of example,

they were perpetuated from age to age, and habit and inattention strengthened their empire. But if man, enlightened by experience and reflection, summon to the bar of mature examination the prejudices of his infancy, he presently discovers a multitude of incongruities and contradictions, which awaken his sagacity, and call forth the exertion of his reasoning powers.

"At first, remarking the various and opposite creeds into which nations are divided, we are led boldly to reject the infallibility claimed by each; and arming ourselves alternately with their reciprocal pretensions, to conceive that the senses and the understanding, emanating directly from God, are a law not less sacred, and a guide not less sure, than the indirect and contradictory codes of the prophets.

"If we proceed to examine the texture of the codes themselves, we shall observe that their pretended divine laws, that is to say, laws immutable and eternal, have risen from the complexion of times, of places, and of persons; that these codes issue one from another in a kind of genealogical order, mutually borrowing a common and similar fund of ideas, which every institutor modifies agreeably to his fancy.

"If we ascend to the source of those ideas, we shall find that it is lost in the night of time, in the infancy of nations, in the very origin of the world, to which they claim alliance: and there, immersed in the obscurity of chaos, and the fabulous empire of tradition, they are attended with so many prodigies as to be seemingly inaccessible to the human understanding. But this prodigious state of things gives birth to a ray of reasoning, that resolves the difficulty; for if the miracles held out in systems of religion have actually existed; if, for instance, metamorphoses, apparitions, and the conversations of one or more Gods, recorded in the sacred books of the Hindoos, the Hebrews, and the Parses, are indeed events in real history, it follows that nature in those times was perfectly unlike the nature that we are acquainted with now; that men of the present age are totally different from the men that

formerly existed; but, consequently, that we ought not to trouble our heads about them.

"On the contrary, if those miraculous facts have had no real existence in the physical order of things, they must be regarded solely as productions of the human intellect: and the nature of man, at this day, capable of making the most fantastic combinations, explains the phenomenon of those monsters in history. The only difficulty is to ascertain how and for what purpose the imagination invented them. If we examine with attention the subjects that are exhibited by them, if we analyze the ideas which they combine and associate, and weigh with accuracy all their concomitant circumstances, we shall find a solution perfectly conformable to the laws of nature. Those fabulous stories have a figurative sense different from their apparent one; they are founded on simple and physical facts; but these facts being ill-conceived and erroneously represented, have been disfigured and changed from their original nature by accidental causes dependent on the human mind, by the confusion of signs made use of in the representation of objects, by the equivocation of words, the defect of language, and the imperfection of writing. These Gods, for example, who act such singular parts in every system, are no other than the physical powers of nature, the elements, the winds, the meteors, the stars, all which have been personified by the necessary mechanism of language, and the manner in which objects are conceived by the understanding. Their life, their manners, their actions, are only the operation of the same powers, and the whole of their pretended history no more than a description of their various phenomena, traced by the first naturalist that observed them, but taken in a contrary sense by the vulgar, who did not understand it, or by succeeding generations, who forgot it. In a word, all the theological dogmas respecting the origin of the world, the nature of God, the revelation of his laws, the manifestation of his person, are but recitals of astronomical facts, figurative and emblematical nar-

ratives of the motion and influence of the heavenly bodies. The very idea itself of the divinity, which is at present so obscure, abstracted, and metaphysical, was in its origin merely a composite of the powers of the material universe, considered sometimes analytically, as they appear in their agents and their phenomena, and sometimes synthetically, as forming one whole, and exhibiting an harmonious revelation in all its parts. Thus the name of God has been bestowed sometimes upon the wind, upon fire, water, and the elements; sometimes upon the sun, the stars, the planets, and their influences; sometimes upon the universe at large, and the matter of which the world is composed; sometimes upon abstract and metaphysical properties, such as space, duration, motion, and intelligence; but in every instance, the idea of a Deity has not flowed from the miraculous revelation of an invisible world, but has been the natural result of human reflection, has followed the progress and undergone the changes of the successive improvement of intellect, and has had for its subject the visible universe and its different agents.

"It is then in vain that nations refer the origin of their religion to heavenly inspiration; it is in vain that they pretend to describe a supernatural state of things as first in order of events; the original barbarous state of mankind, attested by their own monuments, belies all their assertions. These assertions are still more victoriously refuted by considering this great principle, *that man receives no ideas but through the medium of his senses:* for from hence it appears that every system which ascribes human wisdom to any other source than experience and sensation, includes in it a *ysteron proteron*, and represents the last results of understanding as earliest in the order of time. If we examine the different religious systems which have been formed respecting the actions of the Gods, and the origin of the world, we shall discover at every turn an anticipation in the order of narrating things, which could only be suggested by subsequent reflection. Reason,

then, emboldened by these contradictions, hesitates not to reject whatever does not accord with the nature of things, and accepts nothing for historical truth that is not capable of being established by argument and ratiocination. Its ideas and suggestions are as follows :—

" Before any nation received from a neighbor nation dogmas already invented; before one generation inherited the ideas of another, none of these complicated systems had existence. The first men, the children of nature, whose consciousness was anterior to experience, and who brought no preconceived knowledge into the world with them, were born without any idea of those articles of faith which are the result of learned contention; of those religious rites which had relation to arts and practices not yet in existence; of those precepts which suppose the passions already developed; of those laws which have reference to a language and a social order hereafter to be produced; of that God, whose attributes are abstractions of the knowledge of nature, and the idea of whose conduct is suggested by the experience of a despotic government; in fine, of that soul and those spiritual existences which are said not to be the object of the senses, but which, however, we must forever have remained unacquainted with, if our senses had not introduced them to us. Previously to arriving at these notions, an immense catalogue of existing facts must have been observed. Man, originally savage, must have learned from repeated trials the use of his organs. Successive generations must have invented and refined upon the means of subsistence; and the understanding, at liberty to disengage itself from the wants of nature, must have risen to the complicated art of comparing ideas, digesting reasonings, and seizing upon abstract similitudes.

" It was not till after having surmounted those obstacles, and run a long career in the night of history, that man, reflecting on his state, began to perceive

his subjection to forces superior to his own and independent of his will. The sun gave him light and warmth; fire burned, thunder terrified, the winds buffeted, water overwhelmed him; all the various natural existences acted upon him in a manner not to be resisted. For a long time an automaton, he remained passive, without inquiring into the cause of this action; but the very moment he was desirous of accounting to himself for it, astonishment seized his mind; and passing from the surprise of a first thought to the reverie of curiosity, he formed a chain of reasoning.

"At first, considering only the action of the elements upon him, he inferred relatively to himself, an idea of weakness, of subjection, and relatively to them, an idea of power, of domination; and this idea was the primitive and fundamental type of all his conceptions of the divinity.

"The action of the natural existences, in the second place, excited in him sensations of pleasure or pain, of good or evil; by virtue of his organization, he conceived love or aversion for them, he desired or dreaded their presence: and fear or hope was the principle of every idea of religion.

"Afterwards, judging everything by comparison, and remarking in those beings a motion spontaneous like his own, he supposed there to be a will, an intelligence inherent in that motion, of a nature similar to what existed in himself; and hence, by way of inference, he started a fresh argument. Having experienced that certain modes of behavior towards his fellow-creatures wrought a change in their affections and governed their conduct, he applied those practices to the powerful beings of the universe. 'When my fellow-creature of superior strength," said he to himself, 'is disposed to injure me, I humble myself before him, and my prayer has the art of appeasing him. I will pray to the powerful beings that strike me. I will supplicate the faculties of the planets, the waters, and they will hear me. I will conjure them to avert the

calamities, and to grant me the blessings which are at their disposal. My tears will move, my offerings propitiate them, and I shall enjoy complete felicity.'

"And, simple in the infancy of his reason, man spoke to the sun and the moon; he animated with his understanding and his passions the great agents of nature; he thought by vain sounds and useless practices to change their inflexible laws. Fatal error! He desired that the water should ascend, the mountains be removed, the stone mount in the air; and substituting a fantastic to a real world, he constituted for himself beings of opinion, to the terror of his mind and the torment of his race.

"Thus the ideas of God and religion sprung, like all others, from physical objects, and were in the understanding of man, the products of his sensations, his wants, the circumstances of his life, and the progressive state of his knowledge.

"As these ideas had natural beings for their first models, it resulted from hence that the divinity was originally as various and manifold as the forms under which he seemed to act: each being was a power, a genius, and the first men found the universe crowded with innumerable Gods.

"In like manner the ideas of the divinity having had for motors the affections of the human heart, they underwent an order of division calculated from the sensations of pain and pleasure, of love and hatred: the powers of nature, the Gods, the genii, were classed into benign and maleficent, into good and evil ones: and this constitutes the universality of these two ideas in every system of religion.

"These ideas, analogous to the condition of their inventors, were for a long time confused and gross. Wandering in woods, beset with wants, destitute of resources, men in their savage state had no leisure to make comparisons and draw conclusions. Suffering more ills than they tasted enjoyments, their most habitual sentiment was fear, their theology terror, their worship was confined to certain modes of salutation, of

offerings which they presented to beings whom they supposed to be ferocious and greedy like themselves. In their state of equality and independence, no one took upon him the office of mediator with Gods as insubordinate and poor as himself. No one having any superfluity to dispose of, there existed no parasite under the name of priest, nor tribute under the name of victim, nor empire under the name of altar; their dogmas and morality, jumbled together, were only self-preservation; and their religion, an arbitrary idea without influence on the mutual relations existing between men, was but a vain homage paid to the visible powers of nature.

"Such was the first and necessary origin of every idea of the divinity."....

"In reality, when the vulgar heard others talk of a new heaven and another world, they gave a body to these fictions; they erected on it a solid stage and real scenes; and their notions of geography and astronomy served to strengthen, if they did not give rise to the delusion.

"On the one hand, the Phœnician navigators, those who passed the pillars of Hercules to fetch the pewter of Thule and the amber of the Baltic, related that at the extremity of the world, the boundaries of the ocean (the Mediterranean,) where the sun sets to the countries of Asia, there were Fortunate Islands, the abode of an everlasting spring; and at a farther distance, hyperborean regions, placed under the earth (relatively to the tropics,) where reigned an eternal night. From those stories, badly understood, and no doubt confusedly related, the imagination of the people composed the Elysian Fields, delightful spots in a world below, having their heaven, their sun, and their stars; and Tartarus, a place of darkness, humidity, mire, and chilling frost. Now, inasmuch as mankind, inquisitive about all that of which they are ignorant, and desirous of a protracted existence, had already exerted their faculties respecting what was to become of them after death; inasmuch, as they had early reasoned upon

that principle of life which animates the body, and which quits it without changing the form of the body, and had conceived to themselves airy substances, phantoms and shades, they loved to believe that they should resume in the subterranean world that life which it was so painful to lose; and this abode appeared commodious for the reception of those beloved objects which they could not prevail on themselves to renounce.

"On the other hand, the astrological and philosophical priests told such stories of their heavens as perfectly quadrated with these fictions. Having, in their metaphorical language, denominated the equinoxes and solstices the gates of heaven, or the entrance of the seasons, they explained the terrestrial phenomena by saying, that through the gate of horn (first the bull, afterwards the ram,) vivifying fires descended, which, in spring, gave life to vegetation, and aquatic spirits, which caused, at the solstice, the overflowing of the Nile: that through the gate of ivory (originally the bowman, or Sagittarius, then the balance,) and through that of Capricorn, or the urn, the emanations or influences of the heavens returned to their source and reascended to their origin; and the Milky Way which passed through the doors of the solstices, seemed to them to have been placed there on purpose to be their road and vehicle. The celestial scene farther presented, according to their Atlas, a river (the Nile, designated by the windings of the Hydra;) together with a barge (the vessel Argo,) and the dog Sirius, both bearing relation to that river, of which they foreboded the overflowing. These circumstances, added to the preceding ones, increased the probability of the fiction; and thus to arrive at Tartarus or Elysium, souls were obliged to cross the rivers Styx and Acheron, in the boat of Charon the ferryman, and to pass through the doors of horn and ivory, which were guarded by the mastiff Cerberus. At length a civil usage was joined to all these inventions, and gave them consistency.

"The inhabitants of Egypt having remarked that the putrefaction of dead bodies became in their burning

climate the source of pestilence and diseases, the custom was introduced in a great number of States, of burying the dead at a distance from the inhabited districts, in the desert which lies at the West. To arrive there it was necessary to cross the canals of the river in a boat, and to pay a toll to the ferryman, otherwise the body remaining unburied, would have been left a prey to wild beasts. This custom suggested to her civil and religious legislators, a powerful means of affecting the manners of her inhabitants, and addressing savage and uncultivated men with the motives of filial piety and reverence for the dead; they introduced, as a necessary condition, the undergoing that previous trial which should decide whether the deceased deserved to be admitted upon the footing of his family honors into the *black city*. Such an idea too well accorded with the rest of the business not to be incorporated with it; it accordingly entered for an article into religious creeds, and hell had its Minos and its Radamanthus, with the wand, the chair, the guards, and the urn, after the exact model of this civil transaction. The divinity then, for the first time, became a subject of moral and political consideration, a legislator, by so much the more formidable as, while his judgment was final and his decrees without appeal, he was unapproachable to his subjects. This mythological and fabulous creation, composed as it was of scattered and discordant parts, then became a source of future punishments and rewards, in which divine justice was supposed to correct the vices and errors of this transitory state. A spiritual and mystical system, such as I have mentioned, acquired so much the more credit as it applied itself to the mind by every argument suited to it. The oppressed looked thither for an indemnification, and entertained the consoling hope of vengeance; the oppressor expected by the costliness of his offerings to secure to himself impunity, and at the same time employed this principle to inspire the vulgar with timidity; kings and priests, the heads of the people, saw in it a new source of power, as they

reserved to themselves the privilege of awarding the favors or the censure of the great Judge of all, according to the opinion they should inculcate of the odiousness of crimes and the meritoriousness of virtue.

"Thus, then, an invisible and imaginary world entered into competition with that which was real. Such, O Persians! was the origin of your renovated earth, your city of resurrection, placed under the equator, and distinguished from all other cities by this singular attribute, that the bodies of its inhabitants cast no shade. Such, O Jews and Christians! disciples of the Persians, was the source of your New Jerusalem, your paradise and your heaven, modelled upon the astrological heaven of Hermes. Meanwhile, your hell, O ye Musselmans! a subterraneous pit surmounted by a bridge, your balance of souls and good works, your judgment pronounced by the angels Monkir and Nekir, derives its attributes from the mysterious ceremonies of the cave of Mithra; and your heaven is exactly coincident with that of Osiris, Ormuzd, and Brama."....

"It is evident, that it is not truth for which you contend; that it is not her cause you are jealous of maintaining, but the cause of your own passions and prejudices; that it is not the object as it really exists that you wish to verify, but the object as it appears to you; that it is not the evidence of the thing that you are anxious should prevail, but your personal opinion, your mode of seeing and judging. There is a power that you want to exercise, an interest that you want to maintain, a prerogative that you want to assume: in short, the whole is a struggle of vanity. And as every individual, when he compares himself with every other, finds himself to be his equal and fellow, he resists by a similar feeling of right; and from this right, which you all deny to each other, and from the inherent consciousness of your equality, spring your disputes, your combats, and your intolerance.

"Now the only way of restoring unanimity is by returning to nature, and taking the order of things which

she nas established for your director and guide, and this farther truth will then appear from your uniformity of sentiment.

"If we would arrive at uniformity of opinion, we must previously establish certainty, and verify the resemblance which our ideas have to their models. Now, this cannot be obtained, except so far as the objects of our inquiry can be referred to the testimony, and subjected to the examination of our senses. Whatever cannot be brought to this trial is beyond the limits of our understanding; we have neither rule to try it by, nor measure by which to institute a comparison, nor source of demonstration and knowledge concerning it.

"Whence it is obvious that, in order to live in peace and harmony, we must consent not to pronounce upon such objects, nor annex to them importance; we must draw a line of demarcation between such as can be verified and such as cannot, and separate, by an inviolable barrier, the world of fantastic beings from the world of realities: that is to say, all civil effect must be taken away from theological and religious opinions.

"This, O nations! is the end that a great people, freed from their fetters and prejudices, have proposed to themselves; this is the work in which, by their command, and under their immediate auspices, we were engaged, when your kings and your priests came to interrupt our labors.....Kings and priests! you may yet for awhile suspend the solemn publication of the laws of nature; but it is no longer in your power to annihilate or to subvert them."

We conclude with the following:—"Investigate the laws which nature, for our direction, has implanted in our breasts, and form from thence an authentic and immutable code. Nor let this code be calculated for one family, or one nation only, but for the whole without exception. Be the legislators of the human race, as ye are the interpreters of their common nature. Show us the line that separates the world of chimeras

from that of realities; and teach us, after so many religions of error and delusion, the religion of evidence and truth."

Our space prohibits further quotation in this number; but when we return to the subject, we shall notice chapter xxi., "Problem of Religious Contradictions," and also "The Law of Nature; or Principles of Morality." Few men wrote more on various topics than Volney; and few have been more respected while living, and esteemed when dead, by those whose respect and esteem it is always an honor to possess. At the age of fifty-three, after much travel and great study, Volney consoled his latter days by marrying his cousin—the hope of his youth—Mdlle. de Chassebœuf. A disorder of the bladder, contracted when traversing the Arabian deserts, caused his death at the age of sixty-three. He was buried in the cemetery of Pere Lachaise, when Laya, Director of the French Academy, pronounced a noble panegyric over his grave; and months after his death he was spoken highly of by some of the most illustrious men of France. Thus ended the days of one of the Freethinkers of the past whose works, despite all suppression, will never die.

J. W.

BIOGRAPHY

OF

CHARLES BLOUNT.

Look with me through the dark vista of 150 years of clouded history. Throw your mind across the bridge of time, for we are about to visit a tragic scene—a scene which might be depicted by a poet—so much of beauty, of truth, and of goodness, all blasted by the perjuries of the priest. Yonder, in the dim library of an ancestral mansion, embowered amid the woods of the south, close by the gurgling waters which beat an echo to the stormy breezes—those breezes which will never more fan his cheek—that water where he has often bathed his limbs will be his rippling monument. The shady moonlight of an August evening is gilding the rich pastures of Hertfordshire; the gorse bushes have not yet lost their beauty, the pheasants are playing in the woods—woods that so lately resounded with laughter—laughter ringing like a bell—the music of a merry heart. Withdraw those curtains which hide the heart-struck and the dead. Above you is the exquisite picture of Eleanora, gazing into the very bed at that form which lay shrouded in nothingness. You see the broad manly brow—even now the brown hair rises in graceful curls over that damp forehead. The lips are locked in an eternal smile, as if to mock the closed eyes and the recumbent form. Is it true that pictures of those we love are endowed with a clairvoyant power of gazing at those who have caressed them

in life? If it is, then on that August night the wife of Charles Blount was watching over his bier.

But who is that pale form, with dishevelled hair and weeping eyes, with an alabaster skin stained with the blue spots of grief? The rapid upheaving swells of that fair bosom tell of affection withered, not by remorse, but by superstition? See her how she nervously grasps that dead man's hand, how she imprints kisses on his lips! Her hair, which yesterday was glossy as the raven's, is now as bleached as the driven snow; to-day she utters her plaintive cries, to-morrow she hastens to join her lover in the tomb. This is a sad history. It should be written with the juice of hemlock, as a warning to Genius of impatient love.

While the fair girl watches by the couch of the suicide, while from the painted canvass Eleanora gleams on the living and the dead, while the clouds of night gather silently over that ancestral hall, around the drooping corn on the bold sloping park, and the clear blue river—all so quiet and gentle—let us gather up the events of the past, and learn the cause of a death so tragic, a grief so piercing.

In the year 1672, at the age of nineteen years, a young man (the son of a baronet) led to the altar the lovely daughter of Sir Timothy Tyrrel. Flowers strewed the path of the wedded pair, and for years their life was one scene of bliss. At last, struck down by disease, Charles Blount stood by the side of his dying wife—in his arms *his* Eleanora yielded her last sigh. He buried her by the willow-tree in the old churchyard. The lily blended with the white rose, and the myrtle overshadowed the grave. It was here where the widower rested in the evening—here where he taught his children the virtues of their dead mother. Sometimes he gazed at the azure skies, and strange fancies beguiled the mind of the mourner. When he saw the sun sink to the west, gilding the world with its glorious rays, he mused on the creeds of many lands. He fancied he saw a heaven and a God, and traced in the lines of light the patriarchal worshippers

of the world. He looked at the sun and its worshippers—those who sought the origin of purity by worshipping that which is the origin of all good. He looked at the fables of Greece, and found delight in the thought of Sappho uttering her diapason of joy in lyrics which told of love and beauty; at Egypt, where the priests, in their esoteric cunning, searched in vain for that which gives life, and motion, and joy; and then he glanced at the Christian heaven, but here all was dark—dark as the Plutonian caverns of Homer's hell. He wished to meet his Eleanora—not in Pagan dreams—not in Christian parables—but in the world of realities. He looked with eager eyes upon the world around him, in society, at Court, and in the homes of his country. But wherever he went, there was but one thought—one feeling. He wished a mother for his children—a mother like the sainted dead. There was but one who answered the ideal—like in features, in passion, and in beauty—to the lost Eleanora. Born of the same parents, loved by the same brother, educated by the same teachers, imbued with the same thoughts, she was the model of her dead sister; with a sisterly love for her brother, she was already both mother and aunt to her sister's children.

With deliberate thoughts, with convulsive passion, the love of Charles Blount passed the bounds of that of a brother; longing to make her his wife, he adored her with the passion he had lavished on the dead. It seemed as if the shade of Eleanora was perpetually prompting him to bestow all his affection on the young and beautiful Eliza. She caressed his children with the pride of an aunt, she traced the image of her sister in the laughing eyes of the merry babes—still she was not happy. How could she be happy? She loved him as a man—as a brother. She was a Christian—he an Infidel. She was bound by creeds—he by conduct. She was doing the duty she owed to the dead. He sought to do it by uniting himself to the living. Eliza was anxious to marry, but there existed something which, to her mind, was greater than human duties,

and it often outraged them. God and the Church demanded her first attention, and then her lover and his children. The Church, in cruel mockery of human rights, stepped between her judgment and her affections. It denied the power of a woman to occupy the married home of her deceased sister. She was willing to pledge her love to Charles Blount at the altar, but the priest mocked her prayers and denounced her affections. The occasion was too good to be lost. Episcopalism sought revenge on its opponent, and it triumphed. Eliza felt the force of Blount's arguments. She wandered with him through the green fields, but her sorrow was too great to pluck the wild roses. The luscious fruits of summer were passed untasted. A heart sick and in trouble, a mind wandering from her sister's grave to her children, and then at the anathema of the Church, made her a widowed maid. To overcome her scruples, her lover wrote a book (inviting the clergy to refute it,) defending the marriage with a deceased wife's sister. But ever as he spoke there was a film before her eyes. There was a gaunt priest, with canonical robes, stood before the gates of heaven. Before him and through him was the way to an eternal happiness, below him was a fiery hell; and he shouted with hoarse voice, *Incest, incest, incest!*— And ever as he shouted, he pointed with his finger of scorn at this Christian hell, and she conjured up in her mind the old stories of this priest, until she saw the livid flames rising up higher till they encircled her form, and then the priest screamed with fury, *Anathema maranatha, incest, incest!* And in terror she stood, with the big drops of sweat dripping from her brow, with her heart beating, with her mind distracted, but her affections unclouded.

This priest was the Church of England, and those fancies were driven into her imagination by her creed, her litanies, and her sermons. Eliza Tyrrel was miserable; she was placed between her love, her duty, and her religion. If she had been a woman of a strong mind, she would have torn her creed into shreds, she

would have dared the anathema of the priest—the ostracism of its dupes—and would have clung to the man she loved so truly, in defiance of that which was, at the best, but a faint possibility.

The arguments in that pamphlet of Blount's were conclusive, but she distrusted reason. The plainest dictates of common logic were referred to the promptings of the Devil. How could it be otherwise? Can the teachings of a lifetime be overthrown by the courtship of a few months? Eliza Tyrrel, true to Blount, loved him; true to her religion, she durst not marry him without the sanction of the Church. So Blount, as a last resolve, laid the matter before the Lord's Vicegerent at Canterbury, and many of the most learned divines of England; and from those ecclesiastical leeches there was a Shylock cry of *incest, incest, incest!* And those terrible words came greeting the ears of Charles Blount, making his home like a charnel-house, and they nearly sent his beautiful Eliza to a maniac's grave. Still she lingered on. Denied the power of a wife, she would not relinquish her duties as a mother to her sister's babes. There was a calm heroism here which few can imitate. The passions of Blount could not brook further insults. The last kick of bigotry against the broken-hearted Freethinker was given. He could no longer rise with the lark, and roam over the hills of his ancestral home. To him the birds, as they warbled, spoke of joys never to return. The broad river told him of the days when the little skiff floated on its waters with Eleanora; and even his friends only too bitterly reminded him of the tournaments of wit where Hobbes, Brown, and Gildon, jousted each other in the presence of his wife. His life was one scene of misery. He saw no chance of amendment. In a fit of despair, he loaded his pistol with due deliberation, placed it to his head, and shot himself. He lingered for sometime, and then died on the breast of Eliza.

This was a strange suicide. Blount's memory bears its weight of obloquy. It is hard to draw the line when and where a man has a right to take away his

life. Common sense tells us that so long as our families are dependent upon us, we have no right to end our lives; and if we have no dependents, no friends, then our country has a claim upon us. But, at the same time, the one sole end of existence is to be happy. If a man cannot find happiness in life, if there is a great coalition against him, he is justified in taking up arms against them; but, at the same time, it proves a greater amount of courage "to bear up against the ills of life" than to madly leave it, and thus weaken the force of those who wish to stem its injustice.

Charles Blount died, and with him expired much of the chivalry of Freethought. His friend, Charles Gildon, writing of him to a lady, says, "You know Astrea (Eliza,) and have an exact friendship with her. You can attest her beauty, wit, honor, virtue, good humor, and discretion. You have been acquainted with the charms of her conversation and conduct, and condemn her, only adhering to a national custom to the loss of so generous a friend, and so faithful a lover. But custom and obedience meeting the more easily, betrayed her virtue into a crime. I know my friend loved her to his last breath; and I know, therefore, that all who love his memory must, for her sake, love and value her, as being a lady of that merit, that engaged the reason of Philander (C. Blount) to so violent a passion for her."

The same writer says, "His father was Sir Henry Blount, the Socrates of the age, for his aversions to the reigning sophisms and hypocrisies, eminent in all capacities: the best husband, father, and master, extremely agreeably in conversation, and just in all his dealings. From such a father our hero derived himself; to such a master owed his generous education, unmixed with the nauseous methods and profane opinions of the schools. Nature gave him parts capable of the noblest sciences, and his industrious studies bore a proportion to his capacities. He was a generous and constant friend, an indulgent parent, and a kind master. His temper was open and free; his con-

versation pleasant; his reflections just and modest; his repartees close — not scurrilous; he had a great deal of wit, and no malice. His mind was large and noble —above the little designs of most men; an enemy to dissimulation, and never feared to own his thoughts. He was a true Englishman, and lover of the liberties of his country, and declared it in the worst of times. He was an enemy to nothing but error, and none were his enemies that knew him, but those who sacrificed more to mammon than reason."

This was the man who died, because a dominant priesthood insisted on a dogma which interfered with a purely Secular rite, which blasted two hearts in a vain attempt to perpetuate a system, which dashes its rude fingers, and tears out the heart of human felicity to sprinkle the altar of superstition with the gore of offended innocence. Charles Blount was a Deist; as such, he believed in a God, which he described in his account of a Deist's religion. Let us examine his thoughts, and see if they bear the interpretation which Christianity has always placed upon them. Blount gives the Deist's opinion of God. He says, "Whatever is adorable, amiable, and imitable by mankind, is in one Supreme, perfect Being." An Atheist cannot object to this. He speaks in the manner in which God is to be worshipped. He says, not by sacrifice, or by a Mediator, but by a steady adherence to all that is great and good and imitable in nature. This is the brief religious creed of Charles Blount. He never seeks to find out fabled attributes of Deity. He knows what is of value to mankind, and sedulously practices whatever is beneficial to society.

In his "Anima Mundi, or, History of the Opinions of the Heathens on the Immortality of the Soul," (p. 97,) Blount says:—

"The heathen philosophers were much divided concerning the soul's future state; some held it mortal, others immortal. Of those who held the mortality of the soul, the Epicureans were the chief sect, who, notwithstanding their doctrines, led virtuous lives."

Cardan had so great a value for their moral actions, that he appeared in justification of them. It appears (says he) "by the writings of Cicero, Diogenes, and Laertius, that the Epicureans did more religiously observe laws, piety, and fidelity among men than either the Stoics or the Platonists; and I suppose the cause thereof was, that a man is either good or evil by custom, but none confideth in those that do not possess sanctity of life. Wherefore they were compelled to use greater fidelity, thereby the better to justify their profession, from which reason it likewise proceeds, that at this day few do equal the fidelity of usurers, notwithstanding they are most base in the rest of their life. Also among the Jews, whilst the Pharisees, that confessed the resurrection and the immortality of the soul, frequently persecuted Christ, the Sadducees, who denied the resurrection, angels, and spirits, meddled not with him above once or twice, and that very gently. Thus, if you compare the lives of Pliny and Seneca (not their writings,) you shall find Pliny, with his mortality of the soul, did as far exceed Seneca in honesty of manners, as Seneca excels him in religious discourse. The Epicureans observed honesty above others, and in their conversation were usually found inoffensive and virtuous, and for that reason were often employed by the Romans when they could persuade them to accept of great employs, for their fault was not any want of ability or honesty, but their general desire of leading a private life of ease, and free from trouble, although inglorious. For when immortality is not owned, there can be no ambition of posthumous glory.

"The Epicureans, instead of those bloody scenes of gallantry (which tyrants applaud,) undertook to manage carefully the inheritance of orphans; bringing up, at their own charge, the children of their deceased friends, and were counted good men, unless it were in front of religious worship; for they constantly affirmed that there were no Gods, or, at least, such as concerned themselves with human affairs, according to the

poets. Neither doth the hope of immortality conduce to fortitude, as some vainly suggest, for Brutus was not more valiant than Cassius; and if we will confess the truth, the deeds of Brutus were more cruel than those of Cassius; for he used the Rhodians, who were his enemies, far more kindly than Brutus did those amicable cities which he governed. In a word, though they both had a hand in Cæsar's murder, yet Brutus was the only parricide. So that the Stoics, which believed a Providence, lived as if there were none; whereas the Epicureans, who denied it, lived as if there were.....The next sect to the Epicureans, in point of incredulity, concerning the soul, I conceive to be the Sceptics, who were by some esteemed, not only the modestest, but the most perspicuous of all sects. They neither affirmed nor denied anything, but doubted of all things. They thought all our knowledge seemed rather like truth, than to be really true, and that for such like reasons as these :—

"1. They denied any knowledge of the Divine Nature, because, they say, to know adequately is to comprehend, and to comprehend is to contain, and the thing contained must be less than that which contains it; to know inadequately is not to know.

"2. From the uncertainty of our senses, as, for instance, our eyes represent things at a distance to be less than they really are. A straight stick in the water appears crooked; the moon to be no bigger than a cheese; the sun greater at rising and setting than at noon. The shore seems to move, and the ship to stand still; square things to be round at a distance; an erect pillar to be less at the top. Neither (say they) do we know whether objects are really as our eyes represent them to us, for the same thing which seems white to us seems yellow to a jaundiced man, and red to a creature afflicted with red eyes; also, if a man rubs his eyes, the figure which he beholds seems long or narrow, and therefore it is not improbable that goats, cats, and other creatures, which have long pupils of the eye, may think those things long

which we call round, for as glasses represent the object variously, according to their shape, so it may be with our eyes. And so the sense of hearing deceives. Thus, the echo of a trumpet, sounded in a valley, makes the sound seem before us, when it is behind us. Besides, how can we think that an ear, which has a narrow passage, can receive the same sound with that which has a wide one? Or the ear, whose inside is full of hair, to hear the same with a smooth ear? Experience tells us that if we stop, or half stop, our ears, the sound cometh different as when the ears are open. Nor is the smelling, taste, or touch less subject to mistake; for the same scents please some, and displease others, and so in our tastes. To a rough and dry tongue that very thing seems bitter (as in an ague,) which to the most moist tongue seems otherwise, and so is it in other creatures. The like is true of the touch, for it were absurd to think that those creatures which are covered with shells, scales, or hairs, should have the same sense in touching with those that are smooth. Thus one and the same object is diversely judged of, according to the various qualities of the instruments of sense, which convinceth to the imagination; from all which the Sceptic concluded, that what these things are in their own nature, whether red, white, bitter, or sweet, he cannot tell; for, says he, why should I prefer my own conceit in affirming the nature of things to be thus, or thus, because it seemeth so to me—when other living creatures, perhaps, think it is otherwise? But the greatest fallacy is in the operation of our inward senses; for the fancy is sometimes persuaded that it hears and sees what it does not, and our reasoning is so weak, that in many disciplines scarce one demonstration is found, though this alone produces science. Wherefore it was Democritus's opinion that truth is hid in a well, that she may not be found by men. Now, although this doctrine be very inconsistent with Christianity, yet I could wish Adam had been of this persuasion, for then he would not have mortgaged his posterity for the purchase of a

twilight knowledge. Now, from these sinister observations it was that they esteemed all our sciences to be but conjectures, and our knowledge but opinion. Whereupon, doubting the sufficiency of human reason, they would not venture to affirm or deny anything of the soul's future state; but civilly and quietly gave way to the doctrines and ordinances under which they lived, without raising or espousing any new opinions."

Speaking of the "origin of the world," Gildon gives the following as a translation from Ocellus Lucanas:—"Again (says he,) as the frame of the world has been always, so it is necessary that its parts should likewise always have existed; by parts, I mean the heaven, earth, and that which lieth betwixt—viz., the sky; for not without these, but with these, and of these, the world consists. Also, if the parts exist, it is necessary that the things which are within them should also coexist; as with the heavens, the sun, moon, fixed stars, and planets; with the earth, animals, plants, minerals, gold, and silver; with the air, exhalations, winds, and alterations of weather, sometimes heat and sometimes cold, for with the world all those things do, and ever have existed, as parts thereof. Nor hath man had any original production from the earth, or elsewhere, as some believe, but have always been, as now he is, coexistent with the world, whereof he is a part. Now, corruptions and violent alterations are made according to the parts of the earth, by winds and waters imprisoned in the bowels thereof; but a universal corruption of the earth never hath been, nor ever shall be. Yet these alterations have given occasion for the invention of many lies and fables. And thus are we to understand them that derive the original of the Greek history from Inachus, the Argive; not that he really was the original, as some make him, but because a most memorable alteration did then happen, and some were so unskilful as to attribute it to Inachus.....But for the universe, and all the parts whereof it subsists, as it is at present, so it ever was, and ever shall be; one nature perpetually moving, and

another perpetually suffering, one always governing, and the other always being governed. The course which nature takes in governing the world, is by one contrary prevailing over another, as thus:—The moisture in the air prevaileth over the dryness of the fire; and the coldness of the water over the heat of the air, and the dryness of the earth over the moisture of the water; and so the moisture of the water over the dryness of the earth; and the heat in the air over the coldness of the water; and the dryness in the fire over the moisture of the air. And thus the alterations are made and produced, out of one another.....As nature cannot create by making something out of nothing, so neither can it annihilate, by turning something into nothing; whence it consequently follows, as there is no access, so there is no diminution in the universe, no more than in the alphabet, by the infinite combination and transposition of letters, or in the wax by the alteration of the seal stamped upon it. Now, as for the forms of natural bodies, no sooner doth any one abandon the matter he occupied, but another instantly steps into the place thereof; no sooner hath one acted his part and is retired, but another comes presently forth upon the stage, though it may be in a different shape, and so act a different part; so that no portion of the matter is, or at any time can be, altogether void and empty, but like Proteus, it burns itself into a thousand shapes, and is always supplied with one form or another, there being in nature nothing but circulation."

The following are the principal works of Blount:—"Anima Mundi; or, an Historical Narration of the Opinions of the Ancients concerning Man's Soul after this Life, according to Enlightened Nature;" published in 1679. Upwards of twenty answers were published to this work. In 1680 he published a translation, with notes, of the life of Apolloninis, of Tyana. This work was suppressed. During the same year, he gave the world "Great is Diana of the Ephesians; or, the Original of Idolatry." By able critics this is consider-

ed one of his ablest works. In 1683, "Religio Laici" appeared, which is published from a Latin work of Lord Herbert's. In 1688 he wrote "A Vindication of Learning, and of the Liberty of the Press." This tractate sparkles with wit and argument. But by far the most important work he was connected with, was published in the year he died, and mainly written by himself, "The Oracles of Reason," a favorite title with both American and English Freethinkers. It consists of sixteen sections; the most interesting being the first four, containing "A Vindication of Dr. Burnett's Archiologie." The seventh and eighth chapters (translated) of the same, of "Moses's Description of the Original State of Man," and Dr. Burnett's "Appendix of the Brahmin's Religion." We would quote from these sections of the "Oracles," but intend to form separate "Half-Hours," with sketches of Drs. Brown and Burnett; it will be more appropriate to use Blount's translation in describing those quaint, but highly instructive authors. In the general style of Blount's works, he is not seen to advantage; there is too much heaviness, enhanced by the perpetual Greek and Latin quotations; but as his works were intended for scholars, and the time in which they were written was essentially the most pedantic era of our literary history, we cannot expect that vivacity and clearness which other writers in a later age possessed. It was in his character as a man that Blount excelled—he was the leader of the chivalry of the period, as in the next age Woolston was his successor. At the Court he was the gayest of the gay, without the taint of immorality, in a period of the grossest licentiousness; he defended the honor of his friends, frequently at the expense of calumny and danger. In witty repartees he was equal to Rochester; while for abstruse learning he was superior to many of the most learned theologians. Daintily brave and skilfully alive to the requirements of friends and foes, he passed through life in the gilded barge of pleasure, and ended it sailing through a cloud where he foundered. But the darkness which enveloped his

history is now charged with that sympathetic power which draws the young to his grave, and compels the gloomiest to shed a tear over his unhappy fate.

At the close of August, in 1693, a few friends met near the grave of Blount, to join in their last respects to their lost friend. Foremost amongst them was Charles Gildon, who so soon repented of the part he had taken in the "Oracles of Reason," but never forgot the kindness he experienced from Blount. He lived long enough for Pope to be revenged on his apostacy, by inserting his name in his great satire. At the time we speak he was mournful and deeply grieved at the loss he had sustained; near him was Harvey Wilwood, whose bold demeanor and sorrowful countenance told of heart-struck grief, for of the few able to appreciate the genius of Blount, he was one of the earliest and most devoted in his friendship. Now we see the noble Lord, whom Blount always addressed as "the most ingenious Strephon;" along with him there is the pretty Anne Rogers, with Savage, and Major Arkwright; we look in vain for Eliza Tyrrel; they talk slowly over him that is no more; they recount to themselves the intellectual achievements, and the brilliant hours they have spent in the past; and while they speak so kindly, and think so deeply, they kneel on the hallowed spot, but not to pray; some of them pledge their enmity against Christian laws and Christian priests, and they executed it. During this time, the calm radiance of the lunar light shines on the church of Ridge, illumining those ghostly tablets of white marble, where the forefathers of Blount lie entombed. The baronial arms are emblazoned on the wall; heraldic pomp is keeping watch over the mouldering bones of the now-levelled great. Anne Rogers weeps wildly for Eliza and Eleanora. Those metaphysical disquisitions which have exalted woman to so high a nature, that devotion to æsthetics which woman should always cultivate, not as a household slave, but as one of equal rights with man, and his leader in everything which concerns taste, ele-

gance, and modesty; such gifts in no ordinary degree had Anne Rogers—and often in dialectic subtlety had she mastered her relative, who stood by her side, and given tokens of her admiration of Blount's philosophy and conduct. "Strephon" was passionately attached to his confidant and friend, and could not give so calm an expression to his loss. He wept wildly, for he had lost one who tempered his rebuke with a kind word, and pointed out that Epicurean path which leads to enjoyment without excess; to pleasure, without a reaction. It was a memorable meeting. While the remembrance of past deeds of love lighted up the eye and made the blood course faster through their veins, Anne Rogers detailed the following episode in his character:—Blount had visited the Court of King James, and had been singled out by that monarch for one of his savage fits of spleen. "I hear, Mr. Blount, you are very tenacious of the opinions of Sir Henry, your father, and you consider his conduct during the Rebellion as worthy of imitation. Is it so?" "Your Majesty," replies Blount, "has been correctly informed; I admire my father's conduct." "What!" says James, "in opposing his king?" Blount quickly answered, "A king, my liege, is the chief magistrate of the Commonwealth, and is so hereditarily while he obeys the laws of that Commonwealth, whose power he represents; but when he usurps the direction of that power, he is king no longer, and such was the case with your royal father." With a scowl of defiance on his face, King James left the Freethinker, and sought more congenial company; and as Anne Rogers told the story, each eye was dimmed with tears. The moon had risen high in the heavens ere the mourners prepared to depart—the first streaks of dawn broke through the Eastern sky, and revealed the grave watered with tears, where the most chivalrous Freethinker of his age reposed, in that sleep which knows of no awakening. "A. C."

BIOGRAPHY

OF

PERCY BYSSHE SHELLEY.

Percy Bysshe Shelley (the son and heir of a wealthy English baronet, Sir Timothy Shelley, of Castle Goring, in the county of Sussex) was born at Field Place, near Horsham, in that county, on the 4th of August, 1792. Ushered into the world in the midst of wealth and fashion, with all the advantages of family distinction, the future of Shelley's life appeared a bright one; but the sunshine of the morning only served to render the darkness which came over his noontide more dark, and to make poor Shelley still more susceptible of the hardships he had to encounter. First educated at Eton, his spirit there manifested itself by an unflinching opposition to the fagging system, and by revolt against the severe discipline of the school; in his "Revolt of Islam" Shelley has thus portrayed his feeling:—

"I do remember well the hour which burst
My spirit's sleep; a fresh May dawn it was
When I walked forth upon the glittering grass
And wept, I knew not why: until there rose
From the near school-room voices that, alas!
Were but one echo from a world of woes,
The harsh and grating strife of tyrants and of foes.

And then I clasped my hands and looked around,
And none was near to mock my streaming eyes,
Which poured their warm drops on the sunny ground;

So, without shame, I spake—'I will be wise,
And just, and free, and mild, if in me lies
Such power, for I grow weary to behold
The selfish, and the strong still tyrannize
Without reproach or check.'"

* * * * * *

And from that hour did I, with earnest thought,
Heap knowledge from forbidden mines of lore;
Yet nothing that my tyrants knew or taught
I cared to learn, but from that secret store
Wrought linked armour for my soul, before
It might walk forth to war among mankind."

From Eton, Shelley went to Oxford, and while there he, scarce at the age of eighteen, published a volume of political rhymes, entitled "Margaret Nicholson's Remains," the said Margaret being a woman who tried to assassinate George III. He also wrote a pamphlet in defence of Atheism. A copy of this pamphlet he caused to be sent to the head of each of the colleges in Oxford, with a challenge to discuss and answer.—The answer to this was the edict which expelled Shelley from Oxford, and at the same time placed a wide chasm between him and his family. This breach was still further widened in the following year by his marriage, at the age of nineteen, with a beautiful girl named Westbrook. Although Miss Westbrook was respectfully connected, Shelley's aristocratic family regarded this as a *mesalliance*, and withdrew his pecuniary allowance; and had it not been for the bride's father, who allowed the young couple £200 a year, they would have been reduced to actual poverty. This was an unfortunate marriage for both. After having two children, disagreements arose, and Shelley was separated from his wife. She (like all beautiful women) was soon attacked by the busy tongue of slander, and, unable to bear the world's taunts, committed suicide by throwing herself into a pond, just four years from the date of their marriage. Shelley, on this account, suf-

fered much misery and misrepresentation, and this misery was much increased by his family, who applied to the Court of Chancery, and obtained a decree, by which Shelley was deprived of the custody of his children, on the ground of his Atheism. The same spirit even now pervades the Shelley family, and scarce a copy of his poems can be found in the neighborhood of his birth-place. Shelley afterwards contracted a second marriage with the daughter of Godwin, the author of "Caleb Williams," and Mary Wollstonecroft (who died in giving birth to Shelley's wife), and for sometime the poet resided at Marlow, in Buckinghamshire, where he composed the "Revolt of Islam;" and it is a strong proof of the reality of Shelley's poetical pleadings for the oppressed amongst the human race, that he was indefatigable in his attentions to the poor cottagers of his neighborhood; and that he suffered severely from an attack of opthalmia, which was originated in one of his benevolent visits. Nearly the first of Shelley's poems was his "Queen Mab," in which (having in vain struggled to devote himself to metaphysics apart from poetry), he blended his metaphysical speculation with his poetical aspirations. The following quotations are taken from that poem, in which his wonderful command of language is well shown :—

"There's not one atom of yon earth
But once was living man;
Nor the minutest drop of rain,
That hangeth in its thinnest cloud,
But flowed in human veins;
And from the burning plains
Where Lybian monsters yell,
From the most gloomy glens
Of Greenland's sunless clime,
To where the golden fields
Of fertile England spread
Their harvest to the day,
Thou canst not find one spot
Whereon no city stood.

How strange is human pride!
I tell thee that those living things,
To whom the fragile blade of grass,
That springeth in the morn
And perishes ere noon,
Is an unbounded world;
I tell thee that those viewless beings,
Whose mansion is the smallest particle
Of the impassive atmosphere,
Think, feel, and live, like man:
That their affections and antipathies,
Like his, produce the laws
Ruling their mortal state;
And the minutest throb,
That through their frame diffuses
The slightest, faintest motion,
Is fixed and indispensable
As the majestic laws
That rule yon rolling orbs.

* * * * *

How bold the flight of passion's wandering wing,
How swift the step of reason's firmer tread,
How calm and sweet the victories of life,
How terrorless the triumph of the grave!
How powerless were the mightiest monarch's arm,
Vain his loud threat and impotent his frown!
How ludicrous the priest's dogmatic roar!
The weight of his exterminating curse,
How light! and his affected charity,
To suit the pressure of the changing times,
What palpable deceit!—but for thy aid,
Religion! but for thee, prolific fiend,
Who peoplest earth with demons, hell with men,
And heaven with slaves!
Thou taintest all thou look'st upon!—The stars,
Which on thy cradle beamed so brightly sweet,
Were gods to the distempered playfulness
Of thy untutored infancy: the trees,
The grass, the clouds, the mountains, and the sea,

All living things that walk, swim, creep, or fly,
Were gods: the sun had homage, and the moon
Her worshipper. Then thou becam'st a boy,
More daring in thy frenzies: every shape,
Monstrous or vast, or beautifully wild,
Which, from sensation's relics, fancy culls;
The spirits of the air, the shuddering ghost,
The genii of the elements, the powers
That give a shape to nature's varied works,
Had life and place in the corrupt belief
Of thy blind heart: yet still thy youthful hands
Were pure of human blood. Then manhood gave
Its strength and ardor to thy frenzied brain;
Thine eager gaze scanned the stupendous scene,
Whose wonders mocked the knowledge of thy pride.
Their everlasting and unchanging laws
Reproached thine ignorance. Awhile thou stood'st
Baffled and gloomy; then thou did'st sum up
The elements of all that thou did'st know;
The changing seasons, winter's leafless reign,
The budding of the heaven-breathing trees,
The eternal orbs that beautify the night,
The sunrise, and the setting of the moon,
Earthquakes and wars, and poisons and disease,
And all their causes, to an abstract point,
Converging, thou did'st bend, and called it GOD;
The self-sufficing, the omnipotent,
The merciful, and the avenging God!
Who, prototype of human misrule, sits
High in Heaven's realm, upon a golden throne,
Even like an earthly king: and whose dread work,
Hell gapes forever for the unhappy slaves
Of fate, whom he created in his sport,
To triumph in their torments when they fell!
Earth heard the name; earth trembled, as the smoke
Of his revenge ascended up to Heaven,
Blotting the constellations: and the cries
Of millions, butchered in sweet confidence
And unsuspecting peace, even when the bonds
Of safety were confirmed by wordy oaths,

Sworn in his dreadful name, rung through the land;
Whilst innocent babes writhed on thy stubborn spear,
And thou did'st laugh to hear the mother's shriek
Of maniac gladness, as the sacred steel
Felt cold in her torn entrails!

Religion! thou wert then in manhood's prime;
But age crept on: one God would not suffice
For senile puerility; thou fram'dst
A tale to suit thy dotage, and to glut
Thy misery-thirsting soul, that the mad fiend
Thy wickedness had pictured might afford
A plea for sating the unnatural thirst
For murder, rapine, violence, and crime,
That still consumed thy being, even when
Thou heard'st the step of fate:—that flames might light
Thy funeral scene, and the shrill horrent shrieks
Of parents dying on the pile that burned
To light their children to thy paths, the roar
Of the encircling flames, the exulting cries
Of thine apostles, loud commingling there,
Might sate thy hungry ear
Even on the bed of death!

But now contempt is mocking thy gray hairs;
Thou art descending to the darksome grave,
Unhonored and unpitied, but by those
Whose pride is passing by like thine, and sheds
Like thine, a glare that fades before the sun
Of truth, and shines but in the dreadful night
That long has lowered above the ruined world."

Speaking of the Atheist's martyrdom, in answer to the spirit of "Ianthe," Shelley makes his fairy say:—

"There is no God!
Nature confirms the faith his death-groan sealed.
Let heaven and earth, let man's revolving race,
His ceaseless generations, tell their tale;

Let every part depending on the chain
That links it to the whole, point to the hand
That grasps its term! Let every seed that falls
In silent eloquence unfold its store
Of argument. Infinity within,
Infinity without, belie creation;
The exterminable spirit it contains
Is nature's only God: but human pride
Is skilful to invent most serious names
To hide its ign rance.

The name of God
Has fenced about all crime with holiness,
Himself the creature of his worshippers,
Whose names and attributes and passions change,
Seeva, Buddh, Foh, Jehovah, God, or Lord,
Even with the human dupes who build his shrines.
Still serving o'er the war-polluted world
For desolation's watch-word; whether hosts
Stain his death-blushing chariot wheels, as on
Triumphantly they roll, whilst Brahmins raise
A sacred hymn to mingle with the groans;
Or countless partners of his powers divide
His tyranny to weakness: or the smoke
Of burning towns, the cries of female helplessness,
Unarmed old age, and youth, and infancy,
Horribly massacred, ascend to heaven
In honor of his name; or, last and worst,
Earth groans beneath religion's iron age,
And priests dare babble of a God of peace,
Even whilst their hands are red with guiltless blood,
Murdering the while, uprooting every germ
Of truth, exterminating, spoiling all,
Making the earth a slaughter-house."

"Ianthe's" spirit, however, asks still further, and the ghost of Ahasuerus having been summoned, the question is repeated, "Is there a God?"

"*Ahasuerus.*—Is there a God? ay, an Almighty God,
And vengeful as Almighty! Once his voice

Was heard on earth: earth shuddered at the sound,
The fiery-visaged firmament expressed
Abhorrence, and the grave of nature yawned
To swallow all the dauntless and the good
That dared to hurl defiance at his throne,
Girt as it was with power. None but slaves
Survived,—cold-blooded slaves, who did the work
Of tyrannous omnipotence: whose souls
No honest indignation ever urged
To elevated daring, to one deed
Which gross and sensual self did not pollute.
These slaves built temples for the omnipotent fiend,
Gorgeous and vast: the costly altars smoked
With human blood, and hideous pæans rung
Through all the long-drawn aisles. A murderer heard
His voice in Egypt, one whose gifts and arts
Had raised him to his eminence in power,
Accomplice of omnipotence in crime,
And confidant of the all-knowing one.

These were Jehovah's words:
"From an eternity of idleness
I, God, awoke: in seven days' toil made earth
From nothing; rested, and created man.
I placed him in a paradise, and there
Planted the tree of evil, so that he
Might eat and perish, and my soul procure
Wherewith to sate its malice, and to turn,
Even like a heartless conqueror of the earth,
All misery to my fame. The race of men,
Chosen to my honor, with impunity,
May sate the lusts I planted in their heart.
Here I command thee hence to lead them on,
Until, with hardened feet, their conquering troops
Wade on the promised soil through woman's blood,
And make my name be dreaded through the land.
Yet ever burning flame and ceaseless woe
Shall be the doom of their eternal souls,
With every soul on this ungrateful earth,
Virtuous or vicious, weak or strong,—even all

Shall perish, to fulfil the blind revenge
Which you, to men, call justice, of their God."

The murderer's brow
Quivered with horror.

God omnipotent!
Is there no mercy? must our punishment
Be endless? will long ages roll away,
And see no term? Oh! wherefore hast thou made
In mockery and wrath this evil earth?
Mercy becomes the powerful—be but just:
O God! repent and save.

"One way remains,
I will beget a son, and he shall bear
The sins of all the world: he shall arise
In an unnoticed corner of the earth,
And there shall die upon a cross, and purge
The universal crime; so that the few
On whom my grace descends, those who are marked
As vessels to the honor of their God,
May credit this strange sacrifice, and save
Their souls alive. Millions shall live and die
Who ne'er shall call upon their Saviour's name,
But, unredeemed, go to the gaping grave.
Thousands shall deem it an old woman's tale,
Such as the nurses frighten babes withal.
These in a gulph of anguish and of flame
Shall curse their reprobation endlessly.
Yet tenfold pangs shall force them to avow,
Even on their beds of torment, where they howl,
My honor, and the justice of their doom.
What then avail their virtuous deeds, their thoughts
Of purity, with radiant genius bright,
Or lit with human reason's earthly ray?
Many are called, but few I will elect.
Do thou my bidding, Moses!"

In his poem of "Rosalind and Helen," the poet indulges in the following prophecy, which he puts in the mouth of Helen:—

" Fear not the tyrants shall rule forever,
Or the priests of the bloody faith;
They stand on the brink of that mighty river,
Whose waves they have tainted with death.
It is fed from the depths of a thousand dells,
Around them it foams, and rages, and swells;
And their swords and their sceptres I floating see,
Like wrecks on the surge of eternity."

Beside the poems mentioned, Shelley wrote "The Cenci," "Alastor," "Prometheus Unbound," and many others, including a beautiful little ode to a "Skylark," and the well-known "Sensitive Plant."

Shelley was a true and noble man—no poet was ever warmed by a more genuine and unforced aspiration.—De Quincey says, "Shelley would, from his earliest manhood, have sacrificed all that he possessed for any comprehensive purpose of good for the race of man. He dismissed all insults and injuries from his memory. He was the sincerest and most truthful of human creatures. If he denounced marriage as a vicious institution, *that* was but another phase of the partial lunacy which affected him: for to no man were purity and fidelity more essential elements in the idea of real love." Again, De Quincey speaks of Shelley's "fearlessness, his gracious nature, his truth, his purity from all fleshliness of appetite, his freedom from vanity, his diffusive love and tenderness." This testimony is worth much, the more especially when we remember that it is from the pen of Thomas de Quincey, who, while truthfully acknowledging the man, hesitates not to use polished irony, rough wit, and covert sneering, when dealing with the man's uttered thinkings.

That Shelley understood the true mission of a poet, and the true nature of poetry, will appear from the following extract from one of his prose essays:—"Poetry," he says, "is the record of the best and happiest moments of the happiest and best minds. We are aware of evanescent visitations of thought and feeling, sometimes associated with place and person, some-

times regarding our own mind alone, and always arising unforeseen, and departing unbidden, but elevating and delightful beyond all expression. Poets are not only subject to these experiences, as spirits of the most refined organization, but they can color all they combine with the evanescent lines of this ethereal world; a word, a trait in the representation of a scene or passion will touch the enchanted cord, and reanimate in those who have ever experienced these emotions, the sleeping, the cold, the buried image of the past. Poetry thus makes immortal all that is best and most beautiful in the world; it arrests the vanishing apparitions which haunt the interlunations of life, and veiling them, or in language or in form, sends them forth among mankind, bearing sweet news of kindred joy to those with whom their sisters abide—abide, because there is no portal of expression from the caverns of the spirit which they inhabit into the universe of things."

Shelley's beautiful imagery and idealistic drapery is sometimes so accumulated in his poems, that it is difficult to follow him in his thinkings. In his verse he wishes to stand high as a philosophical reasoner, and this, together with his devotion to the cause, which even men of De Quincey's stamp call "Insolent Infidelity," has prevented Shelley from becoming so popular as he might have been.

Shelley lived a life of strife, passed his boyhood and youth in struggling to be free—misunderstood and misinterpreted: and when at last in his manhood happier circumstances were gathering around him, a blast of wind came, and the waves of the sea washed away one who was really and truly "a man and a poet."

On Monday, July 8th, 1822, being then in his 29th year, Shelley was returning from Leghorn to his home at Lerici, in a schooner-rigged boat of his own, with one friend and an English servant; when the boat had reached about four miles from the shore, the storm suddenly rose, and the wind suddenly shifted. From excessive smoothness, all at once the sea was foaming, and breaking, and getting up in a heavy swell. The

boat is supposed to have filled to leeward, and (carrying two tons of ballast) to have sunk instantaneously —all on board were drowned. The body of Shelley was washed on shore eight days afterwards, near Via Reggio, in an advanced state of decomposition, and was therefore burned on a funeral pyre, in the presence of Leigh Hunt, Lord Byron, Mr. Trelawney, and a Captain Shenley.

Thus died Shelley in the mid-day of life, and ere the warm sun of that mid-day could dispel the clouds that had gathered round the morning of his career. The following comparison made between the personal appearance of Shelley and of Byron, by Gilfillan, has been called by De Quincey "an eloquent parallel," and we therefore conclude the present number by quoting it:—"In the forehead and head of Byron there is more massive power and breadth: Shelley has a smooth, arched, spiritual expression; wrinkle there seems none on his brow; it is as if perpetual youth had there dropped its freshness. Byron's eye seems the focus of pride and lust: Shelley's is mild, pensive, fixed on you, but seeing you through the mist of his own idealism. Defiance curls on Byron's nostril, and sensuality steeps his full large lips. The lower features of Shelley's face are frail, feminine, flexible.—Byron's head is turned upwards as if having risen proudly above his contemporaries, he were daring to claim kindred, or demand a contest with a superior order of beings. Shelley's is half bent, in reverence and humility, before some vast vision seen by his own eye alone. Misery erect, and striving to cover its retreat under an aspect of contemptuous fury, is the permanent and pervading expression of Byron's countenance. Sorrow, softened and shaded away by hope and habit, lies like a 'holier day' of still moonshine upon that of Shelley. In the portrait of Byron, taken at the age of nineteen, you see the unnatural age of premature passion; his hair is young, his dress is youthful, but his face is old. In Shelley you see the eternal child, none the less that his hair is grey, and that sorrow seems half his immortality." "I."

BIOGRAPHY

OF

CLAUD ARIAN HELVETIUS.

If France, at the present day, has not reason to be proud of its "leading man," it has in former times produced those minds that shed lustre upon the country, and who, by their literature, add immortality to its renown. During the eighteenth century, when religious persecution and intolerance were rampant throughout Europe, France furnished men to check oppression and expose superstition, while others followed to lay the foundation of excellence and greatness in the examination and cultivation of its true source—the mind. Helvetius sought to direct men's attention to self-examination, and to show how many disputes might be avoided if each person understood *what* he was disputing about. "Helvetius on the Mind" is a work that ought to be read widely, and studied attentively, especially by "rising young men," as it is one of those *Secular* works too rarely found among our literature.

Claud Arian Helvetius was born in Paris in the year 1715. After his preparatory studies, he was sent to the College of Louis le Grand, having for his tutor the famous Poree, who bestowed additional attention upon Helvetius, perceiving in him great talent and genius. Early in life Helvetius formed the friendship of some of the leading minds of France, Montesquieu being his intimate friend. Voltaire, too, sought his

correspondence when at the age of twenty-three, calling him his "Young Apollo," and his "Son of Parnassus." The first literary attempts of Helvetius consisted of poetry—"Epistles on Happiness," which appeared as a posthumous production, with the "lavish commendations" of Voltaire. After ten years' thought and study Helvetius. in 1758, published a work entitled "De L'Esprit," which brought upon him a great amount of persecution. The Parliament of Paris condemned it, and Helvetius was removed from the office he held of "Maitre d'Hotel to the Queen." Voltaire remarks:—"It is a little extraordinary that they should have persecuted, disgraced, and harassed, a much respected philosopher of our days, the innocent, the good Helvetius, for having said that if men had been without hands they could not have built houses, or worked in tapestry. Apparently those who have condemned this proposition, have a secret for cutting stones and wood, and for sewing with the feet.....I have no doubt that they will soon condemn to the galleys the first who shall have the insolence to say, that a man cannot think without his head; for, some bachelor will tell him, the soul is a pure spirit, the head is nothing but matter: God can place the soul in the nails, as well as in the skull, therefore I proscribe you as impious." During the persecution raised against him, Helvetius visited England in 1764. In 1765 he visited Prussia, being well received by Frederick, in whose place he lodged. Voltaire strongly advised Helvetius to leave France in these words:—"In your place, I should not hesitate a moment to sell all that I have in France; there are some excellent estates in my neighborhood, and there you might cultivate in peace the arts you love." About this period Hume became acquainted with Helvetius, whom he styles, in writing to Dr. Robertson, "a very fine genius and worthy man." In 1765, Helvetius returned from Prussia, and retired to his estate at Vore. The sight of misery much affected him; and when relieving distress, he enjoined strict secrecy. Sometimes, when told he re-

lieved those undeserving his aid, he would say, "If I were a king I would correct them, but as I am only rich and they are poor, I do my duty in relieving them." An attack of gout in the head and stomach terminated his life in December, 1771, in the fifty-sixth year of his age.

In "De L'Esprit, or, Essays on the Mind," chap. I., Helvetius makes the following remarks on the "Mind considered in itself":—

"We hear every day disputes with regard to what ought to be called the Mind; each person delivers his thoughts, but annexes different ideas to the word; and thus the debate is continued, without understanding each other. In order, therefore, to enable us to give a just and precise idea of the word Mind, and its different acceptations, it is necessary first to consider the Mind in itself. We consider the Mind either as the effect of the faculty of thinking, and in this sense the Mind is no more than an assemblage of our thoughts; or, we consider it as the very faculty of thinking. But in order to understand what is meant by the Mind, in the latter acceptation, we ought previously to know the productive causes of our ideas. Man has two faculties; or, if I may be allowed the expression, two passive powers whose existence is generally and distinctly acknowledged. The one is the faculty of receiving the different impressions caused by external objects, and is called Physical Sensibility. The other is the faculty of preserving the impressions caused by those objects, called Memory; and Memory is nothing more than a continued, but weakened sensation.—Those faculties which I consider as the productive causes of our thoughts, and which we have in common with beasts, would produce but a very small number of ideas, if they were not assisted by certain external organizations. If Nature, instead of hands and flexible fingers, had terminated our wrist with the foot of a horse, mankind would doubtless have been totally destitute of art, habitation, and defence against other ani-

mals. Wholly employed in the care of procuring food, and avoiding the beasts of prey, they would have still continued wandering in the forests, like fugitive flocks. It is therefore evident that, according to this supposition, the police would never have been carried in any society to that degree of perfection, to which it is now arrived. There is not a nation now existing, but, with regard to the action of the mind, must not have continued very inferior to certain savage nations, who have not two hundred different ideas, nor two hundred words to express those ideas; and whose language must consequently be reduced, like that of animals, to five or six different sounds or cries, if we take from it the words bow, arrow, nets, etc., which suppose the use of hands. From whence I conclude, that, without a certain exterior organization, sensibility and memory in us would prove two sterile faculties. We ought to examine if these two faculties, by the assistance of this organization, have in reality produced all our thoughts. But, before we examine this subject, I may possibly be asked whether these two faculties are modifications of a spiritual or a material substance? This question, which has formerly been so often debated by philosophers, and by some persons revived in our time, does not necessarily fall within the limits of my work.—What I have to offer, with regard to the Mind, is equally conformable to either of these hypothesis. I shall therefore only observe that, if the church had not fixed our belief in respect to this particular, and we had been obliged by the light of reason alone to acquire a knowledge of the thinking principle, we must have granted, that neither opinion is capable of demonstration; and consequently that, by weighing the reasons on both sides, balancing the difficulties, and determining in favor of the greater number of probabilities, we should form only conditional judgments. It would be the fate of this problem, as it hath been of many others, to be resolvable only by the assistance of the calculation of probabilities."

Helvetius, on the question "whether genius ought to be considered as a natural gift, or as an effect of education," says:—

"I am going to examine in this discourse what the mind receives from nature and education; for which purpose it is necessary first, to determine what is here meant by the word Nature. This word may raise in our minds a confused idea of a being or a force that has endued us with all our senses: now the senses are the sources of all our ideas. Being deprived of our senses, we are deprived of all the ideas relative to them: a man born blind has for this reason no idea of colors; it is then evident that, in this signification, genius ought to be considered as a gift of nature. But, if the word be taken in a different acceptation, and we suppose that among the men well formed and endued with all their senses, without any perceivable defect of their organization, nature has made such a remarkable difference, and formed such an unequal distribution of the intellectual powers, that one shall be so organized as to be stupid, and the other be a man of genius, the question will become more delicate. I confess that, at first, we cannot consider the great inequality in the minds of men, without admitting that there is the same difference between them as between bodies, some of which are weak and delicate, while others are strong and robust. What can here occasion such variations from the uniform manner wherein nature operates? This reasoning, it is true, is founded only on analogy. It is like that of the astronomers, who conclude that the moon is inhabited, because it is composed of nearly the same matter as our earth.—How weak soever this reasoning may be, it must yet appear demonstrative; for, say they, to what cause can be attributed the great disproportion of intellects observable between people who appear to have had the same education? In order to reply to this objection, it is proper first to inquire, whether several men can, strictly speaking, have the same education; and

for this purpose to fix the idea included in the word Education. If by education we merely understand that received in the same places, and under the same masters; in this sense the education is the same with an infinite number of men. But, if we give to this word a more true and extensive signification, and in general comprehend everything that relates to our instruction; then I say, that nobody receives the same education; because each individual has, for his preceptors, if I may be allowed to say so, the form of government under which he lives, his friends, his mistresses, the people about him, whatever he reads, and in short chance; that is, an infinite number of events, with respect to which our ignorance will not permit us to perceive their causes, and the chain that connects them together. Now, this chance has a greater share in our education than is imagined. It is this places certain objects before us, and in consequence of this, occasions more happy ideas, and sometimes leads to the greatest discoveries. To give some examples: it was chance that conducted Galileo into the gardens of Florence, when the gardeners were working the pumps: it was that which inspired those gardeners, when, not being able to raise the water above the height of 32 feet, to ask him the cause, and by that question piqued the vanity of the philosopher, put in action by so casual a question, that obliged him to make this natural effect the subject of his thoughts, till, at last, by discovering the weight of the air, he found the solution of the problem. In the moment when the peaceful soul of Newton was employed by no business, and agitated by no passion, it was also chance that, drawing him under an apple tree, loosened some of the fruit from the branches, and gave that philosopher the first idea of his system on gravitation: it was really this incident that afterwards made him turn his thoughts to inquire whether the moon does not gravitate towards the earth with the same force as that with which bodies fall on its surface? It is then to chance that great geniuses are frequently

obliged for their most happy thoughts. How many great minds are confounded among the people of moderate capacities for want of a certain tranquillity of soul, the question of a gardener, or the fall of an apple!"

Of the "exclusive qualities of the Mind and Soul," Helvetius observes :—

"My view in the preceding chapters was to affix clear ideas to the several qualities of the mind, I propose in this to examine if there are talents that must necessarily exclude each other? This question, it is said, is determined by facts; no person is, at the same time, superior to all others in many different kinds of knowledge. Newton is not reckoned among the poets, nor Milton among the geometricians: the verses of Leibnitz are bad. There is not a man who, in a single art, as poetry, or painting, has succeeded in all the branches of it. Corneille and Racine have done nothing in comedy comparable to Moliere: Michael Angelo has not drawn the pictures of Albani, nor Albani painted those of Julius Romano. The genius of the greatest men appears then to be confined within very narrow limits. This is, doubtless, true: but I ask, what is the cause? Is it time, or is it wit, which men want to render themselves illustrious in the different arts and sciences? The progress of the human mind, it is said, ought to be the same in all the arts and sciences: the operations of the mind are reduced to the knowledge of the resemblances and differences that subsist between various objects. It is then by observation that we obtain, in all the different kinds of study, the new and general ideas on which our superiority depends. Every great physician, every great chemist, may then become a great geometrician, a great astronomer, a great politician, and the first, in short, in all the sciences This fact being stated, it will doubtless be concluded, that it is the short duration of human life that forces superior minds to limit themselves to one kind of study. It must, however, be confessed, that there are talents and qualities possessed only by

the exclusion of some others. Among mankind some are filled with the love of glory, and are not susceptible of any other of the passions: some may excel in natural philosophy, civil law, geometry, and, in short, in all the sciences that consist in the comparison of ideas. A fondness for any other study can only distract or precipitate them into errors. There are other men susceptible not only of the love of glory, but an infinite number of other passions: these may become celebrated in different kinds of study, where the success depends on being moved. Such is, for instance, the dramatic kind of writing: but, in order to paint the passions, we must, as I have already said, feel them very warmly: we are ignorant both of the language of the passions and of the sensations they excite in us, when we have not experienced them. Thus ignorance of this kind always produces mediocrity. If Fontenelle had been obliged to paint the characters of Rhadamistus, Brutus, or Catalme, that great man would certainly have fallen much below mediocrity.....Let a man, for instance, like M. de Fontenelle, contemplate, without severity, the wickedness of mankind; let him consider it, let him rise up against crimes without hating the criminals, and people will applaud his moderation; and yet, at the same instant, they will accuse him of being too lukewarm in friendship. They do not perceive, that the same absence of the passions, to which he owes the moderation they commend, must necessarily render him less sensible of the charms of friendship."

The "abuse of words" by different schools of philosophers is thus ably pointed out:—

"Descartes had before Locke observed that the Peripatetics, intrenching themselves behind the obscurity of words, were not unlike a blind man, who, in order to be a match for his clear-sighted antagonist, should draw him into a dark cavern. 'Now,' added he, 'if this man can introduce light into the cavern, and compel the Peripatetics to fix clear ideas to their words,

the victory is his own. In imitation of Descartes and Locke, I shall show that, both in metaphysics and morality, the abuse of words, and the ignorance of their true import, is a labyrinth in which the greatest geniuses have lost themselves; and, in order to set this particular in a clear light, instance, in some of those words which have given rise to the longest and sharpest disputes among philosophers: such, in metaphysics, are Matter, Space, and Infinite. It has at all times been alternately asserted that Matter felt, or did not feel, and given rise to disputes equally loud and vague. It was very late before it came into the disputants' heads to ask one another, what they were disputing about, and to annex a precise idea to the word Matter. Had they at first fixed the meaning of it, they would have perceived, if I may use the expression, that men were the creators of Matter; that Matter was not a being; that in nature there were only individuals to which the name of Body had been given; and that this word Matter could import no more than the collection of properties common to all bodies. The meaning of this word being determined, all that remained was to know, whether extent, solidity, and impenetrability, were the only properties common to all bodies; and whether the discovery of a power, such for instance as attraction, might not give rise to a conjecture that bodies had some properties hitherto unknown, such as that of sensation, which, though evident only in the organized members of animals, might yet be common to all individuals? The question being reduced to this, it would have appeared that if, strictly speaking, it is impossible to demonstrate that all bodies are absolutely insensible, no man, unless instructed by a particular revelation, can decide the question otherwise than by calculating and comparing the verisimilitude of this opinion with that of the contrary..... Instructed by the errors of great men who have gone before us, we should be sensible that our observations, however multiplied and concentrated, are scarcely sufficient to form one of those partial systems comprehend-

ed in the general system; and that it is from the depth of imagination that the several systems of the universe have hitherto been drawn; and, as our informations of remote countries are always imperfect, so the informations philosophers have of the system of the world are also defective. With a great genius and a multitude of combinations, the products of their labors will be only fictions till time and chance shall furnish them with a general fact, to which all others may be referred.

"What I have said of the word Matter, I say also of Space. Most of the philosophers have made a being of it; and the ignorance of the true sense of the word has occasioned long disputes. They would have been greatly shortened by annexing a clear idea to this word; for then the sages would have agreed that Space, considered in bodies, is what we call extension; that we owe the idea of a void, which partly composes the idea of Space, to the interval seen betwixt two lofty mountains; an interval which, being filled only by air, that is, by a body which at a certain distance makes no sensible impression on us, must have given us an idea of a vacuum; being nothing more than a power of representing to ourselves mountains separated from each other, and the intervening distances not being filled by other bodies. With regard to the idea of Infinite, comprehended also within the idea of Space, I say that we owe this idea of Infinite only to the power which a man standing on a plain has of continually extending its limits, the boundary of his imagination not being determinable: the absence of limits is therefore the only idea we can form of Infinite. Had philosophers, previously to their giving any opinion on this subject, determined the signification of the word Infinite, I am inclined to believe they would have adopted the above definition, and not spent their time in frivolous disputes. To the false philosophy of former ages, our gross ignorance of the true signification of words is principally owing; as the art of abusing them made up the greatest part of that

philosophy. This art, in which the whole science of the schools consisted, confounded all ideas; and the obscurity it threw on the expressions, generally diffused itself over all the sciences, especially morality."

The following remarks show Helvetius's notions of the "love of glory":—

"By the word Strong-Passion, I mean a passion the object of which is so necessary to our happiness, that without the possession of it life would be insupportable. This was Omar's idea of the passion, when he said, 'Whoever thou art, that lovest liberty, desirest to be wealthy without riches, powerful without subjects, a subject without a master, dare to condemn death: kings will then tremble before thee, whilst thou alone shalt fear no person.'.....It was the passion of honor and philosophic fanaticism alone that could induce Timicha, the Pythagorean, in the midst of torture, to bite off her tongue, that she might not expose herself to reveal the secrets of her sect. Cato, when a child, going with his tutor to Sylla's palace, at seeing the bloody heads of the proscribed, asked with impatience the name of the monster who had caused so many Roman citizens to be murdered. He was answered, it was Sylla: 'How,' says he, 'does Sylla murder thus, and is Sylla still alive?' 'Yes,' it was replied, 'the very name of Sylla disarms our citizens.' 'Oh! Rome,' cried Cato, 'deplorable is thy fate, since within the vast compass of thy walls not a man of virtue can be found, and the arm of a feeble child is the only one that will oppose itself against tyranny!' Then, turning towards his governor, 'Give me,' said he, 'your sword; I will conceal it under my robe, approach Sylla, and kill him. Cato lives, and Rome is again free.'.....If the generous pride, the passion of patriotism and glory, determine citizens to such heroic actions, with what resolution and intrepidity do not the passions inspire those who aim at distinction in the arts and sciences, and whom Cicero calls the peaceable heroes? It is from a desire of glory

that the astronomer is seen, on the icy summits of the Cordilleras, placing his instruments in the midst of snows and frost; which conducts the botanist to the brinks of precipices in quest of plants; which anciently carried the juvenile lovers of the sciences into Egypt, Ethiopia, and even into the Indies, for visiting the most celebrated philosophers, and acquiring from their conversation the principles of their doctrine. How strongly did this passion exert itself in Demosthenes, who, for perfecting his pronunciation, used every day to stand on the sea-shore, and with his mouth full of pebbles harangue the agitated waves! It was from the same desire of glory that the young Pythagoreans submitted to a silence of three years, in order to habituate themselves to recollection and meditation; it induced Democritus to shun the distractions of the world, and retire among the tombs, to meditate on those valuable truths, the discovery of which, as it is always very difficult, is also very little esteemed; in fine, it was this that prompted Heraclitus to cede to his younger brother the throne of Ephesus, to which he had the right of primogeniture, that he might give himself up entirely to philosophy; which made the Athletic improve his strength, by denying himself the pleasures of love; it was also from a desire of popular applause that certain ancient priests renounced the same pleasures, and often, as Boindin pleasantly observes of them, without any other recompense for their continence than the perpetual temptation it occasions.....'The cause,' says Cardinal Richelieu, 'why a timorous mind perceives an impossibility in the most simple projects, when to an elevated mind the most arduous seems easy, is, because, before the latter the mountains sink, and before the former mole-hills are metamorphosed into mountains.'"

The different motives that influence our conduct are thus stated:—

"A mother idolizes her son; 'I love him,' says she, 'for his own sake.' However, one might reply, you

take no care of his education, though you are in no doubt that a good one would contribute infinitely to his happiness; why, therefore, do not you consult some men of sense about him, and read some of the works written on this subject? 'Why, because,' says she, 'I think I know as much of this matter as those authors and their works.' But how did you get this confidence in your own understanding? Is it not the effect of your indifference? An ardent desire always inspires us with a salutary distrust of ourselves. If we have a suit at law of considerable consequence, we visit counsellors and attorneys, we consult a great number, and examine their advice. Are we attacked by any of those lingering diseases, which incessantly place around us the shades and horrors of death? We seek physicians, compare their opinions, read physical books, we ourselves become little physicians Such is the conduct prompted by a warm interest. With respect to the education of children, if you are not influenced in the same manner, it is because you do not love your son as well as yourself. 'But,' adds the mother, 'what then should be the motive of my tenderness?' Among fathers and mothers, I reply, some are influenced by the desire of perpetuating their name in their children; they properly love only their names; others are fond of command, and see in their children their slaves. The animal leaves its young when their weakness no longer keeps them in dependence; and paternal love becomes extinguished in almost all hearts, when children have, by their age or station, attained to independence. 'Then,' said the poet Saadi, 'the father sees nothing in them but greedy heirs,' and this is the cause, adds some poet, of the extraordinary love of the grandfather for his grandchildren; he considers them as the enemies of his enemies. There are, in short, fathers and mothers, who make their children their playthings and their pastime. The loss of this plaything would be insupportable to them; but would their affliction prove that they loved the child for itself? Everybody knows this passage in the life of M.

de Lauzun: he was in the Bastile; there, without books, without employment, a prey to lassitude and the horrors of a prison, he took it in his head to tame a spider. This was the only consolation he had left in his misfortune. The governor of the Bastile, from an inhumanity common to men accustomed to see the unhappy, crushed the spider. The prisoner felt the most cutting grief, and no mother could be affected by the death of a son with a more violent sorrow. Now whence is derived this conformity of sentiments for such different objects? It is because, in the loss of a child, or in the loss of the spider, people frequently weep for nothing but for the lassitude and want of employment into which they fall. If mothers appear in general more afflicted at the death of a child than fathers employed in business, or given up to the pursuit of ambition, it is not because the mother loves her child more tenderly, but because she suffers a loss more difficult to be supplied. The errors, in my opinion, are, in this respect, very frequent; people rarely cherish a child for its own sake. That paternal love of which so many men make a parade, and by which they believe themselves so warmly affected, is most frequently nothing more than an effect, either of a desire of perpetuating their names, or of pride of command.....Do you not know that Galileo was unworthily dragged to the prison of the Inquisition, for having maintained that the sun is placed in the centre, and does not move around the earth; that his system first offended the weak, and appeared directly contrary to that text of Scripture—'Sun, stand thou still?' However, able divines have since made Galileo's principles agree with those of religion. Who has told you, that a divine more happy or more enlightened than you, will not remove the contradiction, which you think you perceive between your religion, and the opinion you resolve to condemn? Who forces you by a precipitate censure to expose, if not religion, at least its ministers, to the hatred excited by persecution? Why, always borrowing the assistance of force and terror,

would you impose silence on men of genius, and deprive mankind of the useful knowledge they are capable of dispensing? You obey, you say, the dictates of religion. But it commands you to distrust yourselves, and to love your neighbor. If you do not act in conformity to these principles, you are then not actuated by the spirit of God. But you say, by whom then are we inspired? By laziness and pride. It is laziness, the enemy of thought, which makes you averse to those opinions, which you cannot, without study and some fatigue of attention, unite with the principles received in the schools; but which being proved to be philosophically true, cannot be theologically false. It is pride, which is ordinarily carried to a greater height in the bigot than in any other person, which makes him detest in the man of genius the benefactor of the human race, and which exasperates him against the truths discovered by humility. It is then this laziness and this pride, which, disguising themselves under the appearance of zeal, render them the persecutors of men of learning; and which in Italy, Spain, and Portugal, have forged chains, built gibbets, and held the torch to the piles of the Inquisition. Thus the same pride, which is so formidable in the devout fanatic, and which in all religions makes him persecute, in the name of the Most High, the men of genius, sometimes arms against them the men in power. After the example of those Pharisees, who treated as criminals the persons who did not adopt all their decisions, how many viziers treat, as enemies to the nation, those who do not blindly approve their conduct!" J. W.

BIOGRAPHY

OF

FRANCES W. D'ARUSMONT.

THE previous issues of this publication contain notices of the lives and writings of men of eminence in the world of Freethought. This number is devoted to a review of the career and works of a most talented and accomplished lady—a Freethinker and Republican. As a proof—if any proof were needed—that women, if adequately educated, are equally capable with men to become teachers and reformers, the works of the subject of present notice afford abundant evidence. The efforts now being made to procure an adjustment of the laws relating to women, whereby they will be protected in their property, and consequently improved in their social position, deserve the support of all classes. When females become independent, there will be less ignorance among women and more happiness among men.

FRANCES WRIGHT, afterwards Madame D'Arusmont, was a native of Dundee. She was born on the 6th of September, 1795. She came of a wealthy family, who had been extensive holders of city property from the year 1500. Her father was a man of considerable literary attainments, and to his active antiquarian researches and donations the British Museum is indebted for many rare and valuable coins and medals. He died young, as also his wife, leaving three children—two girls and a boy. Frances was then but two years

and a half old. At the wish of her grandfather, General Duncan Campbell, she was taken to England, and reared as a ward of Chancery, under the guardianship of a maternal aunt. She grew to be very tall in person, erect, and of a commanding figure; large eyes, and magnificent head, with a face somewhat masculine, but well formed, and decidedly handsome. Her brother was sent to India, at the age of fifteen, as a cadet in the East India Company's service, and was killed on the passage out in an encounter with a French vessel. Her sister passed her life with her, and died in Paris in 1831.

At an early age, Miss Wright gave evidence of great intellectual ability. The education she received was of a very superior kind. She diligently applied herself to the various branches of science, and to the study of ancient and modern letters and the arts, being impelled by a strong desire for knowledge. At the age of nineteen, she published her first work, "A Few Days in Athens." Her attention was early drawn to the sufferings of the lower classes, and on reflection she became convinced that some great vice lay at the foundation of the whole of human practice. She determined to endeavor to discover, and assist in removing it. She read Bocca's "History of the American Revolution," and resolved to visit that country, it appearing to her young imagination as the land of freedom and hope.—After having familiarised herself with the government and institutions of America, she sailed for New York 1818. She returned to England in 1820, and published a large volume, entitled "Views of Society and Manners in America." It was dedicated to Jeremy Bentham, and had a large sale. The work being translated into most of the continental languages, she became known to the prominent reformers of Europe.

In 1821, she made her first visit to Paris, and was there introduced to General Lafayette, who, having previously read her work on America, invited her to that city. A republican in all her views and hopes, she was highly appreciated by Lafayette and other

eminent supporters of the liberal party in France.— She remained in Paris until 1824, when she returned to the United States, and immediately undertook a project for the abolition of slavery upon a plan somewhat different from any that then engaged the attention of philanthropists. For this purpose she purchased two thousand acres of land at Chickasaw Bluffs, (now Memphis, Tennessee), intending to make a good farm rather than a cotton plantation. She then purchased several slave families, gave them their liberty, and removed them to the farm, residing there herself to direct their labor. Commencing this novel undertaking with all that enthusiasm for which she was remarkable, she continued the experiment some three years and a half, when her health gave way, and, suffering under severe sickness, she made a voyage to Europe for her recovery. During her absence, the farm got involved in difficulties by the influence of her enemies; and finally, the whole project falling through, the negroes were sent off to Hayti at her expense.— She gave much time and money to the carrying forward of this experiment; and though it was a failure, it strikingly exhibited her strong sympathy and benevolence for an oppressed and degraded class of beings. Returning from Europe, she went to New Harmony, (Indiana) to assume the proprietorship of a periodical (the Harmony Gazette), which had been published under the direction of Robert Dale Owen. In 1828, leaving Mr. Owen in charge of the paper, she began a lecturing tour through the Union; and probably no man, and certainly no *woman*, ever met with such furious opposition. Her views, as announced in her paper, had made her generally known, and, being somewhat new and radically "anti-theological," brought down upon her head the rancor of religious bigotry. As no church or hall would be opened for her, she lectured in theatres; and her ability and eloquence drew great audiences. On one occasion, while preparing to lecture in a theatre at Baltimore, she was threatened with the destruction of her life if she attempted to speak. She

calmly replied, that she thought she knew the American people, and for every riotous fanatic that might annoy her, a hundred good citizens would protect her, and she was not afraid to place herself in their hands. She judged rightly. She went to the theatre, which was crammed from pit to ceiling, and lectured to an admiring and enthusiastic audience. In other cities she was not always so fortunate; more or less rioting occurred, while the press, almost without exception, denounced her in the bitterest terms. Subsequently, her paper was removed to New York. Some years afterwards, she again made a lecturing tour, but this time she spoke on subjects of a political nature, and met with a better reception. In addition to lecturing, she conducted a political magazine, entitled the Manual of American Principles, and was also engaged with Mr. Kneeland in editing the Boston Investigator. She wrote a great deal, and upon many subjects. Among her many works is a tragedy called "Altorf," which was performed on the stage, the principal character being sustained by Mr. James Wallack. Her last work, of any considerable size, was entitled "England the Civiliser," published in London in 1847.

Madame D'Arusmont died suddenly in Cincinnati, on Tuesday, December 14, 1852, aged fifty-seven. She had been for sometime unwell, in consequence of a fall upon the ice the previous winter, which broke her thigh, and probably hastened her decease; but the immediate cause of her death was the rupture of a blood-vessel. She was aware of her situation, knew when she was dying, and met her last hour with perfect composure. A daughter, her only child, survives her.

In a small work entitled "Observations on Religion and Civilization," are given the following "Definitions of Theology and Religion: in the words and in the things signified. Origin and Nature of Theology:"—

"Theology from the Greek *theos*, *logos*, renders distinct the meaning of the subject it attempts to treat.—*Theos*, God, or Gods, unseen beings and unknown caus-

es. *Logos*, word, talk—or, if we like to employ yet more familiar and expressive terms, prattle or chatter. *Talk*, or *prattle*, *about unseen beings* or *unknown causes*. The idleness of the subject, and inutility—nay, absolute insanity of the occupation, sufficiently appears in the strict etymological meaning of the word employed to typify them. The danger, the mischief, the cruelly immoral, and, if I may be permitted to coin a word for the occasion, the *unhumanizing* tendencies both of the subject and the occupation, when and where these are (as they have for the most part ever been throughout the civilized world) absolutely protected by law and upheld by government, sufficiently appear also from the whole page of history. Religion, from the Latin *religo*, *religio*, renders with equal distinctness the things signified. *Religo*, to tie over again, to bind fast; *religio*, a binding together, a bond of union. The importance of the great reality, here so accurately shadowed out, appears sufficiently in the etymological signification of the word. Its utility will be evident if we read, with intelligence, the nature, the past history, the actual condition, and the future destiny of man. But now, taking these two things in the most strict etymological sense of the words which express them, it will readily be distinguished that the first is a necessary creation of the *human intellect* in a certain stage of inquiry; the second, a necessary creation of the *human soul* (by which I understand both our intellectual and moral faculties taken conjointly) in any and every state of human civilization. Theology argues, in its origin, the first awakening of human attention to the phenomena of nature, and the first crude efforts of human ingenuity to expound them. While man sees the sun and stars without observing either their diurnal or their annual revolutions; while he receives upon his frame the rain and the wind, and the varying elements, without observing either their effects upon himself or upon the field of nature around him, he is as the brute which suffers and enjoys without inquiring why it experiences light or darkness, pain or pleasure. When

first he puts, in awkward language, to himself or to his fellow, the question *why does such an effect follow such a cause?* he commences his existence, if not as a reasonable being, (a state at which he has not yet arrived) at least *as a being capable of reason.* The answer to this first inquiry of awakening intelligence is, of course, such as his own circumscribed observation supplies.—It is, in fine, in accordance with the explanation of the old nurse to the child, who, asking, when startled by a rolling peal of thunder—'what makes that noise?' was fully satisfied by the reply: 'my darling, it is God Almighty overhead moving his furniture.' Man awakening to thought, but still unfamiliar with the concatenation of natural phenomena, inevitably conceives of some huge being, or beings, bestriding the clouds and whirlwind, or wheeling the sun and the moon like chariots through the blue vault. And so again, fancy most naturally peoples the gloom of the night with demons, the woods and the waters with naiads and dryads, elves and fairies, the church-yard with ghosts, and the dark cave and the solitary cot with wizards, imps and old witches. Such, then, is theology in its origin; and, in all its stages, we find it varying in grossness according to the degree of ignorance of the human mind; and, refining into verbal subtleties and misty metaphysics in proportion as that mind exchanges, in its progress from darkness to light, the gloom of ignorance for the mass of terror."

The nature of belief in the unknowable, and the dire consequences arising from fanaticism, are ably depicted in the following passages, selected from Lecture IV., on "Religion:"—

"Admitting religion to be the most important of all subjects, its truths must be the most apparent; for we shall readily concede, both that a thing true, must be always of more or less importance—and that a thing essentially important, must always be indisputably true. Now, again, I conceive we shall be disposed to admit, that exactly in proportion to the indisputability

of a truth, is the proof it is capable of affording; and that, exactly in proportion to the proof afforded, is our admission of such truth and belief in it. If, then, religion be the most important subject of human inquiry, it must be that also which presents the most forcible, irrefragable, and indisputable truths to the inquirer.—It must be that on which the human mind can err the least, and where all minds must be the most agreed. If religion be at once a science, and the most true of all sciences, its truths must be as indisputable as those in any branch of the mathematics—as apparent to all the senses as those revealed by the chemist or observed by the naturalist, and as easily referred to the test of our approving or disapproving sensations, as those involved in the science of morals.....Is religion a science? Is it a branch of knowledge? Where are the *things known* upon which it rests? Where are the accumulated facts of which it is compounded? What are the human sensations to which it appeals? Knowledge is compounded of *things known*. It is an accumulation of facts gleaned by our senses, within the range of material existence, which is subject to their investigation.....Now let us see where, in the table of knowledge, we may class religion. Of what part or division of nature, or material existence, does it treat? What bodies, or what properties of tangible bodies, does it place in contact with our senses, and bring home to the perception of our faculties? It clearly appertains not to the table of human knowledge, for it treats not of objects discoverable within the field of human observation. 'No,' will you say? 'but its knowledge is superhuman, unearthly—its field is in heaven.' My friends, the knowledge which is not human, is of slippery foundation to us human creatures. Things *known*, constitute knowledge; and here is a science treating of things unseen, unfelt, uncomprehended! Such cannot be *knowledge*. What, then, is it? Probability? possibility? theory? hypothesis? tradition? written? spoken? by whom? when? where? Let its teachers—nay, let all earth reply! But what

confusion of tongues and voices now strike on the ear! From either Indies, from torrid Africa, from the frozen regions of either pole, from the vast plains of ancient Asia, from the fields and cities of European industry, from the palaces of European luxury, from the soft chambers of priestly ease, from the domes of hierarchal dominion, from the deep cell of the self-immolated monk, from the stony cave of the self-denying anchorite, from the cloud-capt towers, spires, and minarets of the crescent and the cross, arise shouts, and hosannas, and anathemas, in the commingled names of Brama, and Veeshnu, and Creeshna, and Juggernaut; heavenly kings, heavenly queens, triune deities, earth-born gods, heaven-born prophets, apotheosized monarchs, demon-enlightened philosophers, saints, angels, devils, ghosts, apparitions, and sorceries! But, worse than these sounds which but stun the ear and confound the intellect, what sights, oh! human kind! appal the heart! The rivers of earth run blood! Nation set against nation! Brother against brother! Man against the companion of his bosom! and that soft companion, maddened with the frenzy of insane remorse for imaginary crimes, fired with the rage of infatuated bigotry, or subdued to diseased helplessness and mental fatuity, renounces kindred, flies from social converse, and pines away a useless or mischievous existence in sighings and tremblings, spectral fears, uncharitable feelings, and bitter denunciations! Such are thy doings, oh! religion! Or, rather, such are thy doings, oh! man! While standing in a world so rich in sources of enjoyment, so stored with objects of real inquiry and attainable knowledge, yet shutting thine eyes, and, worse, thine heart, to the tangible things and sentient creatures around thee, and winging thy diseased imagination beyond the light of the sun which gladdens thy world, and contemplation of the objects which are here to expand thy mind and quicken the pulses of thy heart!.....I will pray ye to observe how much of our positive misery originates in our idle speculations in matters of faith, and in our blind, our fearful forgetful-

ness of facts—our cold, heartless, and, I will say, *insane* indifference to visible causes of tangible evil, and visible sources of tangible happiness. Look to the walks of life, I beseech ye—look into the public prints —look into your sectarian churches—look into the bosoms of families—look into your own bosoms, and those of your fellow beings, and see how many of our disputes and dissensions, public and private—how many of our unjust actions—how many of our harsh judgments—how many of our uncharitable feelings—spring out of our ignorant ambition to rend the veil which wraps from our human senses the knowledge of things unseen, and from our human faculties the conception of causes unknown? And oh! my fellow beings! do not these very words *unseen* and *unknown*, warn the enthusiast against the profanity of such inquiries, and proclaim to the philosopher their futility? Do they not teach us that religion is no subject for instruction, and no subject for discussion? Will they not convince us that as beyond the horizon of our observation we can know nothing, so within that horizon is the only safe ground for us to meet in public?.....Every day we see sects splitting, creeds new modelling, and men forsaking old opinions only to quarrel about their opposites. I see three Gods in one, says the Trinitarian, and excommunicates the Socinian, who sees a God-head in unity. I see a heaven but no hell, says the Universalist, and disowns fellowship with such as may distinguish less. 'I see a heaven and hell also, beyond the stars,' said lately the Orthodox friend, and expelled his shorter-sighted brethren from the sanctuary. I seek them both in the heart of man, said the more spiritual follower of Penn, and straightway builded him up another temple, in which to quarrel with his neighbor, who perhaps only employs other words to express the same ideas. For myself, pretending to no insight into these mysteries, possessing no means of intercourse with the inhabitants of other worlds, confessing my absolute incapacity to see either as far back as a first cause, or as far forward as a last one, I am content to

state to you, my fellow creatures, that all my studies, reading, reflection, and observation, have obtained for me no knowledge beyond the sphere of our planet, our earthly interests and our earthly duties; and that I more than doubt whether, should you expend all your time and all your treasure in the search, you will be able to acquire any better information respecting unseen worlds and future events than myself."

The philosophical romance, "A Few Days in Athens," though the first of Miss Wright's works, and written when she was very young, displays considerable power and eloquence. It is the most pleasing of all her writings. It is intended to portray the doctrines of Epicurus, and gives a picture of the Gargettian, in the "Gardens of the Academy," surrounded by his pupils, calculated to counteract many of the popular and erroneous notions entertained of that philosopher's teachings. The following dialogue between Epicurus and his favorite, Theon, will afford the readers of the "Half-Hours" an opportunity of judging how far Miss Wright has conveyed a truthful idea of Epicurus's ethical philosophy:—

"On leaving you, last night," said Theon, "I encountered Cleanthes. He came from the perusal of your writings, and brought charges against them which I was unprepared to answer."

"Let us hear them, my son; perhaps, until you shall have perused them yourself, we may assist your difficulty."

"First, that they deny the existence of the Gods."

"I see but one other assertion that could equal that in folly," said Epicurus.

"I knew it," exclaimed Theon, triumphantly; "I knew it was impossible. But where will not prejudice lead men, when even the upright Cleanthes is capable of slander?"

"He is utterly incapable of it," said the Master; "and the inaccuracy, in this case, I rather suspect to rest with you than with him. To *deny* the existence of

the Gods would indeed be presumption in a philosopher; a presumption equalled only by that of him who should *assert* their existence."

"How!" exclaimed the youth, with a countenance in which astonishment seemed to suspend every other expression.

"As I never saw the Gods, my son," calmly continued the Sage, "I cannot *assert* their existence; and, that I never saw them, is no reason for my *denying* it."

"But do we believe nothing except that of which we have ocular demonstration?"

"Nothing, at least, for which we have not the evidence of one or more of our senses; that is, when we believe on just grounds, which I grant, taking men collectively, is very seldom."

"But where would this spirit lead us? To impiety! —to Atheism!—to all, against which I felt confidence in defending the character and philosophy of Epicurus!"

"We will examine presently, my son, into the meaning of the terms you have employed. When you first entered the Garden your mind was unfit for the examination of the subject you have now started: it is no longer so; and we will therefore enter upon the inquiry, and pursue it in order."

"Forgive me if I express—if I acknowledge," said the youth, slightly recoiling from his instructor, "some reluctance to enter on the discussion of truths, whose very discussion would seem to argue a doubt, and"—

"And what then?"

"That very doubt were a crime."

"If the doubt of any truth shall constitute a crime, then the belief of the same truth should constitute a virtue."

"Perhaps a duty would rather express it?"

"When you charge the neglect of any duty as crime, or account its fulfilment a virtue, you suppose the existence of a power to neglect or fulfil; and it is the exercise of this power, in the one way or the other,

which constitutes the merit or demerit. Is it not so?"

"Certainly."

"Does the human mind possess the power to believe or disbelieve, at pleasure, any truths whatsoever?"

"I am not prepared to answer: but I think it does, since it possesses always the power of investigation."

"But, possibly, not the will to exercise the power. Take care lest I beat you with your own weapons. I thought this very investigation appeared to you a crime?"

"Your logic is too subtle," said the youth, "for my inexperience."

"Say, rather, my reasoning too close. Did I bear you down with sounding words and weighty authorities, and confound your understanding with hair-drawn distinctions, you would be right to retreat from the battery."

"I have nothing to object to the fairness of your deductions," said Theon. "But would not the doctrine be dangerous that should establish our inability to help our belief; and might we not stretch the principle, until we asserted our inability to help our actions?"

"We might, and with reason. But we will not now traverse the ethical *pons asinorum* of necessity—the most simple and evident of moral truths, and the most darkened, tortured, and belabored by moral teachers. You inquire if the doctrine we have essayed to establish, be not dangerous. I reply—not, if it be true.—Nothing is so dangerous as error—nothing so safe as truth. A dangerous truth would be a contradiction in terms, and an anomaly in things."

"But what is a truth?" said Theon.

"It is pertinently asked. A truth I consider to be an ascertained fact; which truth would be changed to an error, the moment the fact, on which it rested, was disproved."

"I see, then, no fixed basis for truth."

"It surely has the most fixed of all—the nature of things. And it is only an imperfect insight into that

nature which occasions all our erroneous conclusions, whether in physics or morals."

"But where, if we discard the Gods and their will, as engraven on our hearts, are our guides in the search after truth?"

"Our senses and our faculties as developed in and by the exercise of our senses, are the only guides with which I am acquainted. And I do not see why, even admitting a belief in the Gods, and in a superintending Providence, the senses should not be viewed as the guides provided by them, for our direction and instruction. But here is the evil attendant on an ungrounded belief, whatever be its nature. The moment we take one thing for granted, we take other things for granted; we are started in a wrong road, and it is seldom that we gain the right one, until we have trodden back our steps to the starting place. I know but of one thing that a philosopher should take for granted; and that only because he is forced to it by an irresistible impulse of his nature; and because, without doing so, neither truth nor falsehood could exist for him. He must take for granted the evidence of his senses; in other words, he must believe in the existence of things, as they exist to his senses. I *know* of no other existence, and can therefore *believe* in no other: although, reasoning from analogy, I may *imagine* other existences to be.—This, for instance, I do as respects the Gods. I see around me, in the world I inhabit, an infinite variety in the arrangement of matter—a multitude of sentient beings, possessing different kinds and varying grades of power and intelligence—from the worm that crawls in the dust, to the eagle that soars to the sun, and man who marks to the sun its course. It is possible, it is moreover probable, that, in the worlds which I see not—in the boundless infinitude and eternal duration of matter, beings may exist, of every countless variety, and varying grades of intelligence, inferior and superior to our own, until we descend to a minimum and rise to a maximum, to which the range of our observation affords no parallel, and of which our senses are inade-

quate to the conception. Thus far, my young friend, I believe in the Gods, or in what you will of existences removed from the sphere of my knowledge. That you should believe, with positiveness, in one unseen existence or another, appears to me no crime, although it may appear to me unreasonable; and so, my doubt of the same should appear to you no moral offence, although you might account it erroneous. I fear to fatigue your attention, and will, therefore, dismiss, for the present, these abstruse subjects."

"But we shall both be amply repaid for their discussion, if this truth remain with you—that an opinion, right or wrong, can never constitute a moral offence, nor be in itself a moral obligation. It may be mistaken; it may involve an absurdity, or a contradiction.—It is a truth; or it is an error: it can never be a crime or a virtue."—[Chapter xiv.

Miss Wright was a poetess, as well as a politician and writer on ethics. In her "Fourth of July" address, delivered in the New Harmony Hall, in 1828, in commemoration of the American Independence, is the following:—

"Is there a thought can fill the human mind
More pure, more vast, more generous, more refined
Than that which guides the enlightened patriot's toil?
Not he whose view is bounded by his soil—
Not he whose narrow heart can only shrine
The land, the people that he calleth mine—
Not he who, to set up that land on high,
Will make whole nations bleed, whole nations die—
Not he who, calling that land's rights his pride,
Trampleth the rights of all the earth beside.
No! He it is, the just, the generous soul,
Who owneth brotherhood with either pole,
Stretches from realm to realm his spacious mind,
And guards the weal of all the human kind—
Holds freedom's banner o'er the earth unfurl'd,
And stands the guardian patriot of a world!"

J. W.

BIOGRAPHY

OF

EPICURUS.

Epicurean.—One who holds the principles of Epicurus—Luxurious, contributing to luxury.

Epicurism.—The principles of Epicurus—Luxury, sensual enjoyment, gross pleasure.

THE words with which this page is headed may be found in the current and established dictionaries of the present day; and it shall be our task to show that never was slander more foul, calumny more base, or libel more cowardly, than when it associated the words luxury and sensuality with the memory of the Athenian Epicurus. The much-worn anecdote of the brief endorsed "The Defendant has no case, abuse the Plaintiff's Solicitor," will well apply here. The religionists had no case, the Epicurean Philosophy was impregnable as far as theological attacks were concerned, and the theologians have, therefore, constantly and vehemently abused its founder; so that, at last, children have caught the cry as though it were the enunciation of a fact, and have grown into men believing that Epicurus was a sort of discriminating hog, who wallowed in the filth which some have miscalled pleasure.

Epicurus was born in the early part of the year 344, B. C., the third year of the 109th Olympiad, at Gargettus, in the neighborhood of Athens. His father, Neocles, was of the Egean tribe. Some allege that Epi-

curus was born in the island of Samos; but, according to others, he was taken there when very young by his parents, who formed a portion of a colony of Athenian citizens, sent to colonize Samos after its subjugation by Pericles. The father and mother of Epicurus were in very humble circumstances; his father was a schoolmaster, and his mother, Chærestrata, acted as a kind of priestess, curing diseases, exorcising ghosts, and exercising other fabulous powers. Epicurus has been charged with sorcery, because he wrote several songs for his mother's solemn rites. Until eighteen, he remained at Samos and the neighboring isle of Teos; from whence he removed to Athens, where he resided until the death of Alexander, when, disturbances arising, he fled to Colophon. This place, Mitylene, and Lampsacus, formed the philosopher's residence until he was thirty-six years of age; at which time he founded a school in the neighborhood of Athens. He purchased a pleasant garden, where he taught his disciples until the time of his death.

We are told by Laertius, "That those disciples who were regularly admitted into the school of Epicurus, lived together, not in the manner of the Pythagoreans, who cast their possessions into a common stock; for this, in his opinion, implied mutual distrust rather than friendship; but upon such a footing of friendly attachment, that each individual cheerfully supplied the necessities of his brother."

The habits of the philosopher and his followers were temperate and exceedingly frugal, and formed a strong contrast to the luxurious, although refined, manners of the Athenians. At the entrance of the garden, the visitor of Epicurus found the following inscription:— "The hospitable keeper of this mansion, where you will find pleasure the highest good, will present you with barley cakes and water from the spring. These gardens will not provoke your appetite by artificial dainties, but satisfy it with natural supplies. Will you not, then, be well entertained?" And yet the owner of the garden, over the gate of which these words

were placed, has been called "a glutton" and "a stomach worshipper!"

From the age of thirty-six until his decease, he does not seem to have quitted Athens, except temporarily. When Demetrius besieged Athens, the Epicureans were driven into great difficulties for want of food; and it is said that Epicurus and his friends subsisted on a small quantity of beans which he possessed, and which he shared equally with them.

The better to prosecute his studies, Epicurus lived a life of celibacy. Temperate and continent himself, he taught his followers to be so likewise, both by example and precept. He died 273 B. C., in the seventy-third year of his age; and, at that time, his warmest opponents seem to have paid the highest compliments to his personal character; and, on reading his life, and the detailed accounts of his teachings, it seems difficult to imagine what has induced the calumny which has been heaped upon his memory.

We "cannot quote from his own works, in his own words, because, although he wrote very much, only a summary of his writings has come to us uninjured; but his doctrines have been so fully investigated and treated on, both by his opponents and his disciples, that there is no difficulty or doubt as to the principles inculcated in the school of Epicurus.

"The sum of his doctrine concerning philosophy, in general, is this:—Philosophy is the exercise of reason in the pursuit and attainment of a happy life; whence it follows, that those studies which conduce neither to the acquisition nor the enjoyment of happiness are to be dismissed as of no value. The end of all speculation ought to be, to enable men to judge with certainty what is to be chosen, and what to be avoided, to preserve themselves free from pain, and to secure health of body, and tranquillity of mind. True philosophy is so useful to every man, that the young should apply to it without delay, and the old should never be weary of the pursuit; for no man is either too young or too old to correct and improve his mind, and to study the art

of happiness. Happy are they who possess by nature a free and vigorous intellect, and who are born in a country where they can prosecute their inquiries without restraint: for it is philosophy alone which raises a man above vain fears and base passions, and gives him the perfect command of himself. As nothing ought to be dearer to a philosopher than truth, he should pursue it by the most direct means, devising no fictions himself, nor suffering himself to be imposed upon by the fictions of others, neither poets, orators, nor logicians, making no other use of the rules of rhetoric or grammar, than to enable him to speak or write with accuracy and perspicuity, and always preferring a plain and simple to an ornamented style. Whilst some doubt of everything, and others profess to acknowledge everything, a wise man will embrace such tenets, and only such as are built upon experience, or upon certain and indisputable axioms."

The following is a summary of his Moral Philosophy:—

"The end of living, or the ultimate good, which is to be sought for its own sake, according to the universal opinion of mankind, is happiness; yet men, for the most part, fail in the pursuit of this end, either because they do not form a right idea of the nature of happiness, or because they do not make use of proper means to attain it. Since it is every man's interest to be happy through the whole of life, it is the wisdom of every one to employ philosophy in the search of felicity without delay; and there cannot be a greater folly, than to be always beginning to live.

"The happiness which belongs to man, is that state in which he enjoys as many of the good things, and suffers as few of the evils incident to human nature as possible; passing his days in a smooth course of permanent tranquillity. A wise man, though deprived of sight or hearing, may experience happiness in the enjoyment of the good things which yet remain; and when suffering torture, or laboring under some painful disease, can mitigate the anguish by patience, and can

enjoy, in his afflictions, the consciousness of his own constancy. But it is impossible that perfect happiness can be possessed without the pleasure which attends freedom from pain, and the enjoyment of the good things of life. Pleasure is in its nature good, as pain is in its nature evil; the one is, therefore, to be pursued, and the other to be avoided, for its own sake.—Pleasure, or pain, is not only good, or evil, in itself, but the measure of what is good or evil, in every object of desire or aversion; for the ultimate reason why we pursue one thing, and avoid another, is because we expect pleasure from the former, and apprehend pain from the latter. If we sometimes decline a present pleasure, it is not because we are averse to pleasure itself, but because we conceive, that in the present instance, it will be necessarily connected with a greater pain. In like manner, if we sometimes voluntarily submit to a present pain, it is because we judge that it is necessarily connected with a greater pleasure.—Although all pleasure is essentially good, and all pain essentially evil, it doth not thence necessarily follow, that in every single instance the one ought to be pursued, and the other to be avoided; but reason is to be employed in distinguishing and comparing the nature and degrees of each, that the result may be a wise choice of that which shall appear to be, upon the whole, good. That pleasure is the first good, appears from the inclination which every animal, from its first birth, discovers to pursue pleasure, and avoid pain; and is confirmed by the universal experience of mankind, who are incited to action by no other principle than the desire of avoiding pain, or obtaining pleasure.

"There are two kinds of pleasure: one consisting in a state of rest, in which both body and mind are undisturbed by any kind of pain; the other arising from an agreeable agitation of the senses, producing a correspondent emotion in the soul. It is upon the former of these that the enjoyment of life chiefly depends. Happiness may therefore be said to consist in bodily ease, and mental tranquillity. When pleasure is asserted to

be the end of living, we are not then to understand that violent kind of delight or joy which arises from the gratification of the senses and passions, but merely that placid state of mind, which results from the absence of every cause of pain or uneasiness. Those pleasures, which arise from agitation, are not to be pursued as in themselves the end of living, but as means of arriving at that stable tranquillity, in which true happiness consists. It is the office of reason to confine the pursuit of pleasure within the limits of nature, in order to the attainment of that happy state, in which the body is free from every kind of pain, and the mind from all perturbation. This state must not, however, be conceived to be perfect in proportion as it is inactive and torpid, but in proportion as all the functions of life are quietly and pleasantly performed. A happy life neither resembles a rapid torrent, nor a standing pool, but is like a gentle stream, that glides smoothly and silently along.

"This happy state can only be obtained by a prudent care of the body, and a steady government of the mind. The diseases of the body are to be prevented by temperance, or cured by medicine, or rendered tolerable by patience. Against the diseases of the mind, philosophy provides sufficient antidotes. The instruments which it employs for this purpose are the virtues; the root of which, whence all the rest proceed, is prudence. This virtue comprehends the whole art of living discreetly, justly, and honorably, and is, in fact, the same thing with wisdom. It instructs men to free their understandings from the clouds of prejudice; to exercise temperance and fortitude in the government of themselves; and to practice justice towards others. Although pleasure, or happiness, which is the end of living, be superior to virtue, which is only the means, it is every one's interest to practice all the virtues; for in a happy life, pleasure can never be separated from virtue.

"A prudent man, in order to secure his tranquillity, will consult his natural disposition in the choice of his

plan of life. If, for example, he be persuaded that he should be happier in a state of marriage than in celibacy, he ought to marry; but if he be convinced that matrimony would be an impediment to his happiness, he ought to remain single. In like manner, such persons as are naturally active, enterprising, and ambitious, or such as by the condition of their birth are placed in the way of civil offices, should accommodate themselves to their nature and situation, by engaging in public affairs; while such as are, from natural temper, fond of leisure and retirement, or, from experience or observation, are convinced that a life of public business would be inconsistent with their happiness, are unquestionably at liberty, except where particular circumstances call them to the service of their country, to pass their lives in obscure repose.

"Temperance is that discreet regulation of the desires and passions, by which we are enabled to enjoy pleasures without suffering any consequent inconvenience. They who maintain such a constant self-command, as never to be enticed by the prospect of present indulgence, to do that which will be productive of evil, obtain the truest pleasure by declining pleasure. Since, of desires some are natural and necessary; others natural, but not necessary; and others neither natural nor necessary, but the offspring of false judgment; it must be the office of temperance to gratify the first class, as far as nature requires; to restrain the second within the bounds of moderation; and, as to the third, resolutely to oppose, and, if possible, entirely repress them.

"Sobriety, as opposed to inebriety and gluttony, is of admirable use in teaching men that nature is satisfied with a little, and enabling them to content themselves with simple and frugal fare. Such a manner of living is conducive to the preservation of health; renders a man alert and active in all the offices of life; affords him an exquisite relish of the occasional varieties of a plentiful board, and prepares him to meet every reverse of fortune without the fear of want.

"Continence is a branch of temperance, which prevents the diseases, infamy, remorse, and punishment, to which those are exposed, who indulge themselves in unlawful amours. Music and poetry, which are often employed as incentives to licentious pleasure, are to be cautiously and sparingly used.

"Gentleness, as opposed to an irrascible temper, greatly contributes to the tranquillity and happiness of life, by preserving the mind from perturbation, and arming it against the assaults of calumny and malice. A wise man, who puts himself under the government of reason, will be able to receive an injury with calmnese, and to treat the person who committed it with lenity; for he will rank injuries among the casual events of life, and will prudently reflect that he can no more stop the natural current of human passions, than he can curb the stormy winds. Refractory servants in a family should be chastised, and disorderly members of a state punished without wrath.

"Moderation, in the pursuit of honors or riches, is the only security against disappointment and vexation. A wise man, therefore, will prefer the simplicity of rustic life to the magnificence of courts. Future events a wise man will consider as uncertain, and will, therefore, neither suffer himself to be elated with confident expectation, nor to be depressed by doubt and despair; for both are equally destructive of tranquillity. It will contribute to the enjoyment of life, to consider death as the perfect termination of a happy life, which it becomes us to close like satisfied guests, neither regreting the past, nor anxious for the future.

"Fortitude, the virtue which enables us to endure pain, and to banish fear, is of great use in producing tranquillity. Philosophy instructs us to pay homage to the gods, not through hope or fear, but from veneration of their superior nature. It moreover enables us to conquer the fear of death, by teaching us that it is no proper object of terror; since, whilst we are, death is not, and when death arrives, we are not: so that it neither concerns the living nor the dead. The only

evils to be apprehended are bodily pain, and distress of mind. Bodily pain it becomes a wise man to endure with patience and firmness; because, if it be slight, it may easily be borne; and if it be intense, it cannot last long. Mental distress commonly arises, not from nature, but from opinion; a wise man will therefore arm himself against this kind of suffering, by reflecting that the gifts of fortune, the loss of which he may be inclined to deplore, were never his own, but depended upon circumstances which he could not command. If, therefore, they happen to leave him, he will endeavor, as soon as possible, to obliterate the remembrance of them, by occupying his mind in pleasant contemplation, and engaging in agreeable avocations.

"Justice respects man as living in society, and is the common bond without which no society can subsist. This virtue, like the rest, derives its value from its tendency to promote the happiness of life. Not only is it never injurious to the man who practices it, but nourishes in his mind calm reflections and pleasant hopes; whereas it is impossible that the mind in which injustice dwells, should not be full of disquietude.—Since it is impossible that iniquitous actions should promote the enjoyment of life, as much as remorse of conscience, legal penalties, and public disgrace, must increase its troubles, every one who follows the dictates of sound reason, will practice the virtues of justice, equity, and fidelity. In society, the necessity of the mutual exercise of justice, in order to the common enjoyment of the gifts of nature, is the ground of those laws by which it is prescribed. It is the interest of every individual in a state to conform to the laws of justice; for by injuring no one, and rendering to every man his due, he contributes his part towards the preservation of that society, upon the perpetuity of which his own safety depends. Nor ought any one to think that he is at liberty to violate the rights of his fellow citizens, provided he can do it securely; for he who has committed an unjust action can never be certain

that it will not be discovered; and however successfully he may conceal it from others, this will avail him little, since he cannot conceal it from himself. In different communities, different laws may be instituted, according to the circumstances of the people who compose them. Whatever is thus prescribed is to be considered as a rule of justice, so long as the society shall judge the observance of it to be for the benefit of the whole. But whenever any rule of conduct is found upon experience not to be conducive to the public good, being no longer useful, it should no longer be prescribed.

"Nearly allied to justice are the virtues of beneficence, compassion, gratitude, piety, and friendship.—He who confers benefits upon others, procures to himself the satisfaction of seeing the stream of plenty spreading around him from the fountain of his beneficence; at the same time, he enjoys the pleasure of being esteemed by others. The exercise of gratitude, filial affection, and reverence for the gods, is necessary, in order to avoid the hatred and contempt of all men. Friendships are contracted for the sake of mutual benefit; but by degrees they ripen into such disinterested attachment, that they are continued without any prospect of advantage. Between friends there is a kind of league, that each will love the other as himself. A true friend will partake of the wants and sorrows of his friend, as if they were his own; if he be in want, he will relieve him; if he be in prison, he will visit him; if he be sick, he will come to him; nay, situations may occur, in which he would not scruple to die for him. It cannot then be doubted, that friendship is one of the most useful means of procuring a secure, tranquil, and happy life."

No man will, we think, find anything in the foregoing summary to justify the foul language used against Epicurus, and his moral philosophy; the secret is in the physical doctrines, and this secret is, that Epicurus was actually, if not intentionally, an Atheist. The following is a summary of his physical doctrine:—

"Nothing can ever spring from nothing, nor can anything ever return to nothing. The universe always existed, and will always remain; for there is nothing into which it can be changed. There is nothing in Nature, nor can anything be conceived, besides body and space. Body is that which possesses the properties of bulk, figure, resistance, and gravity: it is this alone which can touch or be touched. Space is the region which is, or may be, occupied by body, and which affords it an opportunity of moving freely. That there are bodies in the universe is attested by the senses. That there is also space is evident; since otherwise bodies would have no place in which to move or exist, and of their existence and motion we have the certain proof of perception. Besides these, no third nature can be conceived; for such a nature must either have bulk and solidity, or want them; that is, it must either be body or space: this does not, however, preclude the existence of qualities, which have no subsistence but in the body to which they belong.

"The universe, consisting of body and space, is infinite, for it has no limits. Bodies are infinite in multitude; space is infinite in magnitude. The term above, or beneath, high or low, cannot be properly applied to infinite space. The universe is to be conceived as immoveable, since beyond it there is no place into which it can move; and as eternal and immutable, since it is neither liable to increase nor decrease, to production nor decay. Nevertheless, the parts of the universe are in motion, and are subject to change.

"All bodies consist of parts, of which they are composed, and into which they may be resolved; and these parts are either themselves simple principles, or may be resolved into such. These first principles, or simple atoms, are divisible by no force, and, therefore, must be immutable. This may also be inferred from the uniformity of Nature, which could not be preserved if its principles were not certain and consistent. The existence of such atoms is evident, since it is impossible that anything which exists should be reduced to noth-

ing. A finite body cannot consist of parts infinite, either in magnitude or number; divisibility of bodies *ad infinitum*, is therefore conceivable. All atoms are of the same nature, or. differ in no essential qualities—From their different effects upon the senses, it appears, however, that they differ in magnitude, figure, and weight. Atoms exist in every possible variety of figure—round, oval, conical, cubical, sharp, hooked, etc. But in every shape, they are, on account of their solidity, infrangible, or incapable of actual division.

"Gravity must be an essential property of atoms; for since they are perpetually in motion, or making an effort to move, they must be moved by an internal impulse, which may be called gravity.

"The principle of gravity, that internal energy which is the cause of all motion, whether simple or complex, being essential to the primary corpuscles or atoms, they must have been incessantly and from eternity in actual motion."

Epicurus, who boasts that he was an inquirer and a philosopher in his thirteenth year, was scarcely likely to bow his mind to the mythology of his country. The man who, when he was but a schoolboy, insisted upon an answer to the question, "Whence came chaos?" could hardly be expected to receive as admitted facts the fabulous legends as to Jupiter and the other gods. His theology is, however, in some respects, obscure, and unintelligible; for while he zealously opposed the popular fables, which men misname God-ideas, he at the same time admitted the existence of material gods, whom he placed in the intervals between the infinite worlds, where they passed a life undisturbed by aught, and enjoyed a happiness which does not admit of augmentation. These inactive gods play a strange part in the system of Epicurus; and it is asserted by many that these extraordinary conceptions of Deity were put forward by the philosopher to screen him from the consequences attaching to a charge of Atheism. Dr. Heinrich Ritter, who does not seem very friendly disposed towards Epicurus, or his philosophy, repudiates this no-

tion, and argues Epicurus was not in truth an Atheist, and alleges that it was a mere pretence on his part; and that from his very theory of knowledge the existence of gods could be deduced. This has been much litigated, (*vide* Electric Review for 1806, p. 606.) It is quite evident that Epicurus neither regarded "the gods" in the capacity of Creators, controllers, or rulers, so that his Theism (if it be Theism) was not of a very superstitious character. The God who neither created man, nor exercised any influence whatever over his actions or thinkings, could have but little to do with man at all.

If we attempt to review the whole of the teachings of Epicurus, we find they are defective and imperfect in many respects, and necessarily so. We say necessarily so, because the imperfect science of the day limited the array of facts presented to the philosopher, and narrowed the base upon which he was to erect his system. We must expect, therefore, to find the structure weak in many points, because it was too large for the foundation; but we are not, therefore, to pass it on one side, and without further notice; it should rather be our task to lay good, wide, and sure foundations, on which to build up a system, and develope a method, really having, for its end, the happiness of mankind. We live 2000 years later than the Athenian philosopher.—In those 2000 years many facts have been dragged out of "the circle of the unknown and unused." Astronomy, geology, physiology, psychology—all except theology are better understood. Men pretend they are searching after happiness, and where do they try to find it? Not here amongst the known, but in the possible hereafter amongst the unknowable. How do they try to find it? Not by the aid of the known, not by the light of facts, gathered in years of toil, and sanctified by the blood of some of the noblest of truth's noble martyrs; no—but in the darkness of the unknown and unknowable; in the next world. Question the men who fly to theology for happiness, and they will tell you that the most learned of the theologians sum up

their knowledge in the word "incomprehensible." Is it wonderful that their happiness is somewhat marred "here" by quarrels as to the true definition of "hereafter?" G. H. Lewes says, of the Epicurean philosophy, "that the attempt failed because the basis was not broad enough. The Epicureans are therefore to be regarded as men who ventured on a great problem, and failed because they only saw part of the truth." And we might add that Christianity, and every other religious "anity," fails, because the professors expect to obtain happiness in the next life, and neglect to work for it in the present one.

Epicurus says, no life can be pleasant except a virtuous life; and he charges you to avoid whatever may be calculated to create disquiet in the mind, or give pain to the body. The Rev. Habbakuk Smilenot, of Little Bethel, says that all pleasure here, is vanity and vexation in the hereafter; and he charges you to continually worry and harrass your mind with fears that you may be condemned to hell, and doubts whether you will be permitted to enter heaven. Which is the best, the philosophy of Epicurus, or the theology of Smilenot?

G. H. Lewes says:—"Epicureanism, in leading man to a correct appreciation of the moral end of his existence, in showing him how to be truly happy, has to combat with many obstructions which hide from him the real road of life. These obstructions are his illusions, his prejudices, his errors, his ignorance. This ignorance is of two kinds, as Victor Cousin points out; ignorance of the laws of the external world, which creates absurd superstitions, and troubles the mind with false fears and false hopes. Hence the necessity of some knowledge of physics." (We can scarcely blame Epicurus that he was not in advance of his time, as far as the physical sciences are concerned, and therefore imparted an imperfect system of physics. We must, with our improved knowledge, ourselves remove the obstruction.) "The second kind of ignorance is that of the nature of man. Socrates had taught men to re-

gard their own nature as the great object of investigation; and this lesson Epicurus willingly gave ear to.—But man does not interrogate his own nature out of simple curiosity, or simple erudition; he studies his nature in order that he may improve it; he learns the extent of his capacities, in order that he may properly direct them. The aim, therefore, of all such inquiries must be happiness."

We may add that the result of all such inquiries will be happiness, if the inquirer will but base his investigation and experiments upon facts.

Let him understand that, as he improves the circumstances which surround him, so will he advance himself, becoming happier, and making his fellows happy also. Remember the words of Epicurus, and seek that pleasure for yourself which appears the most durable, and attended with the greatest pleasure to your fellow men. "I."

BIOGRAPHY

OF

ZENO, THE STOIC.

In the previous number we gave a short sketch of the opinions of Epicurus. In this we shall deal with the founder of a rival sect—the Stoics. Amongst the disciples and students in the Stoic schools have been many illustrious names, and not the least worthy is the name with which we are now dealing.

Zeno was born at Cittius, a small maritime town in the Island of Cyprus. This place having been originally peopled by a colony of Phœnicians, Zeno is sometimes called a Phœnician; but at the period when he flourished, it was chiefly inhabited by Greeks. The date of his birth is uncertain, but must have been about the year B. C. 362. His father was a merchant, and Zeno appears to have been, in the early part of his life, engaged in mercantile pursuits. He received a very liberal education from his father, whom, we are told, perceived in his son a strong inclination for philosophical studies, and who purchased for Zeno the writings of the Socratic philosophers; which were studied with avidity, and which undoubtedly exercised a considerable influence over his future thinkings. When about thirty years of age he made a trading voyage from Cittius to Athens, with a very valuable cargo of Phœnician purple, but was unfortunately shipwrecked on the coast of Greece, and the whole of his

freight destroyed. It is supposed that this severe loss, which must have considerably reduced his means, materially influenced Zeno, and induced him to embrace the tenets of the Cynics, whose leading principle was a chntempt of riches. We are told that upon his first arrival in Athens, he went into the shop of a bookseller, and took up, by accident, a volume of the "Commentaries of Xenophon." After reading a few pages, Zeno was so much delighted with the work, that he asked the bookseller to direct him where he might meet such men as the author? Crates, the Cynic philosopher, passed by at the time, and the bookseller said, "Follow that man!" He did so, and after listening to several of his discourses, was so pleased with the doctrines of the Cynics, that he became a disciple. He did not long remain attached to the Cynic school—their peculiar manners were too gross for him; and his energetic and inquiring mind was too much cramped by that indifference to all scientific investigation which was one of their leading characteristics. He therefore sought instruction elsewhere, and Stilpo, of Megara, became his teacher, from whom he acquired the art of disputation, in which he afterwards became so proficient. The Cynics were displeased at his following other philosophy, and we are told that Crates attempted to drag him by force out of the school of Stilpo, on which Zeno said, "You may seize my body, but Stilpo has laid hold of my mind." The Megaric doctrine was, however, insufficient. Zeno was willing to learn all that Stilpo could teach, but having learned all, his restless and insatiable appetite for knowledge required more, and after an attendance of several years upon the lectures of Stilpo, he passed over to the expositors of Plato, Xenocrates, and Polemo. The latter philosopher appears to have penetrated Zeno's design in attending the various schools—*i. e.*, to collect materials from various quarters for a new system of his own; and when he came to the school, Polemo said, "I am no stranger, Zeno, to your Phœnician arts; I perceive that your

design is to creep slily into my garden, and steal away my fruit." After twenty years of study, having mastered the tenets of the various schools, Zeno determined to become the founder of a sect himself. In accordance with this determination, he opened a school in a public portico, called the Painted Porch, from the pictures of Polygnotus, and other eminent painters, with which it was adorned. This portico became famous in Athens, and was called (Stoa)—the Porch. From this Stoa the school derived its name, the students being called the Stoics. Zeno was a subtle reasoner, and exceedingly popular. He taught a strict system of morals, and exhibited a pleasing picture of moral discipline in his own life. As a man, his character appears deserving of the highest respect. He became exceedingly respected and revered at Athens, for the probity and severity of his life and manners, and consistency thereof with his doctrine. He possessed so large a share of public esteem that the Athenians decreed him a golden crown, and on account of his approved integrity, deposited the keys of their citadel in his hands. Antigonus Gonates, King of Macedon, was a constant attendant at his lectures whilst at Athens, and when that monarch returned, he earnestly invited Zeno to his court. During the philosopher's lifetime, the Athenians erected a statue of brass as a mark of the estimation in which they held him.

Zeno lived to the extreme age of ninety-eight, when, as he was leaving his school one day, he fell and broke his finger. The consciousness of his infirmity afflicted him so much, that he exclaimed, "Why am I thus importuned? Earth, I obey thy summons!" and immediately going home, he put his affairs in order, and strangled himself. In person, Zeno was tall and slender; his brow was furrowed with thought; and this, with his long and close application to study, gave a tinge of severity to his aspect. Although of a feeble constitution, he preserved his health by his great abstemiousness, his diet consisting of figs, bread, and honey. He was plain and modest in his dress and

habits, and very frugal in all his expenses, showing the same respect for the poor as for the rich, and conversing as freely with the slave as he did with the king. Independent in spirit, he broke off all communication with his friend Democharis, because that person had offered to procure a gratuity for Zeno from the King of Macedon. His system appears to have been little more than a collection from his various lessons of whatever was most in unison with his peculiar habit of thought, and an attempt to reconcile and combine in one system the various elements of different theories. Taking from so many schools various portions of their doctrine, he seems to have provoked the antagonism of many of his contemporaries, and several philosophers of learning and ability employed their eloquence to diminish the growing influence of the new school. Towards the close of his life, he found a powerful antagonist in the person of Epicurus, and the Epicureans and Stoics have since treated each other as rival sects. Zeno's school appears to have been generally a resort for the poor, and it was a common joke amongst his adversaries, that poverty was the charm for which he was indebted for his scholars. The list of his disciples, however, contains the names of some very rich and powerful men, who may have regarded the Stoic theory as a powerful counter-agent to the growing effeminacy of the age. After Zeno's death, the Athenians, at the request of Antigonus, erected a monument to his memory, in the Ceramicum.

From the particulars which have been related concerning Zeno, it will not be difficult to perceive what kind of influence his circumstances and character must have had upon his philosophical system. If his doctrines be diligently compared with the history of his life, it will appear, that having attended upon many eminent preceptors, and being intimately conversant with their opinions, he compiled, out of their various tenets, an heterogeneous system, on the credit of which he assumed to himself the title of the founder of a

new sect.....The dialectic arts which Zeno learned in the school of Diodorus Chronus, he did not fail to apply to the support of his own system, and to communicate to his followers. As to the moral doctrine of the Cynic sect, to which Zeno strictly adhered to the last, there can be no doubt that he transferred it, almost without alloy, into his own school. In morals, the principal difference between the Cynics and the Stoics was, that the former disdained the cultivation of nature, the latter affected to rise above it. On the subject of physics, Zeno received his doctrine through the channel of the Platonic school, as will fully appear from a careful comparison of their respective systems. The Stoic philosophy, being in this manner of heterogeneous origin, it necessarily partook of the several systems of which it was composed. The idle quibbles, jejune reasonings, and imposing sophisms, which so justly exposed the schools of the dialectic philosophers to ridicule, found their way into the Porch, where much time was wasted, and much ingenuity thrown away, upon questions of no importance. Cicero censures the Stoics for encouraging in their schools a barren kind of disputation, and employing themselves in determining trifling questions, in which the disputants can have no interest, and which, at the close, leave them neither wiser nor better. And that this censure, is not, as some modern advocates for Stoicism have maintained, a mere calumny, but grounded upon fact, sufficiently appears from what is said by the ancients, particularly by Sextus Empiricus, concerning the logic of the Stoics. Seneca, who was himself a Stoic, candidly acknowledges this. It may, perhaps, be thought surprising that philosophers, who affected so much gravity and wisdom, should condescend to such trifling occupations. But it must be considered, that, at this time, a fondness for subtle disputations so generally prevailed in Greece, that excellence in the arts of reasoning and sophistry was a sure path to fame.

The Stoics, with whom vanity was unquestionably a ruling passion, were ambitious for this kind of repu-

tation. Hence it was that they engaged with so much vehemence in verbal contests, and that they largely contributed towards the confusion, instead of the improvement, of science, by substituting vague and ill-defined terms in the room of accurate conceptions. The moral part of the Stoical philosophy, in like manner, partook of the defects of its origin. It may be as justly objected against the Stoics as the Cynics, that they assumed an artificial severity of manners, and a tone of virtue above the condition of a man. Their doctrine of moral wisdom was an ostentatious display of words, in which little regard was paid to nature and reason. It professed to raise human nature to a degree of perfection before unknown; but its real effect was, merely to amuse the ear, and captivate the fancy, with fictions which can never be realized.....The extravagancies and absurdities of the Stoical philosophy may also be in some measure ascribed to the vehement contests which subsisted between Zeno and the Academics on the one hand, and between him and Epicurus on the other. For, not only did these disputes give rise to many of the dogmas of Stoicism, but led Zeno and his followers, in the warmth of controversy, to drive their arguments to the utmost extremity, and to express themselves with much greater confidence than they would probably otherwise have done. This is, perhaps, the true reason why so many extravagant notions are ascribed to the Stoics, particularly upon the subject of morals. Whilst Epicurus taught his followers to seek happiness in tranquillity, Zeno imagined his wise man, not only free from all sense of pleasure, but void of all passions and emotions, and capable of being happy in the midst of torture. That he might avoid the position taken by the Epicureans, he had recourse to a moral institution, which bore indeed the lofty front of wisdom, but which was elevated far above the condition and powers of human nature. The natural disposition of Zeno, and his manner of life, had, moreover, no inconsiderable influence in fixing the peculiar character of his phi-

losophy. By nature severe and morose, and constitutionally inclined to reserve and melancholy, he early cherished this habit by submitting to the austere and rigid discipline of the Cynics. Those qualities which he conceived to be meritorious in himself, and which he found to conciliate the admiration of mankind, he naturally transferred to his imaginary character of a wise or perfect man.

In order to form an accurate judgment concerning the doctrine of the Stoics, besides a careful attention to the particulars already enumerated, it will be necessary to guard with the utmost caution against two errors, into which several writers have fallen. Great care should be taken, in the first place, not to judge of the doctrine of the Stoics from words and sentiments, detached from the general system, but to consider them as they stand, related to the whole train of premises and conclusions.....The second caution is, not to confound the genuine doctrines of Zeno, and other ancient fathers of this sect, with the glosses of the later Stoics.....Out of the many proofs of this change, which might be adduced, we shall select one, which is the more worthy of notice, as it has occasioned many disputes among the learned. The doctrine we mean is that concerning fate. This doctrine, according to Zeno and Chrysippus, implies an eternal and immutable series of causes and effects, within which all events are included, and to which the Deity himself is subject: whereas, the later Stoics, changing the term fate into the Providence of God, discoursed with great plausibility on this subject, but still in reality retained the ancient doctrine of universal fate. From this example, a judgment may be formed concerning the necessity of using some caution, in appealing to the writings of Seneca, Antoninus, and Epictetus, as authorities, in determining what were the original doctrines of the Stoic philosophers. .

Concerning philosophy in general, the doctrine of the Stoics was, that wisdom consists in the knowledge of things divine and human; that philosophy is such

an exercise of the mind as produces wisdom; that in this exercise consists the nature of virtue; and consequently, that virtue is a term of extensive meaning, comprehending the right employment of the mind in reasoning, in the study of nature, and in morals. The wisdom of the Stoics is either progressive, through several stages; or perfect, when every weakness is subdued, and every error corrected, without the possibility of a relapse into folly, or vice, or of being again enslaved by any passion, or afflicted by any calamity. With Socrates and the Cynics, Zeno represented virtue as the only true wisdom; but being disposed to extend the pursuits of his wise man into the regions of speculation and science, he gave, after his usual manner, a new signification to an old term, and comprehended the exercise of the understanding in the search of truth, as well as the government of the appetites and passions, under the general term, virtue. The great importance of the united exercise of the intellectual and active powers of the mind, are thus beautifully asserted by the philosophical emperor :—"Let every one endeavor so to think and act, that his contemplative and active faculties may at the same time be going on towards perfection. His clear conceptions, and certain knowledge, will then produce within him an entire confidence in himself, unperceived perhaps by others, though not affectedly concealed, which will give a simplicity and dignity to his character; for he will at all times be able to judge, concerning the several objects which come before him, what is their real nature, what place they hold in the universe, how long they are by nature fitted to last, of what materials they are composed, by whom they may be possessed, and who is able to bestow them, or take them away." The sum of the definitions and rules given by the Stoics concerning logic is this :—Logic is either rhetorical or dialectic. Rhetorical logic is the art of reasoning and discoursing on those subjects which require a diffuse kind of declamation. Dialectic is the art of close argumentation in the form of disputation or dialogue. The

former resembles an open, the latter, a closed hand.—Rhetoric is of three kinds, deliberative, judicial, and demonstrative. The dialectic art is the instrument of knowledge, as it enables a man to distinguish truth from error, and certainty from bare probability. This art considers things as expressed by words, and words themselves. External things are perceived by a certain impression, made either upon some parts of the brain, or upon the percipient faculty, which may be called an image, since it is impressed upon the mind, like the image of a seal upon wax.

This image is commonly accompanied with a belief of the reality of the thing perceived; but not necessarily, since it does not accompany every image, but those only which are not attended with any evidence of deception. Where only the image is perceived by itself, the thing is apprehensible; where it is acknowledged and approved as the image of some real thing, the impression is called apprehension, because the object is apprehended by the mind as a body is grasped by the hand. Such apprehension, if it will bear the examination of reason, is knowledge; if it is not examined, it is mere opinion; if it will not bear this examination, it is misapprehension. The senses, corrected by reason, give a faithful report; not by affording a perfect apprehension of the entire nature of things, but by leaving no room to doubt of their reality. Nature has furnished us with these apprehensions, as the elements of knowledge, whence further conceptions are raised in the mind, and a way is opened for the investigations of reason. Some images are sensible, or received immediately through the senses; others rational, which are perceived only in the mind. These latter are called notions, or ideas. Some images are probable, to which the mind assents without hesitation; others improbable, to which it does not readily assent; and others doubtful, where it is not entirely perceived, whether they are true or false. True images are those which arise from things really existing, and agree with them. False images, or phantasms,

are immediately derived from no real object. Images are apprehended by immediate perception, through the senses, as when we see a man; consequentially, by likeness, as when from a portrait we apprehend the original; by composition, as when, by compounding a horse and man, we acquire the image of a Centaur; by augmentation, as in the image of a Cyclops; or by diminution, as in that of a pigmy. Judgment is employed either in determining, concerning particular things, or concerning general propositions. In judging of things we make use of some one of our senses, as a common criterion or measure of apprehension, by which we judge whether a thing is, or is not; or whether or not it exists with certain properties; or we apply to the thing, concerning which a judgment is to be formed, some artificial measure, as a balance, a rule, etc.; or we call in other peculiar measures to determine things not perceptible by the senses. In judging of general propositions, we make use of our pre-conceptions, or universal principles, as *criteria*, or measures of judgment. The first impressions from the senses produce in the mind an involuntary emotion; but a wise man afterwards deliberately examines them, that he may know whether they be true or false, and assents to, or rejects them, as the evidence which offers itself to his understanding appears sufficient or insufficient. This assent, or approbation, will indeed be as necessarily given, or withheld, according to the ultimate state of the proofs which are adduced, as the scales of a balance will sink or rise, according to the weights which are placed upon them; but while the vulgar give immediate credit to the reports of the senses, wise men suspend their assent, till they have deliberately examined the nature of things, and carefully estimated the weight of evidence. The mind of man is originally like a blank leaf, wholly without characters, but capable of receiving any. The impressions which are made upon it, by means of the senses, remain in the memory, after the objects which occasioned them are removed; a succession of these con-

tinued impressions, made by similar objects, produces experience; and hence arises permanent notions, opinions, and knowledge. Even universal principles are originally formed by experience from sensible images. All men agree in their common notions or pre-conceptions; disputes only arise concerning the application of these to particular cases.

Let us pass on to the Stoical doctrine concerning nature. According to Zeno and his followers, there existed from eternity a dark and confused chaos, in which was contained the first principles of all future beings. This chaos being at length arranged, and emerging into variable forms, became the world, as it now subsists. The world, or nature, is that whole which comprehends all things, and of which all things are parts and members. The universe, though one whole, contains two principles, distinct from elements, one passive, the other active. The passive principle is pure matter without qualities; the active principle is reason, or God. This is the fundamental doctrine of the Stoics concerning nature.....The Stoical system teaches, that both the active and passive principles in nature are corporeal, since whatever acts or suffers must be so. The efficient cause, or God, is pure ether, or fire, inhabiting the exterior surface of the heavens, where every thing which is divine is placed. This ethereal substance, or divine fire, comprehends all the vital principles by which individual beings are necessarily produced, and contains the forms of things, which from the highest regions of the universe, are diffused through every other part of nature. Seneca, indeed, calls God incorporeal reason; but by this term he can only mean to distinguish the divine ethereal substance from gross bodies; for, according to the Stoics, whatever has a substantial existence is corporeal; nothing is incorporeal, except that infinite vacuum which surrounds the universe; even mind and voice are corporeal, and, in like manner, Deity. Matter, or the passive principle, in the Stoical system, is destitute of all qualities, but ready to receive any form, inactive, and without mo-

tion, unless moved by some external cause. The contrary principle, or the ethereal operative fire, being active, and capable of producing all things from matter, with consummate skill, according to the forms which it contains, although in its nature corporeal, considered in opposition to gross and sluggish matter, or to the elements, is said to be immaterial and spiritual. For want of carefully attending to the preceding distinction, some writers have been so far imposed upon, by the bold innovations of the Stoics in the use of terms, as to infer from the appellations which they sometimes apply to the Deity, that they conceived him to be strictly and properly incorporeal. The truth appears to be, that, as they sometimes spoke of the soul of man, a portion of the Divinity, as an exceedingly rare and subtle body, and sometimes as a warm or fiery spirit; so they spoke of the Deity as corporeal, considered as distinct from the incorporeal vacuum, or infinite space; but as spiritual, considered in opposition to gross and inactive matter. They taught, indeed, that God is underived, incorruptible, and eternal, possessed of intelligence, good and perfect, the efficient cause of all the peculiar qualities or forms of things; and the constant preserver and governor of the world; and they described the Deity under many noble images, and in the most elevated language. The hymn of Cleanthes, in particular, is justly admired for the grandeur of its sentiments, and the sublimity of its diction. But if in reading these descriptions, we hastily associate with them modern conceptions of Deity, and neglect to recur to the leading principles of the sect, we shall be led into fundamental misapprehensions of the true doctrine of Stoicism. For according to this sect, God and matter are alike underived and eternal, and God is the former of the universe in no other sense than as he has been the necessary efficient cause, by which motion and form have been impressed upon matter.

What notions the Stoics entertained of God sufficiently appears from the single opinion of his finite na-

ture; an opinion which necessarily followed from the notion that he is only a part of a spherical, and therefore a finite universe. On the doctrine of divine providence, which was one of the chief points upon which the Stoics disputed with the Epicureans, much is written, and with great strength and elegance, by Seneca, Epictetus, and other later Stoics. But we are not to judge of the genuine and original doctrine of this sect from the discourses of writers who had probably corrupted their language on this subject, by visiting the Christian school. The only way to form an accurate judgment of their opinions concerning Providence, is to compare their popular language upon this head with their general system, and explain the former consistently with the fundamental principles of the latter.— If this be fairly done, it will appear that the agency of Deity is, according to the Stoics, nothing more than the active motion of a celestial ether, or fire, possessed of intelligence, which at first gave form to the shapeless mass of gross matter, and being always essentially united to the visible world by the same necessary agency, preserves its order and harmony. The Stoic idea of Providence is, not that of a being, wholly independent of matter, freely directing and governing all things, but that of a necessary chain of causes and effects, arising from the action of a power, which is itself a part of the existence which it regulates, and which equally with that existence is subject to the immutable law of necessity. Providence, in the Stoic creed, is only another name for absolute necessity, or fate, to which God and matter, or the universe, which consists of both, is immutably subject. The rational, efficient, and active principle in nature, the Stoics called by various names: Nature, Fate, Jupiter, God. "What is nature," says Seneca, "but God; the divine reason, inherent in the whole universe, and in all its parts? or you may call him, if you please, the author of all things." And again: "Whatever appellations imply celestial power and energy, may be justly applied to God; his names may properly be as numer-

ous as his offices." The term nature, when it is at all distinguished in the Stoic system from God, denotes not a separate agent, but that order of things which is necessarily produced by his perpetual agency. Since the active principle of nature is comprehended within the world, and with matter makes one whole, it necessarily follows that God penetrates, pervades, and animates matter, and the things which are formed from it; or, in other words, that he is the soul of the universe.....The universe is, according to Zeno and his followers, "a sentient and animated being." Nor was this a new tenet, but, in some sort, the doctrine of all antiquity.....Pythagoras, Heraclitus, and after these, Zeno, taking it for granted that there is no real existence which is not corporeal, conceived nature to be one whole, consisting of a subtle ether and gross matter, the former the active, the latter the passive principle, as essentially united as the soul and body of man—that is, they supposed God, with respect to nature, to be, not a co-existing, but an informing principle.

Concerning the second principle in the universe, matter, and concerning the visible world, the doctrine of the Stoics is briefly this:—Matter is the first essence of all things, destitute of, but capable of receiving, qualities. Considered universally, it is an eternal whole, which neither increases nor decreases. Considered with respect to its parts, it is capable of increase or diminution, of collision and separation, and is perpetually changing. Bodies are continually tending towards dissolution; matter always remains the same. Matter is not infinite, but finite, being circumscribed by the limits of the world; but its parts are infinitely divisible. The world is spherical in its form, and is surrounded by an infinite vacuum. The action of the divine nature upon matter first produced the element of moisture, and then the other elements, fire, air, and earth, of which all bodies are composed. Air and fire have essential levity, or tend towards the exterior surface of the world; earth and water have

essential gravity, or tend towards the centre. All the elements are capable of reciprocal conversion; air passing into fire, or into water; earth into air and water; but there is this essential difference among the elements, that fire and air have within themselves a principle of motion, while water and earth are merely passive.....The world, including the whole of nature, God and matter, subsisted from eternity, and will for ever subsist; but the present regular frame of nature had a beginning, and will have an end. The parts tend towards a dissolution, but the whole remains immutably the same. The world is liable to destruction from the prevalence of moisture, or of dryness; the former producing a universal inundation, the latter a universal conflagration. These succeed each other in nature as regularly as winter and summer. When the universal inundation takes place, the whole surface of the earth is covered with water, and all animal life is destroyed; after which, nature is renewed and subsists as before, till the element of fire, becoming prevalent in its turn, dries up all the moisture, converts every substance into its own nature, and at last, by a universal conflagration, reduces the world to its pristine state. At this period, all material forms are lost in one chaotic mass: all animated nature is re-united to the Deity, and nature again exists in its original form, as one whole, consisting of God and matter. From this chaotic state, however, it again emerges, by the energy of the efficient principle, and gods, and men, and all the forms of regulated nature, are renewed, and to be dissolved and renewed in endless succession.

The above is collated from Ritter, Enfield, and Lewes, as a specimen of one of the earlier phases of Freethought. Freethought as then expressed had many faults and flaws, but it has grown better every day, extending and widening its circle of utterance, and we hope that it will continue to do so. "I."

BIOGRAPHY

OF

MATTHEW TINDAL.

It is easy to mark the progress of the age by recurring to the history of past Freethinkers. Bishops, established and dissenting, are now repeating the parts the old Deists played. *They* were sadly treated for setting the example, modern divines follow with applause. Matthew Tindal was an example of this. He labored to establish religion on the foundation of Reason and Nature. It was to be expected that Christians would be pleased at efforts which would have no effect but to strengthen its foundations. The effort was met by reprobation, and resented as an injury. It is but a just retaliation that believers should now have to establish in vain that evidence they once denounced.

Matthew Tindal was an English Deistical writer, who was born at Beer-Terres, in Devonshire, 1656.— His father, it appears, was a clergyman, who held the living of Beer-Terres, presented to him by the University of Cambridge, in the time of the Civil Wars.— Young Matthew was educated at Oxford, where at twenty-eight he took the degree of LL.D. Matthew Tindal, LL.D., was early tossed about by the winds of doctrine. First he embraced Romanism : afterwards he became a Protestant. Then politics interested him, and he engaged in controversy on the side of William III. He was appointed Commissioner of a Court for

Trying Foreigners. In 1693 he published an essay on the Law of Nations. When fifty-four, in 1710, he entered so vigorously into theological controversy, arising out of Trinitarian criticism, that his marked satire led to his books being condemned by the House of Commons, and burnt by the hangman. He resented this indignity by a spirited attack on the dominant priestly party in his "High Church Catechism," and he also wrote in defence of philosophical necessity. But his most notable work was the performance of his old age, his "Christianity as Old as the Creation: or, the Gospel, a Republication of the Religion of Nature." This was produced in his seventy-third year. He was attacked in Reply by Bishop Waterland. It is generally agreed that in point of good spirit and good temper, the Bishop was far inferior to the Deist. Dr. Conyers Middleton, says Thomas Cooper, in his brief sketch of Tindal, appeared in defence of Tindal in a "Letter to Dr. Waterland," whom he condemned for the shallowness of his answer to Tindal, and boldly and frankly admitted that the Freethinker was right in asserting that the Jews borrowed some of their ceremonies and customs from Egypt; that allegory was, in some cases, employed in the Scriptures, where common readers took the relation for fact; and, that the Scriptures are *not* of "absolute and universal inspiration." The following sentence, which will be found in this "Letter" of Dr. Conyers Middleton, does honor to his name:—"If religion consists in depreciating moral duties and depressing natural reason; if the duty of it be to hate and persecute for a different way of thinking where the best and wisest have never agreed—then, I declare myself an Infidel, and to have no share in that religion."

Matthew Tindal died at his house in Coldbath Fields, of the stone, 1773, aged seventy-seven.* Rysbrach, the famous statuary, took a model of him.

* Julian Hibbert gives 1656–7; Dr. Beard, 1556; Thomas Cooper, 1657, as the year of Tindal's birth. All agree that he died 1733—he was therefore seventy-six or seventy-seven at the time of his death.

Tindal opens his great work thus :—"The author makes no apology for writing on a subject of the last importance; and which, as far as I can find, has no where been so fully treated: he builds nothing on a thing so uncertain as tradition, which differs in most countries; and of which, in all countries, the bulk of mankind are incapable of judging; but thinks he has laid down such plain and evident rules, as may enable men of the meanest capacity, to distinguish between religion and superstition; and has represented the former in every part so beautiful, so amiable, and so strongly affecting, that they, who in the least reflect, must be highly in love with it; and easily perceive, that their duty and happiness are inseparable."

The character of the performance will be seen from a few of the propositions he maintains :—

"That God, at all times, has given mankind sufficient means of knowing whatever he requires of them.

"That the religion of nature consists in observing those things, which our reason, by considering the nature of God and man, and the relation we stand in to him, and one another, demonstrates to be our duty; and that those things are plain; and likewise what they are.

"That the perfection and happiness of all rational beings, supreme as well as subordinate, consist in living up to the dictates of their nature.

"That God requires nothing for his own sake; no, not the worship we are to render him, nor the faith we are to have in him.

"That the not adhering to those notions reason dictates, concerning the nature of God, has been the occasion of all superstition, and those innumerable mischiefs, that mankind, on the account of religion, have done either to themselves, or one another.

"The bulk of mankind, by their reason, must be able to distinguish between religion and superstition; otherwise they can never extricate themselves from that superstition they chance to be educated in."

Tindal deals with the question of the obscurity of

Revelation in these terms, sufficiently salient to alarm the very proper divines of that day :—

"Had God, from time to time, spoken to all mankind in their several languages, and his words had miraculously conveyed the same ideas to all persons; yet he could not speak more plainly than he has done by the things themselves, and the relation which reason shows there is between them. Nay, since it is impossible in any book, or books, that a particular rule could be given for every case, we must even then have had recourse to the light of nature to teach us our duty in most cases; especially considering the numberless circumstances which attend us, and which, perpetually varying, may make the same actions, according as men are differently affected by them, either good or bad. And I may add, that most of the particular rules laid down in the gospel for our direction, are spoken after such figurative a manner, that except we judge of their meaning, not merely by the letter, but by what the law of nature antecedently declares to be our duty, they are apt to lead us wrong. And if precepts relating to morality are delivered after an obscure manner, when they might have been delivered otherwise; what reason can you assign for its being so, but that infinite wisdom meant to refer us to that law for the explaining them? Sufficient instances of this nature I shall give you hereafter, though I must own, I cannot carry this point so far as a learned divine, who represents the Scriptures more obscure (which one would think impossible) than even the fathers. He tells us, 'that a certain author (viz., Flaccus Illyricus) has furnished us with one-and-fifty reasons for the obscurity of the Scriptures;' adding, 'I think I may truly say that the writing of the prophets and apostles abound with tropes, and metaphors, types, and allegories, parables, and dark speeches; and are as much, nay, much more unintelligible in many places, than the writings of the ancients.' It is well this author, who talks of people being stark Bible-mad, stopped here; and did not with a celebrated

wit* cry, 'The truly illuminated books are the darkest of all.' The writer above mentioned supposes it impossible, that God's will should be fully revealed by books; 'except,' says he, 'it might be said perhaps without a figure, that even the world itself could not contain the books which should be written.' But with submission to this reverend person, I cannot help thinking, but that (such is the divine goodness) God's will is so clearly and fully manifested in the Book of Nature, that he who runs may read it."

In the next extract we make, we find Tindal quoting two striking passages from Lord Shaftesbury, followed by an acute vindication of the integrity of the Law of Nature over the Scriptures:—

"Had the heathen distinguished themselves by creeds made out of spite to one another, and mutually persecuted each other about the worship of their gods, they would soon have made the number of their votaries as few as the gods they worshipped; but we don't find (except in Egypt, that mother-land of superstition) that they ever quarrelled about their gods; though their gods sometimes quarrelled, and fought about their votaries. By the universal liberty that was allowed by the ancients, 'Matters (as a noble author observes) were so balanced, that reason had fair play; learning and science flourished; wonderful was the harmony and temper which arose from these contrarieties. Thus superstition and enthusiasm were mildly treated; and being let alone, they never raged to that degree as to occasion bloodshed, wars, persecutions, and devastations; but a new sort of policy has made us leap the bounds of natural humanity, and out of a supernatural charity, has taught us the way of plaguing one another most devoutly. It has raised an antipathy, that no temporal interest could ever do, and entailed on us a mutual hatred to all eternity. And savage zeal, with meek and pious semblance, works dreadful massacre; and for heaven's sake (horrid pretence) makes desolate the

† Dean Swift—"Tale of a Tub."

earth.' And further, Shaftesbury observes, 'The Jupiter of Strangers, was, among the ancients, one of the solemn characters of divinity, the peculiar attribute of the supreme deity; benign to mankind, and recommending universal love, mutual kindness, and benignity between the remotest and most unlike of the human race. Such was the ancient heathen charity and pious duty towards the whole of mankind; both those of different nations and different worship. But, good God! how different a character do bigots give us of the Deity, making him an unjust, cruel, and inconsistent Being; requiring all men to judge for themselves, and act according to their consciences; and yet authorizing some among them to judge for others, and to punish them for not acting according to the consciences of those judges, though ever so much against their own. These bigots thought they were authorized to punish all those that differ with them in their religious worship, as God's enemies; but had they considered that God alone could discern men's hearts, and alone discover whether any, by conscientiously offering him a wrong worship, could become his enemies; and that infinite wisdom best knew how to proportion the punishment to the fault, as well as infinite power how to inflict it; they would, surely, have left it to God to judge for himself, in a cause which immediately related to himself; and where they were not so much as parties concerned, and as likely to be mistaken as those they would punish. Can one, without horror, think of men's breaking through all the rules of doing as they would be done unto, in order to set themselves up for standards of truth for God as well as man? Do not these impious wretches suppose, that God is not able to judge for himself; at least, not able to execute his own judgment? And that, therefore, he has recourse, forsooth, to their superior knowledge or power; and they are to revenge his injuries, root out his enemies, and restore his lost honor, though with the destruction of the better part of mankind? But, to do the propagators of these blasphemous notions justice, they do

not throw this load of scandal on the law of Nature; or so much as pretend from thence to authorize their execrable principles; but endeavor to support them by traditional religion; especially by mis-interpreted texts from the Old Testament; and thereby make, not only natural and revealed religion, but the Old and New Testament (the latter of which requires doing good both to Jews and Gentiles) contradict each other. But to return; if what the light of Nature teaches us concerning the divine perfections, when duly attended to, is not only sufficient to hinder us from falling into superstition of any kind whatever; but, as I have already shown, demonstrates what God, from his infinite wisdom and goodness, can, or cannot command; how is it possible that the law of Nature and grace can differ? How can it be conceived, that God's laws, whether internally, or externally revealed, are not at all times the same, when the author of them is, and has been immutably the same forever?'"

The following passage exhibits the judicious mixture of authority and argument for which our author is remarkable. The quotation is a good illustration of Tindal's best manner. He is replying to Dr. Samuel Clark:—

"It cannot be imputed to any defect in the light of nature, that the pagan world ran into idolatry, but to their being entirely governed by priests, who pretended communication with their gods, and to have thence their revelations, which they imposed on the credulous as divine oracles: whereas the business of the Christian dispensation was to destroy all those traditional revelations; and restore, free from all idolatry, the true primitive, and natural religion, implanted in mankind from the creation. The Dr. (Clark) however, seems afraid, lest he had allowed too much to the light of nature, in relation to the discovery of our duty both to God and man; and not left room for revelation to make any addition; he therefore supposes, 'there are some duties, which nature hints at only in general.'— But, if we cannot, without highly reflecting on the wis-

dom and goodness of God, suppose that he has not, at all times, given the whole rational creation a plain rule for their conduct, in relation to those duties they owe to God, themselves, and one another; must we not suppose reason, and religion (that rule of all other rules) inseparable; so that no rational creature can be ignorant of it, who attends to the dictates of his own mind; I mean, as far as it is necessary for him to know it? An ignorant peasant may know what is sufficient for him, without knowing as much as the learned rector of St. James's. Though the Dr. says, 'the knowledge of the law of nature is, in fact, by no means universal;' yet he asserts, that 'man is plainly in his own nature an accountable creature;' which supposes that the light of nature plainly, and undeniably, teaches him that law, for breach of which he is naturally accountable; and did not the Dr. believe this law to be universal, he could not infer a future judgment from the conscience *all* men have of their actions, or the judgment they pass on them in their own minds whereby 'They that have not any law, are a law unto themselves; their consciences bearing witness, and their thoughts accusing, or excusing one another;' which is supposing but one law, whether that law be written on paper, or in men's hearts only; and that all men by the judgment they pass on their own actions, are conscious of this law. And, the apostle Paul, though quoted by the Dr., is so far from favoring his hypothesis of any invincible ignorance, even in the wisest and best of the philosophers, that he, by saying, The Gentiles, that have not the law, do by nature the things contained in the law, makes the law of nature and grace to be the same: and supposes the reason why they were to be punished, was their sinning against light and knowledge. That which may be known of God was manifest in them, and when they knew God, they glorified him not as God. And they were likewise guilty of abominable corruptions, not ignorantly, but knowing the judgment of God, that they who do such things are worthy of death.

"Had the Dr. but considered this self-evident proposition, that there can be no transgression where there is no law; and that an unknown law is the same as no law; and consequently, that all mankind, at all times, must be capable of knowing all (whether more or less) that God requires, it would have prevented his endeavoring to prove, that, till the gospel dispensation, mankind were entirely, and unavoidably ignorant of their duty in several important points; and thus charging the light of nature with undeniable defects. I think it no compliment to external revelation, though the Dr. designed it as the highest, to say, it prevailed, when the light of nature was, as he supposes, in a manner extinct; since then an irrational religion might as easily obtain, as a rational one. The Dr., to prove that revelation has supplied the insufficiency, and undeniable defects of the light of nature, refers us to Phil., iv., 1, which he introduces after this pompous manner: —'Let any man of an honest and sincere mind consider, whether that practical doctrine has not, even in itself, the greatest marks of a divine original, wherein whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report, if there be any virtue, if there be anything praiseworthy; all these, and these only, are earnestly recommended to man's practice.' I would ask the Dr., how he can know what these are, which are thus alone earnestly recommended to man's practice; or, why they have, in themselves, the greatest marks of a divine original; but from the light of nature? Nay, how can the Dr. know there are defects in the light of nature, but from that light itself? which supposes this light is all we have to trust to; and consequently, all the Dr. has been doing, on pretence of promoting the honor of revelation, is introducing universal scepticism. And I am concerned, and grieved, to see a man, who had so great a share of the light of nature, employing it to expose that light, of which before he had given the highest commenda-

tion; and which can have no other effect, than to weaken even his own demonstration, drawn from that light, for the being of a God. I shall mention but one text more, which, had not the Dr. thought it highly to his purpose, for showing the insufficiency of the light of nature, he would not have ushered it in after this most solemn manner:—'When men have put themselves into this temper and frame of mind, let them try if they can any longer reject the evidence of the gospel. If any man will do his will, he shall know of the doctrine; whether it be of God.' Is it not strange, to see so judicious a divine write after such a manner, as if he thought the best way to support the dignity of revelation, was to derogate from the immutable and eternal law of nature? and while he is depressing it, extol revelation for those very things it borrows from that law? in which, though he asserts there are undeniable defects, yet he owns that God governs all his own actions by it, and expects that all men should so govern theirs.

"But, I find the Dr.'s own brother, the Dean of Sarum, is entirely of my mind, as to those texts the Dr. quotes—viz., Rom. ii., 14, and Phil. iv., 8. As to the first—viz., Rom. ii., 14, he says, 'The apostle supposes, that the moral law is founded in the nature and reason of things; that every man is endued with such powers and faculties of mind, as render him capable of seeing, and taking notice of this law; and also with such a sense and judgment of the reasonableness and fitness of conforming his actions to it, that he cannot but in his own mind acquit himself when he does so; and condemn himself when he does otherwise.' And as to the second—viz., Phil. iv., 8, where the same apostle recommends the practice of Virtue, upon the forementioned principles of comeliness and reputation.—'These principles,' says he, 'if duly attended to, were sufficient to instruct men in the whole of their duty towards themselves, and towards each other. And they would also have taught them their duty towards God, their Creator and Governor, if they had diligent-

ly pursued them. For according as the apostle expresses it, Rom. i., 20, the invisible things of God from the creation of the world are clearly seen, being understood by the things that are made, even his eternal power and Godhead. The same fitness and decency that appears in men's regular behavior towards each other, appears also in their behavior towards God. And this, likewise, is founded in the nature and reason of things; and is what the circumstances and condition they are in do absolutely require. Thus we see therein moral virtue, or good consists, and what the obligation to it is from its own native beauty and excellency.'"

One more example of Tindal's style will show how skilfully and cogently he forced the great authorities of his day to bear witness to the truth of his leading proposition, the natural antiquity of all the reasonable precepts of the Bible:—

"The most accurate Dr. Barrow gives this character of the Christian religion, 'That its precepts are no other than such as physicians prescribe for the health of our bodies; as politicians would allow to be needful for the peace of the state; as Epicurean philosophers recommend for the tranquillity of our minds, and pleasures of our lives; such as reason dictates, and daily shows conducive to our welfare in all respects; which consequently, were there no law enacting them, we should in wisdom choose to observe, and voluntarily impose them on ourselves; confessing them to be fit matters of law, and most advantageous and requisite to the good, general and particular, of mankind.'

"That great and good man Dr. Tillotson says, 'That all the precepts of Christianity are reasonable and wise, requiring such duties as are suitable to the light of nature, and do approve themselves to the best reason of mankind; such as have their foundation in the nature of God, and are an imitation of the divine excellencies; such as tend to the perfection of human nature, and to raise the minds of men to the highest pitch of goodness and virtue. They command nothing that is

unnecessary, they omit nothing that may tend to the glory of God, or the welfare of men, nor do they restrain us in anything, but what is contrary to the regular inclinations of nature, or to our reason, and true interest; they forbid us nothing but what is base and unworthy to serve our humors and passions, to make ourselves fools and beasts. In a word, nothing but what tends to our private harm, or prejudice, or to public disorder and confusion.'

"The late Dean of Canterbury, in a sermon preached in defence of Christianity, says,* 'What can be a more powerful incentive to obedience, than for a rational creature clearly to discern the equity, the necessity, the benefit, the decency and beauty of every action he is called to do, and thence to be duly sensible how gracious a master he serves; one that is so far from loading him with fruitless, arbitrary, and tyrannical impositions, that each command abstracted from his command who issues it, is able to recommend itself; and nothing required but what every wise man would choose of his accord; and cannot, without being his own enemy, wish to be exempted from?' And this character of Christianity he makes to be essential to its being from God, and therefore must make it the same with natural religion, which has this character impressed on it.

"'There was none of the doctrines of our Saviour (says the late Archbishop of York)† calculated for the gratification of men's idle curiosities, the busying and amusing them with airy and useless speculations; much less were they intended for an exercise of our credulity, or a trial how far we could bring our reason to submit to our faith; but as on the one hand they were plain and simple, and such as by their agreeableness to the rational faculties of mankind, did highly recommend themselves to our belief; so on the other hand they had an immediate relation to practice, and

* Boyle's Lect., p. 26,

† Sermon before the Queen on Christmas Day, 1724.

were the general principles and foundation, on which all human and divine virtues were naturally to be superstructed.' Does not every one see, that if the religion of nature had been put instead of Christianity, these descriptions would have exactly agreed with it?

"The judicious Dr. Scot affirms, 'God never imposes laws on us *pro imperio*, as arbitrary tests and trials of our obedience. The great design of them (says he,) is to do us good, and direct our actions to our own interest. This, if we firmly believe, will infinitely encourage our obedience; for when I am sure God commands me nothing but what my own health, ease, and happiness requires; and that every law of his is both a necessary and sovereign prescription against the diseases of my nature, and he could not prescribe less than he has, without being defective in his care of my recovery and happiness; with what prudence and modesty can I grudge to obey him?'

"Nay, the most considerate men, even among the Papists, do not scruple to maintain there's nothing in religion but what is moral. The divines of Port Royal for instance, say, 'All the precepts, and all the mysteries that are expressed in so many different ways in the holy volumes, do all centre in this one commandment of loving God with all our heart, and in loving our neighbors as ourselves: for the Scripture (it is St. Austin who says it) forbids but one only thing, which is concupiscence, or the love of the creature; as it commands but one only thing, which is charity, and the love of God. Upon this double precept is founded the whole system of the Christian religion; and it is unto this, say they, according to the expression of Jesus Christ, that all the ancient law and the prophets have reference; and we may add also, all the mysteries, and all the precepts of the new law; for love, says St. Paul, is the fulfilling of the law.' And these divines likewise cite a remarkable passage of St. Austin on this subject, viz., 'He that knows how to love God, and to regulate his life by that love, knows all that the Scripture propounds to be known.' And I

might add the authority of a greater man, and a Papist too,* who says, 'Religion adds nothing to natural probity, but the consolation of doing that for love and obedience to our Heavenly Father, which reason itself requires us do in favor of virtue.'"

Tindal was a solid, rather than a brilliant writer: but he perfectly knew what he was about; and the work from which we quote, was well conceived and carefully executed. His ground was skilfully chosen, his arguments were placed on an eminence where his friends could see them, and where his enemies could not assail them. Dr. Leland, in his view of Deistical writers, is quite in a rage with him, because he discredits Book Revelation, to set up Nature's Revelation. His real offence was, that he did prove that Nature was the only source of truth and reason—the criterion by which even Divine Revelation must be judged. He carried men back to the gospel of nature, by the side of which the gospel of the Jewish fishermen did not show to advantage. Tindal did put something in the place of that which he was supposed desirous of removing. How unwilling Christians of that day were to admit of improvement in religion, is shown by the number of attacks Tindal's work sustained. The Bishop of London published a "Second Pastoral Letter" against it; Dr. Thomas Burnet "confuted" it; Mr. Law "fully" answered it; Dr. Stebbing "obviated the principal objections" in it. "The same learned and judicious writer," observes Leland, a second time entered the lists, in "answer to the fourteenth chapter of a book, entitled 'Christianity as Old as the Creation.'" Mr. Balgny issued a "Second Letter to a Deist," occasioned by Tindal's work. Mr. Anthony O'Key gave a short view of the whole controversy. Dr. Forster, Dr. John Conybeare, "particularly engaged public attention" as Dr. Tindal's antagonists. Mr. Simon Brown produced a "solid and excellent" answer; and

‡ Archbishop of Cambray: Lettres sur la Religion, p. 258, a Paris.

Dr. Leland, with many blushes, tells us that he himself issued in Dublin, in 1773, two volumes, taking a wider compass than the other answers.

"Christianity as Old as the Creation" is a work which Freethinkers may yet consult with advantage, as a repertory of authorities no longer accessible to the readers of this generation. What these authorities allege will be found to have intrinsic value, to be indeed lasting testimonies in favor of Rationalism. In passing in review the noble truths, Tindal insists that it is impossible not to wonder at the policy, or rather want of policy displayed by Christians. Tindal is an author whom they might be proud of, if they were really in love with reason. Tindal's opponents have shown how instinctively the children of faith distrust the truths of Nature. After all the "refutations," and "confutations," and "answers" made to the great Deist, Tindal's work has maintained its ground, and the truths he so ably and spiritedly vindicated, have spread wider since and taken deeper root. J. W.

BIOGRAPHY

OF

DAVID HUME.

Lord Brougham has rendered service not only to "Letters," but also to Freethought, by his admirable "Lives," incomparably the best we have, of Voltaire, Rousseau, Hume, Gibbon, etc. From Lord Brougham we learn (whose life in this sketch we follow) that David Hume, related to the Earl of Hume's family, was born in Edinburgh, in April, 1711. Refusing to be made a lawyer, he was sent, in 1734, to a mercantile house in Bristol. The "desk" not suiting the embryo historian's genius, we find him in 1737 at La Fleche, in Anjou, writing his still-born "Treatise on Human Nature;" which in 1742, in separate Essays, attracted some notice. Keeper and companion to the Marquis of Annandale in 1745, private secretary to General St. Clair in 1747, he visited on embassy the courts of Vienna and Turin. While at Turin he completed his "Inquiry Concerning the Human Understanding," the "Treatise on Human Nature" in a new form. Returned to Scotland, he published his "Political Discourses" in 1752, and the same year his "Inquiry Concerning the Principles of Morals." The "Essays, Moral and Metaphysical," are the form in which we now read these speculations. In 1752, Hume became librarian to the Faculty of Advocates. In 1754 he published the first volume of his "History

of England." In 1755, appeared his "Natural History of Religion." In 1763 he accompanied the British ambassador to Paris. In 1765 he became *charge d'affaires.* In 1766 he was appointed Under Secretary of State under Marshal Conway. In 1775 he was seized with a mortal disease, which he bore without any abatement of his cheerfulness; and on the 25th of August, "*le bon* David," as he was styled in Paris, died, to use his own words, having "no enemies—except all the Whigs, all the Tories, and all the Christians"—which was something to his honor, and a testimony of the usefulness of his life.

David Hume was the first writer who gave historical distinction to Great Britain. Lord John Russell remarked in a speech at Bristol, in October, 1854 :—"We have no other 'History of England' than Hume's..... When a young man of eighteen asks for a 'History of England,' there is no resource but to give him Hume." Hume was the author of the modern doctrines of politics and political economy, which now rule the world of science. He was "the sagacious unfolder of truth, the accurate and bold discoverer of popular error." More than a sceptic, he was an Atheist. Such is Lord Brougham's judgment of him.

Hume carried Freethought into high places. In originality of thought, grace of style, and logical ability, he distanced all rival writers on religion in his time, and what is of no small importance, his life was as blameless as his intellect was unapproachable.

Our first extract from his writings is a felicitous statement of the *pro* and *con.*, on the questions of polygamous and single marriages :—

"A man, in conjoining himself to a woman, is bound to her according to the terms of his engagement. In begetting children, he is bound, by all the ties of nature and humanity, to provide for their subsistence and education. When he has performed these two parts of duty, no one can reproach him with injustice or injury. And as the terms of his engagement, as well as the methods of subsisting his offspring, may

be various, it is mere superstition to imagine that marriage can be entirely uniform, and will admit only of one mode or form. Did not human laws restrain the natural liberty of men, every particular marriage would be as different as contracts or bargains of any other kind or species. As circumstances vary, and the laws propose different advantages, we find, that in different times and places, they impose different conditions on this important contract. In Tonquin, it is usual for the sailors, when the ship comes into the harbor, to marry for the season; and, notwithstanding this precarious engagement, they are assured, it is said, of the strictest fidelity to their bed, as well as in the whole management of their affairs, from those temporary spouses. I cannot, at present, recollect my authorities; but I have somewhere read, that the Republic of Athens, having lost many of its citizens by war and pestilence, allowed every man to marry two wives, in order the sooner to repair the waste which had been made by these calamities. The poet Euripides happened to be coupled to two noisy vixens, who so plagued him with their jealousies and quarrels, that he became ever after a professed *woman hater;* and is the only theatrical writer, perhaps the only poet, that ever entertained an aversion to the sex.....The advocates for polygamy may recommend it as the only effectual remedy for the disorders of love, and the only expedient for freeing men from that slavery to the females which the natural violence of our passions has imposed upon us. By this means alone can we regain our right of sovereignty; and, sating our appetite, re-establish the authority of reason in our minds, and, of consequence, our own authority in our families. Man, like a weak sovereign, being unable to support himself against the wiles and intrigues of his subjects, must play one faction against another, and become absolute by the mutual jealousy of the females. To divide and to govern is an universal maxim; and by neglecting it, the Europeans undergo a more grievous and a more ignominious slavery than the Turks or Persians, who

are subjected indeed to a sovereign that lies at a distance from them, but in their domestic affairs rules with an uncontrollable sway. On the other hand, it may be urged with better reason, that this sovereignty of the male is a real usurpation, and destroys that nearness of rank, not to say equality, which nature has established between the sexes. We are, by nature, their lovers, their friends, their patrons. Would we willingly exchange such endearing appellations for the barbarous title of master and tyrant? In what capacity shall we gain by this inhuman proceeding? As lovers, or as husbands? The *lover* is totally annihilated; and courtship, the most agreeable scene in life, can no longer have place where women have not the free disposal of themselves, but are bought and sold like the meanest animal. The *husband* is as little a gainer, having found the admirable secret of extinguishing every part of love, except its jealousy. No rose without its thorn; but he must be a foolish wretch indeed, that throws away the rose and preserves only the thorn. But the Asiatic manners are as destructive to friendship as to love. Jealousy excludes men from all intimacies and familiarities with each other. No one dares bring his friend to his house or table, lest he bring a lover to his numerous wives. Hence, all over the East, each family is as much separate from another as if they were so many distinct kingdoms. No wonder then that Solomon, living like an Eastern prince, with his seven hundred wives, and three hundred concubines, without one friend, could write so pathetically concerning the vanity of the world. Had he tried the secret of one wife or mistress, a few friends, and a great many companions, he might have found life somewhat more agreeable. Destroy love and friendship, what remains in the world worth accepting?"

Next we quote his famous statement of the principle of *utility* in morals:—

"There has been a controversy started of late much better worth examination, concerning the general foun-

dation of morals; whether they be derived from reason or from sentiment; whether we attain the knowledge of them by a chain of argument and induction, or by an immediate feeling and finer internal sense; whether, like all sound judgment of truth and falsehood, they should be the same to every rational intelligent being; or whether like the perception of beauty and deformity, they be founded entirely on the particular fabric and constitution of the human species. The ancient philosophers, though they often affirm that virtue is nothing but conformity to reason, yet, in general, seem to consider morals as deriving their existence from taste and sentiment. On the other hand, our modern inquirers, though they also talk much of the beauty of virtue, and deformity of vice, yet have commonly endeavored to account for these distinctions by metaphysical reasonings, and by deductions from the most abstract principles of the understanding. Such confusion reigned in these subjects, that an opposition of the greatest consequence could prevail between one system and another, and even in the parts of almost each individual system; and yet nobody, till very lately, was ever sensible of it. The elegant Lord Shaftesbury, who first gave occasion to remark this distinction, and who, in general, adhered to the principles of the ancients, is not, himself, entirely free from the same confusion.....In all determinations of morality, the circumstance of public utility is ever principally in view; and wherever disputes arise, either in philosophy or common life, concerning the bounds of duty, the question cannot, by any means, be decided with greater certainty, than by ascertaining, on any side, the true interests of mankind. If any false opinion, embraced from appearances, has been found to prevail; as soon as farther experience and sounder reasoning have given us juster notions of human affairs, we retract our first sentiment, and adjust anew the boundaries of moral good and evil. Giving alms to common beggars is naturally praised; because it seems to carry relief to the distressed and indigent;

but when we observe the encouragement thence arising to idleness and debauchery, we regard that species of charity rather as a weakness than a virtue. Tyrannicide, or the assassination of usurpers and oppressive princes, was highly extolled in ancient times; because it both freed mankind from many of these monsters, and seemed to keep the others in awe whom the sword or poniard could not reach. But history and experience having since convinced us, that this practice increases the jealousy and cruelty of princes, a Timoleon and a Brutus, though treated with indulgence on account of the prejudices of their times, are now considered as very improper models for imitation. Liberality in princes is regarded as a mark of beneficence. But when it occurs, that the homely bread of the honest and industrious is often thereby converted into delicious cakes for the idle and the prodigal, we soon retract our heedless praises. The regrets of a prince, for having lost a day, were noble and generous; but had he intended to have spent it in acts of generosity to his greedy courtiers, it was better lost than misemployed after that manner.....That justice is useful to society, and consequently that *part* of its merit, at least, must arise from that consideration, it would be a superfluous undertaking to prove. That public utility is the *sole* origin of justice, that reflections on the beneficial consequences of this virtue are the *sole* foundation of its merit; this proposition being more curious and important, will better deserve our examination and inquiry. Let us suppose that nature has bestowed on the human race such profuse abundance of all external conveniences, that, without any uncertainty in the event, without any care or industry on our part, every individual finds himself fully provided with whatever his most voracious appetite can want, or luxurious imagination wish or desire. His natural beauty, we shall suppose, surpasses all acquired ornaments; the perpetual clemency of the seasons renders useless all clothes or covering: the raw herbage affords him the most delicious fare; the clear

fountain, the richest beverage. No laborious occupation required: no tillage: no navigation. Music, poetry, and contemplation, form his sole business: conversation, mirth, and friendship his sole amusement. It seems evident, that, in such a happy state, every other social virtue would flourish, and receive tenfold increase; but the cautious, jealous virtue of justice, would never once have been dreamed of. For what purpose make a partition of goods, where every one has already more than enough? Why give rise to property, where there cannot possibly be any injury? Why call this object *mine*, when, upon seizing of it by another, I need but stretch out my hand to possess myself of what is equally valuable? Justice, in that case, being totally useless, would be an idle ceremonial, and could never possibly have place in the catalogue of virtues. We see, even in the present necessitous condition of mankind, that, wherever any benefit is bestowed by nature in an unlimited abundance, we leave it always in common among the whole human race, and make no subdivisions of right and property. Water and air, though the most necessary of all objects, are not challenged as the property of individuals; nor can any man commit injustice by the most lavish use and enjoyment of these blessings. In fertile extensive countries, with few inhabitants, land is regarded on the same footing. And no topic is so much insisted on by those who defend the liberty of the seas, as the unexhausted use of them in navigation. Were the advantages procured by navigation as inexhaustible, these reasoners had never had any adversaries to refute; nor had any claims ever been advanced of a separate, exclusive dominion over the ocean.....Suppose a society to fall into such want of all common necessaries, that the utmost frugality and industry cannot preserve the greater number from perishing, and the whole from extreme misery. It will readily, I believe, be admitted that the strict laws of justice are suspended in such a pressing emergence, and give place to the stronger motives of necessity and

self-preservation. Is it any crime, after a shipwreck, to seize whatever means or instrument of safety one can lay hold of, without regard to former limitations of property? Or if a city besieged were perishing with hunger; can we imagine that men will see any means of preservation before them, and lose their lives from a scrupulous regard to what, in other situations, would be the rules of equity and justice? The use and tendency of that virtue is to procure happiness and security, by preserving order in society. But where the society is ready to perish from extreme necessity, no greater evil can be dreaded from violence and injustice; and every man may now provide for himself by all the means which prudence can dictate, or humanity permit. The public, even in less urgent necessities, opens granaries without the consent of proprietors; as justly supposing, that the authority of magistracy may, consistent with equity, extend so far. But were any number of men to assemble, without the tie of laws or civil jurisdiction; would an equal partition of bread in a famine, though effected by power and even violence, be regarded as criminal or injurious? Suppose, likewise, that it should be a virtuous man's fate to fall into the society of ruffians, remote from the protection of laws and government; what conduct must he embrace in that melancholy situation? He sees such a desperate rapaciousness prevail; such a disregard to equity, such contempt of order, such stupid blindness to future consequences, as must immediately have the most tragical conclusion, and must terminate in destruction to the greater number, and in a total dissolution of society to the rest. He, meanwhile, can have no other expedient than to arm himself, to whomever the sword he seizes, or the buckler may belong: to make provision of all means of defence and security: and his particular regard to justice being no longer of use to his own safety or that of others, he must consult the dictates of self-preservation alone, without concern for those who no longer merit his care and attention.....But perhaps the diffi-

culty of accounting for these effects of usefulness, or its contrary, has kept philosophers from admitting them into their systems of ethics, and has induced them to employ any other principle, in explaining the origin of moral good and evil. But it is no just reason for rejecting any principle, confirmed by experience, that we cannot give a satisfactory account of its origin, nor are able to resolve it into other more general principles. And if we would employ a little thought on the present subject, we need be at no loss to account for the influence of utility, and deduce it from principles the most known and avowed in human nature..... Usefulness is agreeable, and engages our approbation. This is a matter of fact, confirmed by daily observation. But useful! For what? For somebody's interest, surely! Whose interest then? Not our own only; for our approbation frequently extends farther. It must therefore be the interest of those who are served by the character or action approved of; and these, we may conclude, however remote, are not totally indifferent to us. By opening up this principle, we shall discover one great source of moral distinctions."

The origin and mischiefs of Theistic influences is the subject of the following passage :—

"It must necessarily, indeed, be allowed, that in order to carry men's attention beyond the present course of things, or lead them into any inference concerning invisible intelligent power, they must be actuated by some passion which prompts their thought and reflection, some motive which urges their first inquiry. But what passion shall we here have recourse to, for explaining an effect of such mighty consequence? Not speculative curiosity, surely, or the pure love of truth. That motive is too refined for such gross apprehensions; and would lead men into inquiries concerning the frame of nature, a subject too large and comprehensive for their narrow capacities. No passions, therefore, can be supposed to work upon such barbarians, but the ordinary affections of human life; the anxious concern for happiness, the dread of future misery, the

terror of death, the thirst of revenge, the appetite for food and other necessaries. Agitated by hopes and fears of this nature, especially the latter, men scrutinize, with a trembling curiosity, the course of future causes, and examine the various and contrary events of human life. And in this disordered scene, with eyes still more disordered and astonished, they see the first obscure traces of divinity.....We hang in perpetual suspense between life and death, health and sickness, plenty and want, which are distributed amongst the human species by secret and unknown causes, whose operation is oft unexpected, and always unaccountable. These *unknown causes*, then, become the constant object of hope and fear; and while the passions are kept in perpetual alarm by an anxious expectation of the events, the imagination is equally employed in forming ideas of those powers on which we have so entire a dependence. Could men anatomize nature, according to the most probable, at least the most intelligible philosophy, they would find that these causes are nothing but the particular fabric and structure of the minute parts of their own bodies and of external objects; and that by a regular and constant machinery, all the events are produced, about which they are so much concerned.....There is an universal tendency among mankind to conceive all beings like themselves, and to transfer to every object those qualities with which they are familiarly acquainted, and of which they are intimately conscious. We find human faces in the moon, armies in the clouds; and, by a natural propensity, if not corrected by experience and reflection, ascribe malice or good will to everything that hurts or pleases us. Hence the frequency and beauty of the *prosopopæia* in poetry; where trees, mountains, and streams are personified, and the inanimate parts of nature acquire sentiment and passion. And though these poetical figures and expressions gain not on the belief, they may serve, at least, to prove a certain tendency in the imagination, without which they could neither be beautiful nor natural. Nor is a river-god or hamadryad al-

ways taken for a mere poetical or imaginary personage, but may sometimes enter into the real creed of the ignorant vulgar; while each grove or field is represented as possessed of a particular genius or invisible power which inhabits and protects it. Nay, philosophers cannot entirely exempt themselves from this natural frailty; but have oft ascribed to inanimate matter the horror of a *vacuum*, sympathies, antipathies, and other affections of human nature. The absurdity is not less, while we cast our eyes upwards; and, transferring, as is too usual, human passions and infirmities to the Deity, represent him as jealous and revengeful, capricious and partial, and, in short, a wicked and foolish man in every respect but his superior power and authority.—No wonder, then, that mankind, being placed in such an absolute ignorance of causes, and being at the same time so anxious concerning their future fortune, should immediately acknowledge a dependence on invisible powers, possessed of sentiment and intelligence. The *unknown causes* which continually employ their thought, appearing always in the same aspect, are all apprehended to be of the same kind or species. Nor is it long before we ascribe to them thought, and reason, and passion, and sometimes even the limbs and figures of men, in order to bring them nearer to a resemblance with ourselves.....It is remarkable, that the principles of religion have a kind of flux and reflux in the human mind, and that men have a natural tendency to rise from idolatry to Theism, and to sink again from Theism into idolatry. The vulgar—that is, indeed, all mankind, a few excepted — being ignorant and uninstructed, never elevate their contemplation to the heavens, or penetrate by their disquisitions into the secret structure of vegetable or animal bodies; so far as to discover a Supreme Mind or Original Providence, which bestowed order on every part of nature. They consider these admirable works in a more confined and selfish view; and finding their own happiness and misery to depend on the secret influence and unforeseen concurrence of external objects, they regard, with perpetual attention,

the *unknown causes* which govern all these natural events, and distribute pleasure and pain, good and ill, by their powerful but silent operation. The unknown causes are still appealed to on every emergency; and in this general appearance or confused image, are the perpetual objects of human hopes and fears, wishes and apprehensions. By degrees, the active imagination of men, uneasy in this abstract conception of objects, about which it is incessantly employed, begins to render them more particular, and to clothe them in shapes more suitable to its natural comprehension. It represents them to be sensible, intelligent beings like mankind; actuated by love and hatred, and flexible by gifts and entreaties, by prayers and sacrifices. Hence the origin of religion: and hence the origin of idolatry or polytheism."

More has been written by theologians in endeavors to refute the following passage, than has ever been called forth by the wit of man before by the same number of words:—

"A miracle is a violation of the laws of nature; and as a firm and unalterable experience has established these laws, the proof against a miracle, from the very nature of the fact, is as entire as any argument from experience can possibly be imagined. Why is it more than probable that all men must die; that lead cannot, of itself, remain suspended in the air; that fire consumes wood, and is extinguished by water; unless it be that these events are found agreeable to the laws of nature, and there is required a violation of these laws, or, in other words, a miracle to prevent them? Nothing is esteemed a miracle, if it ever happen in the common course of nature. It is no miracle that a man, seemingly in good health, should die on a sudden; because such a kind of death, though more unusual than any other, has yet been frequently observed to happen. But it is a miracle that a dead man should come to life; because that has never been observed in any age or country. There must, therefore, be an uniform experience against every miraculous event, otherwise the

event would not merit that appellation. And as an uniform experience amounts to a proof, there is here a direct and full proof, from the nature of the fact, against the existence of any miracle; nor can such a proof be destroyed, or the miracle rendered credible, but by an opposite proof which is superior. The plain consequence is (and it is a general maxim worthy of our attention,) 'That no testimony is sufficient to establish a miracle, unless the testimony be of such a kind that its falsehood would be more miraculous than the fact which it endeavors to establish. And even in that case there is a mutual destruction of arguments, and the superior only gives us an assurance suitable to that degree of force which remains after deducting the inferior.' When any one tells me that he saw a dead man restored to life, I immediately consider with myself whether it be more probable that this person should either deceive or be deceived, or that the fact which he relates should really have happened. I weigh the one miracle against the other; and according to the superiority which I discover, I pronounce my decision, and always reject the greater miracle. If the falsehood of his testimony would be more miraculous than the event which he relates; then, and not till then, can he pretend to command my belief or opinion.....There is not to be found, in all history, any miracle attested by a sufficient number of men, of such unquestioned good sense, education, and learning, as to secure us against all delusion in themselves; of such undoubted integrity, as to place them beyond all suspicion of any design to deceive others; of such credit and reputation in the eyes of mankind, as to have a great deal to lose in case of their being detected in any falsehood; and at the same time attesting facts, performed in such a public manner, and in so celebrated a part of the world, as to render the detection unavoidable; all which circumstances are requisite to give us a full assurance of the testimony of men.....One of the best attested miracles in all profane history, is that which Tacitus reports of Vespasian, who cured a blind man in Alexandria by

means of his spittle, and a lame man by the mere touch of his foot; in obedience to a vision of the god Serapis, who had enjoined them to have recourse to the emperor for these miraculous cures. The story may be seen in that fine historian; where every circumstance seems to add weight to the testimony, and might be displayed at large with all the force of argument and eloquence, if any one were now concerned to enforce the evidence of that exploded and idolatrous superstition. The gravity, solidity, age, and probity of so great an emperor, who through the whole course of his life, conversed in a familiar manner, with his friends and courtiers, and never affected those extraordinary airs of divinity assumed by Alexander and Demetrius. The historian, a contemporary writer, noted for candor and veracity, and, withal, the greatest and most penetrating genius, perhaps of all antiquity; and so free from any tendency to credulity, that he even lies under the contrary imputation of Atheism and profaneness. The persons, from whose authority he related the miracle of established character for judgment and veracity, as we may well presume; eye-witnesses of the fact, and confirming their testimony, after the Flavian family was despoiled of the empire, and could no longer give any reward as the price of a lie. *Utrumque, qui interfuere, nunc quoque memorant, postquam nullum mendacio pretium.* To which, if we add the public nature of the facts, as related, it will appear that no evidence can well be supposed stronger for so gross and so palpable a falsehood."

These extracts will give some idea of the grace, and power, and penetration of Hume. The society he kept, the abilities with which he was justly credited, the reputation his works deservedly won for him, made him a man of mark and influence in his day. Read by the learned, courted by statesmen, he taught gentlemen liberality, and governments toleration. The influence of Hume, silent and inappreciable to the multitude, has been of the utmost importance to the nation. His works have been studied by philosophers, politi-

cians, and prelates. The writings of no Freethinker, except Voltaire, have maintained their ground with continually increasing reputation. Oddly enough, none of Hume's works were popular when they first appeared. In fact, his "Treatise on Human Nature" he had to reprint in the form of Essays, five years after its first publication. It then, for the first time, began to be bought; but not to any great extent. Five years later, he again made it re-appear, under the form of an "Inquiry Concerning the Human Understanding." It was not until this third publication that he "began to perceive symptoms of its coming into notice." The world has since made up for its negligence, by perpetual comment and solid appreciation. A king among thinkers, the clergy have in the provinces of politics and philosophical speculation to acknowledge allegiance to him, however they may rebel against his theological heresies. J. W.

BIOGRAPHY

OF

DR. THOMAS BURNET.

It was only a very narrow accident which prevented Dr. Burnet, an ultra Freethinker in the Church of England, from becoming Archbishop of Canterbury at the death of Tillotson. A combination of clergymen were prepared to immolate themselves providing Burnet could be overthrown. They succeeded. Thomas Burnet kept the Charter House, in London, and his conscience—happier, perhaps, in this than if he had enjoyed the ecclesiastical preferment which King William seemed so anxious to give him. Amongst the clergy, Dr. Burnet was, with the single exception of Dean Swift, the greatest Freethinker of whom we can boast, who held an influential position in the Church. This position is sometimes claimed for Bishop Berkeley, a man of vast talents, a sincere Christian, although an innovator in philosophy.

Thomas Burnet was born in the year 1635. At the age of forty-five, he published the work, in Latin, with which his name is generally associated, "The Sacred Theory of the Earth: containing an account of the Original of the Earth, and of all the general changes which it has already undergone, or is to undergo, till the consummation of all Things." This book gives us an idea, formed by its author, of the origin of the world, and is remarkable as one of the first grand

prophecies of geology; although of little value to us, it produced an impression upon the age by depicting the various strata of the mountainous regions, and comparing them in different countries, eliminating ideas of the nature of the vast changes we see in the universe, tracing the rise of most of the phenomena from the two elements, fire and water. Burnet thought that at one time the whole of matter was in a fluid state, revolving round a central sun, until the heavier particles sunk into the middle, and formed the stony strata which supports the earth, over which the lighter liquids coalesced until the heat of the sun effectually separated water from land. This is the foundation of a scheme which is elaborated in a poetic style, abounding in eloquent descriptions; in fact, it is a philosophic prose poem of almost unrivalled beauty. In it there is some resemblance to the measured sentences of Shaftesbury, although unequal to that fine writer in soundness of judgment or practical usefulness. In 1691 an English translation was published.

By far the most interesting work to us of Burnet's (also written in Latin) is "Archœologia Philosophica: or, an account of the Opinion of the Ancients on various Philosophical Problems." This work created great opposition by its free remarks on the Mosaic dispensation, although the writer in this, as in the case of his posthumous works, strongly protested against their being translated into the English language, as he was justly afraid of their influence on the minds of the laity, and from his high official station, with the influence his vast learning and his connection with Tillotson, and the Court gave him, he was, no doubt, apprehensive that the really religious champions of the Church of England would denounce him when exposed to the temptation of High Church preferment. Fragments of those works were translated by the clergy to prove to the unlearned what a dangerous character Thomas Burnet was. Charles Blount, writing to Gildon, says, "I have, according to my promise, sent you herewith the seventh and eighth chapters, as also the appendix,

of the great and learned Dr. Burnet's book, published this winter in Latin, and by him dedicated to our most gracious Sovereign, King William.....As for the piece itself, I think it is one of the most ingenious I have ever read, and full of the most acute as well as learned observations. Nor can I find anything worthy an objection against him, as some of the censorious part of the world pretend; who would have you believe it a mere burlesque upon Moses, and destructive to the notion of original sin, wherefore by consequence (say they) there could be no necessity of a Redemption, which, however, I think no necessary consequence; but, for my part, either the great veneration I have for the doctor's extraordinary endowments, or else my own ignorance, has so far bribed me to his interests that I can, by no means, allow of any of those unjust reflections the wholesale merchants of credulity, as well as their unthinking retailers, make against him. It is true, in the seventh chapter he seems to prove that many parts of the Mosaic history of the creation appear inconsistent with reason, and in the eighth chapter the same appears no less inconsistent with philosophy; wherefore he concludes (as many fathers of the Church have done before him) that the whole rather seems to have been but a pious allegory." Dr. Burnet took the meaning of much of the Bible to be but a "pious allegory," and, as such, he strove to popularize it with the clergy. We do not believe that he intended to enlighten any but the clergy. He foresaw the "flood of fierce democracy," and, like other able men with vested rights in the ignorance of the people, he strove to temporize, to put off still further the day of Christianity's downfall. We place him in this biographical niche not because he dashed into the fray, like bold Hobbes or chivalrous Woolston, and took part in the battle of priestcraft because he thought it was right, but rather because he was a Freethinker in disguise, longing for Episcopal honors; yet, by one false step (the publishing of "Archæologia,") lost an archbishopric, and gave the authority of a great name

to struggling opinion. His accession to our ranks was a brilliant accident. He died, at the age of eighty years, in 1715. After his demise, two works were translated (and published,) both expressive of his liberal views. The first, "On Christian Faith and Duties," throwing overboard the whole of the speculative tenets of the Bible, and giving practical effect to the morals taught in the New Testament, without striving to refute, or even apparently to disbelieve, their authority, but advising the clergy to treat them as a dead letter. The other posthumous treatise was, "On the State of the Dead and the Reviving," which shadows forth a scheme of Deism, inasmuch as Burnet here flatly contradicts the usual ideas of "hell torments" or "hell fire," while asserting the necessity of those "who have not been as good in this life as they ought to be" undergoing a probationary purification before they attained supreme happiness, yet, eventually, every human being would inhabit a heavenly elysium, where perennial pleasure would reign, and sorrow be forever unknown.

Those sentiments indicate a high degree of liberal culture, although they do not sufficiently embody our ideal of one of the great Freethinkers of the past. We should have preferred Burnet if he had systematically opposed the Church as Toland or Tindal, or if he had boldly entered the breach like William Whiston, whose singular talents and faithful honesty separated him alike from the Church, Dissent, and Deism, and left him shipwrecked on the world an able yet a visionary reformer. With more ability than Chubb, he resembled him in his weak policy; he chose to cut his sneers in slices, and served them up for a scholarly party rather than hazard the indignation of the ignorant amongst the clergy. We are, however, certain that although Thomas Burnet was deficient in many points where he might have done effective service, yet we honor him for the boldness with which he faced the scholars with his Latin works. He threw an apple of discord amongst their ranks which has served,

in a constantly increasing manner, to divide and distract their attention. The result has been a constant internecine war in the Church, by which Freethought has largely profited.

We conclude our sketch of Dr. Burnet by quoting some extracts from the seventh chapter of the "Archæologia Philosophica," as translated by Charles Blount in the "Oracles of Reason," concerning Moses's description of Paradise and the original of things:—

"We have (says Burnet) hitherto made our inquiries into the originals of things, as well as after a true knowledge of Paradise amongst the ancients; yet still with reference to sacred writ, where it gave us any manner of light on the subject, but think it altogether unnecessary to define the place or situation of Paradise, since in respect to the theory of the earth, it is much the same thing where you place it, providing it be not on our modern earth. Now, if you inquire among the ancient fathers where the situation of it was, either they will have it to be none at all, or else obscure and remote from our understanding; some of them, indeed, term it an intelligible Paradise, but confined to no one particular place; whilst others, at the same time make it a sensible one, and here it is they first divided about it, etc.....Now, the history of Paradise, according to Moses, is this:—When God had, in six days, finished the creation of the world, the seventh day he rested from all manner of work. And here Moses relates particularly each day's operations; but for the story of mankind, as well male as female, of which he makes a particular treatise by himself. Wherefore, omitting the rest at present, let us consider the Mosaic doctrine upon those three subjects, viz., Adam, Eve, and the Garden of Eden, together with those things which are interwoven within them. As to the first man, Adam, Moses says he was formed not out of stones or dragon's teeth, as other Cosmists have feigned concerning their men, but out of the dust or clay of the earth, and when his body

was formed, 'God *blew into his nostrils* the breath of life, and man was made a living soul.'

"But after another manner, and of another matter, was the woman built—viz., with one of Adam's small bones, for as Adam lay asleep, God took away one of his *ribs*, and out of that made Eve. So much for the forming of the first man and woman by the literal text. Moses has likewise given us a large account of their first habitation. He says that God made them in a certain famous garden in the East, and gave it to them as a farm to cultivate and to inhabit, which garden was a most delightful place, watered with four several fountains or rivers, planted with trees of every kind..... Amongst the trees, in the midst of the garden, stood two more remarkable than the rest; one was called the tree of life, the other the tree of death, or of the knowledge of good and evil.....God, upon pain of death, prohibits Adam and Eve from tasting the fruit of this tree; but it happened that Eve sitting solitary under this tree, without her husband, there came to her a serpent or adder, which (though I know not by what means or power) civilly accosted the woman (if we may judge of the thing by the event) in these words, or to this purpose :—*

"Serpent.—All hail, most fair one, what are you doing so solitary and serious under this shade?

"Eve.—I am contemplating the beauty of this tree.

"Serp.—'Tis truly an agreeable sight, but much pleasanter are the fruits thereof. Have you tasted them, my lady?

"Eve.—I have not, because God has forbidden us to eat of this tree.

"Serp.—What do I hear! What is that God that

---

* We extract this portion not for its merits of buffoonery, but to show the real state of mind which could actuate a dignitary of the Church of England in writing it, as the eighth chapter is by far the most philosophical, but we wish to show Burnet's real sentiments.

envies his creatures the innocent delights of nature? Nothing is sweeter, nothing more wholesome than this fruit; why, then, should he forbid it, unless in jest?

"Eve.—But he has forbid it us on pain of death.

"Serp. — Undoubtedly you mistake his meaning. This tree has nothing that would prove fatal to you, but rather something divine, and above the common order of nature.

"Eve.—I can give you no answer; but will go to my husband, and then do as he thinks fit.

"Serp.—Why should you trouble your husband over such a trifle? Use your own judgment.

"Eve.—Let me see—had I best use it, or not? What can be more beautiful than this apple? How sweetly it smells! But it may be it tastes ill.

"Serp.—Believe me, it is a bit worthy to be eaten by the angels themselves; do but try, and if it tastes ill, throw it away.

"Eve.—Well, I'll try. It has, indeed, a most agreeable flavor. Give me another that I may carry it to my husband.

"Serp.—Very well thought on; here's another for you: go to your husband with it. Farewell, happy young woman. In the meantime I'll go my ways; let her take care of the rest.

"Accordingly, Eve gave the apple to the too uxorious Adam, when immediately after their eating of it, they became both (I don't know how) ashamed of their nakedness, and sewing fig leaves together, making themselves a sort of aprons, etc. After these transactions, God, in the evening, descended into the garden, upon which our first parents fled to hide themselves in the thickest of the trees, but in vain, for God called out, 'Adam, where art thou?' When he, trembling, appeared before God Almighty, and said, Lord, when I heard thee in this garden, I was ashamed because of my nakedness, and hid myself amongst the most shady parts of the thicket. Who told thee, says God, that thou wast naked? Have you eaten of the forbidden fruit? That woman thou gavest me brought

it; 'twas she that made me eat of it. You have, says God, finely ordered your business, you and your wife. Here, you woman, what is this that you have done? Alas! for me, says Adam, thy serpent gave me the apple, and I did eat of it.

"This apple shall cost you dear, replied God, and not only you, but your posterity, and the whole race of mankind. Moreover, for this crime, I will curse and spoil the heavens, the earth, and the whole fabric of nature. But thou, in the first place, vile beast, shall bear the punishment of thy craftiness and malice. Hereafter shall thou go creeping on thy belly, and instead of eating apples, shall lick the dust of the earth. As for you, Mrs. Curious, who so much love delicacies, in sorrow shall you bring forth your children. You shall be subject to your husband, and shall never depart from his side unless having first obtained leave. Lastly, as for you, Adam, because you have hearkened more to your wife than to me, with the sweat of your brow shall you obtain both food for her and her children. You shall not gather fruits which, as heretofore, grew of themselves, but shall reap the fruits of the earth with labor and trouble. May the earth be, for thy sake, accursed—hereafter grow barren. May she produce thistles, thorns, tares, with other hurtful and unprofitable herbs, and when thou hast here led a troublesome, laborious life, dust thou art, to dust shalt thou return.....

"Great is the force of custom and a preconceived opinion over human minds. Wherefore, these short observations of the first originals of men or things, which we receive from Moses, are embraced without the least examination of them. But had we read the same doctrine in a Greek philosopher, or in a Rabbinical or Mahometan doctor, we should have stopped at every sentence with our mind full of objections and scruples. Now, this difference does not arise from the nature of the thing itself, but from the great opinion we have of the authority of the writer 'as being divinely inspired.' The author here defines his ideas in

reference to fabulous writings, after which he proceeds in his inquiry. 'But out of what matter the first of mankind, whether, male or female, was composed, is not so easily known. If God had a mind to make a woman start from one of Adam's ribs, it is true it seems to be a matter not very proper; but, however, out of wood, stone, or any other being God can make a woman; and here, by the bye, the curious ask whether this rib was useless to Adam, and beyond the number requisite in a complete body. If not, when it was taken away, Adam would be a maimed person, and robbed of a part of himself that was necessary. I say necessary, for as much, as I suppose, that in the fabric of a human body nothing is superfluous, and that no one bone can be taken away without endangering the whole, or rendering it, in some measure, imperfect. But if, on the other side, you say this rib was really useless to Adam, and might be spared, so that you make him to have only twelve ribs on one side and thirteen on the other, they will reply that this is like a monster, as much as if the first man had been created with three feet, or three hands, or had had more eyes, or other members, than the use of a human body requires. But in the beginning we cannot but suppose that all things were made with all imaginable exactness.

"For my part, I do not pretend to decide this dispute, but what more perplexes me is, how, out of one rib, the whole mass of a woman's body could be built? For a rib does not, perhaps, equal the thousandth part of an entire body. If you answer that the rest of the matter was taken from elsewhere, certainly, then, Eve might much more truly be said to have been formed out of that borrowed matter, whatever it was, than out of Adam's rib. I know that the Rabbinical doctors solve this business quite another way, for they say the first man had two bodies, the one male, the other female, who were joined together, and that God having cloven them asunder, gave one side to Adam for a wife. Plato has, in his 'Symposium,' something

very like this story, concerning his first man, Anoroginus, who was afterwards divided into two parts, male and female. Lastly, others conjecture that Moses gave out this original of woman to the end that he might inspire a mutual love between the two sexes, as parts of one and the same whole, so as more effectually to recommend his own institution of marriage. .....But leaving this subject, I will hasten to something else.

"Now, the second article treats of God's garden in Eden, watered with four rivers arising from the same spring.....Those rivers are, by Moses, called Pishon, Gishon, Hiddekal, and Perath, which the ancient authors interpret by Ganges, Nile, Tigris, and Euphrates. Nor do I truly think without some reason, for Moses seems to have proposed nothing more than the bringing four of the most celebrated rivers of the whole earth to the watering of his garden. Ah! but, say you, these four rivers do not spring from the same source, or come from the same place; 'tis true, nor any other four rivers that are named by the interpreters. Wherefore this objection will everywhere hold good, as well against the ancient as modern writers.—But although you should reduce these rivers to only two, as some do, to Tigris and Euphrates, yet neither have these two rivers the same fountain-head, but this is really and truly an evasion, instead of an explanation, to reduce, contrary to the history of Moses, a greater number of rivers to a smaller, only that they may the more conveniently be reduced to the same spring; for these are the words of Moses, 'But there comes a river out of Eden to water the garden, and from thence it divides itself into four branches, the name of the first is Pishon,' etc., whereby it is apparent that either in the exit or in the entrance of the garden there were four rivers, and that these four rivers did one and all proceed from the same fountain-head in Eden. Now, pray tell me in what part of the earth is this country of Eden, where four rivers arise from one and the same spring? But do not go about

to say that only two came from that fountain of Eden, and that the other two arose from the Tigris or the Euphrates, where they split near the sea, and make, as it were, a bifrontic figure, since this does by no means answer the words of Moses. Besides, he mentions in the first place Pishon and Gishon, and afterwards Tigris and Euphrates as lesser rivers; whereas you, on the contrary, will have those to be derived from these last as rivers of an inferior order, which is a manifest distorting of the historical account. But to end all these difficulties concerning the channels of the rivers which watered Paradise, you will, perhaps, at last say, that the springs, as well as the courses of rivers, have been changed by the universal deluge; and that we cannot now be certain where it was they burst over the earth, and what countries they passed through. For my part I am much of your opinion, providing you confess there happened in the deluge such a disruption of the earth as we suppose there did. But from only an inundation of waters such a change could never happer. Besides, what geography will you have Moses to describe these rivers, ante-diluvian or post-diluvian?— If the latter, there has happened no considerable alteration of the earth since the time of Moses and the flood. If the former, you then render Moses's description of the earth totally superfluous and unuseful to discover the situation of Paradise. Lastly, it is hard to conceive that any rivers, whether these or others, can have subsisted ever since the first beginning of the world; whether you have regard to their water or their channels. The channels of rivers are made by daily attrition; for if they had been made as ditches and furrows are, by earth dug out and heaped on each side, there would certainly have been seen everywhere great banks of earth. But we plainly see that this is only fortuitous; forasmuch as they often run through plains, and the river banks are no more than level with the adjacent fields; besides, whence could there be had water at the beginning of the world to fill these channels? If you say, that on the third day, when the

great bed of the ocean was made, the smaller channels of the rivers were also; and as the greatest part of the waters of the abyss fell into the gulf of the seas, so the remaining part descended into these other channels, and therewith formed the primitive rivers. Admitting this, yet the waters would not only be as salt as those of the sea, but there would be no continual springs to nourish these rivers; insomuch as when the first stream of water had flown off, there being no fresh supplies of water to succeed it, these rivers would have been immediately dried up; I say because there were no perpetual springs; for whether springs proceed from rain, or from the sea, they could neither way have rose in so short a time; not from rain, for it had not as yet rained; neither was it possible, that in the short space of one day, the waters of the abyss should run down from the most inland places to the sea, and afterwards returning through ways that were never yet open to them, should strain themselves through the bowels of the earth, and ascend to the heads of their rivers. But of rivers we have said enough; let us now proceed to the rest.

"We have, in the third place, a very strange account of a serpent that talked with Eve, and enticed her to oppose God. I must confess, we have not yet known that this beast could ever speak, or utter any sort of voice, beside hissing. But what shall we think Eve knew of this business? If she had taken it for a dumb animal, the very speech of it would have so frightened her, that she would have fled from it. If, on the other side, the serpent had from the beginning been capable of talking and haranguing, and only lost his speech for the crime of having corrupted the faith of Eve, certainly Moses would have been far from passing over in silence this sort of punishment, and only mentioning the curse of licking the dust. Besides this, will you have the particular species of serpents, or all the beasts in Paradise, to have been imbued with the faculty of speaking, like the trees in Dodona's grove? If you say all, pray what offence had the rest been

guilty of, that they also should lose the use of their tongues? If only the serpent enjoyed this privilege, how came it about that so vile an animal (by nature the most reverse and remote from man) should, before all his other fellow brutes, deserve to be master of so great a favor and benefit as that of speech?

"Lastly, since all discoursing and arguing includes the use of reason, by this very thing you make the serpent a rational creature. But I imagine you will solve this difficulty another way; for (say the sticklers for a literal interpretation) under the disguise of a serpent was hid the Devil, or an evil spirit, who, using the mouth and organs of this animal, spoke to the woman as though it were a human voice. But what testimony or what authority have they for this? The most literal reading of Moses, which they so closely adhere to, does not express anything of it; for what else does he seem to say, but that he attributes the seducing of Eve to the natural craftiness of the serpent, and nothing else? For these are Moses's words:—'Now the serpent was more cunning than any beast of the field that the Lord God had made.' Afterwards, continues he:—'The serpent said to the woman, yea, hath God said,' etc.—But besides, had Eve heard an animal, by nature dumb, speak through the means of some evil spirit, she would instantly have fled with horror from the monster.—When, on the contrary, she very familiarly received it; they argued very amicably together, as though nothing new or astonishing had taken place. Again, if you say that all this proceeded from the ignorance or weakness of a woman, it would on the other side have been but just, that some good angels should have succoured a poor, ignorant, weak woman; those just guardians of human affairs would not have permitted so unequal a conflict; for what if an evil spirit, crafty and knowing in business, had, by his subtlety, overreached a poor, weak, and silly woman, who had not as yet, either seen the sun rise or set, who was but newly born, and thoroughly inexperienced. Certainly, a person who had so great a price set upon her head,

as the salvation of all mankind, might well have deserved a guard of angels. Aye, but perhaps (you will say) the woman ought to have taken care not to violate a law established on pain of death. 'The day you eat of it you shall surely die,' both you and yours; this was the law. Die! what does that mean, says the poor, innocent virgin, who as yet had not seen anything dead, no, not so much as a flower; nor had yet with her eyes or mind perceived the image of death—viz., sleep, or night? But what you add concerning his posterity and their punishment, that is not all expressed in the law. Now no laws are ever to be distorted, especially those that are penal. The punishment of the serpent will also afford no inconsiderable question, if the Devil transacted the whole thing under the form of a serpent; or if he compelled the serpent to do, or to suffer things, why did he (the serpent) pay for a crime committed by the Devil? Moreover, as to the manner and form of the punishment inflicted on the serpent, that from that time he should go creeping on his belly, it is not to be explained what that meant. Hardly any one will say, that prior to his catastrophe the serpent walked upright, like four footed beasts; and if, from the beginning, he crept on his belly like other snakes, it may seem ridiculous to impose on this creature as a punishment for one single crime, a thing which, by nature, he ever had before. But let this suffice for the woman and serpent; let us now go on to the trees. I here understand those two trees, which stood in the middle of the garden, the tree of life, and the tree of good and evil. The former so called, that it would give men a very long life, although, by what follows, we find our forefathers, prior to the flood, lived to very great ages, independent of the tree of life. Besides, if the longevity, or immortality of man had depended only upon one tree, or its fruit, what if Adam had not sinned? how could his posterity, diffused throughout the whole earth, have been able to come and gather fruit out of this garden, or from this tree? or how could

the product of one tree have been sufficient for all mankind?"

Such is a condensed abstract of Dr. Burnet's seventh chapter of "Archœologia." The eighth chapter equals the above in boldness; but far exceeds it in breadth of logic and critical acumen, without, however, appearing so iconoclastic or so vulgar. The next chapter abounds in classical quotations, the Creation of the world and the Deluge is the theme on which so much is advanced, at a time when such language was greeted with the stake and the prison. We cannot calculate the effect of Burnet's works on the clerical mind; but this we do know, that since his day, there has progressed an internal revolution in the tenets of the church, which, in the last generation, gave birth to the neology, now so destructive of the internal peace of the churches. Neology has not come from Deism, for this power assails the outworks of Christianity; while the school of criticism is but a severe pruning knife of internal verbiage. Although the language quoted is harsh, the arguments common-place, which, although true, are now discarded by the educated Freethinker; yet if for no stronger language than this men were imprisoned only ten years ago, what must we say to the moral courage which could publish them 150 years ago? There must surely have been greater risks than in our day; and when a man dare hazard the highest power of the church for the duty of publishing unpopular sentiments, it is clearly our duty to enshrine him as one of the guardians of that liberty of thought and speech, which have won for us a freedom we cherish and protect. Let the earth then lie lightly over the priest-Freethinker, Thomas Burnet. A. C.

BIOGRAPHY

OF

THOMAS PAINE.

"The wise by some centuries before the crowd,
Must, by their novel systems, though correct,
Of course offend the wicked, weak, and proud,
Must meet with hatred, calumny, neglect."

Thomas Paine, "the sturdy champion of political and religious liberty," was born at Thetford, in the County of Norfolk, (Eng.,) 29th of January, 1737. Born of religious parents (his father being a Quaker, and his mother a member of the Church of England,) Paine received a religious education at Thetford Grammar School, under the Rev. William Knowles. At an early age he gave indications of his great talent, and found pleasure, when a boy, in studying poetical authors. His parents, however, endeavored to check his taste for poetry, his father probably thinking it would unfit him for the denomination to which *he* belonged. But Paine did not lose much time before experimenting in poetry himself. Hence we find him, when eight years of age, composing the following epitaph, upon a fly being caught in a spider's web :—

"Here lies the body of John Crow,
Who once was high, but now is low;
Ye brother Crows take warning all,
For as you rise, so you must fall."

At the age of thirteen, after receiving a moderate education in reading, writing, and arithmetic, Paine left school, to follow his father's trade (stay-making.) Although disliking the business, he pursued this avocation for nearly five years. When about twenty years of age, however, he felt—as most enterprising young men do feel—a desire to visit London, and enter into the competition and chances of a metropolitan life. His natural dislike to his father's business led him to abandon for a period his original occupation, and, after working some time with Mr. Morris, a noted stay-maker, in Long Acre, he resolved upon a seafaring adventure, of which he thus speaks :—

"At an early age, raw, adventurous, and heated with the false heroism of a master [Rev. Mr. Knowles, Master of the Grammar School at Thetford] who had served in a man-of-war, I began my fortune, and entered on board the Terrible, Captain Death. From this adventure I was happily prevented by the affectionate and moral remonstrances of a good father, who from the habits of his life, being of the Quaker profession, looked on me as lost; but the impression, much as it affected me at the time, wore away, and I entered afterwards in the King of Prussia privateer, Captain Mender, and went with her to sea."

Sea life did not, as may be supposed, long satisfy a mind like Paine's. In April, 1759, after working nearly twelve months at Dover, we find him settled as master stay-maker at Sandwich; marrying, on September 27, Mary Lambert, daughter of an Exciseman of that place. But his matrimonial happiness was of short duration, his wife dying the following year.

Disgusted with the toil and inconvenience of his late occupation, Paine now renounced it forever, to apply himself to the profession of Exciseman. After fourteen months' study he obtained the appointment of supernumerary in the Excise, which he held, with intervals, till 1768, when he settled as Exciseman at Lewes, in Sussex, and married, 1771, Elizabeth Olive, daughter of a tobacconist, whose business he succeed-

ed to. About this time Paine wrote several little pieces, in prose and verse, among which was the celebrated song on the "Death of General Wolfe,' and "The Trial of Farmer Carter's Dog, Porter." The latter is a composition of "exquisite wit and humor."

In 1772 the Excise officers throughout the kingdom were dissatisfied with their salaries, and formed a plan to apply to Parliament for an increase. Paine being distinguished among them as a man of great talent, was solicited to draw up and state their case, which he did in a pamphlet entitled "The Case of the Salary of the Officers of Excise, and Thoughts on the Corruption arising from the Poverty of Excise Officers." Four thousand copies of this pamphlet were printed and circulated. Some time after this publication, Paine, being in the grocery business, was *suspected* of unfair practices, and was dismissed the Excise, after being in it twelve years. This *suspicion*, however, was never shown to be just. But to show how *very vigorous* the authorities were in *suppressing* smuggling, we will quote the following letter from Clio Rickman to the Editor of the Independent Whig, in October, 1807 :—

"Sir,—If there are any characters more to be abhorred than others, it is those who inflict severe punishments against offenders, and yet themselves commit the same crimes.

"If any characters more than others deserve execration, exposure, and to be driven from among mankind, it is those governors of the people who break the laws they themselves make, and punish others for breaking.

"Suffer me, Mr. Editor, thus to preface the following fact; fact, I say, because I stand ready to prove it so.

"When Admiral Duncan rendezvoused in the Downs with his fleet, on the 8th of January, 1806, the Spider lugger, Daniel Falara, master, was sent to Guernsey to smuggle articles for the fleet, such as wine, spirits, hair powder, playing cards, tobacco, etc., for the supply of the different ships.

"At her arrival in the Downs, the ships' boats flock-

ed round her to unload her and her contraband cargo. A Custom House extra boat, commanded by William Wallace, seeing the lugger, followed and took her; in doing which he did his duty.

"On his inspecting the smuggled articles with which she was laden, he found a number of cases directed to Admiral Duncan, the Right Honorable William Pitt, the heaven-born Minister of England, and to the Right Honorable Henry Dundas, Walmer Castle. In a few days, Wallace, the master of the Custom House cutter, received orders from Government to give the lugger and her smuggled cargo up, on penalty of being dismissed the service; and these cases of smuggled goods were afterwards delivered at the Prime Minister's, Mr. Pitt, at Walmer Castle.

"Mr. Editor, read what follows, and repress your indignation if you can.

"There are now in Deal jail fourteen persons for trifling acts of smuggling compared to the above of the Right Honorable William Pitt and the now Right Honorable Lord Melville.

"The former were poor, and knew not how to live, the latter were most affluently and splendidly supported by the people—that is, they were paupers upon the generous public, towards whom they thus scandalously and infamously conducted themselves.

"I am, Sir, your humble servant,

CLIO RICKMAN."

To those opponents of Thomas Paine who attach any weight to his dismissal from the Excise on suspicion of smuggling, we would mention the fact, that during Paine's service at Lewes, Mr. Jenner, the principal clerk in the Excise Office, London, wrote several letters from the Board of Excise, "thanking Mr. Paine for his assiduity in his profession, and for his information and calculations forwarded to the office." Shortly after his dismissal, Mr. Paine and his wife, by mutual agreement, separated. Many tales have been put in circulation respecting the separation. Clio Rickman, in his "Life of Paine," has the following passage:—

"That he did not cohabit with her from the moment they left the altar till the day of their separation, a space of three years, although they lived in the same house together, is an indubitable truth. It is also true, that no physical defect, on the part of Mr. Paine, can be adduced as a reason for such conduct.....Mr. Paine's answer, upon my once referring to this subject, was, 'It is nobody's business but my own: I had cause for it, but I will name it to no one.'.....This I can assert, that Mr. Paine always spoke tenderly and respectfully of his wife; and sent her several times pecuniary aid, without her knowing even whence it came."

In 1774 Paine left England, and arrived at Philadelphia a few months before the battle of Lexington. He made his appearance in the New World as editor of the Pennsylvanian Magazine; and it would appear that he then had in view the coming struggle, in which he took so prominent a part, for in his introduction to the first number of the above Magazine he states: — "Thus encompassed with difficulties, this first number of the Pennsylvanian Magazine entreats a favorable reception; of which we shall only say, that like the early snowdrop, it comes forth in a barren season, and contents itself with foretelling the reader that choicer flowers are preparing to appear." Upon the foreign supply of gunpowder being prohibited, he proposed a plan, in the Pennsylvanian Journal, of a saltpetre association for the voluntary supply of that article of destruction.

On the 10th of January, 1776, "Common Sense" was published, its circulation soon reaching 100,000 copies. The effect this remarkable pamphlet produced upon the minds of the American people, and the share it had in bringing to a successful issue the then pending struggle, may be gathered even from Paine's bitterest enemies. Mr. Cheetham, in his "Life of Paine," while endeavoring to damage the author of "Common Sense," admits the value of this pamphlet. He says:—"This pamphlet of forty octavo pages, holding out relief by proposing Independence to an op-

pressed and despairing people, was published in January, 1776; speaking a language which the colonists had felt, but not thought of. Its popularity, terrible in its consequences to the parent country, was unexampled in the history of the press. At first involving the colonists, in the crime of rebellion, and pointing to a road leading inevitably to ruin, it was read with indignation and alarm; but when the reader—and every one read it—recovering from the first shock, re-perused it, its arguments nourishing his feelings and appealing to his pride, re-animated his hopes, and satisfied his understanding that 'Common Sense,' backed by the resources and force of the colonies, poor and feeble as they were, could alone rescue them from the unqualified oppression with which they were threatened. The unknown author, in the moments of enthusiasm which succeeded, was an angel sent from heaven to save from all the horrors of slavery by his timely, powerful, and unerring councils, a faithful but abused, a brave but misrepresented people." Another of Paine's enemies and slanderers—Elkanah Watson—in a volume recently published, entitled "Men and Times of the Revolution," after speaking in very disparaging terms of Paine's appearance, habits, and disposition (which is proved false by the best of testimony,) admits the service rendered to America by "Common Sense." He says:—"Yet I could not repress the deepest emotions of gratitude towards him, as the instrument of Providence in accelerating the declaration of our Independence. He certainly was a prominent agent in preparing the public sentiment of America for that glorious event. The idea of Independence had not occupied the popular mind, and when guardedly approached on the topic, it shrunk from the conception, as fraught with doubt, with peril, and with suffering. In 1776 I was present at Providence, Rhode Island, in a social assembly of most of the prominent leaders of the State. I recollect that the subject of Independence was cautiously introduced by an ardent Whig, and the thought seemed to excite the abhorrence of the whole

circle. A few weeks after, Paine's 'Common Sense' appeared, and passed through the continent like an electric spark. It everywhere flashed conviction, and aroused a determined spirit, which resulted in the Declaration of Independence, upon the 4th of July ensuing. The name of Paine was precious to every Whig heart, and had resounded throughout Europe." Other testimony could be given to Paine's influence in the American struggle for Independence; but after the two already mentioned from his opponents, it is unnecessary to give further proof.

In the same year that "Common Sense" appeared, Paine accompanied General Washington and his army, being with him in his retreat from Hudson River to the Delaware. Although great terror prevailed, Paine stood brave and undismayed, conscious he was advocating a just cause, and determined to bring it to a successful issue. He occupied himself in inspiring hope in the Americans, showing them their strength and their weakness. This object drew from his pen "The Crisis," a continuation of the "Common Sense," which was issued at intervals till the cessation of hostilities.

In 1777 Paine was unanimously, and unknown to himself, appointed Secretary in the Foreign Department, where he formed a close friendship with Dr. Franklin. He did not retain his office, however, long, as he refused to become a party to the fraudulent demands of a Mr. Silas Deane, one of the American Commissioners, then in Europe; and he resigned the office.

In 1780 he was chosen member of the American Philosophical Society, having previously received the degree of Master of Arts from the University of Philadelphia.

When the Independence of America was attained, and when oppression had received a severe and lasting check in that rising country, we find that Paine, so far from being satisfied with his success in the New World, began to look for a fresh field where he might

render good service to the cause of right and freedom. Accordingly, in 1787, he visited Paris, his famous services to America giving him a welcome by those who knew the benefit arising from the establishment of human rights. His stay in Paris, at this time, was of short duration, as he returned to England after an absence of thirteen years, on September 3rd. After visiting his mother, and settling an allowance of nine shillings per week for her support, he resided for a short time at Rotherham, in Yorkshire, where an iron bridge was cast and erected upon a model of his invention, which obtained him great reputation for his mathematical skill.

The publication of "Mr. Burke's Reflections on the French Revolution" called from Paine his "Rights of Man," a book that created great attraction, and sold nearly a million and a half of copies. In politics Paine was clear and decided, and, from his moderation, what is called "sound." For the perusal of those who may not have read it, we give the following quotations, to show the principles upon which it is based :—

"Mr. Burke talks about what he calls an hereditary crown, as if it were some production of nature; or as if, like time, it had a power to operate, not only independently, but in spite of man; or as if it were a thing or a subject universally consented to. Alas! it has none of those properties, but is the reverse of them all. It is a thing in imagination, the property of which is more than doubted, and the legality of which in a few years will be denied. But, to arrange this matter in a clearer view than what general expressions can convey, it will be necessary to state the distinct heads under which (what is called) an hereditary crown, or, more properly speaking, an hereditary succession to the government of a nation, can be considered; which are, first, the right of a particular family to establish itself; secondly, the right of a nation to establish a particular family. With respect to the *first* of these heads, that of a family establishing itself with hereditary powers on its own authority, and independent of

the consent of a nation, all men will concur in calling it despotism: and it would be trespassing on their understanding to attempt to prove it. But the *second* head, that of a nation establishing a particular family with *hereditary powers*, does not present itself as despotism on the first reflection; but if men will permit a second reflection to take place, and carry that reflection forward but one remove out of their own persons to that of their offspring, they will then see that hereditary succession becomes in its consequences the same despotism to others, which they reprobated for themselves. It operates to preclude the consent of the succeeding generations; and the preclusion of consent is despotism. When the person who at any time shall be in possession of a government, or those who stand in succession to him, shall say to a nation, I hold this power in 'contempt' of you, it signifies not on what authority he pretends to say it. It is no relief, but an aggravation to a person in slavery, to reflect that he was sold by his parent; and as that which heightens the criminality of an act cannot be produced to prove the legality of it, hereditary succession cannot be established as a legal thing.....Notwithstanding the taxes of England amount to almost seventeen millions a year, said to be for the expenses of Government, it is still evident that the sense of the nation is left to govern itself by magistrates and jurors, almost at its own charge, on Republican principles, exclusive of the expense of taxes. The salaries of the judges are almost the only charge that is paid out of the revenue. Considering that all the internal government is executed by the people, the taxes of England ought to be the lightest of any nation in Europe; instead of which, they are the contrary. As this cannot be accounted for on the score of civil government, the subject necessarily extends itself to the monarchical part.....If a law be bad, it is one thing to oppose the practice of it, but it is quite a different thing to expose its errors, to reason on its defects, and show cause why it should be repealed, or why another ought to be substituted

in its place. I have always held it an opinion (making it also my practice) that it is better to obey a bad law, making use at the same time of every argument to show its errors and procure its repeal, than forcibly to violate it; because the precedent of breaking a bad law might weaken the force, and lead to a discretionary violation, of those which are good."

As may be supposed, such a work as "The Rights of Man," aiming directly at all oppression, regardless of party, could not be allowed to escape the Attorney-General's *answer*. Accordingly, we find a prosecution instituted against it. But instead of prosecuting the author, the publishers were selected. This drew from Paine a long Letter to the Attorney-General, suggesting the justice of *his* answering for the book he wrote. On the trial, Mr. (afterwards Lord) Erskine thus spoke of the author of "The Rights of Man:"—"The defendant's whole deportment previous to the publication has been wholly unexceptionable; he properly desired to be given up as the author of the book, if any inquiry should take place concerning it; and he is not affected in evidence, directly or indirectly, with any illegal or suspicious conduct, not even with uttering an indiscreet or taunting expression, nor with any one matter or thing inconsistent with the best subject in England."

On the 12th of September, 1792, Mr. Achilles Audibert came expressly to England, from the French Convention, to solicit Paine to attend and aid them, by his advice, in their deliberations. "On his arrival at Calais a public dinner was provided, a royal salute was fired from the battery, the troops were drawn out, and there was a general rejoicing throughout the town.....Paine was escorted to the house of his friend, Mr. Audibert, the Chief Magistrate of the place, where he was visited by the Commandant, and all the Municipal Officers in forms, who afterwards gave him a sumptuous entertainment in the Town Hall. The same honor was also paid him on his departure for Paris." Upon his arrival in Paris all was confusion. There were the King's friends mortified and subdued, the Jacobins split up into cav-

illing faction, some wishing a federative government, some desiring the King's death, and the death of all the nobility; while a portion were more discreet, wishing liberty without licentiousness, and having a desire to redress wrongs without revenge. These few accepted Paine as their leader, and renounced all connection with the Jacobin Club.

Paine, on all occasions, advocated the preservation of the King's life; but his efforts were thwarted by the appointment, by Robespierre, of Barrere to office. So anxiously was Paine sought after, that both Calais and Versailles returned him as Deputy. To show how the author of "The Rights of Man" opposed all physical force where reason may be used, it is only necessary to state, that when the Letter of Dumourier reached Paris with the threat of restoring the King, Paine wrote a letter to the Convention, stating a plan for re-adjustment, and was taking it personally, when he was informed "that a decree had just been passed offering one hundred thousand crowns for Dumourier's head; and another, making it high treason to propose anything in his favor." Whilst Deputy for Calais, Paine was sought and admired by all classes. He dined every Friday, for a long period, with the Earl of Lauderdale and Dr. Moore; and so frequent were his visitors, that he set apart two mornings a week for his *levee* days.—He soon, however, changed his residence, preferring less formality and a more select circle. His "History of the French Revolution" we are deprived of by his imprisonment, which Gibbon thought would prove a great loss. The historian often applied for the MS., believing it to be of great worth. The opinion Paine held of the Revolution may be gathered from the following:—"With respect to the Revolution, it was begun by good men, on good principles, and I have ever believed it would have gone on so, had not the provocative interference of foreign powers distracted it into madness, and sown jealousies among the leaders. The people of England have now two Revolutions, the Am-

erican and the French before them. Their own wisdom will direct them what to *choose* and what to *avoid*, and in everything which relates to their happiness, combined with the common good of mankind, I wish them honor and success."

His speech against the death of the King, shows how far he was removed from party spirit, or any feeling of revenge. Whilst he protested against the King being re-enthroned, he equally protested against his death, wishing him removed from the seat of his corruption, and placed in a more elevating atmosphere.—Entreating for the King's safety, he says :—"Let then the United States be the safeguard and the asylum of Louis Capet. There, hereafter, far removed from the miseries and crimes of royalty, he may learn, from the constant aspect of public prosperity, that the true system of government consists in fair, equal, and honorable representation. In relating this circumstance, and in submitting this proposition, I consider myself as a citizen of both countries."

The policy pursued by Paine was not consonant with the views of Robespierre. Consequently, he was seized in the night and imprisoned in the Luxembourg eleven months, without any reason being assigned. The readers are doubtless aware of the many *Providential* escapes he had from the death for which he was seized. While in prison he wrote part of his "Age of Reason," (having commenced it just previous to his arrest) not knowing one hour but he might be executed, and once being on the verge of death from fever. He knew the prejudice the "Age of Reason" would create, so he left its production to the latter part of his life, not wishing to make *that* an impediment to the good he sought to accomplish in the Political world.

After toiling in France to bring the Revolution to a *just* termination, and finding his efforts rendered abortive by that feeling which *former oppression had created*, he resolved to return to America, a country he saw thriving by a policy he wished to institute in France.

In 1802, Jefferson, then President of America, knowing his wish to return, wrote him the following letter:—

"You express a wish in your letter to return to America by a national ship. Mr. Dawson, who brings over the treaty, and who will present you with this letter, is charged with orders to the captain of the Maryland, to receive and accommodate you back if you can be ready to return at such a short warning. You will in general find us returned to sentiments worthy of former times; in these it will be your glory to have steadily labored, and with as much effect as any man living. That you may live long to continue your useful labors, and reap the reward in the thankfulness of nations, is my sincere prayer.

Accept the assurance of my high esteem and affectionate attachment, THOMAS JEFFERSON."

But circumstances prevented Paine going by the Maryland. He sailed, however, on the 1st of September, 1802, in the London Pacquet. He had often previously arranged to return to America, but luckily, *Providence* prevented him. One ship that he intended to sail by, was searched by English frigates for Thomas Paine, and another sunk at sea, whilst at other times British frigates were cruising off the ports from which he was to sail, knowing him to be there.

So much religious misrepresentation has been circulated about Paine's life and death, that it becomes a duty to restate the *facts*. The manner of life Paine pursued may be gathered from the *reliable* testimony of Clio Rickman. He says, "Mr. Paine's life in London was a quiet round of philosophical leisure and enjoyment. It was occupied in writing, in a small epistolary correspondence, in walking about with me to visit different friends, occasionally lounging at coffee-houses and public places, or being visited by a select few. Lord Edward Fitzgerald, the French and American ambassadors, Mr. Sharp the engraver, Romney, the painter, Mrs. Wolstonecraft, Joel Barlow, Mr. Hull, Mr. Christie, Dr. Priestley, Dr. Towers, Colonel Os-

wald, the walking Stewart, Captain Sampson Perry, Mr. Tuffin, Mr. William Choppin, Captain De Stark, Mr. Horne Tooke, etc., were among the number of his friends and acquaintances." His manner of living in France and America has already been noticed.

The perverted tales of Carver and Cheetham may be utterly disproved by referring to Clio Rickman's "Life of Paine." As his life, so was his death. When he became feeble and infirm (in Jan. 1809) he was often visited by those "good people" who so often intrude upon the domestic quiet of the afflicted. After the visit of an old woman, "come from the Almighty," (whom Paine soon sent back again) he was troubled with the Rev. Mr. Milledollar, and the Rev. Mr. Cunningham. The latter reverend said, "Mr. Paine, we visit you as friends and neighbors; you have now a full view of death, you cannot live long; and whoever does not believe in Jesus Christ, will assuredly be damned." "Let me," said Paine, "have none of your Popish stuff; get away with you; good morning, good morning." Another visitor was the Rev. Mr. Hargrove, with this statement:—"My name is Hargrove, Sir; I am minister of the new Jerusalem church; we, Sir, explain the scripture in its true meaning; the key has been lost these four thousand years, and we have found it." "Then," said Paine, in his own neat way, "it must have been very rusty." Shortly before his death, he stated to Mr. Hicks, to whom he had sent to arrange his burial, that his sentiments in reference to the Christian religion were precisely the same as when he wrote the "Age of Reason." On the 8th of June, (in the words of Clio Rickman) 1809, about nine in the morning, he placidly, and almost without a struggle, died, as he had lived, a Deist, aged seventy-two years and five months. He was interred at New Rochelle, upon his own farm; a handsome monument being now erected where he was buried.

It has been the object in the present sketch rather to give, in a brief manner, an account of Paine's life and services, than an elucidation of his writings. His works

are well known, and *they* will speak for themselves; but much wrong is done to his memory by the perversions and misrepresentations of the religious publications. No doubt had his views been different on "religious" subjects, he would have been held up as a model of genius, perseverance, courage, disinterestedness of purpose, and purity of life, by the men who now find him no better name than the "Blasphemer." We hope that those not previously acquainted with the facts of his life, will find in the present sketch sufficient reason to think and speak otherwise of a man who made the world his country, and the doing good his religion.

"As Euclid clear his various writings shone,
His pen inspired by glorious truth alone,
O'er all the earth diffusing light and life,
Subduing error, ignorance, and strife;
Raised man to just pursuits, to thinking right,
And yet will free the world from woe and falsehood's night;
To this immortal man, to Paine 'twas given,
To metamorphose earth from hell to heaven."

J. W.

BIOGRAPHY

OF

BAPTISTE DE MIRABAUD.

Jean Baptiste de Mirabaud was born at Paris, in the year 1675. Of his early life we can glean but very scanty information. He appears first to have embraced the military profession, but it not being consonant with his general character, he soon quitted the army, and devoted himself to literature. He was, however, nearly forty-nine years of age before he became known in the literary world. He then published a French translation of Tasso's "Jerusalem," which brought him much fame; and many of the contributors to the French Encyclopædia appear to have associated with him, and courted his friendship. He was afterwards elected a member of the French Academy, of which he became the Secretary in 1742. Mirabaud was a constant visitor at the house of his friend, the Baron d'Holbach, down to the period of his death. He wrote "The World: its Origin and its Antiquity," "Opinions of the Ancients upon the Jews," "Sentiments of the Philosophers upon the Nature of the Soul," and other minor works. The "System of Nature" was also for many years attributed to Mirabaud, but it appears now to be extremely doubtful whether he ever wrote a single line of the work. The Abbe Galiani was one of the first who pointed out D'Holbach as the author. In the memoirs of M. Suard, edited by M. Garat, the same hypothesis is supported with additional firmness. Dugald Stewart seems to put much faith in the latter authority, as fixing the authorship of the "System of Nature" upon D'Holbach. Voltaire attributes the work to Damilaville, in a somewhat positive manner, for which he is sharply criticised in the "Biographie Universelle," published in 1817. The

"System of Nature" is a book of which Dugald Stewart speaks, as "the boldest, if not the ablest work of the Parisian Atheists," and it has undoubtedly obtained great popularity. Voltaire, who has written against the "System of Nature" in a tone of bitter sarcasm, and who complains of its general dullness and prolixity, yet admits that it is "often humorous, sometimes eloquent." It certainly is not written in that lively, but rather superficial style, which has characterized many of the French writers, but it speaks in plain yet powerful language, evincing an extensive acquaintance with the works of previous philosophers, and much thought in relation to the subjects treated upon. Some of its pages exhibiting more vivacity than the rest of the book, have been attributed to Diderot, who (it is alleged by Marmontel and others) aided, by his pen and counsel, many of the Freethinking works issued during his life.

The "System of Nature" was not published during the life-time of Mirabaud, and it is therefore impossible to use any argument which might have been based upon Mirabaud's conduct in relation to it.

Mirabaud died in Paris in 1760, at the advanced age of nearly eighty-six years. Contemporary with him were D'Alembert, D'Holbach, Voltaire, Diderot, Helvetius, Condorcet, Buffon, Rousseau, Frederick II. of Prussia, Montesquieu, Grimm, Sir William Temple, Toland, Tindel, Edmund Halley, Hume, Gibbon, Adam Smith, Franklin, and Darwin, forming a *role* of names, whose fame will be handed down to posterity for centuries to come, as workers in the cause of man's redemption from mental slavery. If (as it appears very probably) it be the fact that Mirabaud had but little part in the authorship of "La Systeme de la Nature," D'Holbach, in using the name of his deceased friend, only associated him with a work which (judging from his other writings, the tenor of his life, and the noble character of his associates) Mirabaud would have issued with pride himself, had the book been really written by him.

BIOGRAPHY

OF

BARON D'HOLBACH.

PAUL THYRY, BARON D'HOLBACH, was born at Heidesheim, in the Palatinate, in the month of January, 1723. His father appears to have been a very wealthy man, and brought his son to Paris, for the purpose of superintending his education, but died while he was still a child. In his youth, D'Holbach appears to have been noted for his studious habits and retentive faculties, and ultimately attained to some eminence in chemistry and mineralogy. He married when very young, and he had not been married one year when his wife died. He afterwards obtained a dispensation from the Pope, and married his deceased wife's sister, by whom he had four children, two sons and two daughters.

D'Holbach appeared to have spent the greater part of his life in Paris, and for forty years he assembled around his table, every Sunday, the *elite* of the literary world, including nearly the whole of those who took part in the first Encyclopædia. If that table were only in the hands of some of our spirit friends of the present day, what brilliant anecdotes might it not rap out—the sparkling wit of Diderot, the good humor of our host, the hospitable and generous D'Holbach, the occasional bitterness of Jean Jacques Rousseau, the cautious expression of opinion by D'Alembert, the agree-

able variety of Montesquieu, and the bold enthusiasm of the youthful but hardworking Naigeon! If ever a table were inclined to turn, this table should have been; but perhaps it may be that tables never turn when reason is the ruler of those who sit around.

It seems more than probable that D'Holbach at first held opinions differing widely from those entertained by him during the later periods of his life, and it is asserted that Diderot contributed much to this change of opinion. D'Holbach was an amiable man of the world, fond of amusement, and without pretension; he was, notwithstanding, well versed in Roman and Grecian literature, mathematics, chemistry, botany, and modern languages. He was generous to every one. "I content myself," he said, "with performing the disagreeable character of benefactor, when I am forced to it. I do not wish to be repaid my money; but I am pleased when I meet with some little gratitude, if it be only as proving that the persons I have assisted were such sort of men as I desired."

Although about forty-five works are now ascribed to D'Holbach, not one of them was published during his life-time in his own name. The manuscripts were taken to Amsterdam by Naigeon, and there printed by Michael Rey. D'Holbach never talked publicly of his literary productions himself, and his secrets seem to have been well kept by his friends. Several of the works were condemned and suppressed by the government; but D'Holbach lived unsuspected and unmolested. The expression used by the Avocat, General Seguier, in his requisitoire against the "System of Nature" is worthy of notice. The Avocat General said—"The restless spirit of Infidelity, inimical to all dependence, endeavors to overthrow all political constitutions. Its wishes will not be satisfied until it has destroyed the *necessary* inequality of rank and condition, and until it has degraded the majesty of kings, and rendered their authority subordinate to the *caprices* of the *mob*." Note the three words we have italicised. For the first read unnecessary; for the second,

voice; for the third, peoples. We trust that Free-thought never will be satisfied until it has destroyed the unnecessary inequalities of rank and condition, and rendered it impossible for the authority of kings to be enforced in opposition to the voice of the people.

The following description of D'Holbach is given in a little sketch, published by Mr. Watson in 1834, as taken from Grimm's "Correspondence:" — "D'Holbach's features were, taken separately, regular, and even handsome, yet he was not a handsome man. His forehead, large and open, like that of Diderot, indicated a vast and capacious mind; but his forehead having fewer sinuosities, less roundness than Diderot's, announced less warmth, less energy, and less fecundity of ideas. A craniologist would say that in both D'Holbach and Diderot, the philosophical organs were largely developed, but that Diderot excelled in ideality; D'Holbach's countenance only indicated mildness, and the habitual sincerity of his mind. He was incapable of personal hatred. Though he detested priests and Jesuits, and all other supporters of despotism and superstition; and though when speaking of such people, his mildness and good temper were sometimes transformed into bitterness and irritability; yet it is affirmed that when the Jesuits were expelled from France, D'Holbach regarded them as objects of commiseration and of pity, and afforded them pecuniary assistance."

The titles of D'Holbach's works may be found in Barbier's "Dictionary of Anonymous Works," and in St. Surins's article in the "Biographie Universelle," also in the little tract before mentioned as published by J. Watson. D'Holbach contributed largely to the first French Encyclopædia, and other works of a like character. Of the "System of Nature" we have already spoken, and shall rather leave our readers to the work itself than take up more space in discussing its authorship.

After having lived a life of comfort, in affluent circumstances, and always surrounded by a large circle

of the best men of the day, D'Holbach died on January the 21st, 1789, being then sixty-six years of age. The priests have never pictured to us any scene of horror in relation to his dying moments. The good old man died cheered and supported in his last struggle by those men whom he had many times assisted in the hard fighting of the battle of life. J. A. Naigeon, who had been his friend for thirty years, paid an eloquent tribute to D'Holbach's memory, in an article which appeared in the "Journal de Paris" of February the 9th, 1789, and we are not aware that any man has ever written anything against D'Holbach's personal character.

EXTRACTS FROM "THE SYSTEM OF NATURE."

Although we may not attempt to express a decided opinion as to the authorship of "Le Systeme de la Nature," we feel it our duty to present some of its principal arguments to the consideration of our readers. The author opens his work with this passage:—

"Man always deceives himself when he abandons experience to follow imaginary systems. He is the work of nature. He exists in nature. He is submitted to her laws. He cannot deliver himself from them. He cannot step beyond them even in thought. It is in vain his mind would spring forward beyond the visible world: an imperious necessity ever compels his return—for a being formed by Nature, who is circumscribed by her laws, there exists nothing beyond the great whole of which he forms a part, of which he experiences the influence. The beings his imagination pictures as above Nature, or distinguished from her, are always chimeras formed after that which he has already seen, but of which it is utterly impossible he should ever form any correct idea, either as to the place they occupy, or their manner of acting—for him there is not, there can be nothing out of that nature which includes all beings. Instead, therefore, of seeking out of the world he inhabits for beings who can procure him a happiness denied by Nature, let him

study this nature, learn her laws, contemplate her energies, observe the immutable rules by which she acts."

Speaking of the theological delusions under which many men labor, and of the mode in which man has been surrounded by those delusions, he says:—

"His ignorance made him credulous: his curiosity made him swallow large draughts of the marvellous: time confirmed him in his opinions, and he passed his conjectures from race to race, for realities; a tyrannical power maintained him in his notions, because by those alone could society be enslaved. It was in vain, that some faint glimmerings of Nature occasionally attempted the recall of his reason; that slight corruscations of experience sometimes threw his darkness into light; the interest of the few was bottomed on his enthusiasm; their pre-eminence depended on his love of the wonderful; their very existence rested on the solidity of his ignorance; they consequently suffered no opportunity to escape, of smothering even the lambent flame. The many were thus first deceived into credulity, then coerced into submission. At length, the whole science of man became a confused mass of darkness, falsehood, and contradictions, with here and there a feeble ray of truth, furnished by that Nature of which he can never entirely divest himself, because, without his knowledge, his necessities are continually bringing him back to her resources."

Having stated that by "nature" he means the "great whole," our author complains of those who assert that matter is senseless, inanimate, unintelligent, etc., and says, "Experience proves to us that the matter which we regard as inert or dead, assumes action, intelligence, and life, when it is combined in a certain way:"—

"If flour be wetted with water, and the mixture closed up, it will be found, after some little lapse of time, by the aid of a microscope, to have produced organized beings that enjoy life, of which the water and the flour were believed incapable: it is thus that

inanimate matter can pass into life, or animate matter, which is in itself only an assemblage of motion. Reasoning from analogy, which the philosophers of the present day hold perfectly compatible, the production of a man, independent of the ordinary means, would not be more marvellous than that of an insect with flour and water. Fermentation and putrefaction evidently produce living animals. We have here the principle; with proper materials, principles can always be brought into action. That generation which is styled *equivocal*, is only so for those who do not reflect, or who do not permit themselves, attentively, to observe the operations of Nature."

This passage is much ridiculed by Voltaire, who asserts that it is founded on some experiments made by one Needham, who placed some rye-meal in well-corked bottles, and some boiled mutton gravy in other bottles, and found that eels were produced in each. We do not know sufficient of the history of Needham's experiments, either to affirm or deny their authenticity, but we feel bound to remind our readers of the much-decried experiments conducted by Mr. Crosse, and which were afterwards verified by Mr. Weekes, of Sandwich. In these cases, insects were produced by the action of a powerful voltaic battery upon a saturated solution of silicate of potash, and upon ferro cyanuret of potassium. The insects were a species of acarus, minute and semi-transparent, and furnished with long bristles, which could only be seen by the aid of the microscope. The sixth chapter treats of man, and the author thus answers the question, "What is man?":—

"We say he is a material being, organized after a peculiar manner, conformed to a certain mode of thinking, of feeling, capable of modification in certain modes peculiar to himself, to his organization, to that particular combination of matter which is found assembled in him. If again it be asked, What origin we give to beings of the human species? We reply, that like all other beings, man is a production of na-

ture, who resembles them in some respects, and finds himself submitted to the same laws; who differs from them in other respects, and follows particular laws determined by the diversity of his conformation. If then it be demanded, Whence came man? We answer, our experience on this head does not capacitate us to resolve the question; but that it cannot interest us, as it suffices for us to know that man exists, that he is so constituted as to be competent to the effects we witness."

In the seventh chapter the author, treating of the soul and spirit, says:—

"The doctrine of spirituality, such as it now exists, offers nothing but vague ideas, or, rather, is the absence of all ideas. What does it present to the mind but a substance which possesses nothing of which our senses enable us to have a knowledge? Can it be truth, that man is able to figure to himself a being not material, having neither extent nor parts, which, nevertheless, acts upon matter without having any point of contact, any kind of analogy with it; and which itself receives the impulse of matter by means of material organs, which announce to it the presence of other beings? Is it possible to conceive the union of the soul with the body; to comprehend how this material body can bind, enclose, constrain, determine a fugitive being, which escapes all our senses? Is it honest, is it plain dealing, to solve these difficulties, by saying there is a mystery in them, that they are the effects of a power more inconceivable than the human soul, than its mode of acting, however concealed from our view? When to resolve these problems, man is obliged to have recourse to miracles, to make the Divinity interfere, does he not avow his own ignorance? When notwithstanding the ignorance he is thus obliged to avow by availing himself of the divine agency, he tells us, this immaterial substance, this soul, shall experience the action of the element of fire, which he allows to be material; when he confidently says, this soul shall be burnt; shall suffer in

purgatory—have we not a right to believe, that either he has a design to deceive us, or else that he does not himself understand that which he is so anxious we shall take upon his word?"

The ninth chapter, after treating of the diversity of the intellectual faculties, proceeds, "Man at his birth brings with him into the world nothing but the necessity of conserving himself, of rendering his existence happy; instruction, examples, the custom of the world, present him with the means, either real or imaginary, of achieving it; habit procures for him the facility of employing these means:"—

"In order that man may become virtuous, it is absolutely requisite that he should have an interest, that he should find advantages in practicing virtue. For this end, it is necessary that education should implant in him reasonable ideas; that public opinion should lean towards virtue, as the most desirable good; that example should point it out as the object most worthy of esteem; that government should faithfully recompense, should regularly reward it; that honor should always accompany its practice; that vice should constantly be despised; that crime should invariably be punished. Is virtue in this situation amongst men? Does the education of man infuse into him just, faithful ideas of happiness—true notions of virtue—dispositions really favorable to the beings with whom he is to live? The examples spread before him, are they suitable to innocence of manners? Are they calculated to make him respect decency, to cause him to love probity, to practice honesty, to value good faith, to esteem equity, to revere conjugal fidelity, to observe exactitude in fulfilling his duties? Religion, which alone pretends to regulate his manners, does it render him sociable? does it make him pacific? does it teach him to be humane? The arbiters, the sovereigns of society, are they faithful in recompensing, punctual in rewarding, those who have best served their country, in punishing those who have pillaged, who have robbed, who have plundered, who have di-

vided, who have ruined it? Justice, does she hold her scales with a firm, with an even hand, between all the citizens of the state? The laws, do they never support the strong against the weak, favor the rich against the poor, uphold the happy against the miserable? In short, is it an uncommon spectacle to behold crime frequently justified, often applauded, sometimes crowned with success, insolently triumphing, arrogantly striding over that merit which it disdains, over that virtue which it outrages? Well, then, in societies thus constituted, virtue can only be heard by a very small number of peaceable citizens, a few generous souls, who know how to estimate its value, who enjoy it in secret. For the others, it is only a disgusting object; they see in it nothing but the supposed enemy to their happiness, or the censor of their individual conduct."

In the tenth chapter, which is upon the soul, the author says :—

"The diversity in the temperament of man, is the natural, the necessary source of the diversity of his passions, of his taste, of his ideas of happiness, of his opinions of every kind. Thus this same diversity will be the fatal source of his disputes—of his hatreds—of his injustice—every time he shall reason upon unknown objects, but to which he shall attach the greatest importance. He will never understand either himself or others, in speaking of a spiritual soul, or of immaterial substances distinguished from nature; he will, from that moment, cease to speak the same language, and he will never attach the same ideas to the same words. What then shall be the common standard that shall decide which is the man that thinks with the greatest justice?

"Propose to a man to change his religion for yours, he will believe you a madman; you will only excite his indignation, elicit his contempt; he will propose to you, in his turn, to adopt his own peculiar opinions; after much reasoning, you will treat each other as absurd beings, ridiculously opinionated, pertinaciously

stubborn; and he will display the least folly who shall first yield. But, if the adversaries become heated in the dispute, which always happens, when they suppose the matter important, or when they would defend the cause of their own self-love, from thence their passions sharpen, they grow angry, quarrels are provoked, they hate each other, and end by reciprocal injury. It is thus that for opinions, which no man can demonstrate, we see the Brachman despised; the Mahomedan hated; the Pagan held in contempt; that they oppress and disdain each with the most rancorous animosity: the Christian burns the Jew at what is called an *Auto-da-fe*, because he clings to the faith of his fathers; the Roman Catholic condemns the Protestant to the flames, and makes a conscience of massacreing him in cold blood; this re-acts in his turn; sometimes the various sects of Christians league together against the incredulous Turk, and for a moment suspend their own bloody disputes that they may chastise the enemies to the true faith: then, having glutted their revenge, return with redoubled fury, to wreak over again their infuriated vengeance on each other."

The thirteenth chapter argues as follows, against the doctrine of the immortality of the soul and a future state:—

"In old age, man extinguishes entirely, his fibres become rigid, his nerves lose their elasticity, his senses are obtunded, his sight grows dim, his ears lose their quickness, his ideas become unconnected, his memory fails, his imagination cools,—what, then, becomes of his soul? Alas! it sinks down with the body, it gets benumbed as this loses its feeling, becomes sluggish as this decays in activity; like it, when enfeebled by years, it fulfils its functions with pain; this substance, which is deemed spiritual, which is considered immaterial, which it is endeavored to distinguish from matter, undergoes the same revolutions, experiences the same vicissitudes, submits to the same modifications as does the body itself. In

despite of this proof of the materiality of the soul, of its identity with the body so convincing to the unprejudiced, some thinkers have supposed that although the latter is perishable, the former does not perish; that this portion of man enjoys the especial privilege of immortality; that it is exempt from dissolution; free from those changes of form all the beings in nature undergo: in consequence of this, man is persuaded himself that this privileged soul does not die.

"It will be asked, perhaps, by what road has man been conducted to form to himself gratuitous ideas of another world? I reply, that it is a truth man has no idea of a future life; they are the ideas of the past and the present, that furnish his imagination with the materials of which he constructs the edifice of the regions of futurity. Hobbes says, 'We believe that, that which is will always be, and that the same causes will have the same effects.' Man in his actual state has two modes of feeling—one, that he approves; another, that he disapproves: thus persuaded that these two modes of feeling must accompany him even beyond his present existence, he placed in the regions of eternity two distinguished abodes; one destined to felicity; the other to misery: the one must contain those who obey the calls of superstition, who believe in its dogmas; the other is a prison, destined to avenge the cause of heaven on all those who shall not faithfully believe the doctrines promulgated by the ministers of a vast variety of superstitions. Has sufficient attention been paid to the fact that results as a necessary consequence from this reasoning; which on examination will be found to have rendered the first place entirely useless, seeing, that by the number and contradiction of these various systems, let man believe whichever he may, let him follow it in the most faithful manner, still he must be ranked as an Infidel, as a rebel to the divinity; because he cannot believe in all; and those from which he dissents, by a consequence of their own creed, condemn him to the prison-house?—Such is the origin of the ideas upon a future life, so

diffused among mankind. Everywhere may be seen an Elysium, and a Tartarus, a Paradise and a Hell; in a word, two distinguished abodes, constructed according to the imagination of the enthusiasts who have invented them; who have accommodated them to their own peculiar prejudices, to the hopes, to the fears of the people who believe in them. The Indian figures the first of these abodes as one of inaction, of permanent repose, because, being the inhabitant of a hot climate, he has learned to contemplate rest as the extreme of felicity: the Mussulman promises himself corporeal pleasures, similar to those that actually constitute the object of his research in this life; each figures to himself that on which he has learned to set the greatest value."

"As for the miserable abode of souls, the imagination of fanatics, who were desirous of governing the people, strove to assemble the most frightful images to render it still more terrible; fire is of all things that which produces in man the most pungent sensation; not finding anything more cruel, the enemies to the several dogmas were to be everlastingly punished with this torturing element: fire, therefore, was the point at which their imagination was obliged to stop; the ministers of the various systems agreed pretty generally, that fire would one day avenge their offended divinities; thus, they painted the victims to the anger of the gods, or rather those who questioned their own creeds, as confined in fiery dungeons; as perpetually rolling into a vortex of bituminous flames; as plunged in unfathomable gulfs of liquid sulphur; making the infernal caverns resound with their useless groanings, with their unavailing gnashing of teeth. But it will, perhaps, be inquired, how could man reconcile himself to the belief of an existence accompanied with eternal torments; above all, as many according to their own superstitions had reason to fear it for themselves?—Many causes have concurred to make him adopt so revolting an opinion: in the first place, very few thinking men have ever believed such an absurdity, when

they have deigned to make use of their reason; or, when they have accredited it, this notion was always counterbalanced by the idea of the goodness, by a reliance on the mercy, which they attributed to their respective divinities: in the second place, those who were blinded by their fears never rendered to themselves any account of these strange doctrines which they either received with awe from their legislators, or which were transmitted to them by their fathers; in the third place, each sees the object of his terrors only at a favorable distance; moreover, superstition promises him the means of escaping the tortures he believes he has merited."

We conclude by quoting the following eloquent passage:—

"Oh! Nature! sovereign of all beings! and ye, her adorable daughters, Virtue, Reason, and Truth! remain forever our reverend protectors. It is to you that belong the praises of the human race; to you appertains the homage of the earth. Show us, then, oh! Nature! that which man ought to do, in order to obtain the happiness which thou makest him desire.—Virtue! animate him with thy beneficent fire! Reason! conduct his uncertain steps through the paths of life. Truth! let thy torch illumine his intellect, dissipate the darkness of his road.....Banish error from our mind, wickedness from our hearts, confusion from our footsteps. Cause knowledge to extend its salubrious reign, goodness to occupy our souls, serenity to dwell in our bosoms.....Let our eyes, so long either dazzled or blindfolded, be at length fixed upon those objects we ought to seek. Dispel forever those mists of ignorance, those hideous phantoms, together with those seducing chimeras, which only serve to lead us astray. Extricate us from that dark abyss into which we are plunged by superstition, overthrow the fatal empire of delusion, crumble the throne of falsehood, wrest from their polluted hands the power they have usurped."

"I."

BIOGRAPHY

OF

ROBERT TAYLOR.

MANY of the readers of this number will, from their own memories, be better able to do justice to him, whom Henry Hunt named "The Devil's Chaplain," than we shall in our limited space. Robert Taylor was born at Edmonton, in the county of Middlesex, on the 18th of August, 1784. His family was highly respectable, and his parents were in affluent circumstances; but, being a younger son in a family of eleven children, it was necessary that Robert Taylor should follow some profession. His father died when he was about seven years old, leaving him under the guardianship of a paternal uncle. When seventeen years of age, he was apprenticed to a surgeon, at Birmingham, and studied medicine afterwards under Sir Astley Cooper and Mr. Clive, passing the College of Surgeons with considerable *eclat*. When about twenty-three, he became acquainted with the Rev. Thomas Cotterell, a clergyman of the Established Church, of high evangelical principles, who induced him to quit physic for metaphysics, and in 1809 Robert Taylor entered Saint John's College, Cambridge, and in 1813 took his degree of Bachelor of Arts. He was publicly complimented by the Master of the College as a singular honor to the University in his scholarship, and was ordained on the 14th of March, 1813, by the bishop of

Chichester; from that time until 1818, Taylor officiated as curate at Midhurst. Here he became acquainted with a person named Ayling, who held Deistical opinions, and who induced Taylor to read various Freethinking works; this soon resulted in an avowal of Deism on the part of Taylor, who tendered his resignation to his Bishop. His friends and family were much alarmed, and much pressure was brought to bear upon him, and we regret to state that it had the effect of producing a temporary recantation. This, however, brought Taylor no relief; he found himself in distress, and shunned by his family. Through the kindness of an old friend, he obtained the curacy of Yardley, near Birmingham, but his previous apostacy having reached the ears of the Bishop, the necessary license was refused, and the rector received a peremptory notice to dismiss Taylor. This harsh treatment caused a reaction, and while the rector sought another curate, Taylor preached a series of sermons, by means of which he shook the faith of nearly the whole of his congregation. The following is an abstract of his last sermon at Yardley :—

"The text was, 'For as Jonah was three days and three nights in the whale's belly, so shall the son of man be three days and three nights in the heart of the earth'—Matt. xii., 40. He began, 'Then this glorious miracle of the man having been 'swallowed alive by a fish, and remaining alive for seventy-two hours, undigested and unhurt, in the fish's bowels, and being vomited up unhurt and safe upon the dry land, was as true as the gospel; and consequently the gospel was as true, but not more true, than this sea-sick miracle. He inferred that no person could have a right to pretend to believe in the death and resurrection of Christ, who had the least doubt as to the reality of the deglutition and evomition of the prophet Jonah. As to the natural improbabilities and physical impossibilities of this very wonderful Bible miracle, these were nothing in the way of a true and lively faith. Where miracles of any sort were concerned,

there could be no distinction into the greater and the less, since infinite power was as necessary to the reality of the least as to the greatest. We should never forget that it was the Lord who prepared the fish, and prepared him for the express purpose of swallowing the man, and probably gave him a little opening physic, to cleanse the apartment for the accommodation of its intended tenant; and had the purpose been, that the whole ship and all the crew should have been swallowed as well as he, there's no doubt that they could have been equally well accommodated. But as to what some wicked Infidels objected, about the swallow of the whale being too narrow to admit the passage of the man, it only required a little stretching, and even a herring or a sprat might have gulped him. He enlarged, most copiously, on the circumstance of the Lord speaking to the fish, in order to cause him to vomit; and insisted on the natural efficacy of the Lord, which was quite enough to make anybody sick. He pointed out the many interesting examples of faith and obedience which had been set by the scaly race, who were not only at all times easy to be caught in the gospel net, when thrown over them by the preaching of the word, but were always ready to surrender their existence to the Almighty, whenever he pleased to drop 'em a line. That as the first preachers of the gospel were fishermen, so the preachers of the gospel, to this day, might truly be said to be looking after the loaves and fishes, and they who, as the Scripture says, are 'wise to catch soles,' speak to them for no other purpose than that for which the Lord spake unto the whale—that is, to ascertain how much they can swallow. The moral of this pungent persiflage, aimed to admonish the proud and uncharitable believer, who expected his acceptance with the deity on the score of his credulity, that when his credulity was fairly put to trial, it might be found that he was in reality as far from believing what he did not take to be true as the most honest and avowed Infidel. 'Thou then who wouldst put a trick upon infinite wisdom, and prefer-

est the imagined merit of a weak understanding to the real utility of an honest heart—thou who wouldst

> 'Compound for sins thou art inclined to,
> By damning those thou hast no mind to;'

hast thou no fears for thy presumptuous self? Thou believest only that which seemeth to thee to be true; what does the Atheist less? And that which appeareth to be a lie thou rejectest; what does the Atheist more? Can we think that God has given us reason only to betray us, and made us so much superior to the brute creation, only to deal with us so much worse than they, to punish us for making the best use we could of the faculties he has given us, and to make the very excellence of our nature the cause of our damnation?'"

This concluded his connection with the Church of England, and his brother having consented to make him an allowance of one pound per week if he would quit England, he retired to the Isle of Man. After nine weeks his brother ceased to remit; and to support himself, Taylor wrote for the two newspapers then published in the island, but his articles attracting attention, he was summoned before the Bishop, and compelled to quit the island under a threat of imprisonment. In deep distress, he went to Dublin, where he lectured on Deism until 1824, when he came to London, and founded the Christian Evidence Society. Many of the discourses delivered by him were printed in "The Lion," which was first published in 1828. In 1827 Mr. Taylor was tried at Guildhall for blasphemy, and was sentenced to imprisonment in Oakham gaol for one year. In Oakham he wrote "The Diegesis" and "Syntagma." After his release from prison in 1829, he, together with Richard Carlile, made a tour through England on an Infidel mission, commencing with a challenge to the Cambridge University. In 1830 and 1831 he delivered a series of discourses, which are printed together under the title of "The Devil's Pulpit." On the 4th July, 1831, he was again tried for

blasphemy and sentenced to two years' imprisonment. In 1833 he delivered a number of discourses, which were printed in the "Philalethean." He was the friend and companion of Richard Carlile for several years. It is difficult to quote from Robert Taylor's works, unless at the risk of doing him great injustice, and we must therefore refer our readers to the works we have named. The following is from "The Devil's Pulpit:"—

"The gentlemen who distribute religious tracts, the general body of dissenting preachers, and almost all persons engaged in the trade of religion, imagine themselves to have a mighty advantage against Infidels, upon the strength of that last and reckless argument—that whether the Christian religion be true or false, there can be no harm in believing; and that belief is, at any rate, the safe side. Now, to say nothing of this old Popish argument, which a sensible man must see is the very essence of Popery, and would oblige us to believe all the absurdities and nonsense in the world: inasmuch as if there be no harm in believing, and there be some harm and danger in not believing, the more we believe the better: and all the argument necessary for any religion whatever would be, that it should frighten us out of our wits: the more terrible, the more true: and it would be our duty to become the converts of that religion whatever it might be, whose priests could swear the loudest, and damn and curse the fiercest. But I am here to grapple with this Popery in disguise, this wolfish argument in sheepish clothing, upon Scriptural ground, and on Scriptural ground only; taking the Scriptures of the Old and New Testament, for this argument's sake, to be divine authority. The question proposed is, 'Whether is the believer or the unbeliever the more likely to be saved, taking the Scriptures to be of divine authority?' And I stand here, on this divine authority, to prove that the unbeliever is the more likely to be saved: that unbelief, and not belief, is the safe side, and that a man is more likely to be damned for believing the

gospel, and because of his having believed it, than for rejecting and despising it, as I do.....:But, if a patient hearing be more than good Christians be minded to give us, when thus I advance to meet them on their own ground, their impatience and intolerance itself will supply the evidence and demonstration of the fact, that, after all, they dare not stand to the text of their own book, that it is not the Bible that they go by, nor God whom they regard: but that they want to be God-a'-mighties themselves, and would have us take their words for God's words; you must read it as they read it, and understand it as they understand it: you must 'skip, and go on,' just where a hard word comes in the way of the sense they choose to put upon't: you must believe what the book contains, what you see with your own eyes that it does not contain: you must shut your eyes, and not see what it does contain; or you'll be none the nearer the mark of their liking. .....Taking the authority of Scripture, for this argument's sake, to be decisive, I address the believer who would give himself airs of superiority, would chuckle in an imaginary safety in believing, and presume to threaten the unbeliever as being in a worse case, or more dangerous plight, than he. 'Hast thou no fears for thy presumptuous self?' when on the showing of thine own book, the safety (if safety there be) is all on the unbelieving side? When for any one text that can be produced, seeming to hold out any advantage or safety in believing, we can produce two in which the better hope is held out to the unbeliever? For any one apparent exhortation to believe, we can produce two forbiddances to believe, and many threatenings of God's vengeance to, and for the crime and folly of, believing. To this proof I proceed, by showing you:—1st. What the denunciations of God's vengeance are: with no comment of mine, but in the words of the text itself. 2d. That these dreadful denunciations are threatened to believers: and that they are not threatened to unbelievers. And 3d. That all possible advantages and safety, which believing could confer

on any man, are likely, and more likely to be conferred on the unbeliever than on the believer. That the danger of the believer is so extreme, that no greater danger can possibly be. 1st. What are the denunciations of God's vengeance? 'There are' (says the holy Revelation, xiv. 10,) 'who shall drink of the wine of the wrath of God, which is poured out without mixture into the cup of his indignation, and shall be tormented with fire and brimstone, and the smoke of their torment ascendeth up forever and ever: and they have no rest day or night.' There's 'glad tidings of great joy' for you! The Christian may get over the terror of this denunciation by the selfish and ungenerous chuckle of his 'Ah! well, these were very wicked people, and must have deserved their doom; it need not alarm us: it doesn't apply to us.' But good-hearted men would rather say, 'It does apply. We cannot be indifferent to the misery of our fellow-creatures. The self-same Heaven that frowns on them, looks lowering upon us.' And who were they? and what was their offence? Was it Atheism? was it Deism? was it Infidelity? No! It was for church and chapel-going; it was for adoring, believing, and worshipping. They worshipped the beast: I know not what beast they worshipped; but I know that if you go into any of our churches and chapels at this day, you will find them worshipping the Lamb; and if worshipping a lamb be not most suspiciously like worshipping a beast, you may keep the color in your cheeks, while mine are blanched with fear. The unbeliever only can be absolutely safe from this danger. He only who has no religion at all, is sure not to be of the wrong religion. He who worships neither God nor Devil, is sure not to mistake one of those gentlemen for the other. But will it be pretended, that these are only metaphors of speech, that the thing said is not the thing that's meant? Why, then, they are very ugly metaphors. And what is saying that which you don't mean, and meaning the contrary to what you say, but lying? And what worse can become of the

Infidel, who makes it the rule of his life 'to hear and speak the plain and simple truth,' than of the Christian, whose religion itself is a system of metaphors and allegories, of double meanings, of quirks and quiddities, in dread defiance of the text that warns him, that 'All liars shall have their part in the lake which burneth with fire and brimstone?' Rev. xxi. 8.

"Is it a parable that a man may merely entertain his imagination withal, and think no more on't,—though not a word be hinted about a parabolical signification, and the text stands in the mouth of him who, we are told, was the truth itself? And he it is who brought life and immortality to light, that hath described in the 16th of Luke, such an immortality as that of one who was a sincere believer, a son of Abraham, who took the Bible for the rule of his life, and was anxious to promote the salvation of his brethren, yet found for himself no Saviour, no salvation; but, 'In Hell he lifted up his eyes being in torment: and saith Father Abraham, have mercy on me, and send Lazarus, that he may dip the tip of his finger in water, and cool my tongue, for I am tormented in this flame.' But that request was refused. 'Then he said, I pray thee, therefore, Father, that thou wouldst send him to my father's house; for I have five brethren, that he may testify unto them, lest they also come to this place of torment.' But that request was refused. There's 'glad tidings of great joy' for you! That the believer's danger of coming or going into that place of torment is so great, that greater cannot possibly be: and that his belief will stand him in no stead at all, but make his plight a thousand times worse than if he had not been a believer; and that unbelief is the safer side—Christ himself being judge—I quote no words but his to prove. Is the believer concerned to save his soul, then shall he most assuredly be damned for being so concerned: for Christ hath said, 'Whosoever will save his soul shall lose it.' Matthew xvi. 25. Is the believer a complete beggar? If he be not so, if he hath a rag that he doth call his own, he will be damned to

all eternity. For Christ hath said, 'Whosoever he be of you who forsaketh not all that he hath, he cannot be my disciple.' Luke xiv. 33. Is the believer a rich man? and dreams he of going to Heaven? 'It is easier for a camel to go through the eye of a needle.' Matthew xix. 24. Is he a man at all, then he cannot be saved,' for Christ hath said, 'Thou believest that there is one God;' saith St. James, 'Thou dost well, the Devils also believe and tremble.' 2 James xix. And so much good, and no more, than comes to damned spirits in the flames of Hell, is all the good that ever did and can come of believing. 'For though thou hadst all faith, so that thou couldst remove mountains,' saith St. Paul, 'It should profit thee nothing.' 1 Cor. xiii. 2. Well, then! let the good Christian try what saving his prayers will do for him: this is the good that they'll do for him; and he hath Christ's own word to comfort him in't, 'He shall receive the greater damnation.' Luke xx. 47. Well, then, since believing will not save him, since faith will not save him, since prayer will not save him, but all so positively make things all the worse, and none the better, there's one other chance for him. Let him go and receive the Sacrament, the most comfortable Sacrament, you know, 'of the body and blood of Christ,' remembering, as all good communicants should, 'that he is not worthy so much as to gather up the crumbs that fall from that table.' 'Truth, Lord! But the dogs eat of the crumbs that fall from their master's table!' O what happy dogs! But let those dogs remember, that it is also truth, that 'He that eateth and drinketh unworthily, eateth and drinketh damnation to himself.' 1 Cor. xvi. 29. O what precious eating and drinking!

> "'My God! and is thy table spread;
> And doth thy cup with love o'erflow?
> Thither be all the children led,
> And let them all thy sweetness know.'

"That table is a snare, that cup is deadly poison, that bread shall send thy soul to Hell. Well, then!

try again, believer: perhaps you had better join the Missionary Society, and subscribe to send these glad tidings of these blessed privileges, and this jolly eating and drinking, to the Heathen. Why, then, you have Christ's own assurance, that when you shall have made one proselyte, you shall just have done him the kindness of making him twofold more the child of Hell than yourself. Mat. xxiii. 15. Is the believer liable to the ordinary gusts of passion, and in a passion shall he drop the hasty word, 'thou fool?' for that one word 'he shall be in danger of Hell fire.' Mat. v. 22. Nay, Sirs! this isn't the worst of the believer's danger. Would he but keep his legs and arms together, and spare his own eyes and limbs; he doth by that very mercy to himself damn his eyes and limbs—and hath Christ's assurance that it would have been profitable for him rather to have plucked out his eyes, and chopt off his limbs, and so to have wriggled and groped his way through the 'Straight gate and the narrow way that leadeth unto life,' than having two eyes and two arms, or two legs, to be cast into Hell, into the fire that never shall be quenched, where their 'worm dieth not, and the fire is not quenched.' Mark ix. 43. Well, then! will the believer say, what were all the miracles and prophecies of both the Old and the New Testament for? those unquestionable miracles, and clearly-accomplished prophecies, if it were not that men should believe? Why, absolutely, they were the very arguments appointed by God himself to show us that men should not believe, but that damnation should be their punishment if they did believe. 'To the law and the testimony.' Sirs! These are the very words:—'Of miracles, saith God's word, 'They are the spirits of devils, that work miracles.' Rev. xvi. 14. And it is the Devil who 'deceiveth them which dwell on the earth, by means of those miracles which he hath power to do.' Rev. xiii. 14. So much for miracles. Is it on the score of prophets and of prophecies, then, that you will take believing to be the safe side? Then 'thus saith the Lord of Hosts, the God of Israel, the prophets

prophesy falsely and the priests bear rule by their means.' Jer. v. 31. 'The prophet is a fool: the spiritual man is mad.' Hosea i. 7. 'Thus saith the Lord of Hosts, hearken not unto the prophets.' Jer. xxiii. 15. 'O Israel, thy prophets are like the foxes of the desert.' Ezekiel xiii. 4. 'They lie unto thee.' Jerem. xiv. 14. 'And they shall be tormented day and night forever and ever.' Rev. xx. 10. 'And the punishment of the prophet shall be even as the punishment of him that seeketh unto him.' Ezekiel xiv. 10. Nay more, then, it is, when God hath determined to damn men, that he, in every instance, causeth them to become believers, and to have faith in divine Revelation, in order that they may be damned. Believers, and none but believers, becoming liable to damnation; believers and none but believers, being capable of committing that unpardonable sin against the Holy Ghost, which hath never forgiveness, neither in this world nor in that which is to come. 'Whereas all other kinds of blasphemy shall be forgiven unto men, and all sorts of blasphemy wherewith soever they shall blaspheme. But there is no forgiveness for believers.' Mark iii. 28. For it is written, 'For this cause God shall send them strong delusion, that they should believe a lie: that they all might be damned.' 2 Thessal. ii. 11. So when it was determined by God that the wicked Ahab should perish, the means to bring him to destruction, both of body and soul, was to make him become a believer.

"I offer no comment of my own on words so sacred; but these are the words: 'Hear thou, therefore, the word of the Lord. I saw the Lord sitting upon his throne, and all the hosts of Heaven standing by him on his right hand and on his left. And the Lord said, who shall persuade Ahab that he may go up and fall at Ramoth Gilead? and one said on this manner, and another said on that manner. And there stood forth a spirit, and stood before the Lord, and said: I will persuade him. And the Lord said unto him wherewith? And he said, I will go forth, and I will be a lying spirit in the mouth of all his prophets. And he said, thou

shalt persuade him, and prevail also. Go forth and do so. Now, therefore, behold the Lord hath put a lying spirit in the mouth of all thy prophets.' 1 Kings xxii. 22. There were 400 of 'em; they were 'the goodly fellowship of the prophets for you; all of them inspired by the spirit from on high, and all of them lying as fast as they could lie.' So much for getting on the safe side by believing. Had Ahab been an Infidel, he would have saved his soul alive. As it was, we may address him in the words of St. Paul to just such another fool, 'King Ahab, believest thou the prophets? I know that thou believest: but no better than I know, that for that very belief, fell slaughter on thy soul: and where thou soughtest to be saved by believing, it was by believing thou wert damned.' So when Elijah had succeeded in converting the 450 worshippers of Baal, who had been safe enough while they were Infidels, and they began crying, 'the Lord He is God, the Lord He is God:' the moment they got into the right faith, they found themselves in the wrong box; and the prophet, by the command of God, put a stop to their Lord-Godding, by cutting their throats for 'em. 'Elijah brought them down to the brook of Kishon, and slew them there.' 1 Kings xviii. 40. Oh! what a blessed thing, you see, to be converted to the true faith! Thus all the sins and crimes that have been committed in the world, and all God's judgments upon sin and sinners, have been the consequence of religion, and faith, and believing. What was the first sin committed in the world? It was believing. Had our great mother Eve not been a believing credulous fool, she would not have been in the transgression. Who was the first reverend divine that began preaching about God and immortality? It was the Devil. What was the first lie that was ever told, the very damning and damnable lie? It was the lie told to make folks believe that they would not be dead when they were dead, that they should not surely die, but that they should be as gods, and live in a future state of existence. When God himself hath declared, that there is no future state

of existence: that 'Dust thou art, and unto dust shalt thou return.' Who is it, then, that prefers believing in the Devil rather than in God, but the believer?—And from whom is the hope of a future state derived, but from the father of lies—the Devil? But if in defiance of so positive a declaration of Almighty God, men will have it that there is a future state of existence after death, who are they who shall sit down with Abraham, Isaac, and Jacob, in the kingdom of Heaven, but unbelievers, let 'em come from the north, from the south, from the east, or from the west? And who are they that shall be cast out, but believers, 'the children of the kingdom?' As St. Peter very charitably calls them, 'cursed children.' 2 Peter ii. 14. That is, I suppose, children with beards, children that never grew to sense enough to put away childish things, but did in gawky manhood, like new-born babes, desire the pure milk and lollipop of the gospel. 'For of such is the kingdom of Heaven.' And who are they whom Christ will set upon his right hand, and to whom he will say, 'Come ye blessed of my father!' but unbelievers, who never troubled their minds about religion, and never darkened the doors of a gospel shop? But who are they to whom he will say, 'Depart ye cursed into everlasting fire, prepared for the Devil and his angels,' but believers, every one of them believers, chapel-going folks, Christ's blood-men, and incorrigible bigots, that had been bothering him all their days with their 'Lord! Lord!' to come off at last with no better reward of their faith than that he will protest unto them, I never knew ye.

"One text there is, and only one, against ten thousand of a contrary significancy: which, being garbled and torn from its context, seems, for a moment, to give the advantage to the believer; the celebrated 19th chapter of Mark, v. 16:—'He that believeth, and is baptized, shall be saved; but he that believeth not, shall be damned.' But little will this serve the deceitful hope of the Christian, for it is immediately added, 'And these signs shall follow them that believe;

in my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover.' Can the Christian show these signs, or any of them? Will he dare to take up a serpent, or drink prussic acid? If he hesitate, he is not a believer, and his profession of belief is a falsehood. Let belief confer what privilege it may, he hath no part nor lot in the matter; the threat which he denounces against Infidels hangs over himself, and he hath no sign of salvation to show. Believing the gospel, then, (or rather, I should say, professing to believe it, for I need not tell you that there's a great deal more professing to believe, than believing,) instead of making a man the more likely to be saved, doubles his danger of damnation, inasmuch as Christ hath said, that 'the last state of that man shall be worse than the first.' Luke xi. 26. And his holy apostle Peter addeth, 'It would have been better for them not to have known the way (2 Peter ii. 21) of righteousness.' The sin of believing makes all other sins that a man can commit so much the more heinous and offensive in the sight of God, inasmuch as they are sins against light and knowledge: and 'the servant who knew his Lord's will, and did it not, he shall be beaten with many stripes.' Luke xii. 47. While unbelief is not only innocent in itself, but so highly pleasing to Almighty God, that it is represented as the cause of his forgiveness of things which otherwise would not be forgiven. Thus St. Paul, who had been a blasphemer, a persecutor, and injurious, assures us that it was for this cause he obtained mercy, 'because he did it ignorantly in unbelief.' 1 Tim. i. 13. Had he been a believer, he would as surely have been damned as his name was Paul. And 'tis the gist of his whole argument, and the express words of the 11th of the Epistle to the Romans, that 'God included them all in unbelief, that he might have mercy upon all.' Unbelief being the essential qualification and recommendation to God's mercy: not without good

reason was it that the pious father of the boy that had the devil in him, when he had need of Christ's mercy, and knew that unbelief would be the best title to it, cried out and said with tears, 'Lord, I believe, help thou mine unbelief!'. Mark ix. 24. While the Apostles themselves, who were most immediately near and dear to Christ, no more believed the Gospel than I do; and for all they have said and preached about it, they never believed it themselves, as Christ told 'em that they hadn't so much faith as a grain of mustard seed. And the evangelist John bears them record, to their immortal honor, that 'though Christ had done so many miracles among them, yet believed they not.' John xii. 37. And the same divine authority assures us that 'neither did his brethren believe in him.' John vii. 5. Which then is 'the safe side,' Sirs, on the showing of the record itself? On the unbelieving side, the Infidel stands in the glorious company of the Apostles, in the immediate family of Christ, and hath no fear; while the believer doth as well and no better than the devils in hell, who believe and tremble." "I."

BIOGRAPHY

OF

JOSEPH BARKER.

In any work, purporting to be a true record of Freethinkers, the name of Joseph Barker cannot be omitted. We find in him, from the commencement of his public life till the present time, an ardent desire for, and a determination to achieve, freedom of thought and expression on all subjects appertaining to theology, politics, and sociology. Possessing a vigorous intellect, a constitution naturally strong, great oratorical ability, and an unrivalled command of the Saxon language, he has made himself a power among each party with whom the transitory state of his mind has brought him in contact. It is seldom we find men with equal boldness, when once connected with Wesleyan Methodism, rising superior in thought to its narrow, selfish, dogmatic, unnatural, and humiliating views, and claiming for human nature a more dignified and exalted position; gradually advancing to Unitarianism; ultimately to land safely on the shore of Materialism. Joseph Barker has passed, amid persecution and privation, through these different phases of theology, to arrive at "Infidelity," to be, he states, a better, wiser, and happier man. In his autobiography, we read that he was born in Bramley, an old country town in the West Riding of Yorkshire, in 1806, the *day* of his birth being forgotten. His parents, and his ancestors, so far as is

known of them, were of humble means. His grandfather was addicted to drinking freely of those beverages which meet with so much opposition from Mr. Barker himself. His aunt also was unfortunate, having married a man who was a minister, a drunkard, and a cock-fighter. His parents appear to have been uneducated and pious; belonging to the old school of Methodists, those who look on this life merely as a state of trial and probation; always looking forward to enjoy their mansion in the skies — the house not made with hands eternal in the heavens, thinking nothing

> .....Worth a thought beneath,
> But how *they* may escape the death
> That never, never dies.

Although living *in* this world, they were not *of* it. It was to them, all vanity and vexation of spirit. They attended their chapel, their love feasts, their class-meetings, their prayer meetings, and their revival meetings, where they would lament over the wickedness and depravity of human nature, where they would "speak their experience," tell of their temptations, pray for the conversion of the world, and sing their hymns, such as the following, which was a favorite with Mr. Barker's family :—

> "Refining fire, go through my heart,
> Illuminate my soul;
> Scatter my life through every part,
> And sanctify the whole."

Such being the character of Mr. Barker's parents, it is no wonder that *he* was "brought up" under the same influence, with the same false notions of life, of humanity, and of the world; and we cannot prize too highly the man who had the industry to investigate, the ability to discern, and the courage to expose the falsity of such doctrines and the disastrous effects of such teaching.

In the extracts we shall give from Mr. Barker's works will be found that simplicity of style and force

of argument peculiar to himself. The first extract we take shows the falsity of the orthodox doctrine of the total depravity of human nature :—

"On looking back on the earlier periods of my life, I first see proofs that the orthodox doctrine of original sin, or of natural total depravity, is a falsehood. I was *not* born totally depraved. I never recollect the time, since I began to think and feel at all, when I had not good thoughts, and good feelings. I never recollect the time since I began to think and feel at all, when I had not many good thoughts, and strong inclinations to goodness. So far was my heart from being utterly depraved or hardened, that I sympathised, even in my childhood, with the humblest of God's creatures, and was filled to overflowing with sorrow at the sight of distress. I recollect one Sunday, while I was searching about for something in one of the windows upstairs, I found a butterfly that had been starved to death, as I supposed. When I laid hold of it, it crumbled to pieces. My feelings were such at the thought of the poor butterfly's sufferings, that I wept. And for all that day I could scarcely open my lips to say a word to any one, without bursting into tears.....And I recollect well what a struggle I had when I first told a lie. A school in the neighborhood had a feast, ours had not, so I played the truant, after a serious struggle, to have an opportunity of seeing the scholars walk. I had a miserable afternoon ; for I felt that I was doing wrong, and I was afraid lest my mother should find me out. My sister found me out and told my mother, but my mother was loth to believe her till she had asked me myself. When I went home my mother asked me if I had been to school, and I said yes, and my mother, as she had never found me out in a lie before, believed me. But I was sadly distressed afterwards, when I thought of what I had done. That lie caused me days of remorse, and my sufferings were all the severer in consequence of my mother having so readily believed what I said."

The unhappy and unnatural effects of theology on

the minds of earnest, truth-seeking men — the total prostration of manly dignity, the perversion of the mental faculties, and the debasement of human nature, is truly stated by Mr. Barker in the following extract:—

"I also recollect being very much troubled with dreadful and indescribably awful dreams, and for several months during certain parts of the year I was accustomed to rise during my sleep, and walk about the house in a state of sleep for hours together. I say in a state of sleep: but I cannot exactly describe the state in which I was. It was not *perfect* sleep, and yet I was not properly awake. My eyes were open, and I saw, as far as I can remember, the things around me, and I could hear what was said to me. But neither what I saw nor what I heard seemed to have power to penetrate far enough into my soul to awake me properly. During those occasions, I was frequently very unhappy, dreadfully unhappy, most horribly miserable. Sometimes I fancied I had been doing something wrong, and my fancied offence seemed horrible beyond all expression, and alarmed and overwhelmed me with unutterable terrors and distress. On one occasion I fancied that both I and my father had both been doing something wrong, and this seemed most horrible and distressing of all; and as I wandered about in my mysterious state, I howled most piteously, and cried and wept as if my heart would break. I never recollect being roused from that dismal state while I was walking about the house, except twice. Once when I struck my shins violently against a large earthenware bowl and hurt myself sadly; and another was when I was attempting to go up the chimney: I put my foot upon the fire and burnt myself, and that awoke me. I suffered in this way for several years. After I went to bed at night I soon fell asleep, and slept perhaps an hour or nearly two. I would then begin to cry, or moan, or howl, and at times to sing. One night I sang a whole hymn of eight verses through; the hymn in Wesley's Hymn Book, beginning

'With glorious clouds encompassed round,
Whom angels dimly see,
Will the unsearchable be found
Or God appear to me?'"

Few persons who have not attended the "class-meetings" of the Wesleyan Methodists can form an adequate idea of the stereotyped phrases and absurd sayings indulged in by those who "speak their experience," etc., at those meetings. Certain sentences are learned, and uttered indiscriminately, without reference to time, place, or other conditions. Mr. Barker, after speaking of the recklessness of speech thus indulged in, says:—

"In many cases this false way of speaking is the result of mere thoughtlessness perhaps, or of ignorance, joined with the notion that it is their duty to pray, or to say something in public. The parties have no *intention* to deceive: but being called on to speak, or invited to pray, they begin, and catch hold of such words as they can find, whether right or wrong, whether true or false. And their words are oftener foolish or false, than wise or true. Their talk is at times most foolish and ridiculous. I will give an example or two. It is customary for people, when praying for preachers, to say, 'Lord, bless thy servants when they stand up to declare thy word: be thou *mouth*, *matter*, and *wisdom* to them.' This has some meaning in it when offered in reference to a preacher, especially a preacher about to preach. In other cases it would be most foolish and ridiculous. Yet I once heard a person in a prayer-meeting at Chester use this same form of expression in behalf of the sick and the dying. 'O Lord,' said he, 'bless the sick and the afflicted, and those that are in the article of death;—be thou mouth, matter, and wisdom to them.' At another prayer-meeting at Chester, on a *Friday* evening, one of the leaders gave out the following lines:—

'Another six days' work is done;
Another *Sabbath* is begun,' etc.

I once heard a woman say in class, 'I do thank God that he ever gave me a desire to see that *death* that never, never *dies*.' "

Soon after Mr. Barker became "religious" and attended his class-meetings, he awaited the usual "call" to preach the gospel. Accordingly, having received the "call," he became a Methodist preacher, belonging to the Old Connexion, the New Connexion, and then advancing to Unitarianism, ultimately arriving at the climax of Freethought, in which cause he is now so distinguished an advocate. While a Methodist preacher, he was induced by a neighbor, an Atheist, to read Carlile's "Republican." We can readily understand why Christians are taught not to read "Infidel" works. The effect the "Republican" produced on Mr. Barker's mind would be augmented, did those Christians investigate what they so often ignorantly denounce. In reference to the "Republican," Mr. Barker says:—

"I was very much struck in reading some portions of the work [Carlile's], and agitated and shaken by its arguments on some points. The object of many of its articles was to prove Christianity irrational and false. The principal doctrines which it assailed were such as the trinity — the common notion about the fall of man, and its effects upon the human race — the Calvinistic notions of eternal, universal, and absolute predestination, unconditional election and reprobation — the Calvinistic notion of God's sovereignty or partiality — the utter depravity of every human being born into the world, and yet the obligation of those utterly depraved beings to steer clear of all evil, and to do all that is right and good, on pain of eternal damnation. The doctrine of satisfaction to justice, was also assailed, and the doctrine of the immortality of the human soul, and the notion that because it is immaterial, it must, as a consequence, be immortal.....The consequence was, that my mind was thrown into a state of doubt and suspense. I cannot say that I doubted the truth of the Christian religion exactly, but still I doubted the

truth of certain doctrines which I had been taught to regard as parts of that religion. I can briefly describe the doubts I had. I neither saw clearly that those doctrines to which he objected were no part of the Christian religion, nor could I see any way by which these doctrines could be defended and proved to be rational and true. One thing began to seem almost certain, either that Christianity was not true, or that those doctrines as generally laid down, were no parts of the Christian religion. This led to investigation. I was wishful to ascertain whether those doctrines which were assailed as irrational, were parts of Christianity or not. I began to converse on the subject with one of my religious companions, and I began to read on the subject as I had opportunity. My companion was rather troubled and alarmed at the doubts I expressed with respect to the correctness of some of the common doctrines of what was considered orthodoxy; still, what I had said had some influence on his mind, for he told me shortly after, that he wished he had never heard my doubts, for what I had said had spoiled some of his best sermons; he would never be able to preach them with comfort more.....During my residence in that [Newcastle] circuit, my views on many subjects became anti-Methodistical to a very great extent indeed. I now no longer held the prevailing views with respect to the nature of justifying faith, the witness of the Spirit, regeneration, sanctification, and the like. In reading Wesley's works, I was astonished at the great number of unmeaning and inconsistent passages which I met with. In many of his views I perfectly agreed with him, but with a vast amount of what he said on other subjects, I could not help but disagree.... ....About this time, finding that there was little likelihood that I should be tolerated in the New Connexion unless I could allow my mind to be enslaved, and feeling that I should be obliged sooner or later to break loose from Methodistical restraint, and speak and act with freedom, I thought of visiting Mr. Turner, the Unitarian minister of Newcastle, and seeking an inter-

view with him. I had heard something to the effect that Unitarians were great lovers of freedom — that they did not bind their ministers and members by any human creeds, but left them at liberty to investigate the whole system of Christianity thoroughly, and to judge as to what were its doctrines and duties for themselves, and to preach what they believe to be true without restraint and persecution, and I thought if this was the case, they must be a very happy people. But from other things which I had heard respecting them, I was led to regard them with something of horror — to look on them as persons who trifled with Scripture authority, as persons who had rushed from the extremes of false orthodoxy into the extremes of Infidelity. I was in consequence prevented from visiting Mr. Turner, and I remained in comparative ignorance of the Unitarian body, in ignorance both of their principles and of their character, still shut up in the dungeons of orthodox slavery."

"The dungeons of orthodox slavery" did not long contain Mr. Barker; for he afterwards became better acquainted with the Unitarians, and formed one of their most energetic preachers. But Unitarianism, appearing to him at first true in its doctrine and free in its advocacy, shortly became insufficient for the cravings of his mind; and, at length, he found himself outside all the churches. The Bible, which at one period of his life seemed to him a perfect revelation from "God," now appeared only the production of erring and half-informed men; and having a thorough knowledge of its contents, he resolved to employ the remainder of his life in confuting the false notions of its "divine authority." America presenting a congenial residence, he resolved to visit that country and purchase some land, upon which he might occupy his leisure from lecturing and writing. Having settled in the country, he considered something should be said on the Bible. Accordingly, in November, 1852, a Bible Convention was held at Salem, Ohio, Mr. Barker being appointed President. We extract the following from

his speech, as illustrating the uncertainty of the Bible translations, the character of the translators, and the nature of the manuscripts from which the translations are made :—

"We say, that the Bible bears on its very face the marks of human imperfection and error. This is true of every Bible in existence. We will begin with the Bible in common use, and what do we find? The title-page tells us it is a *translation* from the original tongues, by the special command of one of the kings of England. Does any one pretend that the translators were infallible—men above the possibility of error? Nothing of the kind. Even those who contend that the original *writers* of the Bible were infallible, do not pretend that the king's translators were so. The sects and priesthoods themselves show that they regard the common translation as imperfect. They all take the liberty to alter it. They alter it in thousands and tens of thousands of places. Nothing is more common than for theological disputants to appeal from the common translation of the Bible to what they call the original Greek and Hebrew. Every commentator takes the same liberty. The leaders of the sects and priesthoods of the day have testified their belief that the Bibles in common use are imperfect and erroneous by making *new* translations. There is scarcely an English sect or priesthood of any note in existence that has not produced a new translation of the Scriptures. John Wesley translated both the Old and New Testament. His translation of the New Testament continues to be used in the Methodist body to this day. Adam Clarke, in his "Commentary," translates afresh almost every important passage in the book. Many passages he translates in such a way as to give them meanings quite contrary to the meaning given them in the common Bible. Richard Watson, a Methodist preacher, commenced a new translation of the Bible. Dr. Boothroyd, a Congregationalist minister of England, published another translation. Dr. Conquest, a layman of the same denomination, published another,

in which he says he made twenty thousand emendations, or improvements. He must, therefore, have thought the common Bible had twenty thousand imperfections or errors. Mr. Belsham, and other English Unitarians, published a new translation of the New Testament. Mr. Wellbeloved, a Unitarian minister, published a new translation of a great part of the Old Testament, intending to publish a new translation of the whole Bible. Even ministers of the Established Church have spoken strongly against the common translation, and some of them have gone so far as to *publish* new translations of *portions* of the Bible. Alexander Campbell, the founder of the denomination which bears his name, has published a new translation of the New Testament. A Mr. Taylor published a new translation of the New Testament from Griesbach's Greek New Testament. A Mr. Sharp published another translation from Griesbach's Greek text. The Baptists have published a new translation of the Bible, I am told..... We are not alone, therefore, in believing that the Bibles in common use bear marks of human imperfection and error. The leading men in all the religious sects and priesthoods of Great Britain and America believe the same. We add, if the translators of the Bible had been the best and wisest men that ever lived, their work would not have been perfect. A translation from Greek and Hebrew cannot be perfect. But the translators employed by King James were not the best or wisest men that ever lived. They were, in some respects, exceedingly ignorant, prejudiced, and immoral.....They were liars and false-swearers. These dignitaries of the Church of England knew, as well as you know, that kings and queens are often vicious, profligate, and godless. They knew that among the kings and queens of England there had been some of the most loathsome lumps of filthiness—some of the most adulterous and lecherous sensualists—some of the most heartless and cruel tyrants—some of the most inhuman and bloody wretches that ever cursed the earth. They knew, too, that English kings and queens gene-

rally were under strong temptations to be thus cruel and profligate, and that it was too much to expect any of them to be strictly religious and virtuous. Yet they bound themselves on oath to call their kings and queens, whatever their characters might be, 'most gracious and religious.' They *did* call the monarch then living, 'most gracious and religious,' and they handed it down as a duty to their successors to give the same high titles to all their future monarchs, though they should be as filthy as that unwieldy, waddling mass of lust and rottenness, King Henry the Eighth, or at false and treacherous as the perjured Charles the First. These translators of the Bible also knew that many who were brought to them to be buried were godless, wicked men. They knew that some of them were drunkards, adulterers, false-swearers. Yet they bound themselves to call them all, as they lowered them into their graves, their 'beloved brethren,' and to declare that they committed them to the dust 'in sure and curtain hope of a resurrection to eternal life,' though they believed in their hearts that they would rise to eternal damnation.....They were the hirelings of the king and government. They regarded the king as the head of the church, and were sworn to obey him in all things. They were sworn to obey him in translating the Bible. The king gave them the rules by which they were to be guided in the work of translation, and they were sworn to follow these rules. These rules were intended to prevent them from putting anything into their translation of the Bible that was at variance with the established priesthoods, and to keep them from leaving out anything that was favorable to the Established Church and government. And they *kept* to their rules, and they were influenced by their interests, their situation, and their prejudices. It would be foolish to think otherwise. To make the Bible agree with their creed, they put into their translation things which were not in the Greek or Hebrew Bibles, and mistranslated vast multitudes of things which were in the Greek and Hebrew Bibles. I will

give you an instance or two. Their creed taught that God once died, or laid down his life. There was nothing in the Greek or Hebrew Bibles to uphold this doctrine, so in translating the Bible they so altered a passage as to make it to teach the doctrine. You may find the passage in 1 John, iii. 16. It is as follows:—'Hereby perceive we the love of God, because he laid down his life for us.' Now the word 'God' is not in the Greek; it was put into the passage by the translators. In one place in the Old Testament it is said that Elhanan slew Goliath the Gittite. The translators have altered the passage so as to make it say that it was the *brother* of Goliath that Elhanan slew. See 2 Samuel xxi. 19.....Before a man can give a perfect translation of the Bible, he must have a perfect knowledge of both the Greek and Hebrew Bible, and of the language into which he would translate it. But no man has that knowledge. The Greek and Hebrew languages, from which the Bible has to be translated, are dead languages—languages which are no longer spoken or written by any people—languages which exist only in ancient writings. The meaning of many of the words of those languages is, in consequence, lost. The writings of the Old Testament are the only books remaining in the Hebrew language. There are no Hebrew books to throw light on dark passages, or to settle the meaning of doubtful words and phrases. True, we have Greek and Hebrew dictionaries and grammars, but these dictionaries and grammars are the work of imperfect and erring men, who had no other means of understanding the meaning of the Greek and Hebrew languages than ourselves. These dictionaries and grammars differ from each other. None of them are perfect. The best abound with errors. We have better means of obtaining a knowledge of the Greek language than of the Hebrew—but the Greek of the New Testament is a peculiar dialect, not to be found in any other book. It is, therefore, as difficult to translate the New Testament as the Old. If, therefore, we would find a Bible that does *not* bear

the marks of human imperfection and error, we must look for it in what are called the original Greek and Hebrew. But there is no such Bible. The Greek and Hebrew Bibles are as really imperfect as the English translations. The Greek and Hebrew Bibles are as really the work of imperfect and erring men as the English translations are. Many people imagine that there is only *one* Greek and Hebrew Bible, and that that one was written by Moses and the prophets, and by the evangelists and the apostles. But this is not the case. There are *several* Greek and Hebrew Bibles, and all of them are the compilations of fallible men. We have several Hebrew Old Testaments, and quite a number of Greek New Testaments, all compiled by different persons, but drawn, to some extent, from different sources. It should be understood, that the oldest Greek and Hebrew Bibles are not printed books, but written ones. They were written before the art of printing was known among Jews or Christians. Those written or manuscript Bibles are more numerous than the Greek and Hebrew printed Bibles. They are the work of different men, in different countries, and different ages. And no two of them are alike. They differ from each other almost endlessly. Some contain more, some less. Some have passages in one form, others have them in other forms. John Mills compared a number of those manuscripts of the New Testament, and found that they differed from each other in thirty thousand places. He marked and collated thirty thousand various readings. Other men have compared the Greek manuscripts of the New Testament, and discovered upwards of a hundred thousand various readings—a hundred thousand places or particulars in which they differ from each other. A similar diversity of readings is to be found in the Hebrew manuscripts of the Old Testaments. Now it is from these imperfect and discordant manuscripts that men have to make their Greek and Hebrew Bibles. They have nothing else from which to make them. And those Greek and Hebrew Bible makers have no

means of knowing which of the various and contradictory manuscripts are the best.....You must understand that the original writings from which the manuscripts now in existence originated, have perished many ages ago. It is probable that the last of them perished more than sixteen hundred years ago. We have, therefore, no opportunity of comparing existing manuscripts with the original writings, in order to find out which are the true, the original readings. The discordant and contradictory manuscripts, therefore, can never be corrected.....It is not only of the common English Bible, therefore, that the words of the resolution are true, but of every Bible known, whether printed or written, whether in Greek and Hebrew, or in modern languages."

Since Mr. Baker has resided in America, he has visited England, and lectured for the Secular and Freethought Societies in England and Scotland; the total number of lectures he delivered during his visit amounted to 153, besides engaging in several debates, the principal one being with the Rev. Brewin Grant, at Halifax, during ten nights, on the "Divine Authority of the Bible," which is now published. The views now held by Mr. Barker on "God" and Secularism may be seen from the following extract of a letter addressed to the Editor of the Reasoner, written by Mr. Barker from America, on February 22, 1853:—

"I confess I know nothing of God but as he is revealed in his works. With me, the word God stands for the unseen cause of all natural phenomena. I attribute to God no quality but what seems necessary to account for what I see in nature. My Jewish and Christian notions of God are all gone, except so far as they appear to be the utterances of nature.....As to Secularism, I think our business is with the seen, the worldly, the physical, the secular. Our whole duty seems to me to be truly and fully to unfold ourselves, and truly and fully to unfold others: to secure the greatest possible perfection of being and condition,

and the largest possible share of life and enjoyment to all mankind in this present world. The machinery of sects and priesthoods for saving souls and fitting men for heaven, I regard as wasteful and injurious folly, except so far as it may tend to better men and improve their condition here. I have a hope of future life, but whatever is best for this life must be best for another life; whatever is best for the present, must be best for the eternal future. To reveal to men the laws of their own being, and to unfold to them the laws of nature generally, and to bring them into harmony with those laws, is, therefore, with me, the whole business of man. If there be another world, as I hope, it will, I suppose, be governed by the same laws as this. If men live on for ever, they will have all the better start in a future life, for having got well on in this. As an *art*, therefore, I believe in Secularism."

J. W.

Note by the American Publisher.—Soon after Mr. Barker's return from England, he resumed his lecturing in various towns and cities in the United States, giving great satisfaction, by his able addresses, to large and intelligent audiences. He still labors occasionally in the same pursuit, though at present he is residing on his farm at Omaha City, in the Territory of Nebraska. Much might be said in praise of his efforts to promote Liberalism in this country; but his greatest triumph, as we consider it, was his public debate with the Rev. Dr. Berg of Philadelphia. This took place on the 9th of January, 1854, and continued no less than *eight evenings*. The question was on "the origin, authority, and tendency of the Bible"—Dr. Berg affirming, and Mr. Barker opposing. This famous discussion was attended by thousands, and was probably the greatest affair of the kind that ever occurred. The speeches on both sides were published, making a large pamphlet of 190 pages. Of course, each of the debaters was victorious, in the opinion of

his friends; but the trick played by the Christian party, in the closing scene, showed a determination on their part to claim the victory whether or no! For, as soon as Dr. Berg (who made the last speech) had finished, one of his friends took the platform, and, while the audience were separating, read some resolutions in favor of the Doctor and the Bible. "Less than one fourth of the audience," says the Philadelphia Register, "voted for them. The more serious part of the audience did not vote at all. The great majority seemed to take the thing as a farce. The result of the vote made a good many long faces on the stage and front seats. A short silence ensued, followed by a burst of obstreporous laughter, and cries of 'the Infidels have it!' And so ended the most remarkable debate ever held in America."

The following correct and candid report of the above discussion, appeared at the time in the columns of the Pennsylvania Freeman:—

The Bible Discussion.—The discussion on the authority of the Bible, at Concert Hall, between Rev. J. F. Berg, of this city and Joseph Barker, of Ohio, closed on Thursday evening last, after a continuance of eight evenings. During the whole time, the vast hall was crowded with an eager multitude — numbering from 2000 to 2500 persons—each paying an admittance of 12 1-2 cents every evening, and on some evenings it is said that hundreds went away, unable to approach the door; nor did the interest appear to flag among the hearers to the last.

Of the merits of the question or the argument, it does not come within the scope of a strictly anti-slavery paper to speak, but we cannot forbear to notice the contrast in the manner and bearing of the two debaters, and the two parties among the audience. Mr. Barker uniformly bore himself as a gentleman, courteously and respectfully towards his opponent, and

with the dignity becoming his position, and the solemnity and importance of the question. We regret that we cannot say the same of Dr. Berg, who at times seemed to forget the obligations of the gentleman in his zeal as a controversialist. He is an able and skillful debater, though less logical than Mr. Barker, but he wasted his time and strength too often on personalities and irrelevant matters. His personal inuendoes and epithets, his coarse witticisms, and a bearing that seemed to us more arrogant than Christian, may have suited the vulgar and the intolerant among his party, but we believe these things won him no respect from the calm and thinking portion of the audience, while we know that they grieved and offended some intelligent and candid men who thoroughly agreed with his views. It is surely time that all Christians and clergymen had learned that men whom they regard as heretics and Infidels have not forfeited their claims to the respect and courtesies of social life, by their errors of opinion, and that insolence and arrogance, contemptuous sneers and impeachment of motives and character, toward such men, are not effective means of grace for their enlightenment and conversion.

Among the audience, there was a large number of men, who also lost their self-control in their dislike to Mr. Barker's views, and he was often interrupted, and sometimes checked in his argument, by hisses, groans, sneers, vulgar cries, and clamor, though through all these annoyances and repeated provocations, he maintained his wonted composure of manner and clearness of thought. On the other hand, Dr. Berg was heard with general quiet by his opponents, and greeted with clamorous applause by his friends, who seemed to constitute a large majority of the audience, and to feel that the triumph of their cause, like the capture of Jericho of old, depended upon the amount of noise made.

Mr. Barker, in giving an account of the origin of the discussion, says :—

"In December, [1853] in compliance with a request from the Sunday Institute, I began a course of lectures in Philadelphia, on the origin, authority and influence of the Scriptures. The object of the lectures was to show that the Bible is of *human* origin, that its teachings are not of divine authority, and that the doctrine that the Bible is God's word is injurious in its tendency.

"When I sent the Sunday Institute a programme of my lectures, I authorised the Secretary to announce, through the papers, that I was willing to meet any clergyman, of good standing in any of the leading churches, in public discussion on the Bible question."

[The Rev. Mr. McCalla, a Presbyterian clergyman, accepted the offer, and arrangements were made for a six nights debate; but, on the fifth evening, after trying to raise a mob, he withdrew from the contest.]

"The clergy, or a portion of the clergy, of Philadelphia, unwilling to leave their cause in this plight, demanded that I should discuss the question with Dr. Berg, a minister in whom they had fuller confidence. Being assured that Dr. Berg was a gentleman and a scholar, and that he was the ablest debater the clergy of Philadelphia could boast, I agreed to meet him, and the discussion was fixed for the 9th, 10th, 12th, 13th, 16th, 17th, 18th and 19th of January."....

"Though the Doctor did not prove himself so much of a gentleman as I had been encouraged to expect, I was sorry he declined to continue the discussion four nights longer, as we had not got more than half through the question when the eighth night closed. I wished for an opportunity of laying the whole subject before the public. Perhaps some other clergyman will take the matter in hand—one disposed and able to discuss the subject thoroughly."

PREFACE.

It is as a contribution to the discussion of the Population Question that we issue this report of the prosecution against ourselves for publishing Dr. Charles Knowlton's pamphlet, entitled "Fruits of Philosophy." Dr. Knowlton's pamphlet, although an ably and carefully written essay by a thoughtful and scientific man, is not, of itself, of vital importance; its importance lies in the fact that it is condemned—says Lord Chief Justice Cockburn—because it advocates prudential restraint to population, while also advocating early marriage. It is the advocacy of prudential checks *after* marriage that is now said to be a punishable offence. Many a better book than that of Dr. Knowlton might be written on the same subject to-day, for we have had 40 years of scientific improvement since "Fruits of Philosophy" was penned; until, however, the judgment against Knowlton is reversed, no better book can be published, for doctors will not write, and publishers will not sell, a work which may bring them within the walls of a gaol. It was for the sake of free discussion that we published the assailed pamphlet when its former seller yielded to the pressure put upon him by the police; it was not so much in defence of this pamphlet, as to make the way possible for others dealing with the same topic, that we risked the penalty which has fallen upon us. The accounts of the trial which have appeared in the daily and weekly papers have brought to the knowledge of thousands a great social question of whose existence they had no idea before this prosecution took place. Once more a cause has triumphed by the fall of its defenders. Once more a new truth has been spread every-

where by its persecutors, and has gained a hearing from the dock that it could never have won from the platform. It had been thought by many that the right to free discussion had been won by the gallant struggles of the earlier half of the present century; it was never dreamed that Lord Campbell's Act might be strained to include medical and scientific works; its author scouted the possibility of such misuse, and himself limited its object to the seizure of the foul literature of passion and sensuality. By the judgment in this cause every medical bookseller is put in jeopardy, and medical authors must find their own safety in the high price—and consequent restricted circulation—of their works. Ignorance has again become a cardinal virtue, and the tree of knowledge is again guarded by the fiery sword of the law.

What will be the ultimate issue of the struggle is certain; this battle will end, as every other such battle has ended, in the triumph of a Free Press. There is but one limit to that Freedom, and that is that slander and libel should be easily punishable by the law, so that the pen should not be permitted to vent private malice in assault on private reputation. The discussion of a question of ethics, of social science, of medicine, is an attack on no one; no one's reputation is injured by it; it can have nothing in it of the nature of slander. Such discussion has always been the medium of progress, and the right to it must be won at all hazards.

Charles Bradlaugh.
Annie Besant.

THE QUEEN

v.

CHARLES BRADLAUGH & ANNIE BESANT.

THE Lord Chief Justice took his seat at 10.30 A.M. precisely. The Solicitor-General, Sir Hardinge Giffard, Mr. Douglas Straight, and Mr. Mead appeared for the prosecution; Mrs. Besant and Mr. Bradlaugh appeared in person. On calling over by ballot the list of special jurymen, the following gentlemen answered to their names:—Alfred Upward, 16, Linden Gardens, N. H., gentleman; Augustus Voelcker, 39, Argyle Road, chemist; Captain Alfred Henry Waldy, 9, Stanhope Gardens, esquire; Thomas Richard Walker, 31, Colville Gardens, bank manager; Robert Wallace, 32, Lancaster Road North, gentleman; Edmund Waller, 33, St. Mary Abbott's Terrace, gentleman; Arthur Walter, 15, Queen's Gate Terrace, gentleman; Charles Alfred Walter, 7, Holland Road, gentleman; John Ward, 79, Ladbroke Grove, N.H., gentleman; Arthur Warre, 109, Onslow Square, Brompton, gentleman; and the two talesmen, who were afterwards added to make up the number, were George Skinner and Charles Wilson.

The Special Jury list having thus been called over, there were only eleven persons present who answered, and the eleventh made an application to the judge to be excused from serving as he was the director of a public company.

Mr. BRADLAUGH, rising, said: Before the jury are sworn, my lord—I think this will be the proper time—I have a motion to make to your lordship. The motion is to quash the indictment, on the ground——

The LORD CHIEF JUSTICE: I do not think I can allow that. I am sitting here in *nisi prius*.

Mr. BRADLAUGH: My lord, the 14th and 15th Victoria, cap. 100, says, "That any objection to any indictment for any formal defect apparent on the face of the indictment shall be taken by demurrer or motion to quash such indictment before the jury shall be sworn, and not afterwards," and it is for a defect on the face of the indictment that I move to quash it.

The LORD CHIEF JUSTICE: Then you should move *in banco*, and *not* in this court. Surely that contemplates a motion *in banco*. What do you say, Mr. Solicitor?

The SOLICITOR-GENERAL: Yes, my lord, that is, as I take it, the meaning of these statutes. These pleadings here are in the Crown Office, and if the defendant was intending to demur he should have moved in that way, or by motion in court.

Mr. BRADLAUGH: I do not intend to demur, my lord, but I do intend to submit that, under the statute, my right to move to quash the indictment is clear, and I should respectfully insist——

The LORD CHIEF JUSTICE: Well, I will reserve that point.

Mr. BRADLAUGH: Then your lordship will reserve that point. Need I state to you the grounds?

The LORD CHIEF JUSTICE: No. I will reserve the point. If it is competent for me to hear the motion at all this will preserve your right.

Mr. BRADLAUGH: That will give us all I wish to obtain.

Mrs. BESANT: My lord, I presume that you will reserve it for me as well?

The LORD CHIEF JUSTICE: Oh, yes.

Mr. BRADLAUGH (handing in the Attorney-General's warrant): Then I will pray a tales.

On this, the usher was sent for one common juryman to make up the mystic twelve.

The jury were about to be sworn, when

The LORD CHIEF JUSTICE said: This gentleman has a strong wish not to serve, as he is the director of a public company (indicating the juryman who had asked to be excused). If you have no objection to raise I will release him, as a tales has been prayed by Mr. Bradlaugh.

The SOLICITOR-GENERAL: If your lordship pleases.

A second common juryman was then added, and the jury were sworn in the usual way.

Mr. BRADLAUGH, handing up a number of copies of the

"Fruits of Philosophy," said: It may be convenient for the Court—I have spoken to the Solicitor-General on the subject—if your lordship does not object—for the jury to have each a copy of the work in question.

The SOLICITOR-GENERAL: It will be very convenient indeed to do so, and it will render unnecessary the reading of certain passages out of the book.

The LORD CHIEF JUSTICE: It is absolutely essential that the jury shall be thoroughly possessed not only of the substance but of the actual language of the book.

The SOLICITOR-GENERAL: I quite agree in that, and cannot object.

Mr. MEAD, as the junior counsel, having formally stated the pleadings,

The SOLICITOR-GENERAL then commenced his address to the jury. He said: Gentlemen of the jury, the two defendants before you are indicted for having published an obscene libel, which is the form, according to our English jurisprudence, the criminal courts adopt for the purpose of preventing the dissemination of any matter which is calculated to destroy or corrupt the morals of the people, and, perhaps, it is not altogether immaterial that I should narrate to you, in the first instance, the mode in which this prosecution comes before you, because I cannot help feeling, and the magistrates who have moved in this prosecution probably could not help feeling, that, in itself, it is (I mean the prosecution) a thing which may produce mischief. I think, before the end of the case, it will be found it has produced mischief already; but the circumstances were such that those who, to some extent, possessed authority in the City of London, were put in the dilemma of either permitting this publication to be sown broadcast over the whole of the City, and to be placed in the hands of any person, however young, or else to institute this prosecution. Now, the circumstances were these: It would appear that a Mr. Watts had published (I believe some years ago) a book which he called the "Fruits of Philosophy; or, the Private Companion of Young Married Couples." Probably, gentlemen, you never heard of it, and, happily, I think, I may say, the world had never heard of it until it was published in Bristol, and became the subject of an indictment there, and attention having been called to it, the defendants appear to have come to the conclusion that the result of that case was unsatisfactory, and

they determined to test the question whether persons were not entitled to publish that book (substantially it is the same book, as you will see presently); and, accordingly, they appear, having published a new edition, to have sent a memorandum to the magistrates and to the police in these words:—"From the Freethought Publishing Company, 28, Stonecutter Street, Farringdon Street, E.C. All orders to be addressed to the manager, Mr. W. J. Ramsey. March 23rd, 1877. To Mr. Martin, Guildhall.—Charles Bradlaugh and Annie Besant will attend at the above address to-morrow, from four to five o'clock, to sell the enclosed pamphlet." That is the pamphlet which is the subject-matter of this indictment. Then they sent a similar notice to Detective-Sergeant William Green:—"Charles Bradlaugh and Annie Besant will attend at the above address to-morrow, from four to five, to sell the enclosed pamphlet; and this notice is sent to you officially to report to the superior person from whom you received instructions to prosecute in the case." Well, gentlemen, upon receiving this notice they proceeded to the place in question, without receiving any instructions; but the authorities subsequently confirmed their action in the matter. They proceeded to the place, and purchased some of these pamphlets; and the result is, that the question which, in truth, has to be decided by this indictment, is, whether or not the defendants were entitled to sell for sixpence this book, which I hold in my hand, to every person to whom it may occur that it is interesting, or amusing, or exciting to the morbid appetite, to purchase a book of this description. Upon the question (it sometimes is the question, of course, upon which matters of this sort turn) whether there has been any publication of the pamphlet, no question will arise here. The publication is of an absolute character. The sum sought to be charged is sixpence; and the only question, therefore, which will remain for your decision, will be whether or not this is an obscene book.

The Lord Chief Justice: Is that quite so? Is it not that the language, if it cannot be called obscene, is such that its effect might be to vitiate public morals; and although the work in point of language may be perfectly free from any objection, still I think that then, in point of law, it would be a libel. A work may not be obscene, it may not be prurient, it may not be open to objection in that respect, and yet it might tend to subvert public

morality. I do not know that by public morality we mean only those rules which regulate the intercourse of the sexes. It involves every rule of human conduct. If a person, in a book, were to teach a thing recommended in certain cases, assassination, you could not characterise that as an obscene book. It would yet be open to the objection that the book tended to subvert public morals in the other acceptation.

The SOLICITOR-GENERAL: I was using the word obscene rather in the sense in which your lordship has used it—in the sense of depraving morals; and in the case which I shall have to quote from, your lordship there uses the words: "Not using the word 'obscene' in the sense of involving any coarseness or vulgarity of expression, but as something which is calculated to destroy the morals," in giving judgment in the case of the Queen *v.* Hicklin, vol. 3 of the Reports of the Queen's Bench, page 371. That is the passage from which I am about to quote. The report commences at page 360, and your lordship, in giving judgment, said: "I think the test of obscenity is this: whether the tendency of the matter charged is to deprave and corrupt those whose minds are open to such immoral influences, and into whose hands it is likely to fall."

The LORD CHIEF JUSTICE: What was the character of the book?

The SOLICITOR-GENERAL: The character of the book there was of this sort, that it was a publication of a Protestant society, which had taken a very strong view against the impurity of certain questions asked and ideas suggested by the Roman Catholic priests in the confessional, and it quoted a variety of the doctors of the Romish Church, Sanchez, Loyola, and a great many others, and the Protestant Society in question had published this book for the purpose of showing how wicked and immoral and depraving was the institution, and it seems to me that your lordship's words there are perfectly applicable to this case. The contention of obscenity seems to me to be exactly what I would suggest to the jury as applicable to the case before the court. Now, gentlemen, the book in question, as you will see, is a book comprehending in the edition with which we are dealing, forty-seven pages; and that which had been described in the original book from which it is taken and which gave rise to this prosecution, as "the private companion of young married couples," becomes in the edition to which your

attention will be called an "Essay on the Population Question," and the nature of the book—before I read any part of it, appears to me to be this—the writer contends that it is not an improper thing to gratify any animal passion which human nature may be susceptible of, that the gratification of the animal instincts in the commerce of the sexes produces in a great many instances an over-crowded population. The writer appears to contend that for the cure of that evil, and for the purpose of enabling persons to gratify their passions without that evil being so great as it is, and may be, in the world, it is lawful and proper, and expedient, to disseminate among the people a minute description of physical means whereby the population may be checked, that the commerce of the sexes may be permitted to continue, and that by various means which he minutely describes, the result of conception, and the consequent birth of children, may be averted.

The Lord Chief Justice: I think it is hardly right to say that unless you introduce another element into the argument, which is that the restrictions which another celebrated writer on population pressed as the means of correcting the evil of excessive population was the restriction upon marriage, and the author of this book says: "That is wrong. Marriage—and marriage at an early stage of life—should be encouraged;" but he argues that, as the effect of early marriage is to increase population, so those artificial means of preventing population should be resorted to, but you must not leave out one element of his reasoning, that he insists upon marriage, and does not profess to suggest these means of checking population as the reason why marriage may be dispensed with.

The Solicitor-General: I did not mean to represent that there was an actual mention of commerce between the sexes without marriage. Whether or not it might obviously suggest itself to persons who wished to gratify their passions without marriage, I will not say. I was about to say that marriage is continually mentioned in the course of the book. This was what I should be disposed myself to suggest as a mere colourable introduction of that which in terms suggests marriage, but which it will be for the jury, if they look at the whole scope and tendency of the reasoning, to consider whether it is more than a colourable—the introduction of the word marriage, from time to time, in the progress of the argument. But the argument which I was

dealing with was the mode in which it was suggested that the evils of over-population could be avoided by physical checks. (The Solicitor-General then briefly alluded to the contents of pages 11—18, 18—33, 44, and 38—41.) That is the nature of the book. The mode in which the subject is treated I am afraid you must hear more minutely hereafter. That is the scope and tenor of the arguments. As my lord has pointed out to you (and, indeed, as I had intended to point out to you), all this is put before the reader under—what, I should say, in speaking plainly—under the guise of philosophy. The writer professes to entertain deep sympathies with the poor curate, and the artisan, who is, by the circumstances of his life, unable to afford the means of the care and rearing of an enormous family. The book, I think it may be said, is carefully guarded from any vulgarity of expression; the whole tone of it is, as I say, under the guise of philosophy and medical science. Further, it may be said that the two defendants, who are the publishers, in the preface here, say that they are neither of them doctors, that they do not affirm the medical truths which are laid down by the author of the book, who, perhaps, I should have told you before, was a Mr. Knowlton, a medical man, and they profess, therefore, not to entirely assent to, or advocate, all the medical truths which the writer puts forward in the book; and, further, with respect to the philosophical proem which precedes the book, they profess to disagree with the propositions which appear in that part of the work.

The Lord Chief Justice: The book has been published in America, and was first introduced in this country forty years ago, I think?

The Solicitor-General: I believe so, my lord. They further proceed to say they do not agree with some of the propositions in the philosophical proem, and which I rather think they say are mistakes. But what underlies apparently the whole thing, and what may be taken to be the principle of the defence here as far as one gathers is this: that it is a subject of interest, that the subject of the population, and the relations between the sexes, may involve a subject of deep national interest, and, therefore, the defence appears to be of this character: although we do not agree with some of the medical knowledge, and although we do not agree with all the philosophical proem, yet, as it is a subject of interest we claim a right to publish it, because, in the conflict of opinion,

and the discussion which may ensue, the truth ultimately may be elicited. That appears to me to be the main proposition underlying the whole of the contention, that they have a right to publish this work. Gentlemen, I will now read to you the preface, which will put you into possession, at all events, of the ground upon which the writer, or the publisher rather, in this case, feels himself at liberty to publish this broadcast all over the country.

(The Solicitor-General here read the preface at length, and, when he came to the words where the change of the sub-title is spoken of, he said: Gentlemen, that is the title which I will remind you was in its original form—"The Private Companion of Young Married Couples"—and that is now omitted. The Solicitor-General then read the preface to the end.)

Now, gentlemen, I have thought it right that you should be at once in possession of the defence which it is intended to suggest for the publication of the work in question, because I think it will be found that what may be called the ultimate object and intention of the persons publishing is not the question which you have to determine. Although there are many passages in this work which might be the subject of unfavourable commentary, I would rather have you believe that the persons publishing this work were actuated by the motives which their defence sets forth. But the question will still remain, whether they are justified in publishing and circulating in the wholesale and unrestricted way which I have pointed out to you, that which—if in the result you should be of that opinion—is an obscene work. Gentlemen, that question arose some few years ago, it is in fact very much in the course of discussion at the present moment, as I had occasion to observe in speaking of the case from which I am about to quote. A discussion took place some time ago on the subject of the confessional in the Romish Church, and it was a subject of the deepest interest both to those who took the Protestant view that the confessional was wrong, and to the Roman Catholic party, who were of opinion that it was a sacrament, and essential to the discipline of their church. This discussion, no one can deny, was fraught with most important consequences on each side, and on the one hand the directions which were given to confessors by doctors of the Roman Church were veiled in the comparative obscurity of a learned language. Those who took the other view thought themselves justified, and it was held by

courts before whom the question came that it ought to be assumed in their favour in the discussion of the question that they really did believe that, for the purpose of getting rid of the evil effects of the confessional, they were entitled to publish to everybody the sort of questions which it was urged confessors were authorized to put to those who were confessing in the confessional. It was argued on the one side: this is a most important public question; this is a matter which affects the relations between the great Christian churches into which Christianity is divided, and, therefore, this is a matter of the greatest public concern, and should have the most absolute and unreserved publicity in discussing all that is relevant to the question. Gentlemen, that question came before this court, and I can do no better, I think, than read to you what was said upon that subject, because it seems to me to go to the very pith of the matter which we are at present discussing. Now here I might call to your mind the motive which is said to influence the persons who are publishing this book—viz., the motive of the general welfare of mankind, avoiding the evils due to the increase of the population, and the misery which it is said is inflicted on persons of small means who marry and are unable to sustain large families. There the object was to destroy what was considered to be a false system of theology, and now remembering that, I think I cannot do better than to read to you on that subject the judgment which my lord, who now so happily presides here, concurred in, as it was by the whole court present. The Solicitor-General then read as follows:—

"We have considered this matter, and we are of opinion that the judgment of the learned Recorder must be reversed, and the decision of the magistrates affirmed." This was a proceeding under 20 and 21 Vict., c. 83, s. 1, whereby it is provided that in respect of obscene books, &c., kept to be sold or distributed, magistrates may order the seizure and condemnation of such works in case they are of opinion that the publication of them would have been the subject-matter of an indictment at law, and that such prosecution ought to have been instituted. Now, it is found here, as a fact, that the work which is the subject-matter of the present proceeding was, to a considerable extent, an obscene publication, and, by reason of the obscene matter in it, calculated to produce a pernicious effect in depraving and debauching the minds of the persons into whose hands it

might come. The magistrates must have been of opinion that the work was indictable, and that the publication of it was a fit and proper subject for indictment. We must take the latter finding of the magistrates to have been adopted by the learned Recorder when he reversed their decision, because it is not upon that ground that he reversed it: he leaves that ground untouched; but he reversed the magistrates' decision upon the ground that, although this work was an obscene publication, and although its tendency upon the public mind was that suggested upon the part of the information, yet that the immediate intention of the appellant was not so to affect the public mind, but to expose the practices and errors of the confessional system in the Roman Catholic Church. Now, we must take it upon the finding of the Recorder that such was the motive of the appellant in distributing this publication—that his intention was honestly and *bonâ fide* to expose the errors and practices of the Roman Catholic Church in the matter of confession; and upon that ground of motive the Recorder thought an indictment could not have been sustained, inasmuch as to the maintenance of the indictment it would have been necessary that the intention should be alleged and proved—viz., that of corrupting the public mind by the obscene matter in question. In that respect I differ from the Recorder. I think that if there be an infraction of the law, the intention to break the law must be inferred, and the criminal character of the publication is not affected or qualified by there being any ulterior object in view (which is the immediate and primary object of the parties) of a different and of an honest character. It is quite clear that the publishing of an obscene book is an offence against the law of the land. It is perfectly true, as has been pointed out by Mr. Kydd, that there are a great many publications of high repute in the literary productions of this country, the tendency of which is immodest, and, if you please, immoral, and, possibly, there might have been subject-matter for indictment in many of the works which have been referred to. But it is not to be said, because there are in many standard and established works objectionable passages, that therefore the law is not as alleged on the part of this prosecution—viz., that obscene works are the subject-matter of indictment, and I think the test of obscenity is this, whether the tendency of the matter charged as obscenity is to deprave and corrupt those whose minds

are open to such immoral influences, and into whose hands a publication of this sort may fall. Now, with regard to this work, it is quite certain that it would suggest to the minds of the young of either sex, or even to persons of advanced years, thoughts of a most impure and libidinous character. The very reason why this work is put forward to expose the practices of the Roman Catholic confessional, is the tendency of questions, involving practices and propensities of a certain description, to do mischief to the minds of those to whom such questions are addressed, by suggesting thoughts and desires which otherwise could not have occurred to their minds. If that be the case as between the priest and the person confessing, it manifestly must equally be so when the whole is put into the shape of a series of paragraphs, one following upon another, each involving some impure practice, some of them of the most filthy and disgusting and unnatural description it is possible to imagine. I take it, therefore, that apart from the ulterior object which the publication of this work had in view, the work itself, in every sense of the term, is an obscene publication, and that, consequently as the law of England does not allow of any obscene publication, such publication is indictable. We have it, therefore, that the publication itself is a breach of the law. But then it is said for the appellant, 'Yes, but his purpose was not to deprave the public mind; his purpose was to expose the errors of the Roman Catholic religion, especially in the matter of the confessional.' Be it so. The question then presents itself in this simple form: May you commit an offence against the law in order that thereby you may effect some ulterior object which you have in view, which may be an honest and even a laudable one? My answer is emphatically, 'No.' The law says you shall not publish an obscene work. An obscene work is here published, and a work the obscenity of which is so clear and decided that it is impossible to suppose that the man who published it must not have known and seen that the effect upon the minds of many of those into whose hands it would come would be of a mischievous and demoralising character. Is he justified in doing that which clearly would be wrong, legally as well as morally, because he thinks that some greater good may be accomplished? In order to prevent the spread and progress of Catholicism in this country, or possibly to extirpate it in another, and to prevent the State from affording any countenance to the

Roman Catholic Church in Ireland, is he justified in doing that which has necessarily the immediate tendency of demoralising the public mind wherever this publication is circulated? It seems to me that to adopt the affirmative of that proposition would be to uphold something which, in my sense of what is right and wrong, would be very reprehensible. It appears to me the only good that is to be accomplished is of the most uncertain character." Gentlemen, I pause here to say that I most deeply regret that every word which I am now reading, applying to the "Confessional Unmasked," is applicable to this work. I have it on the face of the last edition, which bears on its title-page these words, "This is the one hundredth thousand." The Lord Chief Justice, in his judgment, continues: "This work, I am told, is sold at the corners of streets and in all directions; and, of course, it falls into the hands of persons of all classes, young and old, and the minds of the hitherto pure are exposed to the dangers of contamination and pollution from the impurity it contains. And for what? To prevent them, it is said, from becoming Roman Catholics, when the probability is that nine hundred and ninety-nine out of the thousand into whose hands this work would fall would never be exposed to the chance of being converted to the Roman Catholic religion. It seems to me that the effect of this work is mischievous and against the law, and is not to be justified because the immediate object of the publication is not to deprave the public mind, but it may be to extirpate Roman Catholicism. I think that the old sound and honest maxim, that you shall not do evil that good may come, is applicable in law as well as in morals, and here we have a certain and positive evil produced for the purpose of effecting an uncertain and remote and very doubtful good. I think, therefore, the case for the order is made out, and although I quite concur in thinking that the motive of the parties who published this work, however mistaken, was an honest one, yet I cannot suppose but what they had that intention which constitutes the criminality of the act, at any rate, that they knew perfectly well that this work must have the tendency which, in point of law, makes it an obscene publication, namely, the tendency to corrupt the minds and morals of those into whose hands it might come. The mischief of it, I think, cannot be exaggerated. But it is not upon that I take my stand in the judgment I pronounce. I am of opinion, as the learned

Recorder has found, that this is an obscene publication. I hold that where a man publishes a work manifestly obscene, he must be taken to have had the intention which is implied from that act, and that as soon as you have an illegal act thus established, *quoad* the intention and *quoad* the act, it does not lie in the mouth of the man who does it to say: 'Well, I was breaking the law, but I was breaking it for some wholesome and salutary purpose.' The law does not allow that; you must abide by the law, and if you would accomplish your object, you must do it in a legal manner or let it alone; you must not do it in a manner which is illegal. I think, therefore, that the Recorder's judgment must be reversed, and the order must stand."

The LORD CHIEF JUSTICE: In that case it was alleged that the questions put in the "Confessional" were calculated to suggest unchaste and unclean thoughts, and, therefore, it appeared to me, they were calculated to lead to immorality, and that a man could not say, "I published a work of an immoral tendency, but to effect what I thought would be a greater good." We all held that that was no answer.

The SOLICITOR-GENERAL: No doubt, my lord, your lordship will remember that the whole of the questions used in the "Confessional" were published side by side with the strongest protest against such questions being permitted to be put. The mere fact of publishing the work the full Court held to be illegal. The other judges concurred in your lordship's judgment, giving their special reasons.

The LORD CHIEF JUSTICE: I think the questions were pretty nearly the same as those recently referred to in the House of Lords.

Mr. BRADLAUGH: I have no desire to unnecessarily interrupt the learned Solicitor-General; but I would submit, my lord, that he has no right to present to the jury something which he must not prove until after the verdict, and which does not relate to the matter at issue; and therefore I think it is hardly fair for him to introduce into his speech, for the purpose of influencing a verdict, the alleged fact he has recently referred to with regard to the publication of the work.

The LORD CHIEF JUSTICE: Perhaps it would be better to confine the case to the issue there is to be tried.

The SOLICITOR-GENERAL: A part of my case is that the publication of this work recently must affect the act of publication, and is important for the jury to know.

Mr. BRADLAUGH: The indictment is for a publication on March 24th and March 29th.

The LORD CHIEF JUSTICE: I decide that point for you, Mr. Bradlaugh.

Mr. BRADLAUGH: Very well; I thank your lordship.

The SOLICITOR-GENERAL: I must not be taken to consent to its not being important now, and shall have to refer to it again.

Mr. BRADLAUGH: I will take my objection at the proper time.

The SOLICITOR-GENERAL: In questions of this kind it should be borne in mind by the jury, not only the nature of the work published, but the mode of publication, and I cannot do better than to read to you, gentlemen, his lordship's own language in the case I have already referred to—The Queen *v.* Hicklin. His lordship, at page 367 of "Common Law Reports, Q. B.," says: "A medical treatise, with illustrations necessary for the information of those for whose education or information the work is intended, may in a certain sense be obscene, and yet not the subject for indictment, but it can never be that these prints may be exposed for any one, boys and girls, to see as they pass. The immorality must depend upon the circumstances of the publication." Therefore, gentlemen, as it appears to me, it is a matter worthy of your consideration, not only the nature of the work itself, but the mode in which it was and is now claimed to be published. It is not whether a work of this kind can be submitted to a college of philosophy, but whether it can be sold at the price of sixpence about the streets of London and elsewhere, and it is with a view to stopping that publication that the law has interfered.

The LORD CHIEF JUSTICE: That is assuming always that it is an obscene work. I did not intend it to apply to a work on a scientific question.

The SOLICITOR-GENERAL: No; it may be absolutely necessary for the medical profession that plates and works treating on obstetric matters should be published; but who would say it would be right to publish such things indiscriminately throughout England? And it is to that question that I venture to think the distinction of my lord seems to point. The morality or immorality in such a case must depend upon the circumstances of the publication. We have here, in the work before us, a chapter on restriction published, not written in any learned language, but in

plain English, in a facile form, and sold in the public streets at sixpence. Of course, as my lord has pointed out, although the question is one of publication, the mode of publication is involved. You must first establish that the work is an obscene work. Now, gentlemen, I do not wish to read you extracts from the work. I would rather refer you to the passages in the copies of the work you have before you, which we, the prosecution, rely upon as being obscene.

The LORD CHIEF JUSTICE: Meaning by obscene, tending to influence the passions, or recommending some course of conduct inconsistent with public morals.

The SOLICITOR-GENERAL: I do not want, gentlemen, to trouble you in going through many passages of this work; but at page 34 you will find a chapter on promoting and checking conception.

Mr. BRADLAUGH: I am not sure, my lord, whether your lordship had a copy of the same edition as that which the Solicitor-General and the jury have; but I will hand your lordship one.

Having handed one to the Lord Chief Justice, the LORD CHIEF JUSTICE said: I found a difference in the paging. This, Mr. Bradlaugh, is the same edition as that which the Solicitor-General is about to refer to?

Mr. BRADLAUGH: Yes, my lord; and the same as the one on which the indictment is founded; there is a little left out of the one which is contained in the other edition.

The LORD CHIEF JUSTICE: And the same as the jury have is this?

Mr. BRADLAUGH: Yes, my lord, and the same as that which is the subject of the indictment. The one your lordship had was the later edition, handed up on the motion for the *certiorari*.

The SOLICITOR-GENERAL: The whole chapter, gentlemen, is, as you will perceive, devoted to the subject of promoting and checking conception, referring, amongst other matters to the use of cayenne; and, gentlemen, I do not desire to read it. I would rather refer you to the chapter, and you will perceive for yourself what it purports to be.

The LORD CHIEF JUSTICE: Are you not going to read it?

Mr. BRADLAUGH: I do not wish to compel the Solicitor-General to read the pamphlet, but I require to know the exact parts relied on to support the indictment. I have applied to the prosecution for a statement of the parts relied

on, and have been refused. I am afraid for our defence I shall have to require the prosecution to read the work to the jury, unless we are allowed to know the exact words relied upon by the learned gentleman.

The LORD CHIEF JUSTICE: Yes, I think that is fair.

The SOLICITOR-GENERAL: I thought it would be unfair to the defendants in one sense to select any part of the book. I presume Mr. Bradlaugh's motion which he was about to make was on the ground that there were no passages mentioned in the indictment, but merely that the work was an obscene book. It seemed to me that it would be unfair to the defendants and to the prosecution to select any one part of the book. I thought we needed only to give the jury that which it seemed to me was the key to the whole publication. If not, the whole book must be read.

The LORD CHIEF JUSTICE: I quite agree; but still I was supposing that if there was anything independent of the whole scope of the work that you could put your finger on and say it tended to obscenity, it is right that the defendants should know it. In one part he discusses the causes of sterility in females, and how it may be cured by means of certain remedies such as he suggests. One, for instance, you say, is by the use of cayenne. That, it may be argued, is medical information; but, on the other hand, it may be said to be an indecent and indictable passage. It is well known that sterility is a source of great discomfort to women who wish to be blessed with children, and any man who can suggest a mode for its removal would be a benefactor to humanity; but, as you say, that may be used as a disguise to instil bad notions into the mind. That is a question for the jury to decide, and for that purpose they must have the subject before them.

The SOLICITOR-GENERAL: I shall have to read the whole of that chapter; but I did not wish to give the jury the pain and trouble to hear it.

The LORD CHIEF JUSTICE: Very well, read it. The book must be read, sooner or later, either by you, Mr. Solicitor, or the officer of the court.

The SOLICITOR-GENERAL: I thought it was unfair to read a part.

Mr. BRADLAUGH: Whatever part of the work the learned Solicitor thinks it his duty to refer to, I have a large number of standard medical works, of the highest character, which I shall have to read extracts from, showing that every line of Knowlton is amply covered by the best authorities. I

mention that, as I should like the Solicitor-General to know how I put it.

The Lord Chief Justice: What I shall ask the jury will be very much like this: If they take the statements contained in the work to be a treatise on obstetric medicine, do they consider there is anything in it which the writer was not justified in writing? And, looking to the whole character of the work, do they think it is introduced into the work merely for the purposes of medical knowledge useful for the people to know, or do they think it tends to immoral results? Whether you read it, or whether it is read by the officer of the court, or the defendants, matters little; the jury must hear it.

Mr. Bradlaugh: I only want the passages the Solicitor-General relies on precisely stated, so that I may identify the parts I have to answer. I do not want to put the Solicitor-General, or the officer of the court, to the inconvenience of reading it. Nor do I desire thus to waste thet ime of the court.

The Solicitor-General to the jury: I will point out one of the passages which, I think, evidently not only shows the object of the writer but illustrates the mischief and evil that the work is liable to produce. It is really extremely painful to me, (hesitating) very painful, to have to read this. At page 38 you will find—[Here the Solicitor-General read to the end of the chapter]. Gentlemen, I have read the whole of that, and I assure you that it has been with extreme pain and regret that I have found myself compelled to read it, and if it were possible—I don't know that it is, but if it were—to do what the defendant said in his interlocutory statements, *i. e.*, to produce from any number of medical works observations supporting this book in its entirety, I should submit that a medical work, published as this is, would be properly the subject of an indictment. It must not be assumed that, peradventure, a great number of works having been published that have not been made the subject of indictment, that another should not be proceeded against. No one feels more deeply than I do that these prosecutions are fraught with danger, and that any number of authorities may be brought before you to suggest that these works are not novel. Any authorities of that sort I should recommend you to disregard. You may tell me about American doctors; but it is not to be permitted that doctors in England shall have a right to circulate such filth, and then be allowed to

substantiate it by instances from other medical works. Many things—medical treatises, recommendations for the use of medicaments, herbs, and so forth—applicable to the ills under which humanity may suffer may, in the study of the physician, be properly considered for the purpose of applying to mankind some kind of remedy for the evils under which they may suffer. But is it to be said that because these things may be discussed and considered in the closet of the physician, that they may be cast broadcast all over the streets? If you accept that, you entirely subvert the principle which is properly deducible, and there is no such thing as indecency and obscenity at all. A man who had the view that the human figure was the most beautiful in the world might claim the right to walk naked through the streets, and might triumphantly say, "I am exhibiting nothing but the natural parts, and it is only a prurient mind that will see anything improper in it." And you might push it to the extreme of saying that, inasmuch as sexual intercourse is a natural provision, there is nothing improper in publicly performing it.—[We paraphrase the extreme coarseness of the language here used by the learned counsel]. There is no limit to the extent to which a proposition like that may be carried. The question is for the good sense of an English jury, whether what I have read to you—and I don't wish to read any more—may be properly sold. I rely upon that passage read as indicating what is the nature, the extent, and the scope of that particular passage led up to, as I have told you it is, by a description of the parts engaged. It may be said that parts of this book—the defendant will be entitled to point to them, and I wish to make no concealment of such passages—contain passages in which the general scope and thesis enforced relates to marriage, which is introduced where the connection between the sexes is spoken of. Therefore, you may read it thus: I recommend this not as a mode by which persons who are unmarried may gratify their passions without the consequences which follow from that gratification. You may read it in every line that the defendant recommends and points out this simply as the use that is to be made of the preventive check, assuming that lawful connection between the sexes, and assuming that marriage has sanctified the intercourse of which he is speaking. Gentlemen, the question for you is, whether a book of this sort, published to everybody, would not suggest to the unmarried as well as to the married, and any persons into whose hands

this book might get—the boy of 17 and the girl of the same age—that they might gratify their passions without the mischief and the inconvenience and the destruction of character which would be involved if they gratified them and conception followed. Gentlemen, that is one of the questions which you will have to determine. I venture to submit that the whole scope and tendency of giving such a minute description of all that has relation to the sexual appetite and the apparatus concerned therein—the effect of that is to constitute an obscene book. Gentlemen, there is one passage at the very end of the book, pp. 44 and 45, which I will also read. [The Solicitor-General here read p. 44 and to the end of p. 45.] Now, gentlemen, I pause for one moment upon that. These expressions, which you find all scattered through the book, assuming that they are meant for married persons to put a check upon undue population, I submit to you that is colourable, and that the object of the whole book, the scope of this book, is to permit people, independent of marriage, to gratify their passions, independently of the checks which nature and providence has interposed. I say that the object of this book is to tell everybody how they may do that, and yet have no children, whether they are married or not. Now, I invite your attention to the last passage. You will observe the thesis is the necessity, in point of health and in point of morals and mental tranquillity, for the gratification of this particular passion, and observe—"It is a fact universally admitted, that unmarried females do not enjoy so much good health, and attain to so great an age, as the married." What is the inference from that? Here are the means by which the unmarried female may gratify her passions. The truth is, those who publish this book must have known perfectly well that an unlimited publication of this sort, put into the hands of everybody, whatever their age, whatever their condition in life, whatever their modes of life, whatever their means, put into the hands of any person who may think proper to pay sixpence for it—the thesis is this: if you do not desire to have children, and wish to gratify your sensual passions, and not undergo the responsibility of marriage; if you are desirous of doing that, I show you by a philosophical treatise, forsooth, how you may effect that object satisfactorily and safely, after a long experience, collected from a great number of scientific persons; the expedient I recommend has never been known to fail. And, therefore, this is to be put into the hands of every

one, and it is sought to be justified upon the ground that it is only a recommendation to married people, who under the cares of their married life are unable to bear the burden of too many children. I should be prepared to argue before you that if confined to that object alone it would be most mischievous. The Christian religion is happily still a part of the law of this country, and if it were confined simply to that recommendation, I certainly should have a great deal to say to you, and would point out that that is immoral in the higher sense to which my lord at the commencement of the case referred. I feel it would be inappropriate to enter upon a discussion of this character, because it would appear to concede that this book is only intended for circulation among persons so situated. I deny this, and I deny that it is the purport and intention of this book. This book is sold for sixpence, and at such a price as that it will induce a circulation, which you may well conjecture, and it may be induced amongst an enormous population, there will be so many sold to boys and girls and persons who may obtain it with perfect facility in the streets; I decline to argue the question, and it would be most inappropriate and inadequate to discuss the book as if it were a document handed to a young couple who are anxious to avoid the evil and misery, which, as the writer states, a large family produces. That is not the ground on which I should discuss it. I submit to you, that from what I have read, it is an obscene book. The mode of publication is such as does not justify the book, and it is calculated to deprave and destroy the minds of those young persons especially into whose hands it may come, and therefore, it is properly the subject of an indictment. Don't talk to me about doctors! I care not if every physician in England had written a book of this character—although God forbid that I should suggest any physician could do so!—if you collect into this book all that may be found relating to one subject-matter scattered in various books, it is a totally different thing. Apart from such a question altogether, if you were to prove to me that any physician in England had published a book like this, I submit that there can be no justification for that book to be quoted, which is calculated to deprave the minds of those into whose hands it may fall. I therefore ask your judgment that this book is an obscene publication.

William Simonds, detective officer, City of London police, examined by Mr. Douglas Straight:

Did you, on the 24th of March, go to 28, Stonecutter Street?—Yes, I did.

Is that the Freethought Publishing Office?—Yes, sir.

Did you go into the shop?—I did.

Whom did you see there?—I saw Mr. Bradlaugh and Mrs. Besant.

What did you say?—I asked for a copy of the "Fruits of Philosophy."

By the LORD CHIEF JUSTICE: Whom did you see?

Mr. STRAIGHT: He says he saw the two defendants. You purchased a copy?

WITNESS: Yes, I bought a copy of the "Fruits of Philosophy."

To whom did you address yourself?—To Mrs. Besant.

What took place?—She supplied me with a copy, for which I paid sixpence. I gave her a shilling, and she gave me sixpence change.

Did the defendant Mr. Bradlaugh hear what you said?—He was close beside, and could hear what was said.

Did you go again on the 29th of March?—Yes.

Did you purchase another copy on that occasion?

By Mr. BRADLAUGH: One moment, pray. Were either of the defendants there then?—No, they were not.

Neither of them were there. Who served you?—A young man in the shop.

By Mrs. BESANT: How long have you been in the detective force?—About 13 years a detective.

What wages do you get?—Thirty-one shillings and sixpence.

Has it been raised at all?—Yes; I get an extra portion for my clothes.

You did not get so much at the beginning?—No; about 28s. or 29s.

By Mr. BRADLAUGH: Have you the documents you produced before the magistrate?—I have, sir.

Will you just let me look at them?—I will, sir.

The documents were produced, and proved to be memoranda from Mr. Bradlaugh and Mrs. Besant to Detective-Sergeant Green, of the City Police, and to Mr. Martin, the Chief Clerk of the Guildhall Justice-room, intimating that Mr. Bradlaugh and Mrs. Besant would attend to personally dispose of the first hundred copies of the Knowlton pamphlet.

Mr. BRADLAUGH: Have you received a letter from me

since the commencement of this prosecution?—Yes, about three weeks ago.

Have you got it?—No, sir.

Mr. Bradlaugh (to City Solicitor): Do you produce this letter. I gave you notice to produce it.

Witness: All the letters I received I handed over to the City Solicitor.

Mr. Bradlaugh: It is simply a letter asking him if he is the prosecutor. I ask did you give an answer to that question? Did you reply whether or not you were the prosecutor? Did you say yes or no?

Witness: No, I did not.

Edwin Williams, constable of the City Police, called.

Mr. Mead: On the 24th of March did you go to Stonecutter Street?

Witness: Yes, sir.

Whom did you see?—I saw Mrs. Besant and Mr. Bradlaugh. I asked Mrs. Besant to give me the book called the "Fruits of Philosophy."

Did she give you the book?—She gave me the book, and I paid sixpence for it.

Did the other defendant hear what was said?—Yes; he was standing close by, sir.

That is the only time, I think, you went?—That was the only time.

Have you the book?—Yes.

Hand it in, please.

(Book handed in.)

No questions were put to this witness by either Mr. Bradlaugh or Mrs. Besant.

Detective Sergeant Robert Outram, City of London Police, called.

Mr. Mead: On April 5th, did you obtain a warrant at the Guildhall Justice-room?—No; I received the warrant at the head office.

Did you go with the warrant to 28, Stonecutter Street?—I did.

With the two last witnesses?—Yes.

Did you see the two defendants?—I did.

Did you search the premises?—When I saw them I told them I was a detective-sergeant, and that I held a warrant——

Mr. Bradlaugh: Don't tell us anything about the warrant if you have not got it here.

The LORD CHIEF JUSTICE: When you said warrant, you must have described it in some way.—I said I had a warrant for their arrest, also a search warrant. I read the warrant to Mr. Bradlaugh and Mrs. Besant, and I also searched the premises.

Did you find any books?—I did not.

LORD CHIEF JUSTICE: You did not find any books there?—No, my lord.

Mr. MEAD: Did the defendant say anything?—When I read the warrant to him he said there was no t a book on the premises which would come under the warrant.

Mr. Bradlaugh made that reply. What else did he say?—He said he had a few copies, which they would require for the defence.

The LORD CHIEF JUSTICE: Require for what?

Sergeant OUTRAM: For their defence, my lord.

You then took both defendants into custody?—Yes. I afterwards took them to Bridewell police-station.

SOLICITOR-GENERAL: Now, my lord, I propose to prove what I referred to in opening, what the publication is since, and the extent of the publication.

LORD CHIEF JUSTICE: That the defendants have published you have proved.

SOLICITOR-GENERAL: This book bearing their imprint must surely make them publishers of other copies.

LORD CHIEF JUSTICE: Somebody else may have bought up all the other copies; if you can show that the sale took place in their premises—but you don't say so.

Mr. BRADLAUGH: I should submit that even this would be no evidence on an indictment charging us with specific sales on the 24th and 29th.

The LORD CHIEF JUSTICE (to Solicitor-General): I don't see what you want. You have proved the sale of two copies of this work by the defendants jointly. The only question for the jury is, what is the object or effect of the work. If the defendants should be convicted, you can produce the other evidence hereafter, by way of aggravation, that many other copies have been sold by the defendants. One sale is enough, and you have proved it.

The SOLICITOR-GENERAL: It strikes me as important that it was being published everywhere.

The LORD CHIEF JUSTICE: Does not the preface sohw that it was intended for general circulation?

The SOLICITOR-GENERAL: Simonds, I believe, has not identified the copy in court.

Simonds recalled.

The SOLICITOR-GENERAL to Witness: Just look at the copy attached to the deposition; is that the copy you purchased on the 24th?

WITNESS: It is the copy purchased on the 29th.

The SOLICITOR-GENERAL: Then you have a copy purchased on the 24th; you should have handed both in. (To the Lord Chief Justice.) That is my case, my lord, but after wha tyour lordship has said it would be right to call attention to certain passages in the book, and to ask the officer of the Court to read them.

Mr. BRADLAUGH: To save both the officer's time, and that of everyone else, it will be sufficient if the passages are pointed out distinctly with the page, and identified as beginningwith such a word and ending with such a word; we do not wish to put the officer of the court to the necessity of reading them; it will only be uselessly taking up time. I will only ask the learned counsel to be particular in the references he gives.

The SOLICITOR-GENERAL: I should like the jury, if your lordship will be good enough, to look at page 8 (in any instance down to the end of the chapter), then page 11.

Mr. BRADLAUGH: But where do you finish?

The SOLICITOR-GENERAL: At the end ot the chapter.

Mr. BRADLAUGH: That will be page 9.

The LORD CHIEF JUSTICE: Then page 11?

The SOLICITOR-GENERAL: What I said was page 8 to the end of the chapter. Then page 11 from "fully to effect," pages, 12, 13, 14, 15, 16, 17 and 18.

The LORD CHIEF JUSTICE: The whole portion of the description?

Mr. BRADLAUGH: Then where will that end?

The SOLICITOR-GENERAL: "Induced by too frequent and promiscuous intercourse."

The LORD CHIEF JUSTICE: All the way through to page 18?

The SOLICITOR-GENERAL: Yes. Then page 27 "considering it important to do away with," down to the end of the chapter, page 33.

Mr. BRADLAUGH: The whole of the intervening pages?

The SOLICITOR-GENERAL: Yes. I do not think I can draw any distinction in chapter 3, on checking conception.

Mr. BRADLAUGH: The whole of chapter 3?

The SOLICITOR-GENERAL: Then page 44, beginning "every young married woman," down to the end of the chapter. That is my case, my lord.

Mr. BRADLAUGH: I will just call over the pages to see if we have got them rightly.

The LORD CHIEF JUSTICE: I think you may assume that the learned Solicitor-General objects to the whole book from beginning to end.

Mr. BRADLAUGH: Very well, my lord, then we must defend the whole. If your lordship will allow it, I have arranged, for our mutual convenience, that Mrs. Besant should make her defence first. I do not know whether your lordship would adjourn now (12.30), before the case for the defence is commenced; it will be utterly impossible for Mrs. Besant to conclude before the adjournment for luncheon.

The LORD CHIEF JUSTICE: We have an hour yet.

Mr. BRADLAUGH: I only suggested it for the convenience of the Court.

Mrs. BESANT: My lord, and gentlemen of the jury—It will not seem strange to any of you if, in defending myself here to-day, I find myself slightly over-weighted by the amount of legal ability which the prosecution has thought it well to bring against me. I know that names such as those who stand as advocates against me must carry—and must rightly carry—a certain amount of weight with those to whom I have to appeal. When you find the learned Solicitor-General engaged in the case, and when his great legal knowledge is not enough to conduct it without the assistance of two other counsel learned in the law, you must come to the conclusion that you have two great criminals before you, because, if it were not so, the prosecution would not go into the very large expense entailed in this case. I might feel less hopeful of success did I pretend to rival the learned Solicitor-General in legal knowledge, in force of tongue, or in skill of dialectic. But, gentlemen, I do not rely on these: I rely on a far mightier power; I trust to the goodness of my cause, and I am sure that, when you have heard the evidence which I shall lay before you, you will feel that to give a verdict of "guilty" would be to give a verdict against the weight of the evidence, and would have a most unfortunate effect upon the public outside. But, gentlemen, I do not mean that I have had the impertinence

to come before you without a careful and thorough consideration of the case which I submit. I have spent the few weeks I have had between my arrest and the present time in studying the case I have to set before you. I have done my best during these few weeks which have intervened to make myself acquainted with those trials of the past which bear upon this subject, and those state trials from which I could gather some ideas by which I might move you, or some words which I could use when appealing to you. It is not as defendant that I plead to you to-day—not simply as defending myself do I stand here—but I speak as counsel for hundreds of the poor, and it is they for whom I defend this case. My clients are scattered up and down through the length and breadth of the land; I find them amongst the poor, amongst whom I have been so much; I find my clients amongst the fathers, who see their wage ever reducing, and prices ever rising; I find my clients amongst the mothers worn out with over-frequent child-bearing, and with two or three little ones around too young to guard themselves, while they have no time to guard them. It is enough for a woman at home to have the care, the clothing, the training of a large family of young children to look to; but it is a harder task when oftentimes the mother, who should be at home with her little ones, has to go out and work in the fields for wage to feed them when her presence is needed in the house. I find my clients among the little children. Gentlemen, do you know the fate of so many of these children?—the little ones half starved because there is food enough for two but not enough for twelve; half clothed because the mother, no matter what her skill and care, cannot clothe them with the money brought home by the breadwinner of the family; brought up in ignorance, and ignorance means pauperism and crime—gentlemen, your happier circumstances have raised you above this suffering, but on you also this question presses; for these over large families mean also increased poor-rates, which are growing heavier year by year. These poor are my clients, and if I weary you by length of speech, as I fear I may, I do so because I must think of them more even than I think of your time or trouble. You must remember that those for whom I speak are watching throughout England, Scotland, and Ireland, for the verdict you will give. Do you wonder I call them my clients, these poor for whom I plead? they cannot bring the fee of gold such as is received by the

learned gentlemen who are briefed against me here; but they bring what is better than gold—they send up a few pence week by week out of their scanty wage for as long as the trial lasts; they send up kindly thoughts and words of cheer and of encouragement; mothers who beg me to persist in the course on which I have entered—and at any hazard to myself, at any cost and any risk—they plead to me to save their daughters from the misery they have themselves passed through during the course of their married lives. Gentlemen, I may perhaps say one word for myself before I go right into my case. The learned Solicitor-General has had the kindness to say that he does not impute bad intent to us in publishing this work. What bad intent could there be? I had nothing to gain in publishing this work—I had much to lose. It is no light thing for a woman, whose ambition is bound up in the name which she hopes to make, to have the imputation thrown upon her of publishing indecent books and of disseminating obscenity amongst the young. I risk my name, I risk my liberty; and it is not without deep and earnest thought that I have entered into this struggle. And when I shall lay before you the indictment against me, I must ask you if you will be able to bring in a verdict of guilty on an indictment such as this. The cases of myself and my co-defendant are practically the same; and while we do sever in our defence, and each conduct our own, we have thought it wise that we shall not severally go over the whole of the case. I have thought that I shall best consult the convenience of the Court by leaving the purely physiological details to be dealt with by my co-defendant. Although I do not pretend to the extreme delicacy displayed by the learned Solicitor-General; while I should hardly have imagined it possible that a counsel who has had such wide and large experience in criminal cases should have hesitated to read extracts which deal with facts perfectly well known to any doctor; at the same time, I think it will be more fitting, more in good taste, more agreeable to the Court, if I leave these purely physiological details to my co-defendant. I do this, not as admitting that these details are obscene or indecent in any respect, but simply because I think that such a course will be pleasanter to all concerned. I propose to deal chiefly with the other parts of the pamphlet. The questions are: What is this pamphlet? What is it intended to do? What purpose is there in the circulation of it?

One or two physiological questions I shall touch upon and deal with generally, because I feel myself compelled to do so in the interest of my clients, in the interest of the poor woman who has only 6d. to spare, and should be allowed to purchase with that 6d. the knowledge which richer women can obtain for 2s. 6d., 5s., or 6s., at any of the railway bookstalls of Messrs. Smith and Sons. The learned Solicitor-General spoke most disdainfully of a book that should be sold for 6d.; but when people have to live on 13s. a week, 6d. is quite as much as they can afford to pay for a book containing useful and necessary sanitary information. Gentlemen, I do not think there is anything to fear in this presence, from statements outside, calculated to arouse prejudice against us. I do not think I need do more than refer to prejudice which has been sought to be aroused against us by certain newspapers—one in particular, which I will not here mention, whose editor, when attacked, has a habit of hiding himself behind an infant. That paper charged me with child murder, and referred to me as an advocate of promiscuous intercourse. Gentlemen, if some word as to promiscuous intercourse had not fallen from the lips of the learned Solicitor-General, I should have thought that such a charge was too foul and too baseless to have been founded on a pamphlet such as this. You will have seen some of these papers, but I am sure that you have left them outside the Court, and that you will not allow them to influence your verdict here, and that any word which may have fallen in another case will not be allowed by you to prejudice this. One great fault charged against us, though shut out by the ruling of the learned judge, is, that books which are not ours, and do not emanate from us, are sold by men who get drunk, and swear in the public streets. I am not here to defend these hawkers. I can only say that that to which objection has been made is the fault of the Solicitor-General himself, or of the prosecution which he represents. This pamphlet had a small sale for years back of about 700 copies annually, and for the number that have been sold since our arrest, you must blame the prosecution, and not me. It is the prosecution which has given the importance to this book. If we had wanted to do so we could have hired men to sell the work at the street corners, but we did not care to have our book in the hands of men bearing the—not good—character of too many of this class of persons. We sent these men away from

the shop when they came to buy, and we absolutely refused to supply them, and we have done nothing to spread the sale of this pamphlet, as we have done with our other publications. We have not even advertised it in our own paper, except once, and then only because we wanted to make it known that we were going to sell it for the first time at our office. Spurious copies were printed and sold at the street corners, because it was difficult to get the real pamphlet, and the whole annoyance is due to the action of the prosecution; they have given a purely factitious importance to an old and almost forgotten pamphlet which had been supplanted by more modern treatises; and the more they prosecute the more they will cause this annoyance to continue, because these men sell whatever they can get a high price for, and people buy it now simply because it is prosecuted. I come now, gentlemen, to the question of the indictment; I do not know if it has been laid before you or no. This indictment charges Charles Bradlaugh and Annie Besant that "unlawfully and wickedly devising and contriving and intending, as much as in them lay, to vitiate and corrupt the morals as well of youth as of divers other liege subjects of our said lady the Queen, and to incite and encourage the said liege subjects to indecent, obscene, unnatural, and immoral practices, and bring them to a state of wickedness, lewdness and debauchery," they did publish a certain book, which it then goes on to describe in words which I will not read because of their extreme and unnecessary coarseness. Gentlemen, I think I may fairly lay some complaint before you against the language of this indictment. I may be told that it is pleaders' language, and I have, fortunately, not very much knowledge of pleaders' language, but I must really put it to you that the learned Solicitor-General does not accuse me of what is charged against me in this indictment. If he wants to accuse me, as he has done, of publishing a bad book with a good intent, he ought to amend the indictment, which has been so clumsily drawn up. If you refer to Archbold, you will see that the ordinary indictment for selling an obscene book is very different to that to which I am called upon to plead to-day. You are told in this indictment that we intend, and devise, and contrive to corrupt the morals of youth as much as in us lies, and it then goes on to give the very coarsest possible description of the book. It seems to me as if the learned counsel who drew this up

had gone through every indictment he could find, and had picked out every unpleasant adjective which could prejudice us with those to whom we have to plead, and had thrown them together into this. The learned Solicitor-General says it was too much trouble to put the whole of the book into the indictment; but I say that unless every page of the pamphlet is indecent, you cannot convict us on this indictment. We have then to deal with a prosecution which endeavours to do too much, and which is likely, therefore, to do nothing. But, gentlemen, the malice of the prosecution has overreached itself. Since no distinction is drawn between one part of the book and the other, you must find that the whole of it is obscene before you convict me. You must take the whole book. You have heard the preface read—and I was very glad that the learned Solicitor-General did so read it—are you prepared to say that the preface is an obscene, immodest, and disgusting production? Unless you include the preface in your verdict, you must acquit the book in your verdict. The very way the indictment has been framed makes it fatal to the prosecution. But you have got more to do than to find the whole of the book obscene. You have got to find that our object in publishing it was to vitiate and corrupt the morals of youth as of divers others, and unless you believe that to have been our object, no verdict can be given against us on this indictment. I am perfectly aware that you must allow the intention to exist if you can prove that the work is thoroughly obscene; but then you must get at the intent. Take the case of two men, one of whom has a pistol, and the second man, who has not a pistol, is found shot. It does not follow that the second man, even if found with the pistol in his hand, has been guilty of murder. If that man were set before you on the charge of murder, you would find out what the intent was which might have governed his actions. You would ask if there had been malice between them, or quarrels between them, in the time that had gone. You would ask what intention perhaps was in the mind of the man who shot, before you would bring him in guilty of the murder of his fellow man. I put it to you that much more, in dealing with a medical book, you must show the intent to be malicious, before you can, by any possibility, bring in a verdict of guilty against me here. The Solicitor-General says the intent is good. If that be so, the duty of the Solicitor-General is to get up and

say that he drops the charge against us, for as the indictment falls through by his own admission, he has no right to keep you here wasting your time on an indictment which he himself confesses is bad. But, then, he puts it, that the intent does not matter. I say, gentlemen, that the intent is the vital part of the charge. The intent of the book is what you really will have to judge. The learned Solicitor-General put that strongly when he said there was a colourable pretence of philosophy, a colourable use of the word marriage, when really what was intended was not to give philosophy, but gratification of passion—not to teach married people how to restrain their families, but to teach the unmarried how wrongly to gratify their passions. How utterly untrue that is I shall show you as I go on through the pages of this book. The intent in a medical book must be taken to be the very essence of the character of the book. If Sir James Paget wrote a book simply on the diseases of the generative organs, no kind of description of those organs could make the book obscene, because Sir James Paget would write the book not with the intention of corrupting the mind, but with the intention of curing the diseases with which he dealt. In every book that contains physiological details, the intent, therefore, is the very essence of the charge. The intent makes the difference between decency and indecency. A medical book which describes these organs with the intent of a useful purpose is a proper book, and a book that may rightly be published. A medical book that makes such description with the intent to arouse passions is a bad book, and against such an indictment would fairly lie. I am not talking now whether or not it would be wise to prosecute a book of that kind, because I hold that such a prosecution really spreads the book more widely than otherwise it would be; but I must acknowledge that every medical book may be read for a bad purpose by an impure mind. There is no question that with great medical men (although the learned Solicitor-General says he does not care about medical men, and that we are not to talk to him about medical men, or to tell him what they have written)—I must submit to you that it is not wise, that it is not moral (for I hold morality to be that which makes individuals and societies happier and better than they were before, and wiser than they were before)—it does not conduce to morality to say that these men shall not spread knowledge, because that knowledge may be made

impure by the impure minds that read it. Every book, however good the book may be—any of your old classics, any of your standard English works, may be read for the vilest purposes, if the impure mind is to be permitted to characterise them and put upon them the shame that only comes from its own obscene impurity. Then I will put it to you, and I will venture here, instead of using my own words, to plead in the words of one of our mightiest advocates—that Erskine, whose name is known as one of our mightiest pleaders wherever the English language has made its way. The case is that of The King *v.* J. Lambert, J. Perry, and J. Grey, for a seditious libel, in "Howell's State Trials," 22nd vol. Erskine says:—"When a man accused of libel is brought before a jury, they are to consider only the mind and intention with which the matter was written; and, accordingly as they shall find that, they are to form their decision of guilt or innocence." Gentlemen, that is the contention I am raising to you—that you are to think of our minds and intents in publishing this book; and I take publishing to be the same as writing a book; and according to that you are to find us guilty or innocent. Mr. Erskine goes on:—"The jury are to dismiss from their minds every other consideration, and allow themselves to be biassed by no motive of party or of political convenience. There is this essential difference between criminal and civil cases: in criminal cases, the jury have the subject entirely in their own hands; they are to form their judgment upon the whole of it; not only upon the act alleged to be criminal but the motive by which it was influenced, the intention with which it was committed, and, according to their natural sense of the transaction, they ought to find a man innocent or guilty: and their verdict is conclusive. Not so in civil cases. In these the jury are bound to abide in their decision by the law as explained by the judge; they are not at liberty to follow their own opinions. For instance, if I am deprived of any part of my property, the loss of my property lays a foundation for an action, and the fact being found, the jury are bound to find a verdict against the person who has occasioned my loss, whatever might be his intentions. Here the judge pronounces the law, the jury only find the fact. The law and the fact are as distinct and separate as light from darkness, nor can any verdict of a jury pass for a farthing in opposition to the law as laid down by the judge, since the courts have a

power to set such a verdict aside. But in criminal cases the very reverse has been immemorially established—the law and the fact have been inseparably joined; the intention of the party accused is the very gist of the case. We are criminal only in the eyes of God and man as far as the mind and intention in committing any act has departed from the great principles of rectitude by which we are bound as moral agents, and by the indispensable duties of civil society. It is not the act itself, but the motive from which it proceeds that constitutes guilt." I ask you to bear that passage in mind, from one of the highest authorities in a court like this. When you are considering your verdict after the defence is made, Erskine reminds you: "You are solemnly set in judgment on the hearts of the defendants in the publication of this paper. You are to search for their intention by every means which can suggest itself to you. You are bound to believe in your consciences that they are guilty of malicious and wicked designs before you can pronounce the verdict of guilty. It is not because one of them published the paper, or because others are the proprietors of it, but because they were or were not actuated by an evil mind, and had seditious intentions, that you must find them guilty or not guilty." And Erskine states, gentlemen, that that was the law as laid down by the celebrated Hale; and I am sure, in putting it to you so, you will see the authority with which I am dealing here. He points out in another place that this had been contested in earlier days, but in his own time it was made law; and then, in dealing with this very case, where a book was held to be libel against the king, but where, because the intent of the publisher was good, no sentence was ever passed upon him, and the jury refused to find him guilty of a publication with malicious intent, as charged in the indictment; in dealing with that Erskine says: "If you give the defendants the credit of honest feelings and upright intentions, on my part any farther defence is unnecessary; we are already in possession of your verdict; you have already pronounced them not guilty; for you will not condemn the conduct when you have acquitted the heart." That, gentlemen, is Erskine's speech in pleading to the jury, and I will ask you to remember that if you bring me in guilty on this indictment you will have done it only because you believe my intent to have been bad, believe my desire

is to corrupt and deprave the young; and unless you find that, you are bound in justice, you are bound to give me a verdict of Not Guilty. Then the learned Solicitor-General turns to the case of the Queen *v.* Hicklin, and points out that the good intent of the publisher cannot be held to protect the work. But we find there that the work was an utterly obscene work, and in that part which the learned Solicitor-General read (and I was glad to hear him read it, because Lord Chief Justice Cockburn at that time made practically the very contention which I shall plead to you to-day) it was put that if the book was utterly obscene no amount of good intention could justify the publication of obscene matter. That book was to show that the questions asked in the confessional were depraving to the mind, and would vitiate the morals of youth. The whole of the object of the book, and the publication of the book, would fall to the ground unless the matter contained in the book was obscene. The very contention of the publisher was that the contents depraved and demoralised. Well, if they depraved and demoralised in the confessional box, they would do so still more when printed and circulated to the public in a book. The contention of the publisher destroyed his own case. Gentlemen, unless the book contained obscene matter there was no reason for the publication of the book for which he was put on his trial. This case of the Queen *v.* Hicklin does not in any fashion touch the case on which you are called to pass your judgment. I know the learned Solicitor-General says that some of the worst quotations in the book were veiled in learned language, and that side by side with them were placed some of the very strongest observations against their character. These observations condemned the book which the publisher had issued, for if he thought the questions in the confessional depraved and demoralised, he must have known that they would be likely to do the same thing with whoever should read them. But you don't pretend to say that physiology is in itself indecent, and you will find Lord Mansfield saying in the case of the King *v.* Woodfall: "Where an act is in itself indifferent, if done with a particular intent it becomes criminal; then the intent must be proved and found. But where the act is in itself unlawful (as in this case), the proof of justification or excuse lies on the defendant, and in failure thereof the law implies a criminal intent." You cannot pretend that physiology is in itself an indecent thing; you cannot say that medical studies

are in themselves indecent. All you can say is that physiology may be used for an indecent purpose and may be made the cover of indecent suggestions. We come, then, to the very case Lord Mansfield puts where the act is in itself indifferent and only becomes criminal when the intent is a criminal intent. The intent in the case of the Queen *v.* Hicklin was to break the law, and the Lord Chief Justice laid down that where a man publishes a work manifestly obscene he has no right to say that he breaks the law with a good intent. Gentlemen, I admit that to the very fullest extent. I admit that there is no justification in law for publishing an obscene book. I admit that if this book is obscene no amount of good and pure intentions on my part can possibly purge it from its obscenity. I bow thoroughly here to the judgment laid down by the Lord Chief Justice in this case. But I contend that this book is not an obscene book, and that therefore the case of the Queen *v.* Hicklin has no authority here. I will pass, then, to the matter of the book. I say that the matter is not obscene; that our intent in publishing the matter was good; that the knowledge conveyed in the book is useful and necessary, and that, because it is useful and necessary that knowledge ought to be within the reach of all. Unless you disbelieve, gentlemen, the whole of what I am going to say to you—unless you believe not only that the book is obscene—and if you do that you will be branding with the stigma of obscenity every great surgeon and medical man of eminence that has made our English name known throughout the world for our books; and I acknowledge that I reverence the medical profession for the work they do, and I trust you will not be a party to branding as obscene those men into whose hands at the most critical moment you place the health of your wives, your daughters, and your sisters!—a verdict of guilty, or not guilty, does not depend upon whether you approve of that book or not. It does not depend on whether you may think that there are passages in it which had better not have been there. It does not depend on that; nor is it enough you might have thought some of the language coarse, although the Solicitor-General has kindly stated that the language is free from any taint of vulgarity. You must take one part with the other. Turning to the case of the King *against* Daniel I. Eaton for publishing a libel, you find this plainly put by the Judge himself, the Recorder who summed up the evidence, which I hold to be analogous to the case

before you: "If the book was published as the work of a philosopher, for the benefit of mankind, then this man will not have to answer for the publication. If published with a malicious view, then he will have to answer for it, if you are convinced of the fact of publication."

The LORD CHIEF JUSTICE: What was the nature of the publication?

Mrs. BESANT: There, again, it was a case of a blasphemous libel, one of the many cases brought up at that time.

Mr. BRADLAUGH: It was for publishing one of Paine's works.

Mrs. BESANT: We find here, in this same case, that it was put that you must give a verdict upon the whole matter put in issue before you, that you must affirm every allegation in the indictment to be true; that if you disbelieve and negative any one allegation, you are bound to find the defendants not guilty. Gentlemen, I will ask you to remember that, when you go away to consider your verdict; I will ask you to take a copy of the indictment with you and read it through, and say solemnly whether, on your oath, you can find every count in that indictment has really justified you in a verdict against us; and if I press this specially upon you, gentlemen, it is because I feel that in this matter I have so much to lose if your verdict should go against me, and I will ask you, therefore, if at any time during the trial (which may, in some parts, perchance, become wearisome to you), if, at any moment, you think you are kept here to your own annoyance and inconvenience, I ask you to put that momentary annoyance of, at the utmost, but a few days' detention in a crowded court, against the penalty which lies on me, unless I can succeed in obtaining a verdict of not guilty — a penalty which does not mean confinement for a few days, or for any length of time which the judge can sentence, but which means, practically, almost the extinction of my future life until I can wipe off the stain which your verdict, if guilty, will put upon me. Do not mistake me by thinking that I should think myself guilty; I should not do so. I have done this thing with full thought and with full knowledge of the responsibility I incurred. Knowing it all, I should proceed to do it again, with the experience I have had since my arrest. I should bring in myself not guilty, whatever your verdict might be at the end of the trial. Now, alleging our intent to be good (and I

hold myself and Dr. Knowlton to be identical in the matter, for the words in the preface, where we said we did not agree in everything, were not intended in any fashion to avoid the responsibility of the publication of every word in the pamphlet), I acknowledge the responsibility to the very fullest extent—I stand responsible for every word from beginning to end. I challenge, practically, your verdict by the course I have taken, and, therefore, I am willing to take the responsibility of every syllable in the pamphlet. Let me, for a moment, deal with the word obscene, for on your consideration of that word will practically come your verdict in this matter. I contend that the book is not an obscene book, and you get the difficulty here that you have no statutory definition of the word obscene. You have not only no statutory definition of the word, but you have not even any unchallenged authoritative judgment on the matter, for I shall show you presently, dealing with the Lord Chief Justice's remarks, that the circumstances of that case unfortunately prevented him from giving a carefully defined meaning of the word, simply because the matter was admittedly obscene on every hand. In almost all other offences, you know with what offences you are dealing. Take murder. Murder is carefully defined in books of law. Take manslaughter: that is also carefully defined, and if you are in any doubt, you have only got to turn to the accepted legal authority and then judge whether the prisoner has committed a certain act or not; you are able to say whether he has committed a murder, or whether he has only committed what is called manslaughter. But you have no such thing to help you when you are dealing with the offence of an obscene libel. So far as I can find, I have not been able to discover a single case where a book, incriminated as this one has been, has been defended on the ground that the book was not an obscene book. Palliations have been brought in, excuses have been made, circumstances that made it justifiable have been caused to be pleaded, but I cannot find one case through the whole English law where the publisher accused of publishing an obscene book has stood up and said that the book did not contain bad matter, and has stood by it. That makes it very difficult for a jury to decide whether a book comes within the scope of the law. One might almost put it to you—though I do not intend to base my case on that ground—that no book ought to be considered as obscene which does not incite to the commission of those acts which are defined by the law to be

obscene, because, when you come to obscene acts, you find these acts laid down and specialised in the law books, and an obscene book may be fairly taken to be a work which incites to the commission of those obscene practices which are indictable under the common law as misdemeanours. For the purposes of this trial, I take a narrower definition than this. I put it to you that an obscene book is a book "written for the single purpose of corrupting the morals of youth, and of a nature calculated to shock the feelings of decency in any well-regulated mind." That is the definition on which I stand for my trial, and that definition is at least worthy of some reverence in this court when I tell you it comes from Lord Campbell, a man who was in the very highest position in our land, and who brought in the very act under which the seizure-warrant was issued which was brought to search at Stonecutter Street. I am quoting from Hansard, vol. 146, No. 2, page 329. It is a definition, gentlemen, which I put before you as the true definition of the word "obscene." And I am the more glad to do that because it thoroughly coincides with the words of the learned judge in the case of the Queen *v.* Hicklin, which was put before you. You will find him saying that "I think the test of obscenity is this: where the tendency of the matter charged with obscenity is to deprave and corrupt those whose minds are open to such immoral influences, and into whose hands publications of this sort may fall." That is what my Lord Chief Justice Cockburn laid down as the law; and, as I pointed out to you, it was, perhaps, unfortunate that the circumstances of the case did not enable his lordship to give us a thoroughly careful definition, which would have been so invaluable to us for our guidance on the trial of to-day. But on that trial there was no question raised as to whether the matter published was obscene or not, for on all hands it was admitted that the subject-matter was obscene; and where it was taken that the work was an obscene publication, the learned judge would have been going out of his way if he had carefully laid down a strait definition in what obscenity consisted. I will put it to you that obviously the Lord Chief Justice meant the same as Lord Campbell meant, and that the single word "well-regulated" should be inserted. The opinion of the two learned judges thoroughly coincided on that matter—a vital point; and that "well-regulated" is implied in the case of the Queen *v.* Hicklin. I cannot put it to you too strongly that it must

be a well-regulated mind which has to be dealt with in a question of this kind. Should you say that the book is to be adjudged obscene because some utterly ill-regulated mind found something which raised wrong passions or impure desires? You must take the normal mind—the normally-regulated mind—and think of the influence the book would have upon that, for to the impure mind the purest book will have a bad effect, because you get the reflection of the mind in the book. In dealing with the word obscene on any wider definition you will find yourself making a law which will have the most unfortunate effect in the time to come. In this very case you find a debate in the House of Lords, and of course I am not going to put this in evidence here, but simply as showing you the difficulties into which you will plunge the law if you take a wider definition than that of Lord Campbell. You find Lord Lyndhurst putting the objection that might easily arise. He objected to Lord Campbell because he said, "what is the interpretation which will be put on the word obscene?" "I can easily conceive (he says) that two men will give an entirely different conception as to the meaning of the word," and then you find him drawing a picture of a detective officer going into a print-seller's or a bookseller's, under the new act, and asking for photographs of all the most celebrated pictures, by the greatest masters, going with these photographs to the police magistrate, and not saying what the picture was intended to represent, and then getting a warrant from the magistrate to destroy all the works, which might include some of the greatest productions of art. The difficulty is, that if you are to allow the word obscene to be stretched into meaning anything which is coarse, which deals with the human figure, you must make a clean sweep of your literature and your art right through. I don't mean to say that because there is not another book before you, you should acquit the book which is before you; but I ask you where you will land yourself if by a verdict of guilty you are going to include books under Lord Campbell's Act, which were never intended to be included in it when the act was drawn? Nothing can be stronger than the way in which Lord Campbell put it that he did not intend to put down medical works, physiological treatises, and standard authors; and yet every one of them might be practically put down, if by a verdict of guilty here you make every

common spy and informer able to go to the shops of the best publishers of London, and put them to the annoyance and expense of such a prosecution as this, simply because by a verdict of guilty against us you will have given a verdict of guilty against every one of them. I think I may fairly argue that the difference between coarseness and obscenity is this—that obscenity is coarseness written with intent to corrupt, with intent to vitiate, with intent to destroy the good feelings and arouse the evil ones. Coarseness has not that meaning; it is low, it is revolting, but it does not endeavour to corrupt. The learned Solicitor-General pointed out a passage which, by itself, he thought would move your feelings, and I think he was wise in the matter of not reading the whole of the book to you, for if he had done so you would have seen that what he read as obscene was simply a part of the whole work. Take this passage from "Tristram Shandy," and judge what would be the feelings of some people in hearing it read out in public; I shall not read it, but will simply hand it up to you.

The SOLICITOR-GENERAL: I am very reluctant to interfere, my lord; but I think I must take your judgment whether or not such passages ought to be read.

Mr. BRADLAUGH: I should submit, respectfully, that it has been decided over and over again, that if we prove the publication of a work—and no work will be produced which we are not prepared to prove the publication of—we shall have the right to put in the passages as evidence at any rate, if not to read them as part of the defence.

The LORD CHIEF JUSTICE: How can two negatives make an affirmative?

Mr. BRADLAUGH: I do not put it on that ground, my lord; but there have been some very strong arguments as to the right to refer to other publications——

The LORD CHIEF JUSTICE: Have you got the authority?

Mrs. BESANT: It is in the case of the King *v.* Carlile.

The LORD CHIEF JUSTICE: Well, I remember a case that the late Serjeant Thomas defended here in which, upon an indictment of a similar character, I do not think it was reported, but I happened to be present in court; he read a long string of passages, and referred to a variety of public representations.

Mr. BRADLAUGH: I shall be prepared to argue the point later on, my lord. I have the case looked up, but I did not think it would arise so soon.

The Lord Chief Justice: Then, perhaps, this would be a convenient time to adjourn?

Mr. Bradlaugh: If your lordship pleases.

The Court then adjourned for lunch.

After the adjournment,

Mr. Bradlaugh said that, with regard to putting in the publication "Tristram Shandy," it was not intended by the defendants to do so in any way as evidence, but they were entitled to read or to communicate it to the jury as part of the defence.

The Lord Chief Justice: I have been consulting with my learned brothers, and they agree with me that it is so. I am bound to reject every publication as evidence, but I can't prevent Mrs. Besant from committing a passage to memory and reciting it as part of her speech, nor from reading from a book as if reciting from memory. But the book is not evidence, and need not be proved, nor must it be handed to the jury.

Mr. Bradlaugh: There is a curious case, but, unfortunately, it is only the informal report of a Recorder's opinion. It is the case of the King *v.* Carlile, in which a reference to a public newspaper was objected to because, as was said by Mr. Adolphus, it might have been printed in the defendant's back shop; and the Recorder said to Mr. Carlile, "If you mean to read that, you must prove its publication."

The Lord Chief Justice: A person could not be supposed to recollect the whole of it. [To Mrs. Besant]. You can read anything you wish.

Mrs. Besant: I do not propose to read any quotations from "Tristram Shandy," my lord; it would be an utter waste of the time of the Court. I was stopped when I was going to hand up to you "Tristram Shandy," and the Solicitor-General objected to the book being put in evidence. I quite agree that books ought not to be put in evidence on any point unless the publication of these books be proved, because if you do that you would open the door to a large amount of abuse; and, although we might not take advantage of it, it might seriously, if it were permitted by the learned judge, prejudice or unfairly decide trials in the future. Therefore, I do not think it would be worth while to read any passages of "Tristram Shandy" to you, although if it had been permitted and thought right by the learned judge, you might haved glanced at a single passage, and have seen

how far one passage might be used to destroy a whole book if, as the Solicitor-General has done, you were to pick out a passage most likely to prejudice the book. I simply want to show to the jury how books which you find in the library of every gentleman who has any pretence to culture or education might be branded in the same way, and put down by an ignorant jury as obscene publications. I have one great advantage—I do not for one moment conceal it from myself—and that is the fact that it has been thought right in this case to give us the very great advantage of a special jury, because, to hand up to an ignorant jury a passage from "Tristram Shandy" would be utterly condemnatory of the whole book; but from the circumstances of your education, and from your having had the opportunity of becoming perfectly familiar with the whole of our standard English literature, I feel that I have nothing to fear from a miscarriage of justice, such as I might fear from a jury less cultivated. I put it to you that in any one of those books which every one of you have in your libraries, you could find passages which, if taken by themselves, might be said to have a tendency to vitiate and corrupt, and I think I shall not be dealing unfairly if I say to you that in every great dramatist of England you would find such passages. I take Shakespeare as an example, whom no one would desire to see blotted out of our literature, and imagine that some spy of some society—we will say of the Society for the Suppression of Vice—took one of Shakespeare's poems, such as "Venus and Adonis," and founded a prosecution on it. We all know that it would break down. But you must not forget that a publisher's prosecution means an enormous amount of damage to him, whether a verdict is obtained or not. Some people (two or three in every town) devoted to us, and wishing to serve us in the same way that Hetherington was served, though most unwisely, might institute prosecutions against other booksellers for selling works of a similar character. Imagine the number of prosecutions to which your verdict would give rise. You would throw open prosecutions against every bookseller in London, with the exception, perhaps, of some little publisher who has not the power or the capital to publish books that the public want to read. You do not want to throw open the door to every mischievous man who seeks notoriety, to prosecute such publishers as Churchill, Longman, and Smith. I might also allude to the

works of Mr. Bohn, who will be one of the witnesses for the defence in this case, and whose Standard Library gives text-books for the education of your sons in every public school in England. Do you want to offer a premium to every miserable spy, who may wish to ruin these men by the chance he possesses of getting a verdict in his favour? I would remind you that you are going to take the effect of language into your consideration, and you will see that the comparison between Knowlton and these dramatists, on the question of the effect on the passions, is in Knowlton's favour, because medical books have no tendency to arouse sexual feelings. If you want a book of an improper character you must carefully avoid physiological works. Your common sense tells you that a medical book is a book that no man or woman would read for the purpose of arousing sexual passions of any kind. I will come to that in a later portion of my speech. If you want to arouse sexual passion you might do so by some foul works, and you might even do so by some of the grandest of our dramatists and novelists. You will find passages calculated to arouse sexual passion in Fielding, Congreve, and Wycherley, but you will never arouse that passion by dry physiological details put forward in dry technical language. I put that to you because I say that while the language in many of these books would arouse the sexual passions far more than the language of any medical book, it would be an utter blunder—I say it would almost be a crime—to prosecute these books because of occasional coarse passages in them. If you are going to give a verdict of guilty against me—a verdict that means to me the momentary destruction of all that I work for—you must make up your minds that no statement that certain passages might be more carefully worded will authorise you in giving that verdict. I say to you, remember that in the days to come you will never free your minds from the remembrance of what is happening in this court. The verdict that you give may mean to us almost destruction—destruction against which we are strong enough to fight—destruction that will not ultimately touch our future very much, though unkind things may be said about it. If you give a verdict thoughtlessly, carelessly, or indifferently, carried away by prejudice against me and my co-defendant—if, I say, you give a verdict against us which you would not give against your wife, your daughter, or your brother—a verdict based not on evidence, but based on a prejudice against us because of other work in which we

have been engaged, I remind you at the very outset of this case that a great responsibility rests upon you, and that you will remember during all the remainder of your lives the verdict you will give at the close of this trial. I do not say so to prevent you from giving a verdict of guilty. Every Englishman and citizen has the duty to discharge the functions of juror without any regard to the consequences that will flow from his verdict to those whom he convicts of crime. But I say, do not let any carelessness or thoughtlessness prevent your giving your whole brains and hearts to a decision that is vital to us both. I have now to remind you of the definition of obscene, which I put forward, and I ask you to bear it in mind; I do not propose to repeat the arguments, but simply to read the words upon which I rely. If you are to narrow it down to the definition of Lord Campbell, he says that his Act is intended to apply to works "written for the single purpose of corrupting the morals of youth, and which are of a nature calculated to shock the common feelings of decency in any well-regulated mind." We stand or fall upon the definition. I remind you—and unless you take Dr. Knowlton's pamphlet to be written with the single (but not possible) purpose, in the mind of the writer, and in the mind of the publisher (which for the purposes of this trial are identical)—unless you think it written for the single purpose of corrupting the morals of youth, you have no right to bring in a verdict of guilty against us; and I lay stress upon this, because Lord Campbell says, "The question whether the pictures or books impugned were obscene or not, is to be left to the jury to decide." My lord, I don't know whether I am going out of my case, but I think if the light could be prevented falling on the jury-box, it would be an improvement. It is a great point to me to keep the jury in good temper, my lord. (Laughter.)

The Lord Chief Justice directed that this inconvenience should be stopped, and added: I must do you the justice to say, that up to this time you have said nothing that could produce any other result.

Mrs. Besant: If I say anything that goes further, it will be because I think it necessary to win my case, and that is vital to me. The Solicitor-General made one remark which I had the pleasure of agreeing with, and I did not agree with much that fell from my antagonist's lips. He said that you are the guardians of public morals. There is no point on

which I feel more strongly than the value of our present system of law, and it is because of that that my co-defendant and myself, instead of publishing the work and leaving it to be prosecuted, thought it the best plan to challenge the verdict of a jury, because we believe that the verdict of a jury is the right, legal, and constitutional fashion of settling questions of this kind; so much is this the case, that the jury have the whole decision in their hands in these cases. I have no doubt that the learned Judge on the bench would endorse what I say to you, when I put it that even the judge's opinion is not binding on the jury. The judge has a right to lay down the law and explain the law, and the jury has the duty of finding a verdict in accordance with the law, and I press that upon you, for while I don't want for a moment to pretend that the Lord Chief Justice will rule against us; while I have the utmost confidence in his complete and thorough impartiality in this case—feeling sure that what he believes to be right he will say without favouring either the one or the other, and without fear of anything outside which may go in favour of one side rather than the other—while I have the most complete confidence in him, I do not want that one single member of the jury should for one moment imagine that he can throw his responsibility upon the learned judge who lays down the law in this case. I am dealing with a question on which I might pile up authorities one after the other; I do not intend to do that, although in a case so important as this I must guard myself step by step by those precedents of English justice which are the real safeguards of justice in our land. I will point out to you that the Lord Chief Justice Eyre, dealing with the case of the King *v.* Hardy—and I am now quoting from proceedings taken in the Old Bailey in a case of high treason—a case where the life of a man hung upon the decision of a jury—you will find that Lord Chief Justice Eyre distinctly lays down that the responsibility lies upon the jury, and not upon the judge: "Every verdict upon a clear point of fact ought to be the jury's own choice, and in a case of this nature more particularly so, because, to be sure one great object of this prosecution is, that the country may be satisfied, that they may see that the public justice of it has taken its fair course, and that the prisoner has that deliverance made for him which the laws and constitution of the country in his case call for." He laid it down that the responsibility of the

verdict did not lie with the judge. I find that the Right Hon. Chief Justice Pennefather, dealing, thirty or forty years ago, with one of those cases that aroused so much the popular feeling of the country—the case of The Queen *v.* Daniel O'Connell and others that I find in "Shaw's State Trials for 1844,"—the judge laid down the doctrine that, whatever the judge's opinion might be, the jury were "the constitutional judges to determine and to come to a just conclusion." And you will also find that Erskine, to whom I referred before, pointed out that the jurymen were the real judges, and added that they were to "examine the judge's opinion as rigorously as that of the advocate at the bar"; and the curious point in that case is, that, while the judge summed up directly against the prisoner, the jury gave a verdict against the judge. Gentlemen, I put these cases before you because I desire you to feel that it is not possible for you to shift in any way the responsibility on to his lordship, in whom rightly and naturally you must have such thorough trust. If this question were by English law to be decided by him, I should be fully content to put my fate in his hands; but when the English law bars the judge from the verdict, and gives it to the hands of the jury, then I must remind you that you cannot evade your responsibility. The learned Solicitor-General told you that you are the guardians of public morals; and if you give a verdict against us, it will make a grave breach of morality, which it will take many decisions to cure. If I say that, do not think that I say it because I have not confidence in the verdict of twelve men, sworn to do justice between the Queen and ourselves. I do not forget what Whiteside put so well in his great case, when he was speaking on behalf of some of those who were tried with Daniel O'Connell. Although an advocate there, you cannot forget that Whiteside afterwards became Lord Chief Justice of Ireland, and gave from the bench proofs of that genius which he had so long shown at the bar. Gentlemen, the question for your consideration is whether in days to come you would wish your names to be handed down to posterity amongst the juries who by their verdicts have induced freedom, or whether they shall be handed down with those who have narrowed freedom, those who, in cases such as this, wherein liberty of discussion has been concerned, have returned verdicts of repression, verdicts afterwards to be reversed, as all such verdicts are, on

appeal to the higher court of posterity. Do you, gentlemen, think for one moment that myself and my co-defendant are fighting the simple question of the sale or publication of this sixpenny volume of Dr. Knowlton's? Do you think that we would have placed ourselves in the position in which we are at the present moment for the mere profit to be derived from a sixpenny pamphlet of forty-seven pages? No, it is nothing of the sort; we have a much larger interest at stake, and one of vital interest to the public, one which we shall spend our whole lives in trying to uphold. The question really is one of the right to public discussion by means of publication, and that question is bound up in the right to sell this sixpenny pamphlet which the Solicitor-General despises on account of its price. We are not fighting simply to obtain your verdict for the sake of selling this work. I, personally, don't care, if your verdict is in my favour, to sell another copy. I sell it so long as the detective police spies and secret agents of a society calling itself a Vice Society resort to the practices that they do to get respectable booksellers into trouble; so long as that goes on, so long shall we endeavour to uphold those principles which we maintain with reference to the right of public discussion, by fighting this great battle until we win ultimate success. This pamphlet is valuable to us just as is the piece of silk to the soldier who wins the battle for his country: it is the flag which represents the cause we have at stake. It is with that feeling—and that feeling alone—that we stand here to-day to uphold the right to publish this pamphlet, and I fight that I may make here the right of open and free discussion on a great and important social subject. There are various rights of speech which the public enjoy. The right of discussion in theology is won; the right of publicly discussing politics is won; but as to discussion on social subjects, there is at present no right. There will be this day week, if your verdict is in our favour, because, you may depend upon it, that verdict once given no one will ever go against it; everyone will then feel free to discuss a point of vital interest to society; but till that verdict, that right is not one which can be exercised with impunity. However much you may disagree with Dr. Knowlton's theories—and I don't pretend to agree with him on all his points—however much I say you disagree, that is no reason why you should brand

his book as obscene. Difference of opinion is not to be taken as proof of obscenity against any particular subject, and the more you may differ in opinion from Knowlton so much the more jealously should you guard his right of discussion. If it were only to gain your sympathies with Dr. Knowlton's work, I would not waste your time or mine here to-day; but it is because I want you, by your verdict, to lay down this great and just principle—that opinion, honestly given opinion, honestly expressed opinion, freely and fairly published, shall not be prevented public expression because a police-officer does not agree with the opinion so expressed upon matters in which probably he is not at all informed. I have in my hand the opinion of Mr. John Stuart Mill, in which he treats of the right to free discussion: he says, in his Essay on Liberty: "But I deny the right of the people to exercise such coercion, either by themselves or by their Government. The power itself is illegitimate: the best Government has no more title to it than the worst. It is as noxious, or more noxious, when exerted in accordance with public opinion, than when in opposition to it. If all mankind, minus one, were of one opinion, and only one person were of the contrary opinion, mankind would be no more justified in silencing that one person than he, if he had the power, would be justified in silencing mankind." I put it to you that a medical work, published by a medical man of eminence to raise a great public and social question, must not be branded as obscene because you disagree with it; but the more you disagree the more you are bound to give weight to the arguments we put forward here. But, after all, does any single one of you believe that my co-defendant and myself desired, in publishing this work, that it should tend to corrupt the morals of the public? This is not a question merely of publishing an indecent work. For what reason are we dragged here—a man and a woman whose whole lives disprove the allegation against us? What hidden motive is there for bringing us here to answer so monstrous an accusation? Whiteside once said of a prosecution in which he defended the prisoner (and may not his words be used to-day with reference to the present proceedings?): "The whole object of this unprecedented prosecution is to stifle the discussion of a great public question. Viewed in this light, all other considerations sink into insignificance; its importance be-

comes vast indeed. Destroy the right of free discussion and you dry up the sources of freedom. By the same means by which your liberties were won can they be increased or defended." It is said that that principle of free discussion may be carried too far, but Whiteside, whom I have just quoted, deals with that point, in reference to prosecution on these matters. He holds that prosecutions, with regard to division of opinion, are unjust and unfair, as I shall show you this prosecution is in a few minutes. "Quarrel not," he says, "with the partial evils free discussion creates, nor seek to contract the enjoyment of that greatest privilege within the narrow limits timid men prescribe. With the passing mischiefs of its extravagance contrast the prodigious blessings it has heaped upon man. Free discussion gave to Europe the reformation, which I have been taught to believe the mightiest event in the history of the human race—illuminated the world with the radiant light of spiritual truth. May it shine with steady and increasing splendour. Free discussion gave to England the revolution, abolished tyranny, swept away the monstrous abuses it rears, and established the liberties under which we live. Free discussion, since that glorious epoch, has not only preserved, but purified our constitution, reformed our laws, reduced our punishments, and extended its wholesome influence to every portion of our political system. The spirit of inquiry it creates has revealed the secrets of nature—explained the wonders of the creation, teaching the knowledge of the stupendous works of God. Arts, sciences, civilisation, freedom, pure religion, are its noble realities. Would you undo the labours of science, extinguish literature, stop the efforts of genius, restore ignorance, bigotry, barbarism, then put down free discussion, and you have accomplished all. Savage conquerors, in the blindness of their ignorance, have scattered and destroyed the intellectual treasures of a great antiquity. Those who make war on the sacred right of free discussion, without their ignorance, imitate their fury. They may check the expression of some thought, which might, if uttered, redeem the liberties or increase the happiness of man. The insidious assailants of this great prerogative of intellectual beings, by the cover under which they advance, conceal the character of their assault upon the liberties of the human race. They seem to admit the liberty to discuss—blame only its extravagance, pronounce

hollow praises on the value of freedom of speech, and straightway begin a prosecution to cripple or destroy it." That is exactly what our prosecutors are to-day trying to do; don't forget that stopping us in our object will only tend to cause some others to rise on the same subject, who may do better than those who went before them; but if you find a verdict of guilty against us you may stop the discussion of the whole population question until we try the matter again. I will ask you whether, when I unfold to you the nature of this prosecution, you will not feel that Knowlton is not guilty of using the word marriage to cover obscenity, but rather that the prosecution is using the name of Knowlton to smother the right of free discussion and free press in this country. Now, gentlemen, I must appeal to you on a simple matter of justice. I must ask you to look at the way in which this prosecution is conducted. I asked Detective Simonds what his weekly wage was, and how long he had been in the detective force. Probably, when I asked him those questions, you may have thought that I was asking useless ones without an object, and although in most instances you would have been right in considering they were not directly to the issue, and therefore inadmissible according to the laws of evidence, I asked them with no idle intention. I asked them for this reason—It is one of the principles of English justice, that those accused shall be placed face to face with their accusers, and shall understand who brings them to answer before the bar of justice. Our difficulty in knowing the aim of the prosecution is, that we don't know at the present moment who is prosecuting us. When first we were arrested and taken to the Guildhall we were kept waiting for more than two hours shut up in the cold and uncomfortable cells under the Guildhall court of justice. We were then told that we were kept there to await the presence of the City Solicitor, who had the conduct of the prosecution. Hearing that, we thought we were to fight a prosecution conducted by the city authorities. We wrote to the City Solicitor, and our belief was strengthened by his answer, because the City Solicitor, writing on the paper of the Corporation, using the stamp of the Corporation, and signing under his name "City Solicitor," has only the right to use the funds of the city to conduct prosecutions for the city authorities; we naturally then believed that we were being prosecuted by the city authorities. Imagine our astonishment when on Mr. Bradlaugh asking whether that was

so, we were told that "the Corporation of the City of London has nothing and never had anything to do with the prosecution against you and Mrs. Besant"! This came to us as a greater surprise because Mr. Douglas Straight, instructed by the City Solicitor, said in open court that he appeared on behalf of the Corporation. You may imagine that we found it difficult to discover what private malice had been brought to bear in the institution of the prosecution against us. We tried to find out; we wrote to the solicitor and he wrote us telling us the Corporation had nothing to do with it, and referred us to the head of the Police of the city, who in his turn, in answer, said he had nothing to do with it and that we must refer to the information. We found upon the information the name of William Simonds, there being no address given. We wrote for the address, which was furnished to us, and we then wrote to detective Wm. Simonds asking if he were the man responsible. We received in return merely an answer expressing his pleasure at receiving our letter. Now Mr. Wm. Simonds has been in the force for 13 years. He commenced at 28s. a week, and has risen to 31s. 6d., and he has some clothes in addition. I will ask you to use your common sense whether Mr. Wm. Simonds on 28s. a week, rising to 31s. 6d., has made such large economies that he has been able to save sufficient money out of his salary to find the fees and engage the services of the Solicitor-General, Mr. Douglas Straight, and Mr. Mead, instructed by the City Solicitor, to prosecute us? If it be possible to live upon so small a sum of money and also put by sufficient means to fight one's difficulties with the aid of a powerful retinue of legal advisers such as the learned counsel engaged in this case, there can be no necessity for appealing to Dr. Knowlton's work with any desire to keep down one's family on the ground of want of means. (Laughter.). Why, when Dr. Knowlton's work was commenced to be published in England—that was forty-two years ago—Mr. William Simonds must have been a little boy. He must have made this prosecution the far-off ideal of his life, and undoubtedly he must have commenced to have saved the 6d. or 9d. a week, which he should have spent in sugar-plums or toffee, to have then commanded means sufficient to have retained the services of the Solicitor-General and these other gentlemen. Now, see the position in which we stand with regard to this prosecution, which is a disgrace to English justice. If we win. the

whole of the costs will fall on William Simonds—as the country allows nothing for expenses—as the only responsible prosecutor in this case. We know that the Queen is nominally our prosecutor, but there is no public fund out of which the costs of our prosecution can be paid. Where, I should like to know, do the costs come from, and who is hidden behind the city constable that they refuse to let us and you know? If we win the verdict, who is to pay the costs? Poor Wm. Simonds—is it possible that we can look to him? or are there people hidden behind the coat of the city detective, of whom we have a right to hear, and the hiding of whom tends to open the door to the greatest scandal in the prosecution of public justice in this country? Where has this sudden virtuous inspiration sprung from? I have a right to assume its real origin, because our names have been dragged into another prosecution which is being carried on, and which was only commenced in order to prejudice this case. Its representatives are here to-day, brought here lest the failure of the Solicitor-General and the two learned counsel whom he leads should need the fostering care of these hidden abettors. Forty or fifty years ago there was a society called the Society of Vice, but better known as the Bridge Street gang; in this Society, under cover of a few respectable names, a herd of spies and informers carried on their despicable work, and hunted down honest booksellers, whose works are now found on the shelves of every thinker. This society sank out of sight under a weight of shame and disgust, but it has again arisen, and is once more at its foul work. It is to-day worthily represented by its secretary, Mr. C. H. Collette, solicitor, and he boasts openly that he "prompts" the Solicitor-General against us. That he is starting all these prosecutions is very suggestive, and I ask you whether you will countenance a society like that, sheltering itself under a police detective in order to prosecute a man and a woman who are spending their lives in trying to do good to their fellow-creatures? If you think we are wrong in doing so, we must bow to the result of your verdict; but I submit that the whole conduct of this prosecution has been malicious and disgraceful, and I trust that in a case like the present you will pause before you give a prosecution, instituted as this one has been, any encouragement. I now come to deal with the pamphlet itself. The Solicitor-General has read the whole of the preface, and

has thus saved me from having to read it over again. Allow me to refer to the history of the pamphlet. The Solicitor-General exhibited a curious—if not a pretended—ignorance on the subject when he spoke of "Mr. Knowlton." No doubt the learned Solicitor-General's time has been so fully occupied in the conduct of his wide criminal practice, that he has had very little opportunity of studying the details of medical works; Mr. Chas. Knowlton might be anyone; but Chas. Knowlton, M.D., is a medical man, who, by reason of his position, has more right to deal with physiological details than a layman. He was an M.D. in good practice in Boston, which city is said to be considered by the Americans as the "hub of the universe"—the "hub," meaning the acme of culture, of education, of scientific thought and ability. Chas. Knowlton not only practised in Boston as a leading physician, but he was also a contributor to the foremost scientific journals of that city. That city is the American centre of pure intellect, and the greatest proof that I can give you of the qualifications of Dr. Charles Knowlton is the fact of his contributing to those journals, when I tell you that those leading medical journals of the city of Boston rank in the same category as do the *Lancet* and *Obstetric Journal* published in England. I point out that to you with a knowledge that these are not matters of evidence, but because I think it important to you to know that Dr. Charles Knowlton was not only looked up to and respected throughout his native town but throughout the whole of the United States. In consequence of its not being evidence we did not think it worth while to bring from America Messrs. Seaver & Mendum, the proprietors of the leading Boston Freethought paper, to prove that Dr. Knowlton was to their knowledge a man of blameless life. I contend that such observations as those of the Solicitor-General should not be allowed to be brought against the character of a man of Dr. Knowlton's capacity, and that it is going too far, even in a criminal prosecution, to cast unfair slurs on the name of a dead man. Dr. Knowlton's book was published in America, and was largely sold there. In 1833 it was published in London by Mr. James Watson, who died the year before last. He also was a man of unblemished life, who, while he had been prosecuted by the Government for the sale of political and other pamphlets, now generally published, had never had the smallest shadow cast upon him as seller of an indecent book. He was one of those men who persisted in selling

unstamped papers, and the penny newspaper press of this country is the result of the struggles in which Mr. James Watson took part; it was the result of those struggles which made it possible to sell for a penny those journals which were previously sold bearing a sixpenny stamp. When he died he was honoured by all who knew him, even by those who had prosecuted him in his lifetime. That was how this book was first issued forty-four years ago. Mr. James Watson died, as I have already said, about a year and a-half ago. We had thought of putting his widow into the box to prove the publication; but in consequence of her ill-health, and her desire not to be troubled with an examination in a public court, we have determined, in reverence for the memory of her dead husband, not to bring her here against her will. The book was not only sold by Mr. James Watson but also by Messrs. Holyoake & Co. One of this firm was Mr. George Jacob Holyoake, whose name is probably fairly well known to you. The other was Mr. Austin Holyoake. He it was whose "Thoughts in a Sick Room," written when he was dying, were spoken of admiringly by Miss Frances Power Cobbe, a lady whose opinions might not be supposed to be favourable to such a man as Austin Holyoake. He recommended this book, in a pamphlet of his own, in conjunction with Robert Dale Owen's "Moral Physiology," and the "Elements of Social Science," a book which no one yet has had the courage to attack. It was also sold by Brook & Co., 282, Strand, but I will not conceal from you that the moment the prosecution was instituted the last-named firm sold the copies they had at once, that they might not stand in the same position as we stand in to-day. It is not pleasant for booksellers to stand in such a position, and I cannot blame them if they did not persist in the sale of the pamphlet. From Mr. Holyoake the book went into the hands of a Mr. Charles Watts, and on James Watson's death he bought the plates of the work together with many others from the widow. His plea to the indictment of wilfully publishing an obscene book was, as you know, a plea of guilty. The Solicitor-General, doubtless from forgetfulness, entirely omitted any reference to that trial, and spoke as though we republished the book because of the Bristol affair. It is not the case that we published the book because of the prosecution of the man named Cook, at Bristol. We should never have troubled to republish a book because a man named Cook, at Bristol, had been

called up about it. It seems, from the reports I have seen, that he was not really called up for this pamphlet, although nominally he was prosecuted for it; he was a bookseller of known bad character, and he sold very few of these works, because they are not written in a style which a vendor of obscene literature would find it profitable to sell. It so happened that this Mr. Charles Watts had published for my co-defendant for some years, and for me for a short time, thus somewhat connecting our names with his, and bringing us into the disgrace of his yielding. Mr. Watts thought it right to plead guilty, and I feel this fact is calculated to prejudice our case, and that if you did not hear our defence the very plea of guilty, put in by the man who published the book, would make you put the book down to be one of that set of obscene publications which are sold for the purpose of making a large profit. We felt that the book could not be given up in that fashion. Gentlemen, that book had been published for more than forty years by those with whom my co-defendant had worked, and whose work I have inherited (for I have only come young into the work). That book being so published, we felt it our duty to the dead who had gone before, as well as to those yet living, that no plea of guilty should be allowed to stand, and that imprisonment should be braved rather than that the stigma of indecency should attach to those whom we reverence. Neither Mr. Bradlaugh nor myself had previously had anything to do with the purely technical details connected with publication. We took this new work upon ourselves in order that we might issue this book that everybody shrank from issuing. We were not printers before, but we became printers that we might print this book; we became publishers that we might publish this book; we took a shop that we might sell this book; and we did all this at a time when danger attached to it, and we had nothing to gain and much to lose by so doing. That, gentlemen, is the history of the book. The Solicitor-General stated that the sub-title of the book has been changed. Gentlemen, that is perfectly true. The sub-title of the book used to be "Private Companion to Young Married Couples," or, "Young Married People." That sub-title is just like the title of Dr. Chavasse's book. He calls his book "Advice to a Wife," and Knowlton's was called "Advice to Young Married Couples." Frankly, I don't like titles of that character. Dr. Chavasse's book is a good and a useful book, and labelling it "Advice

to a Wife" gives a kind of suggestiveness to it, and hints that you might get a special kind of knowledge, which is, I think, a mistake when you are dealing with a book to be put on railway bookstalls. But I hold that there is nothing indecent or obscene in calling a book "Advice to a Wife," or "Private Companion to Young Married People." Gentlemen, I have no experience of obscene literature; I have never seen a book which has been made the subject of a prosecution such as this, but I understand that it is the usual thing, where an obscene book is published, that the printer's and publisher's names are omitted, and they so evade responsibility. I may say there is no attempt at concealment here, when you find that right through this book is openly published; first by James Watson (holding up the works cited in turn), then by Holyoake & Co., then by Austin & Co., then by Brook & Co., then once more published by James Watson & Co. at a later address, then published once more by James Watson at another address, and, latterly, by the "Freethought Publishing Company," bearing the imprint "Printed by Annie Besant and Charles Bradlaugh." There is here throughout no concealment of publisher or printer. Having once found how the responsibility of the printer might be treated when it was challenged, we made up our minds to put our own names on everything we published for the future, so that we alone might be responsible for every word we thought it right to issue to the public. So much for the history of the pamphlet; now for the pamphlet itself. If it would not trouble you too much, gentlemen, I would ask you kindly to mark the passages with which I deal, because I don't want to give you the trouble of going over the same ground twice. I will first take the preface, for, although I thought that the preface could not be attacked, I heard it read by the Solicitor-General as part of the accusation. It might be thought that the case for the prosecution was so small that he was obliged to fill up the necessary time by reading the preface, for I don't see anything obscene or immodest in it. But to suggest that that could have been his object would be discourteous to my learned antagonist. I will refer to a passage at page 6, dealing with the publishers' preface, from "We publish this pamphlet" down to "sound judgment." I need not read it as you have already heard it read. The Solicitor-General said we do not "agree" in our preface with the medical views or the philosophical proem; we

simply wanted to guard ourselves against endorsing every one of the medical and metaphysical views of Dr. Knowlton. The Solicitor-General put it that we did not agree with them, but whether or not we agree with them, we are responsible for them for the purpose of this trial. However much we may disagree with Dr. Knowlton, we are responsible for every syllable that he has written. I hold that everyone who prints and publishes a book ought to be held to the fullest extent responsible for that which he issues to the public. I hold that nothing is so cowardly, nothing is so mean or so disgraceful, as for a publisher to issue a book, or for an editor to issue a journal, and then, when challenged by the law, to shrink back and say "I did not know what I was doing." If publishers are not aware of what is in the books they publish, they ought to be; and if editors do not know what is in their journals, they ought to know. You have no safety for character, or for morality, or for any of our valuable institutions, unless you make the publisher responsible for everything which he issues. Therefore, in saying that I don't endorse Dr. Knowlton on some points, I don't want to shirk full responsibility for all he has here written. That preface was written because we hold that, on social questions, discussion is a vital necessity, and we published Dr. Knowlton's views, not because we agreed with him, but simply because we think that his views ought to be heard. I agree with Dr. Knowlton's principle; I think that some kind of check to population ought to be adopted; but when this preface was written, I did not know enough of medical books to know whether his checks would tend to promote health. I put it to yourselves that it is a question very much discussed in France—what kind of checks are healthy to the women and the children. You must get that question settled, for on the question of the health of the women and children depends the deterioration or the improvement of the next generation. You cannot settle that question unless you permit doctors to discuss what checks are healthy and what are not. Amongst the French doctors' books I have read in the course of this defence, I have found some objections raised to some of the checks put forward by Dr. Knowlton. But, I say, you cannot deal with this question unless every man is free to put forward his medical knowledge without fear of prosecution, or of the disgrace of obscenity being attached to the book that he may issue. That may, perhaps, cover the

point of the Solicitor-General as to our agreement with Knowlton. I will only, in the next page, page 7, draw your attention to the three concluding lines of the first paragraph, with reference to the names of other works being given in foot notes. Not desiring that Dr. Knowlton's views should be taken without study, we thought it right to add the references, so as to afford any one the opportunity of seeing what might be said against as well as for. The preface says: "We advocate scientific checks to population, because so long as poor men have large families pauperism is a necessity and from pauperism grow crime and disease." I shall have to deal with that a little more fully later on, and I will only put it to you now, that you have got before you a great social question which is becoming more and more pressing as every year goes by—a question the gravity of which is recognised by men like John Stuart Mill, by men like Professor Fawcett, by men like Professor Cairnes and Professor Bain, as well as by some of those whom we shall put into the witness box. I must put it to you that if pauperism is the consequence of large families and that if from it grow crime and disease, then you will be bound to bring in a verdict of "not guilty," because we shall have shown that our object in publishing this pamphlet was not in any way to arouse the passions of the unmarried, but simply to prevent the curse of pauperism, which is becoming more and more a pressing question with every year that rolls over our heads. You will now permit me to refer to the former publisher's preface, which is not in the copy now before you. The Solicitor-General thought it right to put it to you, without offering one word of proof, that Dr. Knowlton used the word "married" to cover unmarried people, and that he really meant to suggest promiscuous intercourse. In fact, he speaks most warmly against it. You find he says: "It is a notorious fact that the families of the married often increase beyond what a regard for the young beings coming into existence, or the happiness of those who gave them birth, would dictate." He goes on to say that in publishing the pamphlet his only object is to enable married people to have some control over the number of children they bring into the world. It is a fact that the object of this pamphlet, so far from destroying marriage and so far from approving any kind of illicit connection between the sexes—it is a fact that this pamphlet is written by Dr. Knowlton, and circulated by us to-day, for the purpose which the learned judge suggested

was a question of great importance, that of making early marriage possible to a very large number of young men to-day. Our object is not to destroy marriage but to make it more widely prevalent; not to encourage prostitution, but to destroy that which is a very prolific source of prostitution, the shrinking of young men from marriage because of the terrible responsibility that marriage often brings with it. That is the object of my co-defendant and myself. I lay stress upon another part of the preface, because the Solicitor-General seemed to insinuate an objection to the idea: "without even a partial sacrifice of the pleasure which attends the gratification of the productive instinct." I put it to you that there is nothing wrong in a natural desire rightly and properly gratified. There is no harm in feeling thirsty because people get drunk; there is no harm in feeling hungry because people over-eat themselves, and there is no harm in gratifying the sexual instinct if it can be gratified without injury to anyone else, and without harm to the morals of society, and with due regard to the health of those whom nature has given us the power of summoning into the world. I put it to you gravely, that it is only a false and spurious kind of modesty, which sees harm in the gratification of one of the highest instincts of human nature—an instinct which goes through all the world, not only in the animal but in the vegetable kingdom; if you are to blame Dr. Knowlton because he recognises a great natural fact, then it is your duty to blame the constitution of the world, and the arrangements of nature, because you find that the reproductive instinct *is* attended with pleasure in its due gratification. The notion that pleasure *quâ* pleasure is wrong is an ascetic notion, which is at the base of a large amount of the profligacy of the present day. You even find it stated, right through the teaching of the Christian moralists, that Providence annexed pleasure to the reproductive function in order to ensue the perpetuation of the species. Take Jeremy Taylor. No one will say that in his "Living and Dying," he wrote a book intentionally calculated to arouse sexual desires. You will find he says that God appointed sexual pleasure in order to ensure the reproduction of the species. It is not only by those to whom the co-defendant and myself belong that this fact is recognised. You find it in the bishops of the Church of England and your great moralists. They say that it is the special plan of Providence so that the species in the animal and vegetable kingdom may be preserved. Mon-

taigne truly said, that it is only an impure mind which sees impurity in the function which brings mankind into the world. I put it to you that the pamphlet is specially addressed to the married, and there is not one single syllable in it that gives colour to the insinuation that the word "marriage" is used as a cover to unlawful desires. I now come to the Philosophical Proem. I do not agree with it, but I say there is not a single syllable which even the Solicitor-General can twist into indecency, and I hold that in order to convict on this indictment you must take the whole book to be obscene.

The LORD CHIEF-JUSTICE: I don't want to interrupt you, but that is going too far.

Mrs. BESANT: Is it putting it a little too strongly?

The LORD CHIEF-JUSTICE: You are wrong there. The question is whether the book is obscene, not whether there may be intermediary passages that are not obscene. You must take it as a whole. They have charged the whole book. The jury must look at the scope and effect of the whole.

Mrs. BESANT: I am much obliged to you, my lord. You must read the whole of the publisher's preface, and judge of that part which will tend to produce obscenity taken as a whole. I will call your attention to a sentence in the Philosophical Proem to show the tone of Dr. Knowlton. He speaks of—"Passions acquired by habit—habitually hankering for stimulants, as spirits, opium, and tobacco, is one of these." Dr. Knowlton, you will see, is not a man specially given to physical or sensual indulgence. You will find that on many points he is, what would be called by many people, ascetic. In the third paragraph you will see:—"That which gives rise to agreeable consciousness is good, and we desire it. If we use it intemperately such use is bad, but the thing itself is still good." How can the Solicitor-General, then, pretend that intemperate passion is advised by Knowlton? The only other passage in the philosophical proem with which I need trouble you is the second paragraph on page 3. We are told there, "Man by nature is endowed with the talent of devising means to remedy or prevent the evils that are liable to arise from gratifying our appetites, and it is as much the duty of the physician to inform mankind of the means of preventing the evils that are liable to arise from gratifying the reproductive instinct as it is to inform them how to keep clear of the gout or

dyspepsia." And I will put it to you that that is true. The doctor cannot pick out one portion of the human frame and say: I won't deal with that because, in so doing, I may be branded as indecent. It is the physician's business to deal with the whole man and woman, and so to deal with them that he may warn them from what disease is likely to arise, and what methods they may take in order to prevent such arising, and you will find right through this that Knowlton, writing as a scientific man to those whom he desires to instruct, is really giving them such physiological knowledge as will tend to the preservation of their health; and, more than that, you will find that duty thoroughly recognised by other doctors as well as by Knowlton. Now, take the case of Dr. Acton, where he is dealing with some of the questions which are most objected to by the learned Solicitor-General. Knowlton also deals with them, and I take leave to say that, after all, a doctor of medicine in America may surely be permitted to deal with subjects that a doctor of medicine in England is also allowed to deal with. You find in dealing with Acton that he publishes a book treating right through of the functions and disorders of the reproductive organs, a book which he does not intend to go amongst medical men, but which he intends for more general circulation, because he distinctly says he hopes it will exert good influence on public health and public morals. You will find Dr. Acton arguing: "I have been entreated over and over again to urge on parents, guardians, schoolmasters, and others interested in the education of youth, the necessity of giving their charges some warning, or some intimation of their danger." Dr. Acton, gentlemen, is dealing specially with one of the intemperate practices to which Dr. Knowlton alludes in some five lines, and which Dr. Acton gives a large portion of his book to, and he is dealing there with the question as to whether it is wise or not to publish details of that kind, and he publishes here details which Knowlton does not, and you will find, when my co-defendant comes to deal with his book, that he clearly puts there that you cannot possibly—especially with young men—avoid their having knowledge regarding their own bodies, and that it is better—especially so long as you allow them to read the classics—that they should have some kind of what I may, perhaps, call an antidote, in physiological knowledge, to that thoroughly sensual set of ideas that they get in dealing with the classical authors; and he says: "it is in this way that

men of my mode of thinking view the distinction between he modern newspaper details and the prurient literature which has been generally known as Holywell Street. In this last-named literary garbage, illicit pleasure was depicted in all its most attractive and meretricious forms, but the anonymous author, like the translators of the Greek and Latin lores of the heathen gods and goddesses omitted to allude to the frightful consequences that illicit love or bestial propensities produce on all those who directly or indirectly indulge their animal propensities." That, Dr. Acton says, is the distinction between decency and indecency, and right through this book you will find the strongest language employed by Dr. Knowlton against such intemperate indulgence as is bad for the health of those for whom he writes. With that, I think, gentlemen, I may almost leave this philosophical proem, although I had marked, to read to you, two sentences that follow the one I have just read to you, putting it that the reproductive instinct, being a physical need like hunger or thirst, comes as much within the province of the physician as any other part of the human body, and I will put here what is matter of fact—as later, I can show you from Mr. Darwin—that what Knowlton says about health is shewn to be true by the fact that married women live longer than unmarried women, and this is a point you get right through every census table that you can take up. You will find there that marriage has a distinctly lengthening effect on human life; you will find that bachelorhood or spinsterhood distinctly shortens life; and it is only reasonable it should be so, gentlemen, because those who despise the natural instincts of nature can scarcely be surprised if nature revenges herself by shortening the life which they do not know how to use. That, then, I will put to you, that you find—especially dealing with my own sex—that unmarried women (and if any of you are doctors you will know it well) suffer from a number of diseases, special to the reproductive organs, that married women, as a rule, do not suffer from, because they have not thwarted nature in the fashion that those who lead a celibate life must do. And I may say here, too, that Dr. Knowlton remarks that "mankind will not so abstain;" as a simple matter of fact, I must put it to you that men and women, but more especially men, will not lead a celibate life, whether they are married or unmarried, and that what you have got to deal with is, that which we advocate—early mar-

riage with restraint upon the numbers of the family—or else a simple mass of unlicensed prostitution, which is the ruin both of men and women when once they fall into it. I will pass, gentlemen, from that, on to the first chapter of Dr. Knowlton's essay. Dr. Knowlton writes the first chapter to show "how desirable it is, both in a political and social point of view, for mankind to be able to limit at will the number of their offspring, without sacrificing the pleasure that attends the gratification of the reproductive instinct;" and I will put it broadly, that mankind will not sacrifice the pleasure that attends the gratification of the reproductive instinct, and that you have got to deal with things as they are, and not with things as they might be—if ascetics could form the world better, as they think, than nature has already formed it. It has been put that the political economy of this pamphlet is only a cover for an indecent object. If so, it seems almost strange and suicidal on Dr. Knowlton's part that he should speak so strongly against profligacy as you find him do in this first chapter. It is not usual for a man who wants to induce young people to become profligate, to carefully point out to them all the harm that will come from their following his advice, and all the misery that will attend them in after-life if they carry out his suggestions. I am inclined to think, taking the learned Solicitor-General's point of view, that Dr. Knowlton, instead of being attacked for writing an obscene pamphlet, ought almost to have been shut up in a madhouse for taking the very means that must utterly destroy the end which he proposed to himself to attain. This chapter, then, which is part of the incriminated book, deals with a serious question of political economy, and I will draw your attention now to the first paragraph, "in a political point of view"—"If population be not restrained by some great physical calamity, such as we have reason to hope will not hereafter be visited upon the children of men, or by some *moral restraint*, the time will come when the earth cannot support its inhabitants. Population, unrestrained, will double three times in a century. Hence, computing the present population of the earth at one thousand millions, there would be at the end of one hundred years from the present time, 8,000 millions; at the end of 200 years, 64,000 millions; at the end of 300 years, 512,000 millions, and so on, multiplying by eight for every additional hundred years. So that, in 500 years from the present time, there

would be thirty-two thousand seven hundred and sixty-eight times as many inhabitants as there are at present. If the natural increase should go on without check for 1500 years, one single pair would increase to more than thirty-five thousand one hundred and eighty-four times as many as the present population of the whole earth!" I urge, gentlemen, that this chapter cannot be separated from the book when you are dealing with the intent of the book; that you have no right to presume an indecent intent unless you have some amount of proof which shall show that the intent is bad; and I urge that the whole of the tone of this first chapter directly negatives the contention which the Solicitor-General put forward to you in opening the case for the prosecution. That contention of Knowlton is one that is thoroughly and fully recognised by others; and when you are dealing with it, if you once allow my definition of this first chapter to stand, you cannot convict on the remainder of the book; because, if I can prove to you that you must have some checks on population—that you have only got the choice between the checks of vice and misery and the scientific checks for which we plead—if I can prove that to you, you cannot bring in a verdict of guilty against us. You may say, "physiological details are introduced;" but you cannot discuss the population question without introducing physiological details. You may lay down the law, as Knowlton does in his first chapter, without physiological details; but it is no good laying down the law if you don't apply the law; and you cannot apply the law until you make the people acquainted with the simple mechanism of their own bodies, as Dr. Knowlton does here; and I will put it that there is nothing more hopeless to us than if the increase of our knowledge is simply to point out to us the doom which we are powerless to avert; you had better have no political economy at all, no science at all, if that science is only to drive us to despair by giving us the knowledge of an approaching misery, while you forbid us in any fashion to discuss the means whereby we may avert it; you can no more discuss the population question without physiology than you can solve an arithmetical problem without figures. If you tried to do it you would utterly fail; you might lay down your law, but you could not apply it without the details. The economical law teaches the danger of over-production; nature teaches us that men and women will marry; and the object of medical science is to teach us how the

law of political economy, and the law of nature, may be shown so to dovetail into each other, that they may be both obeyed by human beings without wrong or harm being done to any one. The prosecution, when pressed specially—I may say pressed almost by the learned judge himself—picked out one or two extracts of the book which it characterised as specially obscene. Our duty is, then, to bring forward the other parts of the book which show that those parts of the book are simply necessary for the solving of the question in hand; and as the intent is part of the indictment, if I can show you that Knowlton's intent, and, therefore, our intent, is a scientific intent, you will be bound to bring us in not guilty of the indictment against us. That I think you will find to be so strongly decided in a number of trials that I have put down here, that unless my course of dealing with it is objected to by the prosecution I won't trouble you with the references I have made. On the fourth page you find Knowlton putting forward:—"Some check, then, there must be, or the time will come when millions will be born but to suffer and to perish for the necessaries of life. To what an inconceivable amount of human misery would such a state of things give rise! And must we say that vice, war, pestilence, and famine, are desirable to prevent it? Must the friends of temperance and domestic happiness stay their efforts? Must peace societies excite to war and bloodshed? Must the physician cease to investigate the nature of contagion, and to search for the means of destroying its baneful influence? Must he that becomes diseased be marked as a victim to die for the public good, without the privilege of making an effort to restore him to health? And, in case of a failure of crops in one part of the world, must the other part withhold the means of supporting life, that the far greater evil of excessive population throughout the globe may be prevented?" Gentlemen, that is practically putting that law of population, which was laid down first, in the year 1798, by the Rev. T. R. Malthus, who was a fellow of Jesus College, Cambridge, and a professor of history and political economy at the East India College, in Hertfordshire. Malthus wrote that the law of population, which he then pressed on the people of his time, was that "there was a constant tendency in all animated life to increase beyond the nourishment prepared for it. It is observed by Dr. Franklin that there is no bound to the prolific nature of

plants and animals but what is made by their crowding and interfering with each other's means of subsistence"; and he goes on to say, "And it may safely be pronounced that the population, when unchecked"—and I lay great stress on the "when unchecked," that you may find out the terrible nature of those checks, against which we are setting ourselves in this trial—"population, when unchecked, goes on doubling itself every twenty-five years, or increases in a geometrical ratio. The rate according to which the production of the earth may be supposed to increase will not be so easy to determine. Of this, however, we may be perfectly sure, that the ratio of their increase in a limited territory must be of a totally different nature from the ratio of increase in the population. A thousand millions are just as easily doubled every twenty-five years by the power of population as a thousand, but the food to support the increase of the greater number will by no means be obtained with the same facility. Man is confined in room. When acre has been added to acre until all the fertile land is occupied, the yearly increase of food must depend on the amelioration of the land already in possession." That is the way that Mr. Malthus puts it, and I may perhaps deal there with the figures he puts because he puts it so clearly that I think that by reading this I shall give you the whole gist of Malthus's "Law of Population." "Let us call," he says, "the population of this island eleven millions. Suppose the present produce equal to the easy support of such a number (and I may remind you, in passing, that the population which Malthus speaks of as eleven millions—which was then nearer ten millions—has since then gone up to something like twenty-three millions, while, as you know from the price of food, food has not multiplied itself with the rapidity which population has done), "in the first twenty-five years," he says, "the population will be twenty-two millions, and the food being also doubled, the means of subsistence would be equal to the increase. In the next twenty-five years the population would be forty-four millions, and the means of subsistence only equal to the means of twenty-three millions."

The Lord Chief Justice: He hardly makes any allowance for deaths. He gives the actual increase, and not the ratio?

Mrs. Besant: He deals with that further on, and I shall

show, in a few moments, the checks that keep it down. Mr. Malthus does make allowance for what should be the ordinary death-rate, and be points out the misery that results from war and starvation, which are the checks that are acting to-day; and that is the justification, my lord, for our pamphlet.

Mr. BRADLAUGH: I do not know how long your lordship will sit. At this stage Mrs. Besant is about half-way through the matter which she has to bring before your lordship. I have been following it on the brief.

The LORD CHIEF JUSTICE: We must go on, I think, for another half-hour, unless Mrs. Besant feels exhausted.

Mrs. BESANT: Oh, no; I can go on.

The LORD CHIEF JUSTICE: Then I think we must take another half-hour.

Mrs. BESANT: The reason why I am bringing this forward, gentlemen, is that I shall have to show you—as I can show you, and I shall bring some figures to-morrow morning to show you and the learned judge—that the population does double itself in 25 years, in countries where food is sufficient to support it. That, gentlemen, is really the justification of our pamphlet; for we believe that the present checks that keep population down are the misery and starvation that result from over-crowding, and we want to substitute scientific checks for those. I was quoting from Malthus, where he was pointing out the rate of subsistence that is natural to the human kind; you find in the "second 25 years the population gets to 44 millions, and the means of subsistence to only 33 millions. In the next period the population is 88 millions, and the means of subsistence just equal to half. At the conclusion of the first century, the population would be 176 millions, and the means of subsistence only equal to the support of 55 millions, leaving a population of 121 millions totally unprovided for"; and then he goes on to point out that the human species would increase, with a sufficiency of food, in the ratio of the numbers 1, 2, 4, 8, 16, 32, and so on.

The LORD CHIEF JUSTICE: In other words, geometrically.

Mrs. BESANT: Yes; in the geometrical ratio, my lord.

The LORD CHIEF JUSTICE: Whereas the food increased in arithmetical proportion.

Mrs. BESANT: That is just how he puts it; I was putting it in figures, lest the technical terms should not so well

convey the idea. Then that is Malthus' "Law of Population," published by him, as I put to you, in 1798. Since that time, gentlemen, a very large number of books have been written, all bearing on this subject, and, almost without exception, the books of the leading political economists follow the theory propounded and laid down by Mr. Malthus. You may remember that Miss Martineau said that it would be as absurd to try to upset the law of population as to upset the law of arithmetic. That is putting it very plainly. But it just shows you the view that thinkers take on the subject. I do not mean to give all the quotations I might to back up Malthus, or many except on special points, but I may say that both John Stuart Mill and his father, Professor Cairnes, Professor Fawcett, Mrs. Fawcett, Professor Bain, and many others, whose works, at the present time, are the text-books for the instruction of young men at the Universities of Oxford and of Cambridge, as well as at other universities, that all those do agree, without exception, in the law laid down by Malthus ; that they all, without exception, acknowledge his division as to positive and preventive checks, which I shall have to deal with to-morrow, and all, without exception, do say that unless you can find some way of limiting the population of the world by preventive checks, you must be content to remain with those old barbarous means, which the Solicitor-General said were the provisions made by God and nature for our benefit: those provisions are — war, famine, disease, misery, starvation, overcrowding, preventible disease, infanticide, baby-farming, and all other horrors of our civilization : those are the means which the Solicitor-General says God and providence give us in order to prevent the over-increase of our population. Gentlemen, when the Solicitor-General said that, I remembered the same expression being used, now almost one hundred years ago, when, in the House of Lords, it was ventured to be put forward that the use of the Red Indians to scalp our American brethren was a means that God and nature had put into our hands to crush the powers of rebellion, and I remembered the fiery indignation of Lord Chatham, who, whatever may have been his faults, at least remembered England's honour in dealing with this point, and he said—"God and nature ! I have yet to learn, my lords, that these sacred names are to be employed in fashion such as that !" and when I heard the Solicitor-General, when telling you of nature and providence, as

he put it, when he spoke of the miseries I have seen in our cities as one of the means God and nature have employed to destroy children brought into the world, children often born from drunken parents, in misery, in wretchedness and filth, which, gentlemen, your circumstances have happily removed you from; when I heard those things put down as a provision of God and nature, I trusted that, at least with you, terms used in cant fashion such as that would not have more influence than when used in that other fashion in the House of Lords in the last century. That, you will find is the law, and now what is the application which the learned judge suggested when I was speaking? Twenty-five years was the time within which Mr. Malthus said population doubled itself unless checked by misery, and war, and starvation. Refer, gentlemen, to the Northern States of America, and you find there, as a matter of fact, put forward here by Mr. Malthus and since then endorsed in America by Professor Draper—whose works are probably familiar to all of you—that in the Northern States of America, "where the means of subsistence have been more ample, the manners of the people more pure, and the checks to early marriages fewer than in any of the other modern States of America and Europe, the population has been found to double itself, within the last century and a half, in less than twenty-five years." That was written in 1798; during the time that has passed since then, you will find, gentlemen, if you consult the census returns of the United States, that the population has doubled itself in every twenty-five years, and in some of the States—if I may take the evidence of Professor Draper as thoroughly reliable on that point—in some of the States, he says, it has doubled itself in twelve years, instead of in fifty.

The LORD CHIEF JUSTICE: Is that including the results of emigration?

Mr. BRADLAUGH: That is excluding the emigration returns.

The LORD CHIEF JUSTICE: Is that so?

Mr. BRADLAUGH: Yes.

The LORD CHIEF JUSTICE: It is very astonishing!

Mr. BRADLAUGH: It is very astonishing, but it is the result, after carefully excluding the emigration returns.

Mrs. BESANT: One may weary you with it, my lord, but so many of these things are not known generally, that you will pardon me if I put them to the jury, so that they may

see how we, who have studied this matter, put the question, and why we think it so vital a question, when dealing with it before you. The population does not increase, as my lord fairly pointed out, at this rate in this and other countries. Why not? "Population," says Malthus, "is necessarily limited by the means of subsistence. Population invariably increases where the means of subsistence increase, unless prevented by some very powerful and obvious checks. These checks, and the checks which repress the superior power of population, and keep its effects on a level with the means of subsistence, are all resolvable into moral restraint, vice, and misery." I shall put it to you, gentlemen, that you must have some checks, that the only choice you have got is, not whether there shall be checks, but what the checks shall be. You have got that choice, if you agree with the Solicitor-General. You may think the means of nature (for I won't bring the other name into a contention such as this)—you may think the means of nature are those you prefer, and then I put it to you, if so, that you go back to the old savage times where you get those checks in their full swing. You do get them there, gentlemen. If you want to go back, you must decide for these checks. I will now lay before you the division of checks made by Malthus, and it is with that division, I almost think (with my lord's permission), that I shall finish my speech of this afternoon, simply because, my lord, it makes a clear division of sense which it will be valuable to me to keep.

Those checks are divided into what are called "positive" checks, and what are called "preventive" checks. Positive checks for a moment I will call "natural" checks, following out the line of thought which the learned Solicitor-General kindly draws for my guidance, but they are "natural" only in the sense of being general throughout Nature; that is to say, it is the death-producing check which is the positive check, the check that produces death. You find it in the vegetable kingdom; you find it in the animal kingdom; the trees produce a number of seeds more than can ever grow into plants, animals produce far more young than ever can grow into maturity. If any of you have taken an interest in natural history, you will have seen there (and even without that you must know it from the common every-day matters of life), that the death producing check is the one check that acts throughout nature of all the young brought into the world, not one tithe survives to grow up into maturity; but that check is only a natural check in the

sense that nature is opposed to art, to science, or to men's reason. It is only natural, when you exclude man from nature and treat nature as simply brutal animal instincts and passions, and nothing more. The moment you admit man's reason into nature, that death-producing check is no longer a natural check, because man's reason is given him by nature, in order that by being thrown into the mass of a number of mute laws he may learn to balance law against law, and in doing that may use his reason to bring him out of the terrible crushing wheel of nature, that breaks down the lower organisms that have not our brain. I plead for preventive check. Preventive check means that man's brain is used—preventive check means birth-restricting check as opposed to death-producing check ; and I hold, in the words of our preface, gentlemen, that it is more moral to prevent the birth of children than it is after they are born to murder them as you do to-day by want of food, and air, and clothing, and sustenance. Gentlemen, I call it a birth-restricting check—an artificial check if you will, because all comfort and all civilization are artificial. It is the natural way, as the Solicitor-General put it (although not delicately, perhaps), for a man to go about naked ; though that is not respectable, that is the natural way of doing things. We, however, prefer the artificial fashion, which has the decency of clothing, instead of that which the Solicitor-General put, and I plead for what is called the artificial check—the preventive check ; and I say that man's reason is given him by nature in order that he may, by his reason and by his intellect, prevent that suffering which results from the laws of nature, if you take nature without man. That, gentlemen, is what I shall plead for to-morrow. I have brought you down now partly through our pamphlet, with our reasons for doing it. I have put to you as plainly as I can the meaning of the word obscene, which will govern your verdict ; I have pleaded that our intent is good, and that the purpose at which we aim is good, because it conduces to human and to social happiness. I have shown you from Malthus—and he has never yet been disproved—what the law of population is. I have shown that some checks must prevail, either positive or preventive, and to-morrow I will deal with these.

SECOND DAY.

THE Court sat again, exactly at 10.30, and on taking his seat the Lord Chief-Justice intimated that he had received a letter from a gentleman who did not append his signature, complaining of the want of ventilation in the court, and requesting that more windows might be opened. He should certainly most willingly have granted the request, only that there were no more windows to open.

Mrs. BESANT, resuming her address, said: My lord, gentlemen of the jury: You will remember that when the Court rose, yesterday afternoon, I had just brought my argument down to the necessary checks on population which, following the rule laid down by Malthus, I had divided into two classes—one class being those positive, which I characterised as death-producing checks, which the learned Solicitor-General named as being that with which Nature and Providence had interposed, and the other those preventive, prudential, or birth-restricting checks, of which I am here the advocate. I propose, this morning, to take up my argument exactly where I laid it down, for it is very important for me in this trial that I should build up, step by step, the arguments which I desire to lay before you, and by which I hope to overthrow the contention of the learned Solicitor-General, that the whole of the philosophy of this book is only a cloak put to cover the body of a vicious and demoralising intent. I laid the foundation of the argument yesterday, and I shall proceed to take it step by step to-day, and while I shall do my best to compress my arguments so far as I can, I am quite sure that I may ask from your sense of justice, and from your patience, the full consideration which will be necessary, if I am to put before you the contention which I raise. I feel slightly encouraged to-day, in trespassing on your time, from the fact that even this morning we have had the pleasure of receiving a letter from Professor Bain, a man who will be known to all of you, a man who is known wherever thought has spread, in which he says, that he regards this trial "as one of the most critical trials in the history of our liberties." If that be true, or if it is possible that it can

be true, you will not think I am unduly trespassing on your time if I leave no argument untouched which may avail to move you at a crisis so important. It is the positive checks with which I have to deal first. Malthus puts it that the ultimate check on population appears to be "want of food arising necessarily from the different ratios according to which population and food increase." You will remember that the learned judge pointed out that population increased in a geometrical ratio, while the means of supporting the population only increased in an arithmetical ratio. "The immediate check," says Malthus, "may be said to consist in all those customs and all those diseases which seem to be generated by a scarcity of the means of subsistence, and all those causes independent of this scarcity, whether of a moral or a physical nature, which tend prematurely to weaken and to destroy the human race." These are the checks of which, for the purpose of his argument, the learned Solicitor-General thought it right to speak in words of praise. These checks are found to apply most rigorously in savage nations, the tendency of civilisation being, instead of leaving the rough natural checks and other injuries to operate, to bring the means of neutralising the effect of natural laws. It is to savage nations, then, that we first turn. You get as a check on population, war, that in savage nations mows down so many of the strongest of the tribe, and, by destroying men in the prime of their life, acts, to a very great and wide extent, as a check on population. You get also the hardship of the daily life killing off the sickly and the young—a check that Malthus characterises in the very strongest terms, pointing out, as he goes through his great work, that, amongst some savage nations, a large proportion of children die because their baby frames are unable to support the hardships of their life. You have the difficulty of subsistence and of getting food, on which Darwin lays special stress as being a universal check; in his great work on the "Origin of Species," p. 61, he remarks that "of the many individuals of any species which are periodically born, but a small number can survive," and on p. 63, he says: "A struggle for existence inevitably follows, from the high rate at which all organic beings tend to increase. Every living being which, during its natural lifetime, produces eggs or seeds, must suffer destruction during some period of its life, and during some season or occasional year; otherwise, on the principle of geometrical increase, its numbers would quickly

become so inordinately great that no country could support the product. Hence, as more individuals are produced than can possibly survive, there must, in every case, be a struggle for existence, either one individual with another of the same species, or with individuals of distinct species, or with the physical conditions of life. It is the doctrine of Malthus applied with manifold force to the whole animal and vegetable kingdoms, for in this case there can be no artificial increase of food, no prudential restraint from marriage. . . . . There is no exception to the rule, and every organic being naturally increases at so high a rate that, if not destroyed, the earth would soon be covered by the progeny of a single pair. Even slow-breeding man has doubled in twenty-five years, and, at this rate, in a few thousand years, there would literally not be standing room for his progeny." He further goes on to point out that people do not recognise "this fact as thoroughly as they ought to do, owing to the fact that among the larger domestic animals we see no great destruction falling on them, and we forget that thousands are annually slaughtered for food, and that in a state of nature an equal number would have somehow to be disposed of." You get another check on population, operating in savage nations, and I shall have to put it to you as largely prevailing amongst ourselves. Amongst savage nations you get infanticide openly practised to a large extent. In the ruder tribes of America it is practised by many mothers, who do not wish to burden themselves by rearing more than two out of their offspring. If a mother endeavours to rear the whole of her children, a large proportion inevitably perishes under the rigorous treatment which must be their lot in a savage state, where, probably, none of those who laboured under any original weakness or infirmity could possibly attain the age of manhood. If they do not get cut off as soon as they are born they cannot long preserve their lives under the severe discipline that awaits them. You get another check in the murder of the aged, for the moment they cease to become productive, and can no longer make food for the tribe, their lives are put an end to. You get the whole thing well summed up in Malthus, who urges that all the checks you find in the savage state may be summed up in misery. He speaks of "the frequent wars of these savages with different tribes and their perpetual contests with each other; their strange spirit of retaliation and revenge, which prompts the midnight murder and

the frequent shedding of innocent blood; the smoke and filth of their miserable habitations, and their poor mode of living, productive of loathsome cutaneous disorders; and, above all, a dreadful epidemic like the small-pox, which sweeps off great numbers" (p. 17). It is thus that Malthus sums up those checks on the increase of mankind which prevail amongst savage nations, and what I want you to bear in mind, gentlemen, if you will kindly do so right through, is that we have got to deal with phases of these checks amongst ourselves, and it is to you that the poor of this country are now looking, hoping that you will say that, instead of these checks that mean misery and vice, you will give them the chance of a scientific check, which means happiness and comfort for the home. Looking through history, all the great periodical famines that kept down the European population may be traced back to this same species of check. All the great incursions of the Northmen and of the Goths were simply produced by the want of the means of subsistence, and, overcrowded in their own land, these strong and vigorous races they overflowed into more fertile lands that they might find them there. These are the only answers that savage nations have found to the great population question—simply starvation, war, famine, and disease; these are the checks which have prevented savage nations from increasing as rapidly as they would have done otherwise. Now, we come to a slightly more advanced state of civilisation, and since I do not want to follow Malthus in his great work from country to country, because to do that would make my speech last nearer a week than the day to which I hope to confine it, I will take one single instance, that of China, which may be considered as a representative country, where the population difficulty is bringing now tremendous social and political difficulties that have already touched America, and have touched our own colonies in Australia, and that may touch England as well, unless we can find some better solution than is at present afforded. China, as you know, is a country that may almost be said for thousands of years to have been growing into such an instance as I want to lay before you. They were against emigration, were shut up within their own circle, and, in addition to that, their creed gave them special encouragement to marry, to marry at a very early age, and to bring into the world as many human beings as

possible. We find in the "Statesman's Year Book" that the population of China in the year 1877 is reckoned at 405,213,134.

The LORD CHIEF JUSTICE: For what year?

Mrs. BESANT: The present year, my lord.

The LORD CHIEF JUSTICE: Is it the present population?

Mr. BRADLAUGH: It is an estimate; hardly an official census.

THE LORD CHIEF JUSTICE: It refers to the present population?

Mrs. BESANT: It does; and it is taken upon estimates based upon the Chinese official returns. The "Statesman's Year Book" goes on to point out that the above population, giving 263 souls per square mile, appears to be excessive, considering that some of the outlying portions are by no means densely inhabited. It goes on to say that the census taken in 1842, which would be rather before the enormous amount of emigration, showed a population of 419 millions, and in 1852 it was 450 millions, that increase being enormously rapid, while it has, during the last few years, been somewhat checked by the very large emigration which has had most lamentable results. The result in China, as laid down by Malthus, has been most unfortunate, for he points out that, "notwithstanding the great sobriety and industry of the inhabitants of China, the prodigious number of them occasions a great deal of misery. There are some so poor that being unable to supply their children with common necessaries they expose them in the streets," and that, gentlemen, is a resource which you know is unfortunately not confined to the inhabitants of countries like China. We are told that the country, "extensive and fertile as it is, is not sufficient to support its inhabitants," and that "four times as much territory would be necessary to place them at their ease," and he points out that that wretchedness has been the consequence of the over rapid increase. You get in China, as another result of this population question, an enormous amount of infanticide, chiefly amongst female children—because the males being more productive the female children are those who suffer most—and you find, as a consequence of this, that terrible prevalence of unnatural crimes right through China,—crimes so shocking in their character that I will not even mention them in this Court. You find in America, where these Chinese have spread, carrying with them those unnatural crimes which always result from

a thwarting of nature—you find in America continual complaints of the Chinese servants, who are beginning to overrun the land, so that it is impossible to put children into the care of Chinese men because of the terrible habits that they have brought with them from their over-populated county. The very reason of our last war in China recalls us to another branch of the great question that we are discussing to day. We went to war on the question of the opium traffic. Opium is simply taken there in order to buy escape from the terrible sexual difficulty which arises from the fact that the number of men far exceeds the number of women in that unfortunate land; for taking opium does at first give rise to some of the feelings which should be only naturally aroused, and then later it entirely destroys the sexual instinct; that is one of the answers that China has given to this question in her utter ignorance. In Australia, our government there sent home to complain that the proportion of women amongst the immigrant Chinese was utterly inadequate to sexual needs, for only four or or five women went over, amongst literally cart-loads of men. Sixteen women, my co-defendant tells me, to some 15,000 men, was the proportion that one table shewed, as having emigrated from China. Your experience is sufficient to tell you the terrible amount of crime and disease to which such a state of things must necessarily give rise. Leaving then that part of the question, because your own reading must have made you familiar with so many of these questions that I need not trouble you more with them here—I will come to those checks on population in Europe, which, as my lord pointed out, seemed to neutralise, to some extent, the conclusions of Malthus. You find, in Europe, that these positive checks have been so extremely marked, so curiously and strongly marked, that right through the 1000 years that are taken as the Middle Ages, the population of Europe had not even doubled. During the whole of that long period some tremendous checks must then have been in operation in order to keep down the natural fertility of the human species. Later, the increase has been very rapid, and it is only reasonable, therefore, to try to find out what has caused the change between the stationary state of things for 1000 years, and later, the very rapid increase. The rapid increase has simply been due, generally, to the fact that civilization has removed many of those checks which, in

the more barbarous time of the Middle Ages kept down the population of this Continent. Now, instead of the sickly being left to die without treatment, they are cured by the advance of sanitary science, and we now take more care to prevent disease, as well as possess more skill in curing it. These are the reasons why you find the population to-day increasing so rapidly, and it becomes a practical question for us to grapple with the ever-growing danger. And not only is it the tendency of civilisation to reduce all those checks that are called death-producing checks or positive checks by Malthus, but you have the tendency to reduce these ever more and more rapidly. War is beginning, although very slowly, to be replaced by arbitration, and although that has not yet been thoroughly carried out, we may hope that, as nations become wiser and more civilised, we shall have fewer wars and more frequent resorts to arbitration and to legal and reasonable remedies. One may hope also that we shall be able to cure disease more extensively the more doctors discover of the secrets of nature; and as many diseases are preventible, we may look forward to the time when the returns of the Registrar-General will showmore deaths from old age than from any other cause. You thus come to the point put by Knowlton on page 4, "that some check there must be, or the time will come when millions will be born but to suffer and to perish for want of the necessaries of life." The advantages of civilisation are to some extent neutralised by the terrible idea that the more civilised we become the more we remove the natural checks, and, therefore, the more quickly approaches the period of actual general privation; the sick, instead of being left to die, are cured by medical skill; hospitals are built, wherein they are sheltered, and not only is it that the sickly do not die, but they survive and marry, and so pass on the inheritance of their own feebleness to the children who proceed from such marriages. The aged in the Middle Ages died far more rapidly than they do now; now their life is lengthened by the care, nourishment, and comfort which they enjoy. Then, such plagues as that which visited Florence, and the great plague of London, in the reign of Charles the Second, have now become almost impossible, owing to our improved sanitary arrangements. Since these checks are now so much diminished by science, it is necessary to bring in some scientific checks to take their place. Nature, left to herself, balances herself; but if we interfere with nature by curing the sickly

whom she is killing, and preserving the life which she has doomed, it becomes necessary to substitute scientific for natural checks—for you must not interfere on one side without interfering on the other; the increase of science otherwise means only the increase of human misery. It may be said that the result is a long way off, and that it is not worth while to trouble ourselves with what will only affect the century that follows us. Is this so? You find that a gentleman called Mr. Montague Cookson, who is well known in this court, and who would not be inclined to frighten people for the purpose of causing an effect, says, in an article which appeared in the *Fortnightly Review* of October, 1872: "But, without being extravagant, we may, nay must, go further. If there were no counteracting causes, sooner or later the time would come when this little island would be overstocked to such a degree that the great bulk of the inhabitants would be unable to procure the bare necessaries of life, and ultimately this would be the case, not only in England, but in all the countries of the globe. However unpalatable the truth, it is useless to disguise the fact that the sources of food are limited, whereas, but for war and disease, which many people"—(Mr. Cookson says, here anticipating the Solicitor-General)—"openly treat as special interferences in man's favour, the augmentation of human beings would be unlimited. Emigration somewhat interposes; but emigration is only effectual so far as it aids equal distribution, and is, therefore, but a temporary method of dealing with the difficulty which will have to be disposed of at no distant day, on a more gigantic scale." That is the argument put forward by Mr. Cookson in an article in which he is dealing with the very subject under discussion here. It is entitled "The Morality of Married Life," and I shall refer to it several times, in order to show that if you give a verdict of guilty against us you must remember that you are not only branding us but half of the leading writers in England, every one of whom has substantially taken our side on this great question. What, then, are the checks in England? In 1821 the population of England was 12,000,236, and you find that fifty years later—in 1871—it was 22,712,266. When you think, gentlemen, how, during that time, the cost of food and living has risen, I think you will say with me that this population question is not a question for the future, for if we have nearly doubled our numbers in fifty years, in spite of those lamentable checks

to which in a moment I shall have to draw your attention, what will be the rate of increase during the next fifty years—the time that our children will have this country—unless some greater thought can be brought to bear upon it? You know from your own experience how rapidly food is rising at the present day. During the last ten or twelve years, those things which are regarded as most necessary to human life have increased in the most rapid proportion. Bread, meat, and milk, all most necessary things for men, women, and children, have gone up in price. These are things known to every housekeeper—and this is a point where a woman may speak with almost more knowledge than a man would be expected to possess, seeing that though men have to pay the bills generally the women have to buy the necessaries,—and, therefore, the question is a personal one to ourselves. I find that Professor Fawcett, in his essay on "Pauperism, its Causes and Remedies," published by Macmillan and Co. in 1871—I may say, my lord, that we are prepared to prove the publication of every book we use in this way—Professor Fawcett puts it very strongly and clearly. He says that the "population of England and Wales in 1810 was about 10,000,000, and 50 years later, in 1860, it had grown to 20,000,000. At the present time it is growing at the rate of 200,000 every year, which is almost equivalent to the population of the county of Northampton. If in 50 years the descendants of one million become two millions, it is obvious that in 100 years the two millions will have become four millions, so that if the population of England were eight millions in 1810 it would be 80 millions in 1960." So he goes on to point out that if 22,500,000 now find it difficult to obtain sufficient food, what would it be if there were 40 millions to be maintained! This will be our population in 40 years if the rate of increase which has prevailed since the beginning of the century continues. "At the present time it is said that there is a great redundancy of labour. Many who are willing to work cannot find employment; in most of our important branches of industry there has been great over-production; every trade and every profession is over-crowded; for every vacant clerkship there are hundreds of applications. Difficult as it is for men to obtain a livelihood, it is ten times more difficult for women to do so; partly on account of unjust laws, and partly because of the tyranny of society, they are shut out from

many employments. All that has just been stated is admitted by common consent—it is the topic of daily conversation, and of daily complaint—and yet with the utmost complacency we observe 200,000 added to our population every year, and we often congratulate ourselves upon this addition to our numbers, as if it were an unerring sign of advancing prosperity. But viewed in relation to the facts just mentioned, what does this addition to our numbers indicate? To this question only one reply can be given—that in ten years' time, where there are a hundred now seeking employment, there will then be a hundred and twenty. This will not apply simply to one industry, but will be the case throughout the whole country. It will also further happen that in ten years' time, for every hundred who now require food, fuel, and clothing, a similar provision will have to be made for a hundred and twenty. It therefore follows that, low as the general average standard of living now is, it cannot by any means be maintained, unless in ten years' time the supply of all the commodities of ordinary consumption can be increased by 20 per cent., without their becoming more costly." Gentlemen, if I may trouble you to look at it from that point of view, you will understand how grave is the feeling with which we argue for this pamphlet—not because we want this pamphlet carried on—not because we attach special value to this one pamphlet—but because a verdict of guilty against this pamphlet means that it will not be safe for medical men, or for political economists, to discuss the question of population at all; and we feel that unless the question of population may be discussed, you will come, in ten or twenty years, to an amount of suffering of which we can scarcely realise the extent. Professor Fawcett quotes Ireland as showing the effect of overcrowding on population —and when we are dealing with Ireland you must admit that you are dealing with a land at our very doors, and in whose prosperity we are deeply interested. Professor Fawcett says, "Ireland should serve to warn us of the terrible misfortunes brought upon a country by an undue increase of population. At the beginning of the eighteenth century, the population of that country was about two millions: maintaining for the next 150 years a smaller rate of increase than is now going on in England, the two millions had grown into eight millions in the year 1847. The country, at this time, became so densely peopled that a considerable portion of the nation could only obtain the barest subsistence; still, nothing was

done to avert the suffering that was certain to ensue; the people went on marrying with as much recklessness as if they were the first settlers in a new country possessing a boundless area of fertile land. All the influence that could be exerted by religion prompted the continuance of habits of utter improvidence; the priests and other ministers of religion encouraged early marriages. At length there came one of those unpropitious seasons which are certain occasionally to recur: the potato, the staple food of the people, was diseased, and it was soon found that there were more people in the country than could be fed." And then he comes to a description of the terrible Irish famine, which was only really put an end to by the enormous emigration from Ireland which carried off the surplus population. I put this to you: what is there to prevent that happening in England which has happened in Ireland? We are following the Irish plan, we are increasing the population with more rapidity than we are increasing the food supply. What right have we to think that we shall escape the terrible sufferings of Ireland, if we go on ignoring with Irish recklessness questions like that for which I am pleading to-day? But the justification of this pamphlet lies in the checks that are operating round us on every side. I have put it to you that there must be some checks in operation, because we are not increasing at the natural rate. Malthus puts it that every check on population may be put down as referable either to moral restraint, to misery, or to vice. Moral restraint being unfashionable in this country, and it being dangerous to venture to treat the subject at all, as my presence here to-day shows you, we are driven back to accept those checks of poverty and vice which Malthus says are the only checks except moral restraint that can be brought to bear. The justification of this pamphlet is, therefore, the nature of the checks that are operating on every side. First, I shall put the overcrowding in towns which you, gentlemen, from your happier circumstances, may not have seen much of, but which I, who have gone much among the poor, know from personal experience. When the time comes to bring evidence before the Court, I shall call one or two clergymen of the Church of England, who will bear witness to the terrible nature of the evils against which we speak. The Rev. Mr. Horsley, late of St. Michael's, Shoreditch, and now chaplain of the House of Detention at Clerkenwell, will tell you that I am not in any way exaggerating the extent of this

check, and he will speak from his own personal knowledge. I also propose to call the Rev. Stewart Headlam, now of the parish of Bethnal Green, who from his own knowledge and experience will tell you the nature of these checks on population. He will also give you some idea of the extent to which it has a terribly demoralising effect on the young of both sexes, who are necessarily subject to it. Personal witnesses will perhaps be more effective than any books I could read. When you are dealing with a scientific subject, it has always been ruled that scientific evidence may be adduced, not as giving an opinion on the special subject at issue, but simply as a doctor may bear witness to a certain fact as having come within his own personal knowledge. In the proceedings of the National Association for the Promotion of Social Science, there is an essay read by George Godwin, F.R.S., pressing this question of population very strongly. He states that he himself traced it out in one of the poorest districts of the metropolis. Mr. Godwin says : " Evidences of overcrowding turn up from time to time where they are not looked for. It was but the other day that a child was found dead in Brownlow Street, and, on inquiry, it was learnt that the mother, a widow, and six children slept in one bed in a small room. The death of the child was attributed to the bed clothes. In such an atmosphere as a room so occupied must have, the vital power necessarily becomes weak, and to kill is easy. In a house of respectable appearance outside I found a hole under the stairs made the sleeping place for three persons, twenty-one, seventeen, and fourteen years of age. It was intended originally for the reception of coals ; it is not more than four feet deep, and the height, of course, diminishes to nothing, as the steps descend. When the door is closed there are only seven small gimlet holes in the stairs for ventilation. Is it surprising that fevers break out under such circumstances ? One is struck, sometimes, with the strange contrivances resorted to to meet the difficulty of want of room. Thus, in a model lodging-house for families, a father, who with his wife and one child occupies one room, has accommodated six of his nine other children cross-way on two camp bedsteads, while three elder girls, one sixteen years old, sleep on a small bedstead near. The room is well ventilated and clean, but the same sort of stowing away is to be found in hundreds of cases, under circumstances which render it deadly. In another

room in the same building, a wooden shelf has been contrived, which can be pushed under the bed during the day, and drawn out at night to accommodate a pile of children. In a respectable house, not far from the last, occupied by steady artisans and others, I found that nine persons slept in one of the rooms (12 feet by 14 feet)—a father, mother and seven children; eleven shoemakers worked in the attics; and in each of the other five rooms there was a separate family. I could quote scores of cases of overcrowding, in what would seem to be decent houses, but the repetition might tire. No words, even aided by the pencil, can give a full idea of some of the dens which are occupied by a lower and different class; many born to evil and without the power to rise; others the victims of more recent misfortunes or their own conduct. The world has still an interest in improving their condition: children, as yet innocent, cry aloud to be rescued from the otherwise inevitable gulf. In some places, in the eastern districts, quite recently visited, I have found ten, eleven, and in more cases than one, fourteen persons occupying a single room." These are some of the facts which being known to my co-defendant and myself have made us feel it a duty which no personal considerations can make us shrink from, to publish for sixpence that information which might be utilized to prevent continuance of such misery—information which wealthier women can obtain in higher-priced publications. When it comes to a question of immorality, you get far more immorality by crowding five or six boys and girls together than you can get from giving them dry physiological knowledge, such as is given in the pages of Knowlton. Mr. Godwin gives a number of cases, of which I take one more, the description of a house in Bemerton Street, Caledonian Road: "The basement below the level of the street contains, in the front room, an old man and his wife; in the back room, two lodgers; in the parlours, there are a man and his wife and eight children; on the first floor a man and his wife and infant, two girls 16 and 18 years of age, and occasionally their mother, all in the front room; and in the small back room, two women, a girl, and two young children. On the second floor, a father, mother, two young grown-up sons, an infant, and a brood of rabbits. Two women and two boys in the back room make the whole population of the house thirty-four. In the next house there were thirty-three

persons similarly divided." These are things which will be explanatory to many of you gentlemen, who may wonder what motive we could have for bringing forward such a question as this, for it will show you how the overgrowth of population affects the poor. Dr. Lankester, who, as coroner for Middlesex, is surely some authority, says that, "In the parish of St. James, which is not one of the poorest districts in the metropolis, there are 10,000 persons who, for the sake of their health, ought to be removed from the parish." That is not the amount of the whole population, but the amount of the surplus population, whom Dr. Lankester states should be removed from the parish if that parish is to be put into a healthy condition. You find him urging that over and over again. At a vestry meeting of Marylebone, Dr. Bach, medical officer, said the horrible state of some of the places could scarcely be described; "human beings were there living in such a state of squalid misery that a horse that was kept in the worst possible stable was better provided for. There were 19 houses in which were 89 families, comprising 300 persons. There was one room eight feet square, with a small opening for a window, but no glass, and a man, his wife, and five children lived in it, and there had been seven children." I find that Mr. W. Rendle, who is thoroughly acquainted with this subject, when speaking to an audience of doctors at a meeting of the British Association, said that, though there was this overcrowding in the face of a steadily-increasing population, no real attempts were being made, to any appreciable extent, to prevent it; and he dilated upon the consequent evils: "Overcrowding, the mixing of the sexes, and the results—incest, bastardy, filthy and degrading habits, and, as a consequence rather than a cause, a degraded home, drunkenness, and generally an absence of religion and morality in any true sense." This is the testimony of one who had seen what he speaks of. It is these terrible evils that we are striving to grapple with in some fashion; and if you think our view a mistaken one, and that we are blundering in the remedy we propose, you must say that we are grappling with an evil the gravity of which you cannot overestimate; and, therefore, if we err, it is from want of knowledge, and not from evil will. If this effort of ours is to be met, it is not by the brutal method of repression. The proper way of meeting mistake is argument, and the proper way of meeting error is to bring truth to oppose it. If Dr. Knowlton

is wrong in his checks, let some one who is competent to do it write a pamphlet pointing out his objections, but do not bring us in as criminals when we are trying to grapple with a terrible amount of immorality in our capital. You find this immorality quite as prevalent in the agricultural districts as in the towns. I am now going to quote from a report of the evidence which came before the "Royal Commission on the Employment of Women, Young Persons, and Children in Agriculture," published in 1868. I shall quote the evidence of one gentleman, the Rev. J. Fraser, now so worthily elevated to the see of Manchester, and who has made himself remarkable as a bishop by his intense sympathy with the poor. I am willing to base my case here purely on the report, and I shall not weary you by unnecessary comments. I find that in this report Dr. Fraser, dealing with this very question of overcrowding, puts the case in a terribly strong fashion:—"It is impossible to exaggerate the ill effects of such a state of things in every respect—physical, social, economical, moral, intellectual. Physically, a ruinous, ill-drained cottage, 'cribb'd, cabin'd, confined,' and overcrowded, generates any amount of disease—fevers of every type, catarrh, rheumatism—as well as intensifies to the utmost that tendency to scrofula and phthisis which, from their frequent intermarriages and their low diet, abounds so largely among the poor. Socially, nothing can be more wretched than the condition of 'open' parishes, like Docking, in Norfolk, and South Cerney, in Gloucestershire, into which have been poured remorselessly the scum and offscouring of their 'close' neighbours. Economically, the imperfect distribution of cottages deprives the farmer of a large proportion of his effective labour power. The employer who has no cottages to offer those whom he employs must either attract labourers by the offer of higher wages or must content himself with refuse; and in either case, when he gets his man gets him more or less enfeebled by the distance he has had to travel to his work. The moral consequences are fearful to contemplate. 'I only wonder,' writes one clergyman to me, 'that our agricultural poor are as moral as they are.' Modesty must be an unknown virtue, decency an unimaginable thing, where, in one small chamber, with the beds lying as thickly as they can be packed, father, mother, young men, lads, grown and growing up girls—two and sometimes three generations—are herded promiscuously; where every operation of the toilette, and of

nature—dressings, undressings, births, deaths—is performed by each within the sight or hearing of all; where children of both sexes, to as high an age as twelve or fourteen, or even more, occupy the same bed; where the whole atmosphere is sensual, and human nature is degraded into something below the level of the swine. It is a hideous picture; and the picture is drawn from life. Mr. Clarke, of Norwich, can tell any one who will ask him tales of things that he has himself seen, horrifying enough to make the very hair stand on end. The medical gentleman, whose evidence I publish, assures me that cases of incest are anything but uncommon. We complain of the ante-nuptial unchastity of our women, of the loose talk and conduct of the girls who work in the fields, of the light way in which maidens part with their honour, and how seldom either a parent's or a brother's blood boils with shame—*here*, in cottage herding, is the sufficient account and history of it all." It is, indeed, a fearful picture, but it is one drawn from the life by the Bishop of Manchester, whom you cannot imagine is making a sensational tale for the purpose of attracting popularity. I have myself seen four generations of human beings crowded together into one small room, simply divided into two or three beds, and I will ask you if, after such an experience as that, you wonder that I risk even prison and fine if I can bring some salvation to those poor whose misery I have seen. I will not trouble you to read an extract from proceedings before the Truro magistrates, concerning a man named Tonkin, with nine little ones, seven of whose children were found huddled up in one corner, while the rest were lying about the floor without bedding. He was told that he must clear out; he did not want to go to the workhouse, but he was told that "the nuisance must be abated," and he had to go. There are so many of these Tonkins, but they only come to the top when the crimes that flow from their habits of life shock the public ear. These crimes are the natural results of the way they live; and if we took our own children, gentlemen, and herded them among the filthy associations of these poor people, could we expect from them in their manhood and their womanhood that purity and refinement which we pride ourselves on making possible for them? There is one additional evil, and that is the large amount of illegitimacy which overcrowding gives rise to in country parishes. It is no doubt a fact that among illegitimate children you get a far higher death-rate, the

reasons for which are so obvious that I need not dwell upon them. At Sheffield, the proportion of deaths of illegitimate children is just now 305 per 1000 in the first year. I think, my lord, that is a check on population of a most terrible character, and the report of the registrar of Sheffield has been copied into the papers as showing the terrible way in which that check has affected the increase of the population. Leaving the question of overcrowding, there is the question of insufficiency of food, and of its unwholesome character. I put it to you that this is caused by the fact that many a man does not earn sufficient wages to maintain the number of children he brings into the world. It was said when the Corn Laws were repealed that the effect of that measure would be an enormous reduction in the price of bread, which would enable the poor to live in comfort. Starvation then got so far in England that it was common in the agricultural districts to get up riots against the farmers because the people, in the misery of their starvation, imagined that the farmers hoarded up the corn, and so kept up the price of bread. There is no question that if books of this character had been circulated then, you would not have had that sudden increase of the population which was one of the most remarkable effects of the repeal of the Corn Laws. In the Registrar-General's returns you find that, in consequence of the high rates of wages, marriages are more frequent in certain districts. It is an unfortunate thing that wherever you get more food you find this reckless, improvident fashion of never pausing to think whether the increase of to-day may not be followed by a decrease to-morrow, and that, if so, the food will be insufficient for the little ones to be brought into the world, for the food which would be sufficient for a small family is quite insufficient for a large one. We hear much talk about the physical deterioration of Englishmen; we hear much talk about the artisan of Sheffield or of Manchester not being the same strong, healthy man that his grandfather was, and the reason is not far to seek. When his grandfather was born the population of England was about half what it is at the present time, so that the man of to-day has less room to live in, less food, less clothing, less possibility of health, and that will (grow and is growing) worse year by year unless some scientific thought may be brought to bear upon this great question. I need not repeat that all these are the checks which the Solicitor-General

said were afforded by nature and providence. Another of the natural checks is the terrible drunkenness prevailing among a large number of our poor. It is oftentimes the result of want of food, simply because with so little money they seem to think they can get temporary oblivion with a small amount of drink, while they cannot get enough wholesome food to stop the craving which nature gives. All these causes operate in a double fashion, causing premature death among the adults, and acting in an even more terrible fashion upon the unhealthy children who are born of drunken and dissolute parents, amidst such awful associations, growing up feeble, blood-poisoned, and only half human in many ways. It has often been remarked that when you get to the lowest grade of the criminal class you observe a kind of marked type. This is because the lives of their parents have so unhumanized them, that the children born of such parents are literally a lower race than those of parents whose happier circumstances have raised them above that condition. If you want to know how these checks operate there, again, I think I shall be able to call before you clear medical evidence. For instance, we find Dr. Drysdale, whom we shall, by and bye, put into the box, who will tell you, I have no doubt, how these checks operate, and the reflex results which arise from over-crowding, with the consequent and continual advance of death rate among the children of the rich as well as among the children of the poor. I say among the rich as well as among the poor, though among the poor the death rate is three times as heavy as among the rich. If you go to Islington you find a million of children, all under five years of age, and among them the death rate is 66·9 in a thousand, although Islington is one of the healthiest districts in the metropolis. The death rate, however, is nearly double that in the eastern districts. If you go to Whitechapel, for instance, there the death rate is as much as 102 in a thousand; they die before reaching the age of five years. In Manchester, again, the death-rate is 117 in a thousand; in Liverpool it is 132 in a thousand; and all that death rate I put down as death resulting from what I call preventible diseases, and I urge that you can only judge upon this case when you put before yourselves clearly whether it is either moral or right to allow children to be brought into the world, inoculated with the predisposition to be attacked by these preventible diseases, instead of putting, as

I believe you ought to do, a check which would effectively relieve the population so terribly overcrowded; and you have to consider whether by refusing to apply such a check, we are not, by the very refusal, making a large class of criminals. I will put it to you whether such a check would not be a moral one, and I need not enter very fully into all the details, my point being only that some preventive check, is necessary and would be effectual. "This excessive mortality is no doubt mainly due to our crowded and unwholesome dwellings, and to insufficient food and clothing; these causes more or less directly originate from poverty, and therefore would work with intensified effect if poverty were increased. It may be, therefore, thought that the evil of over-population carries with it its own cure; that as the people increase in number poverty beomes greater; that, if there is more poverty there will be a larger number of deaths. A check to increasing population is thus brought into operation, and hence things will be restored to the same state as they were before. The hardest words which have been ever used against Malthusianism altogether fail adequately to characterise such a doctrine. . . . . Some definite idea may be formed on the subject by considering the results involved in the present high death-rate prevailing amongst the children of the poor. Assume that there are 1000 of these children, that 500 of them die before the age of five, whereas if they were as well cared for as the children of more wealthy parents, only 200 of them would die before this age. The death, therefore, of 300 is to be traced to defects in our social and economic condition. These children are literally slaughtered and in a manner, moreover, which indicates prolonged suffering. But this is only a part, and perhaps the smaller part, of the mischief which is done: the causes which produce this excessive mortality do not alone affect the children who die; all those who survive are also brought under the same blighting influence. Consequently, to all, the struggle for existence becomes more severe, the more weakly succumb; even the stronger who survive, in passing through the trying ordeal, often contract the germs of future disease, their constitutions being in too many cases undermined. Physical deterioration ensues, and a whole people may thus become gradually stunted and enfeebled." Mr. Fawcett, in his essay on "Pauperism, its Causes and Remedies," page 107, says:—"There is amongst

the poorer classes an excessive mortality amongst children. In the wealthy parish of St. George's, Hanover Square, less than one-third of the total number of deaths is of children under five years old; whereas, in the poor parish of Bethnal Green the deaths of children under five amounted to more than half the total number of deaths." Another check on the population is what is called baby farming. Some years ago, as you may remember, there were brought before the police courts very terrible facts in connection with this point, in consequence of prosecutions that were instituted with reference to what was called "baby farming." Just take one instance which I find mentioned as occurring about that time. A child three years of age was employed in one of those places as a ganger over eight other children, in the midst of whom it sat up in bed and as soon as any one of them awoke it was its duty to put the bottle into its mouth. If any of you, gentlemen, have children three years of age, what would you say of putting such babies over eight other children still younger than themselves, which it would be their duty to take care of all night? Consider this fact, gentlemen, and then say if you can wonder at the terrible preventible morality among the children of the poor? These are the views which we hold, and however this trial may end, whether we succeed in the action that is pending or not, it will still be our bounden duty to proceed on the course in which we have set out—not, I wish to say, in a spirit of undue defiance, but in a patient and yet persistent manner on the path of duty which every good citizen owes to the country—to bring these subjects manfully forward, and to urge them upon the careful consideration of our countrymen and countrywomen until, even if we have to pass through a prison in the doing, we shall at last succeed, as all great causes do, and we shall relieve the ruin caused by over-population, and shall bring happiness to the poor, the down-trodden, and the oppressed. There is another kind of check which Dr. Drysdale puts, about which, when he comes before you, he may have something to say. I refer to the very common occurrence of overlying children amongst the poor. Dr. Lancaster puts the case, let me say, very strongly when he states that there are 16,000 mothers in London who have in this way committed child murder. I should be very sorry to believe that this is the case, and I may venture to hope that it savours something of

rhetorical exaggeration; but in spite of that, this habit of overlying amongst the poor, resulting in coroner's inquests and verdicts of accidental death, is far too common, when in one district in the metropolis alone we find that it gives rise to 101 inquests in the course of a single year, and I cannot help thinking that this is one of those preventible causes of death to which I have been referring. In many cases doctors, driven to their wit's-end, have been forced to give certificates of accidental death from suffocation, while they were aware that there might have been motives for the occurrence, as evidenced by the fact that the child was considered by the parents unwelcome, and as adding a new burden in the struggle with which the poor are afflicted. One other cause I shall put before you, upon the clearest possible evidence, and it shall be the last of the direct checks of which, for the moment, I must speak. One other check, I say, to the growth of the population, of the most fatal character to the mind, as well as to the body, is the great, and I fear ever increasing, prevalence of what is rightly and justly called the social evil, the characteristics of which are known to you all. Knowlton puts it that this terrible scourge leads to sterility, and that sexual intemperance brings in its train the most baneful results. Another of the results which flow from sexual vice is illegitimacy, and, in the case of such children, the chances of life are very small, as will readily be seen, when we consider the circumstances under which such children are born. These are the direct checks which, among us, are at present keeping down the ever-growing increase of the population, in addition to the most fatal diseases that flow from them, all of which, or at any rate, most of which, are, as I contend, preventible, and which will, I fear, still more increase unless we take steps to remove the cause. These diseases I need scarcely add are a fruitful cause of the gradual deterioration which we see taking effect among the working classes, and unless some means can be adopted to stop them, they will increase more and more. Professor Fawcett, in his Manual of Political Economy, I find urges upon his readers, on the very same grounds, this question which I have ventured to put before you, and I need not add that it comes from him with far greater weight than it possibly can from me. He states that among "children belonging to the upper and middle classes 20 per cent. die before they reach the age of five;" and he adds

that the amount is more than doubled in the case of children belonging to the labouring classes. This great mortality amongst poor children is caused by neglect, by want of proper food, and by unwholesome dwellings. When we take these facts, and find that this large number of children have literally been murdered; when you consider that the number of these children who, if they had been born in a higher rank would not have died, is calculated by Professor Fawcett at 1,150,000, taking the proportion into account that die amongst the poor more than among the rich, you will see what a large and important question this is, and you will be able to estimate the nature of the evil against which I am pleading to-day. Professor Fawcett in this matter is, I may say, strengthened by the observations of Mrs. Fawcett, that Millicent Garrett, who has become so well and so honourably known. She, too, says that the alarming death-rate amongst the children of the poor, which is induced chiefly by the want of food, clothing, and attention, and from over-crowding "in those districts where they herd together," is "appalling, and is a blot upon the civilisation of this country" ("Political Economy for Beginners," p. 110). Are you, gentlemen, going to give a verdict of guilty against my co-defendant and myself—against a man and a woman whose only efforts have been to consider seriously the means by which this wholesale death may be arrested, and thus to remove the blot which Mrs. Fawcett says has been put upon the civilisation of the country to which we are all proud to belong? These are the natural checks to the overgrowth of the population imposed "by Nature and Providence;" and I will now ask you to consider the means by which the wholesale misery can be avoided which is caused by the operation of those checks. I put it to you whether you are prepared to take upon yourselves the task of bringing in a verdict against us, who, feeling the terrible responsibility lying upon us with regard to the poor, and seeing that the natural checks are incapable of keeping down the population to legitimate limits, and that its undue increase brings about us a mass of human crime and misery, try to substitute prudential for positive checks. It is that crime and misery which we desire to alleviate by applying checks to the over-population of the country—checks so much required at the present time. In that endeavour, so far as it is set forth in this publication, we—Dr. Knowlton, my co-defendant, and myself—we are

all equally responsible. Our desire is common. We wish to bring in effectual checks if possible, and checks which, at the same time, will not harm those who apply them, and which in themselves are neither immoral nor degrading. If the preventive check, the birth-restricting check, does not touch human happiness or affect national morality, it is surely preferable to the terrible checks provided by "nature and providence." One argument only of those which are used against the checks which we propose to introduce is deserving of smallest consideration. Mr. Darwin in his "Origin of Species" puts that argument in the strongest light. Mr. Darwin thinks rightly, with reference to the lower animals, that the application of "natural" checks upon the natural rate of increase is really for the welfare and progress of the various classes of brutes; and Mr. Darwin thinks this "natural" check good for the human species, and in this he is supported to a certain extent by Mr. Herbert Spencer. I will venture to lay before you what I consider to be his strongest statement of that argument, and therefore of any possible objection. Mr. Darwin, writing to us a few days since, pointed our attention to the following extract from his "Descent of Man," p. 618:—"The enhancement of the welfare of mankind is a most intricate problem; all ought to refrain from marriage who cannot avoid abject poverty for their children, for poverty is not only a great evil, but tends to its own increase by leading to recklessness in marriage. On the other hand, as Mr. Galton has remarked, if the prudent avoid marriage, whilst the reckless marry, the inferior members tend to supplant the better members of society. Man, like every other animal, has no doubt advanced to his present high condition through a struggle for existence, consequent on his rapid multiplication, and if he is to advance still higher it is to be feared that he must remain subject to a severe struggle; otherwise he would sink into indolence, and the more gifted men would not be more successful in the battle of life than the less gifted. Hence our natural rate of increase, though leading to many and obvious evils, must not be greatly diminished by any means." That is Mr. Darwin's position, and, putting aside for a moment the awful amount of human misery which it accepts as the necessary condition of progress, let us see if the position be defensible. I have no doubt that if natural checks were allowed to operate right through the human, as they do in the animal, world, this re-

sult would follow. But I may be allowed to direct attention to the point that Mr. Darwin has overlooked, the fact that these natural checks are not so allowed to operate among men and women. Mr. Darwin, you must remember, is accustomed to dealing chiefly, if not exclusively, with the animal kingdom—I mean the animal kingdom as excluding man. He, therefore, overlooks the elements which accompany the struggle for existence as it goes on among the higher class of animals—*i.e.*, man—and that it is in no way comparable with that which goes on among the lower. Among the brutes the weaker are driven to the wall, the diseased fall out in the race of life, and the old brutes, when feeble or sickly, are killed. We all know and have read of instances in which wounded stags have been set upon by their companions and killed. If that were the case amongst men—if the drunken and the improvident were over-ridden in the struggle for existence by those who were careful and temperate—the result might be to improve those who survived, and Mr. Darwin's position might be true. If men insisted that those who were sickly should be allowed to die without help of medicine or of science—if those who were weak were put upon one side and crushed—if those who were old and useless were killed —if those who were not capable of providing food for themselves were allowed to starve,—if all that were done, the struggle for existence among men would be as real as it is among brutes, and would doubtless result in the production of a higher race of men; but are you willing to do that, or to allow it to be done? If not, you are taking away the natural checks instead of keeping them; and instead of improving the race of human beings in the midst of a struggle for existence, you are perpetuating that which tends to the deterioration of the race. For what are you doing? You are protecting and fostering the most careless, the most improvident, the most thoughtless, the most drunken, the most miserable, the most criminal elements of your population, and so you are perpetuating improvidence, crime, misery, disease, and all that tends to the deterioration of the race, while the more provident and more thrifty—those whose qualities should be transmitted, are exactly those who do not marry. Put in this way, the objection, I think, is not valid; and it seems to me that in his argument Mr. Darwin has altogether overlooked this aspect of the question, which is fatal to the ground that he has taken up—the

ground that the natural checks should be sufficient in the human as in the animal kingdoms to overcome the tendency to over-population. We have not, therefore, to deal with natural so much as with scientific checks.

The LORD CHIEF JUSTICE: I think that is a point very well worthy the serious consideration of Mr. Darwin. Whether there may result, as a consequence of the struggle for existence among mankind, the survival of a smaller number of the strongest, or a larger number of the weaker, and whether, should it be found that the weaker survive, the race is not by that means in process of deterioration. The process might result in a few of a higher race, but the effect on the masses would be an increase of suffering and of misery.

Mrs. BESANT: That, my lord, is just the point that I have been endeavouring to make. My contention is that these natural checks cannot have free operation among men, and, although where they have, they eliminate the weaker portions of races, they cannot be fairly applied to mankind; and I trust I shall be able to show that as they cannot be so applied, we are left with the great difficulty that the weaker, who, in the animal world would be pushed out of existence, are, among men, capable of communicating their weaknesses to their offspring, and so they deteriorate succeeding generations. It is for that reason that we seek to bring in an artificial check. Nature balances herself, but if we remove her checks by civilization, and cure those whom she would kill, we must put some other checks in their place. Mr. Darwin believes with us that is necessary to apply some check, in order to promote civilization among men, and to eliminate the elements which all are agreed should be suppressed if possible. He points out (p. 133), that among "savages, the weak, in body or mind, are soon eliminated," and that "we civilized men, on the other hand, do our utmost to check the process of elimination; we build asylums for the imbecile, the maimed, and the sick; we institute poor laws; and our medical men exert their utmost skill to save the life of every one to the last moment. There is reason to believe, that vaccination has preserved thousands, who, from a weak constitution, would formerly have succumbed to small-pox. Thus the weak members of civilized societies propagate their kind. No one who has attended to the breeding of domestic animals will doubt that this must be highly injurious to the

race of man." But Mr. Darwin does not meet his own argument. He states his case, he puts the fact upon record, but he does not suggest any positive remedy, nor does he show how such a remedy, if known, can be applied, so as to ensure success. The checks we propose might eliminate the sickly, just as does the struggle for existence. Dr. Knowlton insists that the proper check to be applied is, not to interfere with the natural and healthy play of the feeling of mankind, but one which may be applied after marriage, and that check, he contends, would deal with the evils of over-population successfully. He does not propose that the check should involve any undue or any unnatural restraint, and so far he is at complete issue with Mr. Malthus, who argues in favour of late, and against early, marriages. Differing, as I do, with Malthus on this point, I here utterly sever my allegiance to him. I do not believe in delaying marriage until a late age in consequence of the considerations he urges for doing so. Malthus puts his argument very clearly and strongly, and it is one which, in my opinion, very few people indeed will be found ready to adopt. No doubt late marriage, from his point of view, would provide some sort of check, but the attendant evils are so great that I infinitely prefer a check which does not necessitate late marriages. Such a check, I believe, has been found by Dr. Knowlton. Malthus says, pp. 404, 405 : "When the wages of labour are hardly sufficient to maintain two children, a man marries and has five or six ; he, of course, finds himself miserably distressed. He accuses the insufficiency of the price of labour to maintain a family. He accuses his parish for their tardy and sparing fulfilment of their obligation to assist him. He accuses the avarice of the rich, who suffer him to want what they can so well spare. He accuses the partial and unjust institutions of society, which have awarded him an inadequate share of the produce of the earth. He accuses, perhaps, the dispensations of Providence, which have assigned to him a place in society so beset with unavoidable distress and dependence. In searching for objects of accusation, he never adverts to the quarter from which his misfortunes originate. The last person he would think of accusing is himself." I shall put it to you that whether the man be a labouring man or one of higher rank who marries, and, in course of time, brings into the world a number of children, when he has not sufficient income to provide adequately for

their wants, is a man who commits a crime, not only against the children themselves, who are born into misery, but commits a crime against the society of which he is a member, because all the children brought into the world, which cannot be sufficiently provided for by their parents, are thrown, for maintenance, upon the saving, the thoughtful, and the self-restraining portion of the community, who have not given rein to their passions. You have Malthus saying that, by the proposal he puts forward, there is a fair prospect that those who bring children into existence shall have a fair means of supporting them; but it did not strike him that young men would not exercise that self-restrain which he advocated, and which he holds to be the bounden duty of men before marriage. He says: "Our obligation not to marry till we have a fair prospect of being able to support our children will appear to deserve the attention of the moralist, if it can be proved that an attention to this obligation is of most powerful effect in the prevention of misery; and that if it were the general custom to follow the first impulse of nature, and marry at the age of puberty, the universal prevalence of every known virtue in the greatest conceivable degree would fail of rescuing society from the most wretched and desperate state of want, and all the diseases and famines which usually accompany it." And he urges: "All that the society can reasonably require of its members is that they should not have families without being able to support them. This may be fairly enjoined as a positive duty." "This preventive check does act," he says, "to some extent. The most cursory view of society in this country must convince us that throughout all ranks the preventive check to population prevails in a considerable degree. Those among the higher classes, who live principally in towns, often want the inclination to marry, from the facility with which they can indulge themselves in an illicit intercourse with the sex. And others are deterred from marrying by the idea of the expenses that they must retrench, and the pleasures of which they must deprive themselves, on the supposition of having a family. A man of liberal education, with an income only just sufficient to enable him to associate in the rank of gentlemen, must feel absolutely certain that if he marry, and have a family, he shall be obliged to give up all his former connections. The woman whom a man of education would naturally make the object of his choice, is one brought up

in the same habits and sentiments with himself, and used to the familiar intercourse of a society totally different from that to which she must be reduced by marriage. Can a man easily consent to place the object of his affection in a situation so discordant probably to her habits and inclinations? Two or three steps of descent in society, particularly at this round of the ladder, where education ends and ignorance begins, will not be considered by the generality of people as a chimerical, but a real evil." Malthus also points out, but I will not trouble you or take up the time of the Court by quoting the passage, that this check acts in the most unfair fashion. It is not those who ought to refrain from marriage, but those who ought to marry who hesitate. It is those who by extra carefulness and foresight fear the results, those who feel the full weight of the responsibility pressing upon them, to whom marriage is disagreeable, and on the other hand it is those who have no care or prevision for those whom they will in the natural order of events have to support, who rush into marriage, and never think of consequences. But is late marriage a good check, and is it productive of morality? The Lord Chief Justice pointed out yesterday that the object of this book was not to prevent early marriages, because the author of it speaks strongly in favour of them, but simply to discover some way in which the moral effects of early marriages might not lead to the immoral effects which occur from over large families. To put off marriage to a late age is, in my opinion, almost certain to lead to immorality, and to consequences of the most unfortunate and regrettable kind. In the first place, people would never consent to the long continuance of self-denial which is involved in the idea. You will never get any large majority of men or women whose natural instincts lead them to join their hands in marriage to forbear, and, therefore, I consider that this is one of the most impracticable schemes which ever entered into the brain of a man of intelligence to propound. Dr. Knowlton's scheme is a very different one. He states that it is a piece of folly to suppose that men and women "will become monks and nuns during the very holiday of their existence, and abjure during the fairest years of life the nearest and dearest of social relations, to avert a catastrophe which they and perhaps their children will not live to witness." I say that men and women will marry young—in the flower of their age—and more especially will this be the case amongst the poorer classes. You

will find that Mr. Montague Cookson, who is one of Her Majesty's counsel learned in the law, and whose duty it is to assist and promote, not to hinder, public morality, ridicules the idea that a young man who has the chance of marrying will refrain from doing so. He says: "To tell a labouring man who has the chance of a cottage that he is not, on prudential grounds, to think of marrying until he has mastered the law of averages, and that even then he is running a considerable risk, is little else than a solemn mockery, and he is entitled to retort that he does not care to be more prudent than his betters. To him a wife is infinitely more necessary than to those of ampler means; for, the public-house apart, all his material comforts must be looked for in his own home, whilst his richer neighbours may satisfy all their wants abroad. It is one thing to have a club-kitchen, and another to have a kitchen for your club." That passage puts shortly and fairly the very feeling that I have myself. I cannot go to the poor man, and tell him that the brightest part of his life is to be spent alone, and that he is to be shut out for years from the comforts of a home and the happiness of married life. I shall have to press this point strongly upon you because the Solicitor-General, in the remarks he addressed to you yesterday, told you that Dr. Knowlton used the word "marriage" merely to cloak his hidden object of advocating a system of immorality. If that is true, the same censure passed on the author of this book must equally attach to my co-defendant and to myself; but let me point out to you that to put forward such a theory is really preposterous, and had it come from any one else than a Solicitor-General who is so high in his profession, so well practised at the bar, and so thoroughly acquainted with the courtesies which belong to a court of justice, I should say that it was one of the most unjust and malicious suggestions that could have fallen from the mouth of an unjust advocate against any defendant whom he was prosecuting. I am going to put this point strongly before you. What do you find? Why, that amongst young professional men marriage is less common than it was; not that they have any disinclination to the married state, not that they shrink from the enjoyment of wife and home, but because they have seen and taken to heart the miseries which too often follow early marriages, and a consequent large family, and they refrain from following their natural incli-

nation from prudential motives. The struggle through which they have to pass before they arrive at an honourable position either at the bar, in medicine, or in the church is such that they reflect three times—ay, four times, before they ask a woman of culture and refinement to place herself in a position where for perhaps eight or nine years her home-life will be a mockery of comfort and a weariness. And yet I say that to put off marriage to a late age is utterly demoralising in its tendency. You will find that fairly put in the first chapter of the "Fruits of Philosophy;" and while I read the extract, I ask you to remember that of such a passage it is put to you by the Solicitor-General that the language is only used as a cover for the advocacy of public immorality. Dr. Knowlton says of late marriage: "But, besides being ineffectual, or if effectual, requiring a great sacrifice of enjoyment, this restraint is highly objectionable on the score of its demoralising tendency. It would give rise to a frightful increase of prostitution, of intemperance and onanism, and prove destructive to health and moral feelings." And he goes on: "Let us now turn our attention to the case of unmarried youth. Almost all young persons, on reaching the age of maturity, desire to marry. That heart must be very cold, or very isolated, that does not find some object on which to bestow its affections. Thus, early marriages would be almost universal did not prudential considerations interfere. The young man thinks 'I cannot marry yet, I cannot support a family. I must make money first and think of a matrimonial settlement afterwards.' And so he goes to making money, fully and sincerely resolved, in a few years to share it with her whom he now loves. But passions are strong and temptations great. Curiosity, perhaps, introduces him into the company of those poor creatures whom society first reduces to a dependence on the most miserable of mercenary trades, and then curses for being what she has made them. There his health and moral feelings alike make shipwreck. The affections he had thought to treasure up for their first object are chilled by dissipation and blunted by excess. He scarcely retains a passion but avarice. Years pass on—years of profligacy and speculation —and his first wish is accomplished, his fortune is made. Where now are the feelings and resolves of his youth? He is a man of pleasure, a man of the world. He laughs at the romance of his youth, and marries a fortune. If gaudy equipage and gay parties confer happiness, he is

happy; but if they be only the sunshine on the stormy sea below, he is a victim to that system of morality which forbids a reputable connection until the period when provision has been made for a large expected family. Had he married the first object of his choice, and simply delayed becoming a father until his prospects seemed to warrant it, how different might have been his lot. Until men and women are absolved from the fear of becoming parents, except when they themselves desire it, they ever will form mercenary and demoralizing connections, and seek in dissipation the happiness they might have found in domestic life." This is written by the man whom the Solicitor-General would have you believe advises young people to rush into promiscuous intercourse and give the reins to their unrestrained passions. You are asked ito believe that, and I can only hope that the sudden strain of parliamentary duty which has lately taken up so much of the time of the Solicitor-General has prevented him from reading this book over with that carefulness which it deserves. If it is not so, I fear I should have to accuse him of something worse than I feel disposed to do under the circumstances. There is no word or suggestion of promiscuous intercourse here. Gentlemen, this is the language of a man who is put before you as one desirous of stirring up the passions of youth, and I ask you whether a man with that intention at heart would be likely to preface his book with remarks directly aimed against profligacy of every sort, and with such solemn warnings against every kind of unfair and immoral living. I think, therefore, I may fairly put it that every young man naturally desires to make a home and enter upon married life when first he comes out into the world. I do not believe that any young man sets out with the intention of rushing into fast life and dissipation, but men are frequently drawn into habits of that kind because they fear the results that follow from early marriage. Since I am told that our object is to increase immorality, and that we only use the word "marriage to conceal the foulest designs upon the purity of society, I may say freely that I hold early marriages to be the very salvation of young men, and especially of young men in our large cities. I hold the belief with a depth of conviction which I cannot put to you in words, that for one man and one woman to help, comfort, and support one another, which they are by nature adapted to do, is a state which

is to be reached, which is to be perpetuated by marriage, and in no other way. It is only by companionship, and the union between a man and a woman, that this is possible. Shut a young man out from the loving influences of home, the golden institutions of the fireside, his wife's society, and the happiness of becoming a father, and you induce a life of profligacy. Gentlemen, do not be deceived. There is no talk in this book of preventing men and women from becoming parents; all that is sought here is to limit the number of their family. And we do not aim at that because we do not love children, but, on the contrary, because we do love them, and because we wish to prevent them from coming into the world in greater numbers than there is the means of properly providing for. Children, I believe, have an influence upon parents purifying in the highest degree, because they teach the parents self-restraint, self-denial, thoughtfulness, and tenderness to an extent that cannot possibly be over-estimated; and it is because I wish to have it made possible for young men and for young women to have these influences brought to bear upon them in their youth, that I advocate the circulation of a book that will put within their reach the knowledge of how to limit the extent of their families within their capabilities of providing for them; for no man can look with pride and happiness upon his home if he has more children than he can clothe and educate. It is because I wish them to marry in the springtime of their youth that I ask you by your verdict in this action to make discussion on these subjects possible, and that men should not be driven to find a substitute for true and pure womanhood and wifehood in other directions. If you render this possible you will make your streets purer and your families happier than they are at present. You have frequently heard the question of disinclination to marry brought forward, and it was not so long since discussed in the public newspapers, and I put it to you whether that was the case fifty years ago? If it was not, what is the reason? Any young man might have married and brought up a family then in comfort, while with the same income he would find it impossible to do so to-day; marriage is less frequent because young men have felt the effects of the law of over-population without knowing clearly from what they are suffering. The increase of population has decreased the value of income, and where the income does not in-

crease with the family, an over number of children brought into the world only means pauperism. Hence it is that the natural desire for marriage is thwarted by the present state of things, and this leads, as Dr. Knowlton puts it, either to proflicacy or to asceticism. I need not re-read the passage on profligacy to you; you have seen he speaks strongly against it. Take a passage from Mr. Montagu Cookson on the same subject. He says: "If, indeed, we could all become perfect beings, the rule of life deduced by Malthus from the unalterable law of population would be both practicable and safe: as it is, it has a direct tendency to promote the cardinal vice of cities—that of unchastity. The number of women in England who ply the loathesome trade of prostitution is already large enough to people a county, and, as our great thoroughfares show at nightfall, is certainly not diminishing. Their chief supporters justify themselves by the very plea which Malthus uses to enforce the duty of continence, namely, that they are not well enough off to maintain a wife and family. If they could be sure that they could limit the number of their children, so as to make it commensurate with their income, not only would the plea be generally groundless, but I believe it would not be urged, and the so-called social evil would be stormed in its strongest fortress. The vice itself would become more immoral, because more without excuse, and its greater immorality would, as in the case of other offences, help to make it more rare. The world at large is only tolerant in matters relating to the sexes when the frailty of human nature makes it necessary that it should be." But, gentlemen, we are not perfect beings; and if young men only knew how to limit the number of their families, then they would have no disinclination to marry. I may just put before you the terrible results of profligacy, and in doing so do not imagine that I think you do not know far better than I do the enormous amount of damage which comes from that which is called "the great social evil," against which it has been thought necessary to invoke a special class of most unfortunate legislation. It is not only a danger for the bodies of young men, but, perhaps, a still greater danger to their minds, for association with women of the character of those to whom I refer makes a man lose his respect for pure womanhood, and taints the sacred bond of married life even when it is at last entered upon; and to the unhappy women who are the victims of this terrible evil the injury is yet

worse: they become hardened out of all that is womanly, reckless in their shame, they rush into drunkenness and excess, and end, too often, a miserable life with a disgraceful death. These are some of the miseries which flow from the social evil; and if we could introduce checks after marriage has taken place, we should wound the evil in its vital point. If the Solicitor-General should again endeavour to make you imagine that we are using the word marriage because our real and our avowed objects are opposed, let me ask you to remember what I have said on this point. If profligacy is bad, what shall we say of asceticism? If you now take up the passage on page 7, where I left it a short time ago, you will see how he treats the matter of asceticism: "Sometimes, if even rarely, the young mind does hold to its first resolves. The youth plods through years of cold celibacy and solitary anxiety, happy, if before the best hours of his life are gone, and his warmest feelings withered, he may return to claim the reward of his forbearance and his industry. But even in this comparatively happy case, shall we count for nothing the years of ascetic sacrifice at which after happiness is purchased? The days of youth are not too many, nor its affections too lasting. We may, indeed, if a great object require it, sacrifice the one and mortify the other. But is this, in itself, desirable? Does not wisdom tell us that such a sacrifice is a dead loss—to the warm-hearted often a grievous one? Does not wisdom bid us temperately enjoy the springtime of life, 'while the evil day come not, nor the years draw nigh, when we shall say we have no pleasure in them.' Let us say, then, if we will, that the youth who thus sacrifices the present for the future, chooses wisely between the two evils, profligacy and asceticism. This is true; but let us not imagine the lesser evil to be a good. It is *not* good for man to be alone. It is for no man or woman's happiness or benefit that they should be condemned to Shakerism. It is a violence done to the feelings and an injury to the character. A life of rigid celibacy, though infinitely preferable to a life of dissipation, is yet fraught with many evils. Peevishness, restlessness, vague longings, and instability of character, are amongst the least of these; the mind is unsettled and the judgment warped. Even the very instinct which is thus mortified assumes an undue importance, and occupies a portion of the thoughts which does not of right or nature belong to it, and which during a life of satisfied affection it would not obtain." So he goes on to

point out that both are evils, but that it is more wise to choose asceticism than profligacy; yet at the same time he points out clearly the evils that flow from asceticism as well as those that result from profligacy. For aceticism is an evil, though not so great a one as profligacy; it is unnatural, and therefore it is unhealthy. We know from a large mass of statistics collected from the census returns that married people live longer than the unmarried. In 1853, for example, we find that the unmarried men in France between the ages of twenty and eighty died in a much larger proportion than did those who were married. The figures show that 11·3 annually die out of a thousand among the unmarried, whilst the proportion of married men is only 6·5. Similar results are found in 1863-4 with reference to the entire population of Scotland above the age of twenty. Out of a thousand between the ages of twenty and thirty 14·97 unmarried men died, whilst the proportion of married men was only 7·24, which is less than one-half. These figures, it seems to me, are destructive of the theory of Malthus against early marriages. One other point I will put before you. Dr. Drysdale, in his pamphlet on Prostitution, dealing with the evils of celibacy, says :— "Sir Benjamin Brodie at the meeting of the Social Science Association in Birmingham, said that the evils of celibacy were so great that he could not mention them; but that they fully equalled those of postitution." We find also that Mr. Holmes Coote, late surgeon to Bethlehem Hospital, used to speak in the same way, and regarded celibacy as one of the causes of lunacy. Evidence so strong, you will agree with me, tells convincingly in favour of early marriages, and against either profligacy or celibacy. You can find, indeed you know without my telling you, what is the opinion of medical men regarding the evils which follow from subduing the natural instincts and living in a state of entire celibacy; and perhaps the evils that result from an unmarried life are more terrible amongst women than amongst men, because when women are unmarried they generally lead purer lives than do the majority of men. And you find among monks and nuns the natural sexual desires coming out in the most curious forms. In countries where monasteries and convents abound a kind of thwarted sexual feeling arises, and it is strangely exhibited even in the hymns that are sung and the prayers that are used. Anyone who is familiar with Roman

Catholic or with High Church manuals will recognise this fact. The misplaced sexual feelings run, in the case of the monks, towards the Virgin, and in that of the nuns to the son of the Virgin, and so nature avenges herself when she is dwarfed and stunted, when the natural affections are not allowed to flow in the channel prescribed by nature. The same thing is observable among High Church sisterhoods in this country, and is exemplified in the character of the hymns and prayers used. These are some of the evils that arise from celibacy, and on this point let me refer you to the last paragraph on page 8, which I will not read, as you have the books before you. I want to draw your attention to the diseases that arise from celibacy, and I would specially point out to you the value of Knowlton in such a case as is there alluded to. You know the unhappy position of those who are persuaded by quack doctors, playing upon their ignorance, that they are not in a condition to enter the married state. You can imagine the unhappiness of those who fall into the hands of these people. They play upon the fears of young men, and are the ruin, both in pocket and in body, of all those who have anything to do with them. Many of these poor victims would have been saved a life of misery if this little sixpenny book had fallen into their hands when they were entrapped by quack doctors; yes, even if the book had been sold them by a hawker—one of those who have been sent to prison—at the corner of a street; for on reading it they would have learned to distrust the men who falsely told them they were unfit to marry, and they would, in later life, have blessed the chance opportunity that threw the publication in their way, as they enjoyed the blessings of a happy home, and looked around with thankfulness upon their two or three children. Such are a few of the evils of profligacy and asceticism, both of which are bad, and both of which may be obviated by early marriages. Perhaps I may here advert to what Mr. Montagu Cookson says of the evils resulting from celibacy to both sides. We have often heard those hard and unwarrantable sneers that are levelled at old maids in this country. It is true they are often hard and sour, because, nature being thwarted, they are thrown back upon themselves; they are dwarfed, dried up, and withered, all the more certainly because they have no means of preventing their solitary condition. Mr. Cookson puts this point very

strongly. He says: "To refuse marriage to men altogether, or to require them to postpone it indefinitely after the maturity of their judgment has justified their choice, is to inflict an injury on the whole community by encouraging special forms of evil, perhaps even calling them into existence. Many a woman whose daily life is now dedicated to her dress, or her household, or who has become so entangled in the narrow meshes of acquaintanceship—which she dignifies by the name of society—as not to have an idea beyond, might have escaped all this bondage if imagined necessity had not doomed her to spinsterhood. Many a man into whose soul has stolen the slow poison of moral and intellectual cynicism, might have retained his early freshness if the example of some friend had not taught him to remain single, rather than succumb to the yoke of marriage, with its heavy, because uncertain, burdens. Meantime better, perhaps, not to pry too closely into the consolations he allows himself, or the mode in which he seeks to reconcile what is with what might have been." That is the way in which Mr. Cookson pleads against late marriages. By postponing marriage, people in middle life often find, when they take upon themselves its duties, that nature revenges herself upon them for having thwarted her teachings, and too often such marriages turn out barren, simply because the married persons, from their long celibacy, are incapacitated from producing children, Nature denying her blessings to those who have despised them. I leave these remarks for your consideration. I do not now deal with the effect of all this upon society, because I have already said as much upon that aspect of the question as I think necessary, and I conclude that both profligacy and celibacy are evils, and if it is argued that early marriages produce as great evils, we are placed in a dilemma as to what course should be recommended. We must inquire whether we cannot secure the benefits of early marriages without undergoing the evils of over-population which result from them; but to do that we must maintain the preventive, the birth-restricting, check, as preferable to the death-producing, but we must bring this check into operation after marriage, and not before.

This is the object which this book has in view, and it is no part of its object either to destroy marriage, or to favour profligacy, or to promote promiscuous intercourse; but, on the contrary, to enable people to marry early, and, at the same time, to avoid those evils which come by over-population.

John Stuart Mill's work on Political Economy—which is regarded everywhere as a standard work, and is accepted as a text-book at the universities of Oxford and Cambridge for the instruction of young men, and on which young men are examined, and in which they are taught—invites them to restrain their passions, and to limit the number of their families; but, so far as this work goes, they are left in ignorance how the recommendations it contains are to be carried out, and, therefore, they are unable to save themselves from the very evils against which they are warned. Take the following passage as a fair sample of John Stuart Mill's opinion :—"Poverty, like most social evils, exists because men follow their brute instincts without due consideration. But society is possible, precisely because man is not necessarily a brute. Civilisation in every one of its aspects is a struggle against the animal instincts. Over some, even of the strongest of them, it has shown itself capable of acquiring abundant control. It has artificialised large portions of mankind to such an extent, that of many of their most natural inclinations they have scarcely a vestige or a remembrance left. If it has not brought the instinct of population under as much restraint as is needful, we must remember that it has never seriously tried. What efforts it has made, have mostly been in the contrary direction. Religion, morality, and statesmanship, have vied with one another in incitements to marriage, and to the multiplication of the species, so it be but in wedlock. Religion has not even yet discontinued its encouragements. The Roman Catholic clergy (of any other clergy it is unnecessary to speak, since no other have any considerable influence over the poorer classes) everywhere think it their duty to promote marriage, in order to prevent fornication. There is still in many minds a strong religious prejudice against the true doctrine. The rich, provided the consequences do not touch themselves, think it impugns the wisdom of Providence to suppose that misery can result from the operation of a natural propensity : the poor think that 'God never sends mouths but he sends meat.' No one would guess from the language of either, that man had any voice or choice in the matter. So complete is the confusion of ideas on the whole subject : owing in a great degree to the mystery in which it is shrouded by a spurious delicacy, which prefers that right and wrong should be mismeasured and confounded on one of the subjects most momentous to human welfare, rather than

that the subject should be freely spoken of and discussed. People are little aware of the cost to mankind of this scrupulosity of speech. The diseases of society can, no more than corporal maladies, be prevented or cured without being spoken about in plain language." You have the testimony, gentlemen, of the Solicitor-General that in this pamphlet there is no vulgarity of language and no coarseness of expression. He puts it as strongly as a counsel for the defence could possibly put it; and therefore if it is only spoken in plain language, without unnecessary vulgarity or coarseness, we will deal with it, if you please, as just one of those productions which you think it is right should speak in plain terms of corporeal maladies, and ought not to be dragged—utterly unfairly as it is dragged now—within the reach of the criminal law in this country (for it is only in this country that this subject is thought outside the barrier of ordinary decent discussion: in any foreign country—in France or Italy—all scientific men have full liberty in discussions of this kind). Mr. Mill goes on: "All experience shows that the mass of mankind never judge of moral questions for themselves, never see anything to be right or wrong until they have been frequently told it; and who tells them that they have any duties in the matter in question, while they keep within matrimonial limits? Who meets with the smallest condemnation, or rather, who does not meet with sympathy and benevolence, for any amount of evil which he may have brought upon himself and those dependent on him, by this species of incontinence? While a man who is intemperate in drink, is discountenanced and despised by all who profess to be moral people, it is one of the chief grounds made use of in appeals to the benevolent, that the applicant has a large family and is unable to maintain them. One cannot wonder that silence on this great department of human duty should produce unconsciousness of moral obligations, when it produces oblivion of physical facts. That it is possible to delay marriage, and to live in abstinence while unmarried, most people are willing to allow; but when persons are once married, the idea, in this country, never seems to enter any one's mind that having or not having a family, or the number of which it shall consist, is amenable to their own control. One would imagine that children were rained down upon married people, direct from heaven, without their having art or part in the matter; that it was

really, as the common phrases have it, God's will, and not their own, which decided the numbers of their offspring." That is the way John Stuart Mill puts the law, and presses on all those who marry the duty of limiting their families. Professor Leone Levi, whom we find lecturing recently to working men on their "Work and Pay," points out that "a proper restraint in the matter of matrimony and prudence as regards the increase of our families" is necessary; showing that the prudence must be after marriage, since he is speaking of the increase of families, and saying that "we cannot trust on so much wisdom on the part of the people," and so we must turn to emigration. Clearly he thinks that true "wisdom on the part of the people," as he puts it, would lead to prudence as regards the increase of families; and he says, as we cannot trust to so much wisdom on the part of the people, "our only hope must lie in the vast fields of emigration." Mrs. Fawcett puts exactly the same thing, in words whose meaning cannot be disputed. She had been writing on pauperism, and had been showing that "no speculations as to the industrial prospects of England are worth the paper they are written on if they do not take into account the probable future of pauperism." She says: "If, in the future industrial competition of nations, England is to keep either first or second in the field, she must devise some means, not only of checking the growth of pauperism, but of eradicating the disease from her social system. And those who deal with this question of pauperism should remember that it is not to be remedied by cheap food, by reductions of taxation, or by economical administration in the departments, or by new forms of government. Nothing will permanently affect pauperism while the present reckless increase of population continues. And nothing will be so likely to check this increase as the imposition by the State on parents of the whole responsibility of maintaining their offspring." When Mrs. Fawcett says that you must check population by making parents maintain their own offspring, she necessarily means that if, after marriage, parents found they had to maintain their own children, they would find some means of checking the rapid increase of the family. That same argument I might bring to you very strongly from Mr. Montagu Cookson, who is on some points so extremely clear, that I do not propose to read very much of him, because I am inclined to think that the pages of a magazine are not exactly the medium which I myself should

choose for the discussion of a question of this kind. When people wish to discuss questions of this kind, they should do so in medical or physiological works. I think that in ordinary magazines physiology and other kindred subjects should not be mixed up with more general questions, and I urge specially in regard to Knowlton that no one need buy his book unless they desire to read it, and that every one who buys it knows exactly what the character of the book is on which he is spending his money. That is hardly so with respect to a magazine of the ordinary character. I think part of Mr. Montagu Cookson's article is far more plain-spoken than I should myself have cared to put in the pages of an ordinary magazine; but that is, of course, a question for his own taste and not for me. He says he need not say more to explain his meaning, which is perfectly true, for he had said quite enough to explain his meaning very thoroughly. Then he goes on : "Those who have followed me so far will hardly need that I should add more by way of explaining my meaning; and I rejoice to think that there are not a few who are familiar with the moral lesson deducible from these remarks, and whose daily practice it has long since served to shape." And he goes on to point out that many may "Think the practical conclusion to which I point, *i.e.* prudential restraint after marriage, wilder than anything Malthus ever dreamt, whilst others will regard it with pious horror on moral or religious grounds. To the former I would say it is premature to predict that any untried experiment will fail until you have shown that the conditions of its success are at variance either with the established facts or with the ascertained laws. In the case before us, the facts do not belie the conclusions, for, I repeat, there already exists a school of moderation, based on the convictions here stated, which boasts several disciples. I believe there would be vastly more if the force of public opinion were brought to bear upon the question. Of ascertained laws which are fatal to its success there is absolutely not a trace, except it be the law of our own inclination, which, if in earnest, we can mould as we choose, each strengthening each in the task. At present, however, no one thinks of lifting a finger to assist his neighbour in the matter, and as long as such perfect indifference prevails, and an impenetrable veil of mystery is drawn over the whole subject, every man's secret will perish with him, and the advance of the human race in this all-important department of knowledge will, for want of the

power of transmission, be no more rapid than that of the brutes. To those again who raise objections which appear to them to have their root in morality, as distinct from revealed religion, I answer :—It would be interesting if it were not melancholy, to observe the way in which, both in writing and speaking, men are perpetually admitting the material inconveniences due to an excess of population, whilst they give the go-by to the obvious solution that the numbers of children born after marriage should be limited in the manner I have endeavoured to indicate." I ask you, gentlemen, whether by writing that an impenetrable veil of mystery is drawn over the whole subject, and that "every man's secret" perishes with him, whether Mr. Montagu Cookson does not thoroughly suggest to those who are well acquainted with physiological details, that it would be well that every man's secret should not perish with them, but that for the benefit of their neighbours they should transmit to each other that which has been of benefit to themselves. You find him saying that as landlords cannot make the cottages large enough for the labourers, the labourers must limit their families to their room. He says the limitation of the number of the family ought to be secured "by obedience to natural laws which all may discover and verify if they will, and that such limitation is as much the duty of married persons as the observance of chastity is the duty of those that are unmarried. One of the main wants of the day is, as I conceive, the formation of a sound public opinion on this subject." He does not ask from married people that chastity after marriage which he demands from the unmarried. He tells them to discover natural laws, and to apply them, and he says that such limitation is the morality of married life. He says that one of the most important wants of the day is the formation of a sound public opinion on this subject. Taking that article, and that he says it is to be after marriage that he wants the cottager to limit his family, that it is after marriage he wants the hedger and the ditcher to practise this duty, I ask you how his suggestions can be carried out unless you publish a physiological treatise giving those natural laws which cottagers and hedgers and ditchers could not discover for themselves, however much Mr. Montagu Cookson may be able to do it? How is it possible his wishes can be carried out unless at a low price, in plain Saxon English, you get these natural laws put forward whereby the offspring can be limited after marriage? I believe that in

dealing with that point Mr. Bradlaugh will have something to mention, because I believe Mr. Montagu Cookson wrote to Mr. Bradlaugh—when he found he was likely to be quoted in a court of law—putting some limitations on the meaning of his words which we do not find in his essay, an essay which is utterly unguarded, and is couched in the strongest terms. I have simply read the passages which give the counsel on this point of Mr. Montagu Cookson, and I have not read certain others which are more suggestive in their wording, because I do not want to make any unpleasantness of feeling in dealing with a subject which is a difficult one for a woman to touch at all in a court of this kind. You have got here to deal with this dilemma: that over-population must be kept down, must be killed down, with misery; or that you must have delayed marriages, with personal and social evils such as I have hinted at; or that you must have early marriages with limitation of families. That I conceive is the dilemma with which my antagonists have to deal, and I will go now to the end for which this book is put forward by Dr. Knowlton. You will find on the sixth page some sentences, which I will not read, if you will kindly look at the book, commencing "In a social point of view." In the first place we find it is there stated that "the families of the married often increase more rapidly than a regard for the young beings coming into the world or the happiness of those who gave them birth" ought to permit. I will speak for a moment on women's health in connection with this subject, for to me that is a very vital point in dealing with this book. We have seen the effect on society of over-population; we have not seen the effect on the women themselves, for the premature deaths which keep down the population do not save the health of the mother, who is exhausted by the over-rapid child-bearing. It may save some of the social effects of over-population; it does not save the unfortunate mothers whose health is ruined, and you will find that put very plainly in Dr. Knowlton's work, when he says the health of the mother is very often sacrificed, and she is "compelled to toil on even at those times when Nature imperiously calls for some relief from daily drudgery." Here is one point I shall want to prove to you, more from the evidence of witnesses than from a book. There is no question that amongst the women of the poorer classes there is a vast amount of suffering caused by over-rapid child-bearing. You get one special class of disease, that every doctor would tell you

about, and called, in common parlance, among themselves, "falling of the womb," which is merely the result of this excessive child-bearing, which is caused by their being compelled to go about among their families long before they ought to do so, when health and reason demand a certain amount of rest after child-bearing. I have often myself seen a poor woman, a mother of a large family, standing over the wash-tub three or four days after having borne a child, and upon my representing to her the utter ruin to her health which was involved in such a proceeding I would get the reply: "What am I to do? There is another mouth to feed; the children are there and must be provided for, and I must get about." Doctors tell you that you will very rarely find women among the poor who are mothers of large families, who do not suffer from a weakness of this kind, which is entirely referrable to the fact that year after year, without any intermission, they are in an almost continual condition of pregnancy. Dr. Bull in his "Hints to Mothers"—which is a book sold by Messrs. Smith, and seen on nearly every book-stall, and about which there is no pretence of secrecy, for it is nearly always to be seen standing side by side with Dr. Chavasse's "Advice to a Wife"—Dr. Bull says: "It is scarcely necessary to advert to the well-known fact that a woman may conceive while nursing." It is thought by the poor, and by many well-educated people too, who ought to know better, that a woman by keeping a child at the breast can check the likelihood of conception. No mistake is more frequent or more fallacious than this, and Dr. Drysdale and Miss Vickery will tell you that a number of diseases result from over-lactation. It gives rise to a peculiar class of diseases, but it does worse, as you will find from the testimony of a man like Dr. Churchill, whose wide experience in these matters no one can dispute. He gives you his opinion on one disease, and says "Among the many causes of this disease rapid child-bearing and over-suckling are the most frequent. The latter is done by the poor to prevent a rapid increase of their family, which it does very effectually when it gives rise to the disorder mentioned, but at the expense of much suffering and loss of health to the mother." That same point is dealt with by Chavasse, and it will be spoken to by Dr. Drysdale and Miss Vickery, and you will see that these poor women are so convinced of the necessity of some check that in their ignorance they adopt this injurious means. You cannot expect man and wife

to live as if divorced; you cannot expect them to do so; and to have some check, therefore, poor women actually resort to the fatal practice of nursing children for a year or longer with the hope that by doing that they may keep off the dreaded increase in the family which they desire to escape. It is ruinous to the health of the mother, to the child at the breast, and also to the health of the unborn child. Thus are three human lives simply sacrificed to the ignorance of the poor—the poor who, in their ignorance, struggle to find some check—and yet we are forbidden to enlighten them, to give them some means which would act as the check they need and yet would not harm them. It is not only amongst the mothers of the artisan classes that you find this special suffering; you find it even amongst the wives of professional men; and here I need not urge upon you that one vast source of suffering in the home is the almost continual ill-health of the wife, whose health is so often broken down by the almost annual increase of the family. I need not tell you, because your own experience tells you, that a large number of injurious checks are not only used, but are constantly talked about by married women for preventing the increase of their families. And this would not be done if you did not deny to them that physical knowledge which it is said to be immoral to give to them; but, gentlemen, I think it is far more immoral to force them into ill-health by withholding from them that knowledge which they need. Much of the knowledge needed is given to the wealthier women who wish to have it. That edition of Chavasse which I have, I gave six shillings for at Paddington railway station, and you may get the book much cheaper in paper covers for those who can afford to pay one shilling or eighteen pence, and I know of no reason why Messrs. Smith and Son can go to people who can afford to pay 1s. 6d. and sell them without fear exactly the same knowledge which you say becomes obscene when poor people pay sixpence for it. The knowledge given by Chavasse is of the same character as that given by Knowlton, and gives so much information that any intelligent person would use it for the purpose of checking as well as of increasing the family. On the father I will not say what is the effect of the yearly increase, because you yourselves can judge of the struggle at home with an ever-growing family while the salary does not grow in the same proportion, and I will only say here that, since this prosecution has been begun, one class of men especially have written to us begging

us to carry on this work. I am not now speaking of the very poor, but we have had a number of letters from country clergymen and town clergymen (who from their position many people would expect to be prejudiced against my co-defendant and myself) expressing pleasure that we have had the courage to take this subject up and begging us to go on with it because of the need they see for it. I put that so because, with two clergymen in the witness box, it is well that you should know that religious feeling is not against us on this point, although many people would think it would be in a discussion of this kind. There is another point as to the health of the woman which Dr. Knowlton has put somewhat strongly; he urges that "many women are so constituted that they cannot give birth to healthy, and sometimes not to living, children. Is it desirable, is it moral, that such women should become pregnant? Yet this is continually the case." I am still reading from page 6 of Knowlton. There is no doubt that many men and women have diseases of the constitution, have, say madness or consumption, in the family, with many other kinds of hereditary diseases, and that these people will marry. I ask you, gentlemen, whether it is moral that these people should be allowed to marry, to bring into the world children who will be the inheritors of their own diseases? Yet it is hard to say that because there is a trace of madness in the family, all the members of that family should be forbidden marriage. If they do marry a sad experience often shows that the diseases lying dormant in the parent break out in the child, and cause much misery and suffering. Had you not better teach that they may have the comfort of home, the comfort of married life, but that they must, remembering that they might transmit diseases, keep such restraints over themselves as should prevent them from bringing children into the world to inherit the diseases from which their own families have suffered? Then there are the other cases referred to by Knowlton—cases where the delivery of a living child is impossible, and may even have been proved impossible. Here I am going to put a point to you which may astonish you as much as it did myself. Dr. Fleetwood Churchill, in dealing with "the diseases of women" (I quote from the fifth edition), points out that there are many cases where, from previous experience, they know that a woman cannot give birth to a living child. You will easily understand that there may be cases of that kind which could not be discovered

before marriage, or even until the first child was brought into the world. A large number of cases are given here where the doctors found it was impossible for a mother to give birth to a living child. Instead of telling the mother that it was utterly immoral to conceive a child which could never be born alive, Dr. Churchill comes to the conclusion that where they had once found out that a woman could not be delivered of a living child, it was better to induce premature labour, or to induce abortion at an early stage. I must put it to you, that it is most immoral to allow a woman to go on conceiving children that she will never be able to bring into the world—for I hold that to destroy life, after it once lives, is the most immoral doctrine that can be put forward; and that when a doctor goes to a man and tells him that his wife can never bear a living child, he ought to be able also to impart to him such physiological instruction as should prevent the recurrence of the conception in future. It can never be right to deliberately give life to a child who can never, as you know, live to the birth—to give a life which you are beforehand determined to destroy. It seems to me that an argument of that kind is the most disgraceful that can be put forward. If you are going to talk about circulating knowledge which makes unchastity safe, I ask you which is the most likely to cause unchastity—to allow such principles as these to be disseminated abroad, or to allow the publication of such checks as are advocated by Dr. Knowlton? Surely the latter are far less likely to do harm, and if knowledge of the ease with which the consequences of unchastity may be warded off is injurious to public morality, then how can you permit a book to be circulated which, as Dr. Churchill's does, gives a detailed account of the fashion in which abortion may be induced—means of which any woman, wicked enough to use them, might most easily avail herself? Another point worthy your consideration is taken from the *Obstetrical Journal*, which is sold at all the railway bookstalls at 1s. 6d., and is published by Messrs. Churchill, the great medical booksellers of Burlington Street—a journal which is illustrated, and being so, when the jury see it, I think they will say it is far more likely to spread unchastity than is Knowlton's work. It says there, that in a case where it was found necessary to perform the Cæsarian section on a woman, "while absorbed in this operation it did not occur to anyone of us to so treat the fallopian tubes as to prevent a future conception." If

it is right for one doctor to go through that operation to prevent conception in a married woman, surely it is not wrong in another doctor to show a woman how the conception of too many children can be prevented. I must urge upon you that if you are going to pass a censure on me, and say that it is wrong and immoral to teach married women how to prevent conception, you really ought to take steps to pass a far stronger censure in cases where people are induced to conceive children which it is deliberately proposed to murder on bringing them into the world. I would ask the jury to make a particular note of that, and to remember it in dealing with their verdict. In other cases the doctor warns the father that the mother's health is so bad that the birth of another child is likely to kill her. What can you do? You cannot expect man and wife to live on as if divorced. What happens? Another child "comes," and the woman dies. Is it immoral to teach how the wife may live and yet not be divorced from her husband? There is another class of cases so often known that I need not dwell on them. You do not expect a young man to live an absolutely celibate life after marriage. If he does not, what happens? You get a strong man and a delicate woman. That which is necessary to the health of the man is fatal to the health of the woman. There are too many instances where the home is unhappy because the husband complains of the "coldness" of the wife, but this coldness is often not from lack of love, it comes simply from physical exhaustion. The consequence is that the man finds a kind of supplement to the home which is simply destructive of everything we wish to see in family life. I urge that it is not fair to bring against us a charge of obscenity, when you find that we are doing what we can to show men and women how to remain thoroughly loyal to each other without injury to the health of either, and so to enable one man and one woman to be thoroughly true to each other throughout the whole of their married life. We find that Dr. Knowlton puts forward these checks as "the only moral restraint to population" (p. 5) with which he is acquainted, but that would not prevent another doctor from presenting checks which are better than Dr. Knowlton's. It is for that that I am so anxious to gain a verdict. You will find a discussion going on in France as to these checks, and as to their effects on the health of the married, and it is a vital point to the happiness of the community that

doctors should be allowed to express their thoughts on this subject without the fear of a criminal prosecution, and that they should not be liable to be told that they were endeavouring to promote promiscuous intercourse between the sexes. That, gentlemen, is the first chapter of the book which is here incriminated, and I will ask you whether, on looking through that chapter, there is one single word which bears out the contention raised yesterday morning by the prosecution? Is there one word which shows that the writer is using the word marriage as the cover for something worse? Can you, from the beginning to the end of that chapter, honestly and fairly say that this is a cloak of physiology, this is a pretence of morality, put on to cover an immoral purpose, such as we are here charged with? That is dealing with the whole chapter; and I may again inquire, while I thoroughly bear in mind the ruling of my lord of yesterday, that you are not obliged to find obscenity in every page; yet, I think, my lord, I may fairly put it that some intent ought to be discoverable from this chapter, something which should lead you to think that the writer's purpose was an immoral one, for it seems unfair to brand a book as immoral unless it is so in intent and in purpose.

The LORD CHIEF JUSTICE: Read by itself it might be an introduction to a Malthusian treatise.

Mrs. BESANT: Just so, my lord.

The LORD CHIEF JUSTICE: The only way in which this chapter can be attacked is, by saying what is the conclusions to which it is intended to lead up, and then, from that conclusion, it may be argued that, although in form and *primâ facie* it is perfectly moral, yet that, from the conclusions it is intended to lead up to, a different construction might be put upon it. That was the argument of the Solicitor-General yesterday, and it is the only way in which this first chapter can be taken to mean anything else than what it says. Judging from what it says, it might be regarded as perfectly honest and perfectly pure. Take it by itself, and there is not a word in it which could be construed into any impropriety of expression or thought.

Mrs. BESANT: There are, on the contrary, my lord, a great many expressions which show a very earnest mind.

The LORD CHIEF JUSTICE: It is perfectly open for you to argue that to the jury.

Mrs. BESANT: I do not propose, gentlemen, to read to you any more of this chapter.

The LORD CHIEF JUSTICE: Will you not read the concluding paragraph to the jury?

Mrs. BESANT: I feared, my lord, to take up more of the time of the Court than your lordship might think necessary for the proving of my case, and I did not wish to try too severely the kindness and patience shown me by the Court.

The LORD CHIEF JUSTICE: The paragraph is very important, it seems to me, as touching the purpose of the pamphlet.

Mrs. BESANT: Thank you, my lord; I will, then, gentlemen, just read the last paragraph of the chapter. "Inasmuch, then, as the scruples of incurring heavy responsibilities deter from forming moral connections, and encourage intemperance and prostitution, the knowledge which enables man to limit the number of his offspring would, in the present state of things, save much unhappiness, and prevent many crimes. Young persons, sincerely attached to each other, and who might wish to marry, would marry early, merely resolving not to become parents until prudence permitted it. The young man, instead of solitary toil and dissipation, would enjoy the society and the assistance of her he had chosen as his companion; and the best years of life, whose pleasures never return, would not be squandered in riot, nor lost through mortification." Is that written, gentlemen, with intent to deprave and corrupt?

The Court here adjourned for lunch.

Upon re-assembling, Mrs. BESANT continued: I take up the subject at the beginning of the second chapter, and it is only the first and the second paragraphs with which I propose to deal. The whole of the remainder of the chapter I propose to leave to my co-defendant, for I understand that any defence of his which is effectual will practically, if not quite in legal strictness, be taken to cover myself, and, with your lordship's permission and the consent of the jury, I think it would be pleasanter for all of us that I did not go through the whole of the details in this chapter.

The LORD CHIEF JUSTICE made a motion of assent.

Mrs. BESANT: It will be pleasanter to let it come from my co-defendant, Mr. Bradlaugh, than from myself, so I will only take the first paragraphs of this chapter. I have only taken the liberty of putting it so, that one might not be thought to be shirking one's duty in the matter. It will be fully dealt with by my co-defendant. I go on then with page 9 of the

pamphlet and the first two paragraphs of Chapter II. I will take the paragraphs separately. Dr. Knowlton says: "I hold the following to be important and undeniable truths. That every man has a natural right both to receive and convey a knowledge of all the facts and discoveries of every art and science, excepting only such as may be secured to some particular person or persons by copyright or patent. That a physical truth, in its general effects, cannot be a moral evil. That no fact in physics or in morals ought to be concealed from the inquiring mind." The first half-dozen lines are not worth troubling you with, but I will take "that a physical truth cannot be a moral evil," and I may say that I thoroughly and entirely endorse that; that I hold that no physical knowledge, properly taught and properly understood, can for one moment be taken to be a moral evil; and I think here I may, perhaps, take leave to point out that the case in which your lordship and your learned brethren gave judgment—the case of the Queen *v.* Hicklin—in that case there were no physiological truths dealt with at all. In fact, that case has really no bearing of any kind on this present case, and has nothing in common with it. There is no kind of connection between a case where obscene matter is put forward, with the admission that it is obscene—matter that cannot be any good; because questions as to certain crimes can never be supposed to convey knowledge that may be useful to either man, woman, or child, and the questions there are all of the most—I was going to say—of the most disgusting character, without conveying one scrap of knowledge that could possibly be useful to any one, and it stands on an entirely different footing to the case where, rightly or wrongly, a pretence of medical knowledge or instruction is put forward. I say a "pretence," because it is said by the prosecution that it is only a pretence, and supposing it were so, nothing in the Queen *v.* Hicklin would touch this, because, in that case, there was no pretence made of any sort that knowledge useful to the community was sought to be given by the publication. (The Lord Chief Justice nodded assentingly.) Knowlton points out that no physical truth can be a moral evil. It is a point vital to me in this, that you should recognise the fact that no physical truth is in itself indecent. I do not mean that under cover of a physical fact indecent suggestions may not be made. I am bound to admit that they may be made under cover of physical knowledge, but I contend

that in itself no physical fact is an indecent fact. I will put it that that is especially and strongly shown by the whole action of our present Government. And speaking of governments, I do not mean, in any fashion, to raise a question of the particular Government with which my prosecutors are connected, or even for one moment to insinuate that the matter of party may lend a spirit of maliciousness to this prosecution. In the question of physiology, Whig, Tory, or Radical Government would, I think, act alike, in that of which I am going to speak. You will remember that the learned Solicitor-General said, that if this book were published in a medical room, or sold to medical students, it would not be indecent, but he contended it was obscene because it might be sold to boys and girls in the public streets, and he contended that practically a book, which to a medical man is a useful book, a decent book, a moral book, would become utterly obscene and utterly indecent the moment it was published in a girls' school, and placed in the hands of girls and boys. Now that, gentlemen, is a very important point. For I hold in my hand the directory authorised by the Government (and for the moment I remind you that the Solicitor-General, being a law officer of the Crown, may fairly be said to be bound by the acts of his Government). You will find, that at the present moment, the Tory Government—and I mean nothing here as against the Tory Government, for they are carrying on exactly the same system that was carried on by the Government preceding—in the directory that I hold here—this directory, my lord, is revised to August, 1873, and is the 28th edition, with regulations for establishing and conducting science schools and classes, and it is issued by the Science and Art Department, the Committee of the Council at South Kensington—it is printed by Eyre and Spottiswoode, whom you well know, gentlemen, as the Queen's printers, the authorised printers of blue books and Acts of Parliament, so that it comes before you with the whole authority that a Government can give to any publication. You will find that they issue a list of books in which they examine the young boys and young girls who present themselves for examination in the science classes in connection with South Kensington, and your lordship and the jury will be thoroughly well aware that these classes are not intended for adult men and women, but are intended for young boys and girls; and boys and girls, under the age

of sixteen years of age, are in the habit of attending them, and in the habit of going up for examination ; and you will find in the examination for honours, that candidates will be examined in any subject treated of in the standard English works upon physiology, such as Carpenter's "Principles of Human Physiology," Marshall's "Outlines of Human and Comparative Physiology," &c. You will find the Government putting into the hands of young girls, under the age of sixteen, as text-books : "Lessons in Elementary Physiology," by Huxley, "Human Physiology," by Carpenter, a "Handbook in Physiology," by Kirke, and another one by Marshall, in each of which they may be examined. Then in the syllabus, they are told that the knowledge of the candidates respecting anatomy and physiology will "be expected to be real and not mere book work," and that the candidates should be able to study the bones of the human skeleton, and also the soft parts, as well as the bones, of the higher domestic animals ; and you will find that it is very carefully put forward that they be examined on the whole of the system of reproduction, that they are to be thoroughly well acquainted with the structures and character of the male and female organs of reproduction, that they are to know (I will not trouble you here with the technical terms) the whole mode of development of the unborn being, and that right through they are to be prepared to put down in answers to an examination not only what Knowlton gives, but—in addition to that which is given by Knowlton as necessary for the point of which he treats—a whole mass of technical and of detailed physiological instruction, not about one sex alone; and young girls of thirteen, fourteen, and fifteen, are by order of the Government instructed in every detail of the male organs of generation from beginning to end, not one point left out, and it is not dealt with in Carpenter and Kirke in the dry fashion in which Dr. Knowlton deals with it — mere dry physiological details; it is dealt with, as you will see when my co-defendant speaks, in language which is calculated to arouse passion, because, while Knowlton carefully avoids one syllable which gives the outward form, the attraction which might be supposed to rouse passion; while, for instance, he speaks of a girl gaining "a more womanly appearance," and says nothing more, you will find in Carpenter's, and in Kirke's books, put into the hands of children, at the express sanction of the Government, of which the Solicitor-General is an officer,

a detailed description of the attractive results of the development of a girl's form, going through every detail in a style that I should scarcely think it wise to put into the hands of those so young, and also speaking of the attractive influence these changes have on the opposite sex. By the authority of the Government these things are put into the hands of young girls and boys, and I ask you with what kind of decency is it that the Solicitor-General, an officer of the Government which authorises a list of books of that kind, comes here to prosecute us for putting into the hands of people and issuing a book, beside which their own books are, if physiology is obscene and if there is any measure in obscenity, immeasurably more obscene than the one for which I plead to-day? We can bring you the very people who have received these books as prizes for studies under the Government examinations. We can bring you a boy who received Carpenter's "Human Physiology;" and not only does Carpenter deal with the question in a manner beside which our book is the utmost extreme of delicacy, but Carpenter is illustrated with a number of plates, and when the jury see them—if they have not already dealt with the subject before—they will be astonished that with the authority of the Government such books are put into the hands of young boys and girls. For myself, I do not object that this should be done, but I do object that the Solicitor-General should say to you that this book circulated in a girls' school would be obscene, because if so it would be hardly consistent that such books as those I have mentioned should be placed in the hands of boys and girls under Government authority, and that, then, he should come here and try to rouse your virtuous indignation to pronounce as obscene that for which we plead.

The Lord Chief Justice: What classes do you mean?

Mrs. Besant: The school and classes of science now held, my lord, at South Kensington, and the Government put forward a number of books which they require as text-books for the children to be examined in.

Mr. Bradlaugh: In the larger directory, under the head of physiology, and in the small one, the instruction for the reproductive organs.

Mrs. Besant: That is a point which is most important, because one would not like to accuse the Solicitor-General of acting an indignation before you that he did not thoroughly feel. We can only suppose, for a moment, that

he was utterly ignorant that the Government had done the very thing which he characterised as obscene, for I am sure all ties of party, if nothing else, would prevent a gentleman in open court from characterising the action of his colleagues in office as actions which were thoroughly obscene, and ought to be indicted at common law. I will claim that if you bring in a verdict against us it will only be fair that you should also sit in judgment upon my Lord Beaconsfield, my Lord Salisbury, and my Lord Derby, and that they should hold the same position we hold in court to-day, to answer for circulating books which are distinctly obscene, which we find them putting into the hands of young girls; and if you are going to fine us, or imprison us, or if you are going to give a verdict which shall make it the duty of the learned judge to sentence us to fine or imprisonment, you will remember that we have taken no steps to circulate these books in girls' schools at all; we have simply treated them in the ordinary way, with no special pressure, and have never, as the Government has done, issued special lists and offered special rewards for the preparing of young girls in them; we have made a point of putting it to married people, while the Government makes a point of putting it to young unmarried girls scarcely out of their childhood. And I hold so thoroughly that the Government is right in putting that information in the hands of boys and girls (and I am speaking to you here as the mother of a daughter for whose education you must at least suppose I have some care and some interest), that I say deliberately to you, as mother of a daughter whom I love, that I believe it will tend to her happiness in her future, as well as to her health, that she shall not have made to her that kind of mystery about sexual functions that every man and woman must know sooner or later; that I feel, with Dr. Acton, that it is better to give instruction honestly, decently, and carefully, than to allow it to be thrown into children by their experience of the world (possibly in a bad and evil way), and I put it distinctly that the Government is doing a service to the coming generation when it places in the hands of young boys and girls the exact physiological facts which we are seeking to spread among adults to-day. And further I put it that when this Government teaching has had its full course for a generation, this work of Knowlton's will not be wanted any longer. Unfortunately, the adults of the present time have not had the advantage of the instruction which the Government

is now giving to the young: when the young have been instructed in Carpenter, Kirke, and in other books of physiology, this little pamphlet will not be needed, because every scrap of information which is found in it, every line which you can point out as covering any sort of words which you may think to be obscene, will, as you will find from my co-defendant's speech, have been thoroughly covered by words put into the hands of children by the Government, and when they have been trained in this fashion there will be no need to circulate among them that for which we are now indicted. It is only because former Governments have not thought it their duty to circulate physiological knowledge that we are condemned for doing it; it would be far better that people should gain that information from the mouths of professors in the schools and classes of science. Some 20 or 30 years hence Knowlton will no longer be required; Government will have taken his position, and will have taught all he teaches, and when the coming generation have had the advantage of that training from men selected by the Government, then will there be no need to give them the physical truths which Knowlton wrote for a generation even more ignorant than the present. Further, not only is a physical truth no moral evil, but I will put it yet more broadly that no physical description in any fashion tends to arouse impure thoughts; in fact, that it has exactly the opposite effect. Physiological knowledge tends to inspire so deep a reverence for the marvellous way in which Nature acts, for the fashion in which she evolves from the apparently most unlikely materials the most unexpected results, that physiological knowledge and teaching inspire a feeling for Nature of reverence so deep and intense that there is no room left for a coarse or an impure thought to enter into connection with the matter. There has been no coarseness attached to the reproductive system spread throughout the vegetable kingdom; and if less mystery were made about the matter, if children were taught that, above all physical functions, they were bound to reverence and think carefully of, and dissever from every element of indecency, that power whereby Nature crowns them with the power of giving new life—if you gave them information such as that, you would do away with the whole suggestion of indecency which hangs around it now. If, for a moment, you will think of the point with which I am dealing, you will acknowledge that in no sense can physiological knowledge be treated as

obscene. Think, for a moment, that every doctor who comes into your homes in time of trial or sickness is a man to whom every physiological detail of the frame is as familiar as possible: to a scientific man, or a medical man, there is no difference between one part of the body and another. There is no more thought of indecency in the mind of the student connected with the reproductive organs than is connected with the brain. It is simply that the course of habit has thrown over them a stigma of indecency which it is ours to try to remove by taking away that cover of ignorance which has covered them with curiosity. You find Dr. Acton pleading for that knowledge in language and expression which I cannot pretend to rival. He says that the whole attraction of impure literature simply gains its strength from the fact that people make a parade of concealment about the functions of Nature, thus giving them a factitious allurement that they never would have if they had been dealt with in a a proper manner. So far from a book of this kind raising sexual passions, nothing can show more utter ignorance of mankind than to pretend that it were possible it should do so. If you were going to sit down to a special breakfast or dinner—and, if I were speaking within the confines of the city, I might say to a Lord Mayor's dinner, for you as citizens might have been there—you would not choose to stimulate your appetite with a dry physiological treatise on the digestive organs. It is very much the same with physiological treatises of the other kind. No man with an impure mind, who wants to rouse sexual passion, who wants in any way to give reins to his passion, will go carefully through dry details which, by the kind of thought they give, and by awakening the brain, utterly destroy all possibility of passion, as I am sure your own experience will tell you amongst medical men who make these things their study. Passing then from that, I will take the following paragraph: "Some," Dr. Knowlton says, "may make a misuse of knowledge; but that is their fault, and it is not right that one person should be deprived of knowledge, of spirits, of razors, or of anything else which is harmless in itself, and may be useful to him, because another may misuse it." That point, my lord, is a vital one in this instance, because it is urged, and has been urged in this presence, and urged very strongly outside the court (though I have no right to introduce that here); it has been urged here by the learned

Solicitor-General that while this pamphlet, if confined to married people, might do no harm, the danger of the pamphlet is that, while addressed to married people, amongst whom the knowledge is not injurious, it may fall into the hands of young people, and people who are unmarried, and may point out to young women especially (for young men do not seem to be taken into consideration on matters of this kind; it is apparently allowed that they may be as fast or as objectionable as they choose)—it has been urged that young women of bad character really, but of good character outwardly, may find that they may become safely unchaste by the knowledge which is given to them by Knowlton. I have found very great stress laid upon that by the Solicitor-General, for he not only assured us that in publishing this pamphlet our intention was to destroy married life, and to promote promiscuous intercourse, and to make unchastity safe—he not only did us the honour to suppose that we should place ourselves in this dangerous position for nothing except for the pleasure of corrupting young girls—not only did he say that was our intent, but also that the book was specially calculated to point out to unmarried females the way in which they could be unchaste without the danger of discovery, which might otherwise arise. Now, for a moment, let me say that the misuse of knowledge does not make the knowledge bad; using knowledge wrongly does not make the knowledge obscene; the knowledge remains the same whether it be used or abused, and the fault of the misuse does not lie with the giver of the knowledge, it lies with the person who abuses the knowledge. I will lay that down as a principle which none will venture to dispute. Suppose you say that a knowledge of poisons enables the person who obtains it secretly to kill another, or to poison a family with a safety which he might not secure were it not for the knowledge, would you, because one person might sooner or later poison his neighbour, venture to say that a botanical book which gave all the properties of plants and included poisons, and which was found extremely useful in a medical sense—would you say that was a book calculated to injure the morals of society because it gave that necessary information, and at the same time enabled some one person to obtain knowledge which enabled him to administer a poison which was not discoverable by medical analysis? My lord pointed out to the learned Solicitor-General, I thought very fairly—it struck me as a very just point to be put by the

judge—he pointed out that in dealing with the word "obscene" it was not in any fashion necessary that the book should in itself contain language obscene and coarse; on the contrary, he stated that you might, under the meaning of such an indictment as this, include words which would be calculated to deprave the morals of society, and that it was not merely whether the book was obscene in the common sense of the term, but whether its tendency was to vitiate public morality. And while for a moment that might be thought to be a remark which might have been directed somewhat unfavourably upon my co-defendant and myself, I yet so thoroughly felt that the learned judge was raising a point which ought to be put before you, that I felt almost grateful to him—if one could be grateful for a momentary disadvantage—for having raised the point. I think, however, that the point I put to you about a botanical treatise exactly covers the contention raised by the learned judge, for no one would pretend that the knowledge of poisons in a botanical book ought to be withheld from the public on the ground that that knowledge might tend to harm public morals by giving to already vicious people the knowledge that they might turn to a bad purpose. That is a point which I will take leave to submit to the learned judge and to the jury as clearly bearing on this case. And take that part to which I referred as dealt with in Churchill's "Diseases of Women," where knowledge as to the procuring abortion is given. It might be urged that that gave a power of harm, but even then you cannot limit medical thought and medical science by this argument, that people of impure and obscene minds may put a bad use on the knowledge which is given. In all knowledge you must get an increased power of harm as well as of good. It is the very condition of knowledge that you have the knowledge of good and evil side by side. You cannot say you will have the one thing without the other; that is entirely beyond your choice, that you cannot have; you must have the knowledge, and with the knowledge of good must necessarily, unfortunately, come also the knowledge of the abuse of what is good, that may fairly be taken as evil. And I put it to you that the argument against Knowlton because Knowlton may be misused is an argument which, if generally applied, would forbid any information to be published, and would make the only virtue of society consist in the utter ignorance of all its members. Take any case you like. Take knives,

for instance; knives are sold, not for the purpose of cutting people's throats; but, if you take the case of the sailors round the docks in Eastern London, you will find that every man there carries a clasp-knife in his pocket, and that it is very common for cases of stabbing to arise. The men do not carry the knives to stab their fellows with, they carry them to cut the rigging, among which their work lies, and they are very handy in that capacity; but you find cases of stabbing arise with far greater frequency than they otherwise would, because the means of stabbing are ready in the pockets of the men whose passions are aroused. Are you going to forbid the use of knives among the sailors because some of them use their knives for the bad purpose of stabbing instead of for the good purpose of cutting the rigging of the vessels? Are you going to forbid the use of guns because a poacher may misuse one to shoot a gamekeeper instead of using it for a legitimate purpose? Do you mean to argue that taking the licence off guns is wrong because it enables more people to carry them? Are you going to argue that ropes ought not to be sold in the public streets because a rope can be bought for 6d., and that that rope can be used by a murderer to hang his victim, and that you must not sell it because a murderer will find it so easy to buy a rope? Look at lucifer matches. Fifty years ago, when lucifer matches were less common than they are now, it might have been urged that you should not sell lucifer matches among farm labourers because it would be so easy to set fire to farmers' ricks with them. With the old flint and steel it was not so easy to fire a rick as it is with lucifer matches, and clearly, therefore, you must not permit them amongst the agricultural population, because you put a power to injure into their hands that they would not possess if they kept to the old flint and steel. Gentlemen, that argument would never have been brought before you if it had not been that this is not a fair prosecution at all. This is simply a trumped up and malicious prosecution. This book has been in circulation for forty years, and now private spite and private malice have dragged it forward from the obscurity of the very small circulation which it had, and has given it a circulation of an enormous extent, which, otherwise, it never would have had. This prosecution has been made purely and distinctly out of private and party spite, and those who conduct the case are compelled to make up ridiculous arguments of this kind, and to read long quotations, in order to fill up the time for which they feel

compelled to speak to the jury. We have heard for this reason the whole of the preface on which I should almost be ready to rest my defence, and of which practically I am following out the lines. They talk of the harm which may ensue to one or two people, and so drag you into the belief of corruption that has no existence in the book, and was never in the minds of the people who published it. You are asked to prevent the circulation of this book because women and others may abuse the knowledge there given. The circulation of this book, if I may judge in any fashion from my own personal experience, is valued by poor men and women in all parts of the country (and I can't help remembering that the editor of the *Times* newspaper said that he judged the c ling of the country by the state of his letter bag in the morning). If the remark of the editor of the *Times* may be taken as a proof of the feeling of the country, then what you are asked to do is nothing less than to prevent the circulation of a book that may bring comfort to thousands of English homes, because one woman here and there may abuse the knowledge which it contains. Why, the knowledge is given in a variety of ways, as I shall be compelled to show you before I sit down. The very knowledge given in Knowlton's book is given in a book practically authorized by Government; I am referring to the report under the Royal Commission on the working of the Contagious Diseases' Acts, and you will find presently that the knowledge most objected to in Knowlton is given there, and it is sold by Messrs Longman, who are not medical publishers, at the price of one shilling. I will only now say that that is a book which, from its very title would attract those by whom the knowledge would be most likely to be misused. I put it to you, is it likely that this knowledge would increase unchastity among women? If you read the appendix—and I may say, though we have printed the appendix, we do not know who wrote it. We have printed it because it formed part of the book which was prosecuted before; and we felt bound to do so, in order to thoroughly challenge the verdict of the jury upon it—in the appendix you will find the argument I am alluding to very clearly put forward. Who this is written by, as I have said, I can't tell; but it was published in the columns of the *Boston Investigator*. If you will carefully glance over it, it will save your time, and I will not read it through, as I do not want to weary

you. You will see that the objection put forward by some against diffusing the knowledge contained in the book is the fear that it would increase illegal connections; and you will clearly remember that I put it to you this morning that the knowledge would have exactly a contrary effect, and it is here put that it is "an outrageous slander" to contend that women are preserved in chastity from the fear of the consequences that may result from the contrary. In this English court of justice need I argue for one single moment that English women are not only kept chaste from the fear of becoming mothers? To do that would be to insult your common-sense and to waste your time. I am sure you feel with me that the chastity of English women is maintained by a feeling purer and nobler than the mere fear of the shame and disgrace that might ensue from a motherhood which was unsanctioned by the law. The fact is, that anyone who could misuse the knowledge that is given here, is so far gone already that there is very little to gain by keeping this knowledge from her. If a woman has been so carried away by passion as to desire the book for purposes of passion, she will not be pushed any further by the possession of this knowledge. Fear, as you know too well, does not keep women chaste, and the only effect the book could have on a woman who, for one moment, contemplated the consequences which are spoken of by the prosecution, would be to dissuade her from her passion. The fact that the woman had the patience to wade through dry physiological details, to make the preparation that is in this book contemplated, shows that it is no longer a question of passion carrying her away, but a quiet and steady determination to go on the wrong path, which no amount of persuasion would keep her back from. If you are going to say that the mothers of England who seek for this knowledge, that those who plead to me to fight this question for them, are to be kept in ignorance because one woman here and there, already unchaste in thought, may become unchaste in act, I say you are sacrificing the many scarcely even for the benefit of the few. You are injuring the great majority of decent, modest, respectable women, who desire to have this knowledge, for the sake of one here and there whom no care on our part can prevent from getting the knowledge she desires. Do not think you can stop the knowledge by stopping this book. There are plenty of books, unfortunately, of a very different character,

from which those who desire to be unchaste can gain their knowledge. This book will not help them, for Knowlton warns them too sternly against the evils of unchastity He tells them too much of the dangers that result from unchastity, too much of the dangers that come from excess. Put the book into the hands of man or woman who is known to be running wild in this matter, and you will find that the dangers pointed out in the book will frighten them back and destroy the charm of the temptations which they feels. You will never do harm with a book like that; there are too many books to which they may turn on the matter for them to go to a dry book like Knowlton's. I put it to you now, as I do not propose to carry on this chapter further, that it is the mothers of families, as a matter of fact, who express so keen an interest in this book; and if we had been so fortunate, as naturally we have not been, as to have had the pleasure of seeing any of you, or the learned judge, at any of the meetings which have been held on the subject, you would have marked one very curious point—that the whole audience, except the very smallest minority, was composed of the rather more than middle-aged, somewhat hard-featured, men and women, who certainly would not have been drawn there from any feeling of prurient curiosity, but were simply drawn there by feeling the pressure of their need to know something more than they did at the present time, to learn how they might preserve their children from the sufferings they had themselves undergone. If it were in any degree admissible—and I do not think it is—I believe that the learned judge would feel it his duty to stop me if I brought here in evidence a large mass of letters from women of all classes which I have received: as a mere point of law I might read them one after another, but I think, to do that would be to shelter myself under a point of law which it would not be fair to raise; for though the learned judge said yesterday that he could not prevent my learning a quotation by heart, and reciting it as part of my speech, and therefore could not prevent me from reading, yet I do not want to weary either the judge or the jury with any unfair amount of matter of that kind. I will therefore, only put it to you shortly that amongst these letters, some of them of the most touching character—letters, gentlemen, that however much you might be prejudiced against me, you could not hear me read without being touched by the tone of their contents—letters of women who have had nine,

ten, or twelve children, imploring me to save their daughters from going through their own deplorable and terrible experience. You would feel, had you seen these letters, that even a man in the rank in the law of the learned counsel for the prosecution, who stands up and puts the taint of obscenity on my intent, simply insults your common sense, and makes a verdict given in favour of the prosecution an entire impossibility to be given consistently with your conscience. You will find a mass of letters coming from those who have had this book in early life, and who have experienced the benefits of the work. One I have particularly in my mind at the present moment, from a certain station-master in Scotland, who says that his wife, almost dying after her last confinement, the whole future of their lives looked black and gloomy. Some mere chance threw this 6d. pamphlet into their hands, when it was published by James Watson. He tells how they read the book; how they acted upon it; how his wife grew strong and healthy, and how, at the present time, years afterwards, they are looking forward to an addition to their family with a pleasure they would never have been able to experience had they not had this book. You may think that in a matter of this kind, I somewhat overdraw it, and that I lay too much stress on a mere 6d. pamphlet, but if you knew the feeling about it, the earnestness, the intensity with which men and women look upon this question, you would not wonder at my zeal. Those who read a book for the sake of the impurity contained in it will not find this pamphlet attractive to them, It is circulated amongst those who need its teachings, and it is those for whom I plead. I acknowledge that medical periodicals may be read for a most impure purpose by impure minds; I acknowledge that the *Lancet*, which is published at all the railway bookstalls, that the *Medical Observer*, which is sold on the Metropolitan Railway, I acknowledge that all these works may be read for impure purposes by impure minds; but that is no reason why this book, or those journals, should be suppressed, because the impure gets from them the knowledge which he would certainly get in some other way if he did not get it through these. That is no reason why earnest and respectable people should not obtain the knowledge which may contribute to their married happiness. The rest of this chapter I propose to pass right over, and to leave to my co-defendant. I stop for one moment on pages 31,

32, and 33, which I shall not read, only asking you to glance at the subject-matter: but I want first to make a general remark on this chapter; the learned Solicitor-General, doubtless through utter ignorance of medical science, used an expression in dealing with this chapter which is calculated to mislead you. He pointed out to you, I don't know whether he intended you to read the book or not, or whether he took the point for granted, that this book dealt not only with the reproductive organs but also with the external forms. The word "external," if you had not read the book, would convey an utterly false idea to you; "external" and "internal," used as medical terms in the ordinary medical division, were pointed out to you as evidence of indecency. The word "external" used as the Solicitor-General used it, conveyed an utterly false impression which there is nothing in the book to cover. When you come to deal with Carpenter you will find expressions which do convey indecent impressions to indecent minds, but you will not find anything here to justify the idea the learned Solicitor-General conveyed. I trust he did that under a mistake, and made a suggestion he will regret. I will now put to you another point which my co-defendant will put to you more fully: the Solicitor-General inferred that the indecency of the publication was increased because it only dealt with one sex and not with the other. The suggestion was most unwarranted. Knowlton only deals with the physiological details which are necessary for the application of his arguments. He does does not deal with the other sex any further than is absolutely needful, and for the learned Solicitor-General to put as a suggestion of indecency what is simply a delicacy on the part of Knowlton is most utterly unjust. I ask you to remember, as I do not doubt you will have more fully impressed upon you than I will venture to do, that what is really a proof of the delicacy of Knowlton's work the Solicitor-General tries to turn into a suggestion of its complete indecency. Now I will refer you to pages 31, 32, and 33 for a special reason, but shall have here to put in evidence a book by Dr. Chavasse called "Advice to a Wife," and another book by Dr. Bull, called "Advice to a Mother." The two books are exactly the same in character, and they deal throughout with the whole of the questions which affect a married women from her marriage day. The only difference between Knowlton

and these books is that both Chavasse and Bull and are far more detailed in their descriptions. They give a large number of stories to make their works read pleasantly instead of writing a mere dry treatise like that of Knowlton. I put it to you, as to the information given in those pages which are objected to by the prosecution, that the value of the information to a young married woman cannot be over-estimated. So great is the truth of this that you will find that many medical men, of careful delicacy of mind, give these books to young married women who are their patients, for the very purpose of avoiding the necessity of going into many personal details which otherwise they would be compelled to deal with. I am speaking here from my own personal experience, because when I was first married my own doctor gave me the work of Chavasse, on the ground that it was better for a woman to read the medical details than it was for her to have to apply to one of the opposite sex to settle matters which did not need to be dealt with by the doctor; practically these pages in Knowlton's work are a very short and very careful summary of the subject dealt with by Chavasse and Bull: where you have got to deal with a sixpenny book you must summarise the details. Many a young married woman does not like to apply to a medical man on many points that may arise; she sometimes does herself serious harm, and perhaps brings on miscarriage, and lays the foundation of future ill-health; or she sometimes thinks herself seriously ill when no real disease exists; these pages are simply invaluable to a woman, and they give to a poor woman for sixpence that which a richer woman can buy for five or six shillings. I will ask you whether for one moment, seeing that these books are both sold by a member of Her Majesty's Government, that they are not sold with any restrictions, that they are sold on railway bookstalls, whether, if any blame is to rest upon us because we publish a short quietly worded treatise on that which others publish far more warmly worded, no blame is to rest on them? Surely English justice, whatever your opinion may be, common English justice compels you, if you bring a verdict of guilty against us, to at once institute a prosecution against Mr. Smith, who is one of Her Majesty's Government, for circulating amongst the higher classes at 2s. 6d. a work which you say is indecent when circulated amongst the poorer classes at 6d. The point as to the use of these books seems

to me so thoroughly pertinent, that I will here quote to you what Dr. Bull puts in issuing this work; in his preface he says: "In the minds of married women, and especially in young females, those feelings of delicacy naturally and commendably exist which prevent a full disclosure of their circumstances when they find it necessary to consult their medical advisers. To meet this difficulty, as well as to counteract the ill-advised suggestions of ignorant persons during the period of confinement —are the chief objects of the following pages." This book is now edited by Dr. Parker, who has edited the work since the death of Dr. Bull. The same remark also applies to another part of the book (pp. 15 and 16), where you will find a number of remarks objected to by the prosecution. You will also find, when my co-defendant comes to speak, that all its details are collected from books whose circulation has never been interfered with, and that the only difference between Chavasse and Knowlton is that Knowlton is dry and very brief when compared side by side with Chavasse and Bull, both of whom use a large amount of what is called "literary padding." Once more I shall have to ask you to look at the book itself for one moment, and refer to pages 34, 35, 36, and 37; these pages deal with cases of sterility and impotence, and the Lord Chief Justice—I thought very wisely—pointed out to the learned Solicitor-General that, in dealing with sterility, any man who could give some cure which would remove sterility might fairly be described as a benefactor to the human race. As this point has already come from the Bench as an expression of opinion, I do not think I need trouble you with any argument on it. Knowlton, in dealing with it has dealt with it thoroughly within the bounds of his subject, and has not included any unnecessary information, but has only given that which it was his duty to include in order that he might be understood by those for whom he wrote. The remedies are here very much the same as those which are approved of in the other medical books; but suppose they were not, suppose that there was anything in the suggestion of the learned counsel against one remedy—difference of remedy, surely, cannot constitute obscenity in medical works; when the remedies which are proposed are different they may be matters of discussion amongst those who are qualified to discuss the question, but it cannot be pretended that one remedy is a remedy that can be de-

fended as decent and the other one condemned as obscene; that in the mere language in which they are advocated there is nothing, which, to a well-regulated mind, could suggest indecency, has already been allowed. I would draw your special attention to pages 36 and 37 as showing the intent of Knowlton in writing. He puts there the very point which the learned judge raised yesterday morning. He says that "Impotency, at a young or middle age, and in some situations especially, is certainly a serious misfortune to say the least of it. The whole evil by no means consists in every case, in the loss of a source of pleasure. All young people ought to be apprised of the causes of it—causes which in many instances greatly lessen one's ability of giving and receiving that pleasure which is the root of domestic happiness. I shall allude to one cause, that of premature, and especially solitary gratification, in another place. Intemperance in the use of spirits is another powerful cause. Even a moderate use of spirits, and also of tobacco, in any form, have some effect. It is a law of the animal economy, that no one part of the system can be stimulated or excited, without an expense of vitality, as it is termed. That part which is stimulated draws the energy from other parts." Gentlemen, I ask you whether that is the kind of language that would be used by a man writing with intent to corrupt? And now I will ask you to look at page 37, on which I will call your attention to the following passage:—"As to the remedies for impotency, they are much the same as for sterility. It is of the first importance that the mind be relieved from all care and anxiety. The general health is to be improved by temperance, proper exercise in the open air, cheerful company, change of scenery, or some occupation to divert the mind without requiring much exercise of it; nourishing food of easy digestion; flannel worn next to the skin. The cold bath may be tried, and if it be followed by agreeable feelings, it will do good."

I will only ask you whether any possible remedies could show more common sense or less desire to deprave or corrupt the minds of the young. Knowlton simply gives that knowledge which it is to the benefit of men and women to possess, and nothing can be stronger than this chapter to show that he was guided by good and pure motives. This curse of sterility is so great a curse upon married people, that any man who, for 6d., can point out the way to avoid 't, may be taken, as my lord said, to be a benefactor of the

human race. The remainder of the chapter deals with checks to population, with which, as I said at the beginning of my address, I propose to leave it to my co-defendant to deal. The whole of this remainder was read out by the learned Solicitor-General, and he put it to you that he read it with a large amount of pain. If it pained him so very much, I do not quite know why he should have read it as he did, because, as you all, every member of the jury, and your lordship, had the book before you, the extreme delicacy of the learned counsel might have excused him from a task he said was so painful.

The LORD CHIEF JUSTICE: The learned Solicitor-General is not here, and I think you must be just to him. He was rather challenged to read them.

Mrs. BESANT: Do you think that I ought to be gentle with him, my lord, as he is absent? (Laughter.)

The LORD CHIEF JUSTICE: What I said was, that you must be just to him.

Mrs. BESANT: I did not mean to be unjust to him, my lord.

The LORD CHIEF JUSTICE: I said he was called upon to read the passages. I thought it fairer to you that he should point out the passages upon which he relied, and upon which he will rely by-and-by, when he comes to address the Court.

Mrs. BESANT: That is quite fair; but I thought, if he felt so very much pain, he might have avoided the special anguish of mind he seems to have had in dealing with these passages. I will not press the point any further, however, as the learned counsel is not here. I do feel the position is especially painful for him, because, if he does not get a verdict against a woman, it does make the position of a learned counsel very painful. (A laugh.)

The LORD CHIEF JUSTICE: You have gone through this long—and, I must say, very able—address up to the present without saying anything that could be regarded as painful or offensive to any one.

Mrs. BESANT: And I will try to do so to the end. My feelings towards the Solicitor shall be more charitable than his were to me, for he accused me of some of the vilest things a woman could do. But I will not press the matter further, and perhaps, by not too roughly defending myself against him, I shall make my case the stronger. I do not say these checks pointed out by Knowlton are the best pos-

sible; but, if they are not, that is a question which should be left to the discussion of medical men. Dr. Knowlton himself is a man of immense learning and culture, and, at any rate, his opinion is entitled to a respectful hearing. If his views are considered erroneous, the proper course is to write a pamphlet pointing out where Knowlton is wrong, and not to bring in this system of police supervision. There is now only one single piece more in this chapter that I shall trouble at all to draw your attention to, and you will perhaps kindly excuse me from reading it. I do not know whether I shall be in order if, instead of reading it, I hand the passage to your lordship.

His LORDSHIP: What is it?

Mrs. BESANT: It is a passage from the files of evidence taken before the Contagious Diseases Commissioners; and it is simply a special point that covers much in Knowlton.

The LORD CHIEF JUSTICE: If it is anything you would rather not read, you can leave it to your co-defendant.

Mrs. BESANT: Very well, my lord; then I will only say that it instructs unmarried people to use one of the checks given by Knowlton. I do not propose to deal further with the third chapter. All in that chapter that has given offence you will find put forward in other books, but I do not propose to deal with the details of it in any way. I understand this supposed objectionable portion is confined to three pages and a quarter, and if the object of the book is bad and immoral, then the whole of the remainder must be supposed to lead up to these three pages and a bit; but this can scarcely be contended to be the case. The whole object of the book is to promote marriage, and to teach temperance to those who are married, and it is utterly wrong that you should judge from these three pages, instead of from the rest of the book, which is manifestly good and manifestly pure. I come now to the fourth chapter, in some respects the most valuable in the book, a chapter which is its own defence almost more strongly than anything I can say will make it. You find Knowlton putting forward a quotation from Mr. Robert Dale Owen on the reproductive instinct: "Controlled by reason," he says, "and chastened by good feeling, it gives to social intercourse much of its charm and zest, but directed by selfishness or governed by force it is prolific of misery and degradation. In itself, it appears to be the most social and least selfish of all instincts. It fits

us to give even while receiving pleasure, and among cultivated beings the former power is even more highly valued than the latter. Not one of our instincts perhaps affords larger scope for the exercise of disinterestedness or fitter play for the best moral feelings of our race. Not one gives birth to relations more gentle, more humanising and endearing, not one lies more immediately at the root of the kindliest charities and most generous impulses that honour and bless human nature. It is a much more noble, because less purely selfish, instinct than hunger or thirst. It is an instinct that entwines itself around the warmest feelings and best affections of the heart." You will observe that it is not as the Solicitor General put it, as if this instinct were to be unrestrained, but that it is to be "controlled by reason, and chastened by good feeling." And I think that one may fairly put it to you that no more elevating idea of love, regarded as a physical passion, can possibly be put forward than is put forward here. In the next paragraph Dr. Knowlton says: "But too frequently its strength, together with a want of moral culture, is such that it is not 'controlled by reason;' and, consequently, from time immemorial, it has been gratified, either in a mischievous manner, or to such an intemperate degree, or under such improper circumstances, as to give rise to an incalculable amount of human misery." That paragraph points out the mischief that may come from sexual intercourse, and the chapter goes on to show how that mischief may be avoided. I am utterly at a loss to understand how it can be suggested by the prosecution that a part of this book gives encouragement to a loose way of thinking, when the rest of the book is so distinctly against intemperance. In the following paragraph Dr. Knowlton goes on to deal, I think fairly from a medical point of view, with some of the evil consequences that arise from this instinct under the present state of things. Some of these consequences he says it is the business of the "moralist to point out, whilst of others it [falls within the province of the physician to treat." He complains that "physicians have hitherto fallen far short of giving those instructions concerning this instinct which its importance demands. In books, pamphlets, journals, &c., they have laid much before the public respecting eating, drinking, bathing, lacing, air, exercise, &c., but have passed by the still more important subject now before us, giving only here and there some faint allusion to

it." Dr. Knowlton wrote to that effect some three-and-forty years ago, but since that time many medical works of a similar character have been published, so that Knowlton's complaint would no longer be real. Dr. Knowlton then goes on to say that "true philosophy dictates that this and all other appetites should be so gratified as will most conduce to human happiness—not merely the happiness attending the gratification of one of the senses, but all the senses —not merely sensual happiness, but intellectual—not merely the happiness of the individual, but of the human family." Taking that position, I will simply ask you whether you think that is the attitude of a man who wishes to degrade the tone of society, and do harm to the morals of the young. The next paragraph I will not read through. It is the paragraph commencing at the foot of page 42 and finishing on page 43. But I may point out that whilst it is said that this pamphlet encourages young lads of seventeen or eighteen to ruin their health by premature indulgence, yet in this paragraph Dr. Knowlton points out that early intercourse means ruin to their health when they come to later years. The next point in the paragraph that I would suggest as extremely useful is that he points out that the marriage ceremony ought not to remove all restraint to indulgence, or do away with the necessity of temperance. He points out how much harm many young people have caused themselves to suffer, because they utterly disregard, after marriage, all those restraints which all moral people observed before marriage. In the last paragraph of page 43 Dr. Knowlton shows that "temperance in this thing is not to be decided by numbers, but that it depends on circumstances; and what would be temperance in one may be intemperance in another. And with respect to an individual, too, what he might enjoy with impunity were he a labouring man, or a man whose business required but little mental exercise, would, were he a student, unfit him for the successful prosecution of his studies. Intemperance in the gratification of this instinct has a tendency to lead to intemperance in the use of ardent spirits. The languor, depression of spirits, in some instances the weakness and want of appetite induced by intemperate gratification, call loudly for some stimulus, and give a relish for spirits. Thus the individual is led to drink. This influences the blood, the passions, and leads to further indulgence. This again calls for more spirits, and thus two vicious habits are commenced which

mutually increase each other." Now I ask you whether that is the language of an immoral or sensually minded man? Is it not true that in these words he very shortly but clearly points out to married people that they must continue their self-restraint right through life, and that the harm that may be done by lacking self-restraint may lead them to intemperance, which in its turn will re-act again and so make utterly miserable the whole of their lives. I put that to you as utterly destroying the idea that the book was written for the purpose of corrupting morals; I urge that this charge cannot be maintained against Dr. Knowlton, and therefore cannot be maintained against those who have published his work. The succeeding paragraph is of exactly the same character, and I do not think that any advice can be purer or more temperate, or more utterly apart from any desire to corrupt than his advice to the married people whom he is addressing—no advice could be more moral, more beneficial, more wholesome, more free from any intention to corrupt than that contained in these passages. Gentlemen, what is Dr. Knowlton's intention and object? Take this chapter—the last paragraph in which I do not read because it has been read already—and we see that his purpose is to promote marriage, and to restrain intemperance. He is charged with writing a bad book with impure intent. But a man of impure intent does not speak against profligacy; a man of impure intent does not speak in favour of marriage; a man of impure intent does not urge temperance after marriage as well as before it; nor does such a man plead for self-restraint as we find Dr. Knowlton doing. The very idea of bad intent—and bad intent is the essence of the charge against which I plead—the very idea is a monstrous idea, and not one shadow of proof has been brought forward which will show you in what Dr. Knowlton's bad intent consisted. It is said that Dr. Knowlton was actuated by a bad intent, but it is not shown in any way how that bad intention appears in this pamphlet. But an objection has been raised to its price. I have now finished what I want to say about the book itself, and I now come to the question of price, which has been made the subject of hostile comment. I think I may fairly put it to you—as was almost suggested by the learned judge himself—that if a book is not obscene in itself, the price will not make it obscene. Its low price is part of the value of the book to

us, because a book at a high price could not reach those poor people in whom we are specially interested at the present moment; the poor cottager, the labourer, the artisan,—those, in short, whom Mr. Montagu Cookson desired to reach—cannot possibly be reached and taught how to proportion "their families to their room" except by means of low-priced books. They might get all this from Dr. Churchill, Dr. Acton, Dr. Marion Sims, if they could obtain them; but all these books are dear, and it is simply mockery to offer poor people books at 30s. or two guineas each. It is said that we sell a book for sixpence to anybody, and that somebody might desire to read it "from curiosity or morbid appetite;" but I will put it that it is not fair to put a bad motive into the minds of people who are desirous of reading a certain medical book. It does not follow that people who can only afford to spend sixpence on a book have a desire to gain a bad knowledge with their money. But if the price of this book is really an objection, then it does not stand alone. Take the *Lancet*, a paper which contains medical details beside which Knowlton is chaste in the extreme. The *Lancet* is sold openly on the bookstalls at *7d.* to anyone who chooses to buy it. The *Medical Observer* is sold for threepence—just half the price of Knowlton. That journal contains medical details of what would be called by the prosecution the most obscene character. Then there is the *Obstetrical Journal*, published at 1s. 6d., and bearing on its cover a special advertisement of a book on this very subject at 3s. 6d. By what reason, by what argument, by what logic are you asked to suppress Knowlton because he is sold at 6d., when these books remain unchallenged, some sold at 3d., some at 7d.? The price cannot make a book obscene. If it is not obscene at a high price, it will not be obscene when sold at 6d. We must remember that cheap knowledge is one of the great glories of the day; and such firms as Messrs. Cassell, Petter, and Galpin have made their names famous just because they have put before the world useful books at a price within the reach of everybody. I will ask you not to allow it to go out from this court as the verdict of twelve English jurymen that you measure indecency by the price at which it may be bought, and that you would allow that to pass at a high price which you count worthy of condemnation at a low. Then we are told that the book is being sown broadcast over London; but why is that?

The book never would have been spread over London had it not been for this prosecution. Seven hundred copies a year was its circulation before this most ill-judged and most ill-advised prosecution had given the book an importance it did not deserve. This prosecution has given the book a factitious importance, because people fancied that when such a large amount of legal talent was brought against it there must be something in it to induce people to buy it. It has been put to you that if medical works were published generally to the public the publishers would be indictable, but I scarcely think the learned judge will allow that that is a fair construction of the law, because every medical book we have here to-day is published generally. There is no restriction in the sale of medical works. Anyone can go to Messrs. Churchill for a copy of any book, and no question will be asked except "have you the money?" There is no such thing as restriction of the sale of medical works. If a book is printed for private circulation only, that is a different matter; there may be no publication then, because there is no sale; but if the book is once published there can be no pretence raised that it is restricted in its circulation. The enormous number of these medical works published shows that they cannot have been in any way restricted in their sale, for they have been circulated by tens of thousands. But even though the sale were restricted—as it is not—medical works, if obscene at all, would be quite as obscene in the lecture-room as in the street. And provided they are sold, and generally published, I do not see that the price at which they are sold at all touches the question of their obscenity. Nay, the very fact that we have got these medical works here to-day is proof that they are generally published. I do not think Mr. Bradlaugh has himself bought any of them, but they have been bought by Mr. Parris, who is not a doctor, by Mr. Wells, who is still a youth, and one or two by myself. When I happened to want to buy an edition of Bull I simply wrote to Messrs. Longman for it and got it; they never dreamt of making any inquiry, but simply treated it as a matter of business, fastened the book up and sent it through the post. If general publication makes a work of this kind obscene we ask you, why we should be specially singled out for prosecution, why this one book should be specially taken up? When Mr. Smith is in the box he will tell you there is no restriction placed upon these books; he will tell you that

their own agent at Paddington sold the book to me and would sell it to anybody and never dream of making any difficulty of any kind. And he will also tell you that the sale of this book has been enhanced by the course taken by this prosecution. The sale of Knowlton has increased enormously during the last three months. Instead of the 700 copies published in one year before the prosecution, about 125,000 copies have been sold in three months. The book undoubtedly has circulated largely in all directions, and we have allowed it to do so believing that we were right in defending its free circulation. To have stopped it, it appeared to us, would have been an act which might very justly have been construed into an acknowledgement, on our part, of guilt; and therefore, I say frankly, we have not tried to stop the sale of it. I openly state to you that we have let the book go its own way, and whilst, on the one hand, we have not taken the trouble of advertising, we have, on the other hand, put no difficulties in its way. We did, however, stop the sale of it at our own place of business. Not that we feared the consequences of selling it; but because we did not wish our shop-people to be subjected to the same annoyance that we have been subjected to. We stopped the sale of it over the counter at Stonecutter Street; and we have stopped also the supply to the hawkers in the streets, for the simple reason that we did not like their manners and customs. Notwithstanding that, however, the sale has risen since the proceedings taken against us by the prosecution from 700 a year to 125,000 in three months. That is one of the effects of trying in a free country to stop the sale of a book which has been uninterruptedly sold to the public for forty-three years. If, gentlemen, we win your verdict, the book will find its own level. Do not understand me to pretend to say that there is anything specially valuable in Knowlton himself that will cause his book to live long; far from it, and I, for one, shall not, after an acquittal, care to sell another copy of it. We only want to make the right for others to sell it freely to whoever desires to buy it. We do not desire to make a gain, and we knew when we were selling it that we were running a risk which no money gain would compensate. We felt that it was necessary to raise the question of the right to sell the work; that we have done, and now, if we obtain your verdict, our interest in the pamphlet ceases. The

moment your verdict is returned in our favour, that moment anyone can publish it. It will find its own level as a work out of date ; but the great question we are fighting is one of liberty of publication, and we ask you by your verdict to say that there is a right to sell all honest thought honestly expressed. That is the point I put to you. I do not, however, pretend to say or think that if we fail to-day—although I think that an impossible result—that then the circulation will cease ; because I think the feeling in this country on the subject is so strong, that if we are convicted and punished, you would find it necessary to institute innumerable prosecutions against persons who entertain our views on this subject. And now I would ask you, gentlemen, in concluding the remarks which I have thought it right to put before you, and in thanking you for the extreme patience you have exhibited in listening to me throughout what I know has been a very long address, I would ask you, in dealing with your verdict, to consider that you have not only to deal with the two defendants now standing here to take their deliverance at your hands, but with that great public feeling of England, which by no other means can so rapidly be raised as by any interference with the liberty of the press. It is not only the question of the publication of an obscene book that brings us here to-day. Had it been so there would have been no necessity to have occupied the time and attention of my lord and of you, gentlemen. Had that been the only question the whole matter would have been very quickly settled, and my co-defendant and myself would have been dealt with at the Old Bailey. It was with a feeling that such a work as the present had no right to be made the subject of a criminal prosecution, that we determined to avail ourselves of the right which a free English justice gives us, of coming into this court and pleading here in defence of our cause, knowing, as we do, that thousands of the English people think us right. Under those circumstances, I do not know how you, gentlemen, will reconcile it to your consciences to bring in a verdict of guilty against us, a verdict which means that the work of Dr. Knowlton is one of a most disgraceful kind. And I now leave the matter in your hands, with every confidence, leaving the remainder of my case in the hands of my co-defendant, knowing that his defence really, though not technically, will cover mine, with the addition of the evidence of skilled witnesses, who

will tell you, not their opinions, but their experience, and who will indorse the points I have put to you. I fairly put it that unless you honestly believe that my whole speech to you has been one mass of falsehoods; unless you believe my intent to be a bad intent; unless you believe I have been deliberately deceiving you throughout, and stand here before you in the very worst character a woman could take upon herself, namely, that of striving to corrupt the morals of the young under the false pretence of purity here put forward, and unless you think that, for the after-part of my life, I deserve to pass through it with the brand upon me that twelve gentlemen, after all patience, thought, not only that the book was a mistake, the opinions wrong, and the arguments unconvincing, but, in the terrible language of the indictment, that I am guilty of "wickedly devising and contriving as much as in me lay to vitiate and corrupt the morals of youth" as well as of others,—unless, I say, you believe that that has been my object and purpose, on this indictment, I shall call upon you, gentlemen, to return a verdict of "Not Guilty," and to send me home free, believing from my heart and conscience that I have been guilty only of doing that which I ought to do in grappling honestly with a matter I consider myself justified in grappling with—that terrible poverty and misery which is around us on every hand. Unless you are prepared, gentlemen, to brand me with malicious meaning, I ask you, as an English woman, for that justice which it is not impossible to expect at the hands of Englishmen—I ask you to give me a verdict of "Not Guilty," and to send me home unstained.

The conclusion of the address was received with applause, which the officers of the court suppressed.

Mr. Bradlaugh then proceeded to open his case. Addressing the Bench,

Mr. Bradlaugh said: Before I commence my opening to the jury I haye again to trouble your lordship, as to the indictment, and I hope, after your lordship's intimation of yesterday morning, you will not think I do so unduly or disrespectfully. I only want to preserve what I think are my legal rights.

The Lord Chief Justice: I cannot deal with that. I have told you I will reserve that point if necessary.

Mr. Bradlaugh: The only doubt is this, my lord. I have been looking at the case of the Queen *v.* Goldsmith; but if your lordship will reserve any rights——

The LORD CHIEF JUSTICE: I have told you I will, already.

Mr. BRADLAUGH: Then, my lord, I will not press the matter any further. There is, however, a very strong dictum of Lord Chief Justice Bovill in the case of the Queen *v.* Goldsmith I should have liked your lordship to have seen. I trust your lordship will not think I wish in any fashion to trespass on the Court, but there is another case I would wish your lordship to take a note of. It is the case of the King *v.* James, reported in Cox's "Criminal Cases," vol. 12, page 127, and I will not trouble your lordship one word more, the points being reserved to myself and co-defendant.

My lord and gentlemen, I feel the grave responsibility that rests upon me in this case the more because I know that any want of tact in speaking upon the extremely delicate matters which I shall have to deal with may probably tend to damage my co-defendant, who has so ably, and if his lordship will permit me to say, so modestly, but earnestly put her case before you; and I will ask you to dismiss from your minds in the beginning the whole of the references made by the learned Solicitor-General to some other proceedings which may have been taken in some other place against this pamphlet or some pamphlet similar to it. It was laid down in the case of the King *v.* Drakard, Howell's "State Trials," vol. 31, page 534, where it was sought to plead the acquittal of a defendant indicted for publishing a similar libel to the one alleged against Drakard, that any evidence of such acquittal was not admissible—that one jury was not bound by the verdict of another jury, and that each jury was equally capable of judging of the merit of any case submitted to it; and I draw your attention to that lest you should think that some judgment which was alluded to by the learned Solicitor-General, but of which no sort of evidence was or could have been tendered in this case, ought to influence you; and lest you should think that that judgment ought to have any practical effect on your verdict here. I ask you, therefore, to utterly discard the learned Solicitor-General's statement. I will now beg you to consider the indictment on which you are asked to pass your verdict against us. The indictment in effect is for publishing an alleged obscene book, and, as has been pointed out by my co-defendant, there is no statutory definition whatever of the word obscene. In the 20th and 21st Victoria, known as Lord Campbell's Act, there is a reference there to books which are described as obscene books, and if one wanted

to gather what was meant by the word obscene one would try to do so by examining the explanation which was given by the learned judges themselves in debating that statute. In the debate in the House of Lords which took place on the moving for the second reading of the statute under which the seizure warrants are issued against obscene books, Lord Campbell gave the definition already read to you by my co-defendant; but I shall have to trouble you at a little more length on the subject of that definition and debate, for I am going to submit to my lord and to you that we are indicted under the common law, and that common law is common usage, and that there never has been an indictment tried out under the common law against a work similar to this. I shall show the character of works usually known as obscene to be entirely different to the one under prosecution, and that fair physiological treatises of whatever price and however widely circulated and published, either by laymen or physicians, are not and ought not to be considered as obscene works. I have one difficulty to contend with in this case, and that is that this is the first instance of a prosecution for alleged obscene libel where the publisher has stepped forward and said the book is not obscene. Sometimes the defendants have denied the publication, sometimes pleaded ignorance of the contents. We make no denial of the publication of the pamphlet; we come here admitting that we published it, knowing every line in it, and we say that we believe it not to be obscene. And I hope that before I conclude this speech I shall succeed in showing you that there is not a line or a word in this book which can be fairly or properly put as being of an obscene character. That much may be unfamiliar to you, I can well conceive, for when my attention was first called to this book in my own judgment it seemed to me to contain objectionable features in many of its details. But since I have read Dr. Carpenter's works, line for line of which it will be my duty to take you through, given as prizes at public schools even by the Recorder of the City of London, who charged the grand jury, at the Old Bailey, which found the true bill which has sent us here, and put us on our trial before you, and again, when I read the works of Dr. Kirke, of Dr. Fleetwood Churchill, Dr. Marion Sims, Dr. Nichols, Dr. Brinton, Mr. Hilles, Dr. Graily Hewitt, Dr. Chavasse, Professor Wilder, and many others most probably known to you, but whose

writings can never be said to have been intended to inflame the passions, I felt ready to stand before you, not to ask you for deliverance from any limited punishment my lord might give me on your verdict, should it be adverse to me, but from the more severe consequences that a conviction of intent to corrupt the public mind will cause me. The stain which will rest on me in such an event will be one which would sorely check and bar the career in which I have hoped, and still hope, to make my way. This punishment, I say, to me would be immeasurable in its severity, compared with the mere sentence that would follow as the measure of punishment I should receive here for what I have done. And in speaking of that alone, I will affirm to you that there is not a line of physiological information in Knowlton that is not chastely put, and that the tone of the work is not calculated in any way to inflame the passions or to deprave the mind. The learned Solicitor-General—and unfortunately my voice does not possess here the weight which his position gives him—in conducting this prosecution against us, suggested to you that the work was full of colouring. If there be a colouring in the work it is a colouring we do not make: it is a colouring drawn from the misery, a colouring drawn from the suffering, a colouring drawn from the poverty, a colouring drawn from the despair with which we have to deal. The learned Solicitor-General, I am sorry to say, used one word that I wish he had thought fit to have left out of his speech. I am willing to believe, although not having the honour of being a member of the profession and not having the honour, at least on this side of the water, to be the friend of any of its members,—I am willing to believe that a gentleman in the position of the learned Solicitor-General would not—to obtain a verdict in this case—have used the word had it not been in the instructions given to him in his brief; but I have a great difficulty in reconciling to my own mind how he can admit that there is not a trace of vulgarity in the work which he thinks right to describe as "filth." I cannot help thinking that he forgot he was pleading for the conviction of a man and woman, and for the moment was led away by the thought that he was conducting a civil case where some trick practice would win the verdict of the jury in his favour for the moment, to be ultimately reversed by the deliberate judgment of thinking men. Now, let us consider first what the word "obscene" means. When the matter was first

debated in 1857, not at some common debating society, but before an assemblage including the finest intellects in the world, it was objected to by Lord Brougham with reference to Lord Campbell's Act, that there was no definition of the word "obscene." Lord Brougham asked—Hansard's "Parliamentary Reports," vol. 146, No. 2, p. 329—"How did he (Lord Campbell) propose to define what was an obscene publication?" and Lord Brougham reminded the House that "In the works of some of the most eminent poets there were some objectionable passages which, under this measure, might cause them to be considered obscene publications." What was the reply of Lord Campbell? If you accept it, it is impossible for you to give a verdict against us. Lord Campbell's reply was that "He had not the most distant contemplation of including in the Bill the class of works to which the noble and learned lord referred. The measure was intended to apply exclusively to works written for the single purpose of corrupting the morals of youth and of a nature calculated to shock the common feelings of decency in any well-regulated mind." And lest there should be any mistake as to what Lord Campbell meant, he added, "Bales of publications of that description were manufactured in Paris and imported into this country." And to make the distinction still stronger, Lord Campbell then said that the need for the statute was that the people who published them, that is these obscene works, hid their names, were not to be found, and that it was necessary to send spies and informers after them. This was not needed for persons who sent previous notice to the public authorities that they were going to publish a work. The whole offence lies in the intent with which it is published. When did you ever see two people give notice to the police authorities under circumstances involving a wicked intention of the act they are about to commit. Before one copy was sold by us, as you have heard from the witnesses for the prosecution, myself and my co-defendant gave notice to the police authorities of our intention to sell. However wrongful our act may be adjudged by you, I deny that you can say we have not acted with frankness and fairness. I deny that you can assume against us any corrupt intent.

The Lord Chief Justice: That may be sought in the work itself.

Mr. Bradlaugh: I am content, my lord, to accept that, and your ruling in the case of the Queen *v.* Hicklin,

that if within the four corners of the work it tends to corrupt and deprave the public mind then no good intent, either unmistaken or mistaken, can save us from conviction. I would not be so impertinent—ignorant though I may be on some matters of law—as to raise an argument which I thought had no bearing on the matter. I wished to show the jury that on the facts as proved we are not persons who would be likely to publish a corrupting work. The Lord Chancellor, replying to Lord Campbell, said that which I unfortunately know to be true—"Who could tell but that the superintendent of police or the magistrates before whom the application came would take a different view of what were obscene or indecent publications from the noble and learned lord."

The LORD CHIEF JUSTICE: The Lord Chancellor of that day was Lord Cranworth?

Mr. BRADLAUGH: Yes, my lord. Lord Lyndhurst, in the same debate, asked, "What is the interpretation which is to be put on the word 'obscene'? I can easily conceive that two men will come to entirely different conclusions as to its meaning." No one can help taking a very different view, but in a case where there is no suspicion that one was going to run away, where we went to the police office to look after the authorities, so as to be in readiness if summoned, it is a little hard that difference of opinion should involve personal indignity. Instead of treating us reasonably, fairly, and summoning us, we were taken on warrants—an indignity I do not complain of personally, but I do complain of such conduct towards the lady who is my co-defendant, and if I have a greater sense of responsibility in now addressing you it is because this lady, who has to share the result of this trial with me here, has been to no inconsiderable extent influenced in her course of action by my views on the law of population. With me this question is no new question. I have been a journalist for the last nineteen years, and in my first prospectus I put forward the Malthusian view as part of the editorial intention of that journal, and lest the jury should think that we now take up this struggle in any mere desire for novelty or notoriety, I may mention that the late Mr. John Stuart Mill left me, written by himself, in his autobiography, a few lines stating that I commended myself to him because I took upon myself the advocacy of these Malthusian views when they were even more unpopular than to-day. If

the work of my life has in your judgment been corrupt when I have sought to teach prudential checks, if you think that I have been criminal in that I have tried to cure poverty by these remedies, try, gentlemen, to decide for yourselves in what fashion the growing evil of poverty is to be dealt with. My co-defendant has sought to show you what is the condition of the poorer classes. Permit me to add a word from my own experience. Some working men in the North of England recently made me arbitrator in a dispute as to the wage of those men who were workers in one of our coal mines. By my award I took 15 per cent. off that wage, and most of those men are earning at this time less than £1 a-week. If I am not to be permitted to show to these men how they may prudentially alleviate their poverty, what am I to do for those poor toilers who put their confidence in me, and whose wage I have reduced? It is with a view to ensure the welfare of these poor people, that my co-defendant, perhaps influenced for some time by my strong views on the question, but now governed entirely by her own views of duty, has with me published the pamphlet which has caused her to be placed in a position which but few gentlewomen would like to take. Is it "obscene" to teach the poor and wretched not to crowd hungry mouths together where food is short and misery plentiful? Lord Lyndhurst asked "what is the interpretation which is to be put on the word obscene?" And in trying to deal with this question I will endeavour not to travel over that which my co-defendant has so clearly stated to you in her speech. Lord Campbell said the question was for the jury to decide, and I will ask them here so to decide it that no such stain shall rest upon us as the indictment seeks to cast. An expression of opinion fell from the Lord Chief Justice yesterday to which I cannot quite assent. I agree with my lord that there are works which do not come under the ordinary definition of the word obscene, but which might tend to corrupt public morals, and I also agree that a work which recommended assassination would be a work tending to corrupt public morals, but I deny that any such work would be prosecutable under this indictment. I am not indicted for such a work. This is a specific indictment for publishing a book specially described and the verdict must be in the language of the indictment.

THE LORD CHIEF JUSTICE: Of course.

Mr. BRADLAUGH: Then I will not press that a moment longer on your lordship.

THE LORD CHIEF JUSTICE: A book recommending assassination would not be an obscene book. But how does that help you?

Mr. BRADLAUGH: I will put a case to you, because of what fell from the learned Solicitor-General. Supposing—which I utterly and indignantly deny—that this Pamphlet, which, it has been alleged, recommends abortion, actually did so, while I agree it would be an offence of a fit character to justify a prosecution, yet I say it is not one punishable under an indictment such as the one under which we stand charged, and I wish to submit that to your lordship very strongly, because I do not want to raise issues unnecessary to be raised, nor do I want to have a view passing through your lordship's mind which would involve me in the supposition that I am arguing with reference to one kind of supposed guilt, when actually arguing against another. The offence charged against us is under the common law, that is the common usage of the country, and it is, comparatively, a modern offence so far as the common law is concerned. The case of the King *v.* Curl, in 1727, is the first case which, as far as I am aware, was ever tried out at common law, so as to obtain condemnation of the defendant. It is reported in Howell's "State Trials," vol. xvii., page 154, and I cannot help thinking that anyone reading, with care and attention, the decisions from the case of King *v.* Curl forwards to the present day, could come to but one decision, as to what works are intended to be indictable as obscene works, *i.e.*, works which incite to the commission of acts which have been considered by proper legal tribunals to be acts of obscenity. And I submit that, under the common law, you will not now find out, or extract for my prejudice, a definition of the word obscene, which has never yet been laid down by the judgment of any court, or affirmed by the verdict of any jury. I will now deal with the details of the physiological part of the work, with respect to which his lordship has made a remark.

The LORD CHIEF JUSTICE: It was not altogether with reference to the physiological details I interfered; it was rather that these details, though perfectly pure, must be looked at through the intent and purpose of the whole book.

Mr. BRADLAUGH: Very well, my lord. They say then, in

effect, *qua* detail, the work is not indictable, but the intent of the work being to prevent conception under certain circumstances, the whole of the book is assailable as an immoral book. Now can it be an offence to advocate checks to conception?

The Lord Chief Justice: If it corrupts the public morals with relation to birth it is. That is a matter for the jury. I certainly shall not withdraw from the jury the question whether the proper construction to be put upon the book is that its opinions with regard to the duties of women had a demoralising tendency. That is for the jury to decide.

Mr. Bradlaugh: Then comes the difficulty, indicted as we are under the common law, into which I am placed, that there has never yet been a similar book submitted for judicial decision.

The Lord Chief Justice: It is for the jury to say whether that is or is not an offence; that is, whether a recommendation which shall have for its effect this restriction of births does or does not tend to the depravation of the public morals.

Mr. Bradlaugh: I submit we do not come within the terms of an ordinary prosecution where your lordship would direct the jury that the offence is within the statute, or clear under the law declared, because the question is for the first time now to be decided before a judge and jury.

The Lord Chief Justice: It is useless to repeat. What I shall leave to the jury in time is that which has been laid down over and over again when the offence has been committed—*i.e.*, that published matter that tends to deprave the public morals, the effect of which is in the opinion of the jury to corrupt the minds of youth or anyone else, is an offence.

Mr. Bradlaugh: Then it will be a question for the jury whether, taking a fair and unprejudiced view of the matter in this pamphlet, it does tend to deprave and corrupt.

The Lord Chief Justice: That is the question I shall put to them.

Mr. Bradlaugh: I am quite willing to accept that, and it is what will govern me in my presentation to the jury of my defence in this case; and I call your lordship's attention now to the case of the Queen *v.* Hicklin, and especially to the case of Steel *v.* Brannan, which was a case of the almost entire republication of the same pamphlet in the report of

the trial. There the defendants submitted that they had left out some of the "most filthy and abominable passages occurring in the former edition," the use of which words precluded the supposition that even the defendants in the Queen *v.* Hicklin case could contend that the pamphlet there was not obscene. Your lordship's own language in the case of the Queen *v.* Hicklin seems to me most vitally in my favour. Your words were, "I think if there be an infraction of the law, and an intention to break the law, the criminal character of such publication is not qualified or affected by there being some ulterior object of a different and of an honest character." Upon that I submit that, to find us guilty, the jury must not only be of opinion that there has been an infraction of the law, but an intention to break the law.

The LORD CHIEF JUSTICE: That is not what I said. What I said was, if the effect of the publication was to corrupt the minds of the individuals composing the public it was not because the publisher thought some ulterior good was likely to arise from it, that he was excused.

Mr. BRADLAUGH: I do not in any sort of fashion wish to insist on any words that may be incorrectly applied to you lordship, but I was reading from the *Law Journal* report.

The LORD CHIEF JUSTICE: No, that is what I think I said, that is what I meant to say, and what I shall say now. Suppose the effect of this work—I am only putting it hypothetically—suppose the jury think the effect of this language is to corrupt public morals, it is not because of a desire to alleviate poverty—it is not that which would excuse an infraction of the law, if there has been any. That is all I meant to say then, and shall say now.

Mr. BRADLAUGH: The difficulty, my lord, still passing through my mind is, suppose myself and co-defendant to have believed the pamphlet not to have been an infraction of the law—suppose we made it clear to your lordship and the jury with whom the decision rests that there never has been any hostile judgment against a work of this class, and that, on the contrary, works—innumerable works—containing the same matter had been published unchecked, I only want—not to press it unfairly, but—to have your lordship and the jury in full possession of the contention I wish to raise, that, if so, this is no offence at common law, there having been nothing decided during the last hundred and

fifty years to govern us; I wish to convince your lordship that we cannot be convicted on this indictment.

The Lord Chief Justice: I shall be bound to direct the jury to the contrary.

Mr. Bradlaugh: Very well, my lord; I will not press it further. I will come, then, to the dictum in the same case of Mr. Justice Mellor, and that I feel bound to urge on your lordship. In the case of Queen *v.* Hicklin his lordship, after saying that he arrived at his decision with some difficulty, says:—"The subject itself, if it is a subject which may be discussed at all, and I think it undoubtedly may, is one which cannot be dealt with without, to a certain extent, producing authorities. Now I take it for granted that the magistrates themselves were perfectly satisfied that this pamphlet went far beyond anything that was necessary or legitimate for the purpose." Supposing the population question is a fair subject for discussion one must examine what the object of this pamphlet purports to be, and whether it is reasonably and fairly what it purports to be? It purports to be an essay on the population question, and I will not venture to go over the grounds put forward so ably and exhaustively by my co-defendant, who has amply proved that the pamphlet is really what it purports to be. Is it an indictable offence to put forward views on the population question, or to discuss checks to over-population, or to recommend some kind of checks? Where is any authority for any one of these propositions laid down? I venture to say it has never been laid down that it is an indictable offence to advocate the Malthusian view of the population question.

The Lord Chief Justice: Certainly not.

Mr. Bradlaugh: Then, if not, comes the next question of advocating checks. It surely is not indictable to advocate checks to over-population?

The Lord Chief Justice: If you do not advocate it by means which are inconsistent with public morality.

Mr. Bradlaugh: Then comes, is it indictable to advocate checking population by one means, and not indictable to advocate checking population by some other means?

The Lord Chief Justice: It might be by late marriages instead of early marriages. There is nothing indictable in that.

Mr. Bradlaugh: Professor Fawcett and Mr. Malthus no doubt advocated late marriages; then comes the question,

is it indictable advocating early marriages, and advising checks to operate after marriage? I respectfully contend that it is not. The checks have been divided by my co-defendant into death-producing and birth-restricting; the birth-restricting can only be divided into two kinds, having sub-divisions—the one, late marriage, which I will dismiss for a moment, and the other early marriage and small families; early marriage coming first and the check coming afterwards. You have had many extracts from an essay on the morality of married life by Mr. Montagu Cookson, and it is only fair for me to say of Mr. Montagu Cookson that he has written me a letter in which he says that it is not his view which is put forward by Knowlton in this pamphlet. He holds the doctrine that it is possible for married people to produce or check conception according to the special period of cohabitation, and that, I think, is fairly what Mr. Cookson would say if in my place, although it is not my duty to press his language in this way. I do not wish to do any injustice to him. He says it is the right thing to marry early, but you must restrain yourself after marriage, and in his letter he says you can do so by knowing and observing the laws governing the reproductive system of women. There are the mensual periods when women conceive more easily than at other times, and therefore at such periods restraint is necessary. If that be true, you must instruct the persons whom you desire to practise restraint, and then the whole of that part of the Knowlton Pamphlet, as to the menstruation and the liability to conception, is instruction necessary to be communicated to the mass of the people whom you desire should utilize that knowledge. I must say I heard with some surprise from the learned Solicitor-General that this instruction must be confined to the medical schools and not communicated generally to the public. I submit that such a contention is the height of absurdity. If it is the population you wish to check, you must publish the instruction, enabling such checks to be applied, to the masses of the people, and more especially you must publish to that class, some of whom are even now only earning something like 12s. a week. In Hereford, the other day, I learned from proceedings before the magistrates that there were men in that county who earned but 8*s.* 6*d.* a week. You say, then, that such men as those are to consult medical practitioners, to whom they must pay a fee for advice on the subject, and that they must not have this work for six-

pence, although works of a similar nature, at prices varying from 1*s.* 6*d.* to half-a-guinea, are sold by Messrs. Churchill, Messrs. Renshaw, Messrs. Longman, and Messrs. Trübner, and are to be bought on the railway bookstalls, by all who can afford? It has been said by the learned Solicitor-General that the book is an obscene one, because it may get into girls' schools. I shall show you that Dr. Carpenter's works and Dr. Kirke's "Handbook of Physiology" are used for the examination of boys and girls in Government schools, for the education of both boys and girls. I am within the ruling of his lordship; but I am prepared to put into the box scholars who were instructed in these works, and who received them as prizes. It is a work of great difficulty to collect this class of evidence, and in our case it has been immense, for there is a reluctance to come forward in a case where obscenity is alleged. What we have the question narrowed to is this, holding the view that the population has a tendency to increase faster than its means of subsistence, we urge that it is necessary to encourage preventive checks on population. In an essay of my own, entitled "Jesus, Shelley, and Malthus," I have thus stated the Malthusian position —"Mr. Malthus advanced three propositions:—1. That population is necessarily limited by the means of subsistence. 2. That population invariably increases when the means of subsistence increase. 3. That the checks which suppress the superior power of population, and keep its effects on a level with the means of subsistence, are all resolvable into moral restraint, vice, and misery." Take that as a fair summary of Malthus. I say it is not wrongful to advise, as John Stuart Mill, Professor Leone Levi, and Mr. and Mrs. Fawcett have done, that there should be prudential checks in lieu of the positive ones of starvation, disease, and crime; and how is the general public to know anything about prudential restraint, or to practise prudence as recommended, unless you publish cheap works in plain language, so that they may be widely circulated? If you tell me that this is a colourable work written for another purpose, that is another thing, and I understood the learned Solicitor-General rather to put it on that issue; but I emphatically deny that there is anywhere in the book the slightest particle of evidence of any such colourable character. If you tell me that this book is indictable because of its advocating checks which have not become commonly known, and which the English public

have not yet understood, I utterly repudiate the proposition. There are many means of preventing births in cases of disease which are urged by medical writers who have never been made the subject of a criminal prosecution. I will ask your lordship if this is to be denounced as obscene? If it be obscene at all, whether it is to be published in a medical student's room or at Stonecutter Street cannot matter at all. The mere fact that it is widely sold and that it is cheap in price cannot, I submit, in any way affect the judgment which my lord will ask the jury to give upon this indictment. It is not necessary that I should go in any fashion into the long argument with respect to this point of over-population, as my co-defendant has already gone into it so thoroughly; but I must ask your lordship to bear with me for a moment while I deal with some expressions of opinions of persons nine or ten years ago treating on this question,—a number of persons of whom I was one. The matter is printed in the *Journal of Health*, then edited by Dr. Hardwicke, the present coroner for Middlesex. In 1868 there was a debate at the London Dialectical Society on a paper read by Mr. Laurie, where I made a speech, with which I will not trouble you. The son of one of the leading statesmen of our time on the Liberal side, Lord Amberley, who is now dead, took part in the discussion. Mr. Laurie had been the tutor of Lord Amberley, and the following is from the report: "Lord Amberley said that the subject brought forward by Mr. Laurie was of first-rate importance. There was no doubt that prevention of over-population was far the best method of attacking the evil. How was that motion best to be spread? He was glad to hear Mr. Bradlaugh say that the working-classes were beginning to debate this vital point. Unfortunately, the influence of the clergy, in common with that of society and the natural passions of mankind, were opposed to the prevention of over-population. He believed, indeed, that women would naturally have a stronger feeling against large families, had they any say in the matter, and if these opinions were more heard. He was truly glad to hear the credit of the discovery given to the great Malthus. Like all other discoveries, there was something wanting to work out the details of Malthus' views and the way in which population could be prevented with the least pain and discomfort. . . . Emigration was good, but not rapid enough to relieve the pressure caused by rapid multiplication. The practical con-

clusion from all of which considerations seemed to him to be, that Malthus was correct, and that if we were to escape from poverty, it must be by means of limitation of our families. We naturally objected to war and famine. He (Lord Amberley) objected to celibacy. Well, then, the only remaining alteration seemed to him to be small families; and this was, in fact, a medical question. He much wished he could stay to hear the opinion of the medical gentlemen in the room whether it was possible to restrain the size of families without measures which were injurious to health. The American ladies were in the habit of keeping back their families: but the means used by these ladies seemed to him, as far as he had heard, dangerous to health; and hence he should much like to hear discussion upon the point whether some less hurtful means could be suggested." I should tell your lordship, that in New England, in the old and settled parts of America, in France, and other countries, the use of checks to prevent large families by poor people is a matter of everyday practice; and I don't know, my lord, how morality is to be measured if I am to be told it is immoral to prevent the birth of those miserable and wretched beings whose state is so depicted in Bishop Fraser's report. No doubt, if so, we are immoral. But, says the learned Solicitor-General, if the work were limited to married people there might be no objection, whereas you put it within the reach of unmarried persons who may abuse it. A man who sells a razor puts in the hands of a person an instrument with which he might cut another's throat, but that man does not advise the other to commit murder, nor would he be indictable if without his participation murder were done. I must complain of unfair suggestions on the part of the learned Solicitor-General, when he said that there was mentioned in the work an instrument for checking population which might be purchased at any chemist's shop for one shilling; he was not familiar, evidently, with the works of Hewitt, Sims, Churchill, and the "Ladies' Companion," which is a journal published by the Homœopathic Society, or he would have said in so many words that that mysterious instrument was a harmless syringe, which is commonly used for personal cleanliness. The use of the word instrument was calculated to convey an improper impression which the language of the work does not justify. What I have to contend is that it is lawful to argue the question of restraint to population, and that the physiological details of this pamphlet do not, in the language of Mr.

Justice Mellor, go beyond what may be termed necessary or legitimate for the purpose. I was most pained to hear from the learned Solicitor-General the declaration that the work was to be condemned as obscene because it only described the female organs.

The Lord Chief Justice: I confess when I heard the Solicitor-General say that I was surprised, because I thought that it was the more a proof in favour of the pure intention of the work. If the work had been intended to corrupt the morals of the young, it would have contained statements which would tend to corrupt the minds of females as well as of males, and if a description of the female tended to corrupt the male youth, it would be natural to suppose that there would be the converse—the description of the male. I don't, therefore, feel any force in the observation of the Solicitor-General.

Mr. Bradlaugh: I will not add one word to what your lordship has said. I have so many details to go through that I feel I may weary the jury, but the length of the case is not my fault. I have asked the prosecution, "What do you rely on?" and they say, "The whole book." Line by line my co-defendant has gone through a portion of it, and I will go line by line through the other part for the purpose of showing you that no part of it is obscene, and of pointing out to you what I think ought to be your verdict; and I submit that in this work of Knowlton the whole of the physiological details given here, beginning with page 11 and going forward, are descriptions only of such parts of the female organism as are thought necessary for the reader to know with relation to health and disease of the female when capable of the exercise of her reproductive functions, and from conception to birth. The learned Solicitor-General, with the business of an advocate, regarding the gain of his cause rather than accuracy of statement, said that the sexual act was described with a disgusting fullness and particularity. Not only is there no such particularity, but, on the contrary, the details are scant compared with such works as I shall have to compare it with, line by line, until I have convinced you. You will say nothing can be more chaste or delicate than Knowlton, if he is to refer to these matters at all. I need hardly concern myself with the inquiry as to who is prosecuting us, because, if we have committed an offence, it does not matter; and if not, no kind of outside influence will here govern the verdict to be given. I will

only put it, that it would have been better that we should have stood face to face with our actual prosecutor—the one who really finds the means of briefing the learned gentlemen against us. But we do, I hope and believe, stand face to face with a judge and jury who have not only fairness and patience to hear the arguments we have to offer them, but who would all dismiss any sort of prejudice that might be sought to be imported into this inquiry. I wondered at the learned Solicitor-General introducing a topic such as the Christian religion into his address here, and I pass without reply the words so used. If this work is to be considered obscene because it is cheap, what becomes of "Chambers's Encyclopædia" and other works issued in numbers, which publish descriptions and illustrations of the generative organs. Now, I put it that the fact that some one else may make an ill-use of this work is, as my co-defendant put it to you, a matter to be entirely dismissed from your mind; that a work on toxicology is not indictable simply because some one may learn how to practise from it a mischief to the community by taking life with poison. The Recorder, in his charge to the grand jury, who have sent us before you, said that a medical work, though indecent, published for medical students in a medical lecture-room, would not be indictable, but that, circulated widely, it would become so. I submit that if the book be indictable in itself it is indictable wherever published, and that if not so indictable, the increase in its publication cannot create it an offence. The Solicitor-General said that we contended for the right to expose the human frame in public, and he gave another illustration not so pleasant to the ears. We make no such contention. There is a distinction that is admitted with regard to acts which are a nuisance and annoyance to others; a distinction recognised in this country, and, I may say, recognised in every civilized country. I reply that the exposure of the naked human form is criminal.

The Lord Chief Justice: I suppose you would admit that an illustration of the human form in all its details in natural size placarded about the streets would be an offence?

Mr. Bradlaugh: Oh, yes, my lord.

The Lord Chief Justice: It is not the subject in itself that is indictable.

Mr. Bradlaugh: I only say that exposing the human

form in all its details, in any size, to the annoyance of the public, is a fair matter to be dealt with and punished by the law. I am not here to start false arguments or to contend for absurd positions.

The LORD CHIEF JUSTICE: Go further than that. If a man took it into his head that the exposure of such a matter would tend to the profit of the State, if he went to such an extent, he must take the consequences.

Mr. BRADLAUGH: Which ought to be "Colney Hatch," my lord. (Laughter.)

The LORD CHIEF JUSTICE: I should think so.

At this stage of the proceedings the Court rose.

THIRD DAY.

LORD CHIEF JUSTICE COCKBURN took his seat at 10.30 A.M., and the Court was again densely crowded. Mr. Bradlaugh immediately rose to resume his defence.

Mr. BRADLAUGH: There is, in the extremely accurate report in the *Times*, a comment, my lord, which makes me fear that I failed to convey quite the explanation I intended to put to your lordship on Montagu Cookson's paper in the *Fortnightly Review*. I intended to put to your lordship what Mr. Cookson, in a private letter to myself, had expressed: that the restraint after marriage, upon which he relied, was a restraint in association at certain periods before and after the menstrual period of the woman; but there is nothing whatever in the article of Mr. Cookson which in any fashion limits his explanation and the language, as reported in the *Times* seems to convey the notion of restraint in the sense of a sort of celibacy after marriage. The language of Mr. Cookson's article is entirely at variance with that construction, and I hope your lordship will pardon me putting that before you, as I wanted to make quite clear my view so as not to misrepresent Mr. Cookson, or, on the other hand, to injure my cause. There is one other point—the letter sent to the *Times*——

The LORD CHIEF JUSTICE: We really cannot go into that.

Mr. BRADLAUGH: Very well; I will only ask that nothing that appears in connection with the reports may be taken as militating in any fashion against what is put here in this case. Now, my lord, I submit that the intention to break the law by publishing obscene matter is governed in this way. I will use your lordship's own words, in the case of the Queen *v.* Hickling—words which, if it were not impertinent, I should say that I urge in the strongest fashion—"Where a man publishes a work manifestly obscene, he must be taken to have had the intention——"

The LORD CHIEF JUSTICE: Equally so, if he publishes a book manifestly immoral. Is it desirable to discuss this

legal question? I must remind you that you are addressing the jury, not me.

Mr. BRADLAUGH: Well, my lord, I will pass away from that entirely, and I will put to your lordship, and to the jury, a series of propositions on which I shall ask their consideration, and the answer to which will govern the verdict which you will give in this case. The first proposition I shall submit is one that has already been more than proved to you, that the essay indicted is an essay on the population question, and I submit next, under my lord's correction, that the question is one lawful to be discussed. I submit next that it has been amply shown to you, and could be proved over and over again, that over-population is a fruitful source of poverty, ignorance, crime, vice, and misery; that therefore the advocacy of prudential checks to population is not merely lawful, but is highly moral. That the prudential checks are all birth-restricting checks. That birth-restricting checks are by delays of marriage or by restraint after marriage. That late marriages and celibacy or general abstinence after marriage involve horrible diseases and crimes, and perpetuate prostitution. I had, when I framed that last proposition, in thinking of the best way of putting it to the jury distinctly — I had simply put it that late marriages and celibacy involve horrible diseases and crimes, and perpetuate prostitution. But when I found that there seemed to be a possible contention that it might be lawful to advocate that which was equivalent to absolute celibacy, so far as all sort of consummation after marriage was concerned, after going through the marriage ceremony; that proposition seemed to me to involve all the terrible consequences of ordinary celibacy, both to the man and the woman, with the addition that there would in that case be the provocative excitement of association, and the worse disease arising from a denial of it, if you can suppose such a denial possible amongst people of the poorer classes, from whom the great mass of the population spring. That early marriages involve the advocacy of restraint of, and intelligent gratification of, the reproductive functions. I submit that if you are dealing with the question of population, having admitted the law of population, and the doctrine of early marriages that then you must admit the right and duty to advocate restraint; if you hold that doctrine of celibacy

is attended with disease and crime, and perpetuates prostitution, then you must also advocate the intelligent gratification of the reproductive functions. That restraint after marriage must be of two kinds: one, the abstinence from cohabitation which has been advocated by many doctors, who contend that during certain periods, *i.e.*, within a certain time before or after the menstrual period, conception is either impossible, or, at any rate, difficult. Against that you have the fact that a well-known people, by their ceremonial laws, are prohibited from sexual intercourse during the period indicated, and notwithstanding that they are notoriously a most prolific people, so that I submit that the restraint after marriage must mean the intelligent gratification of the functions, so that the act shall not involve bringing into life a child whom the parents are unable to support. I submit that advocacy of such a restraint has never been declared unlawful, my lord, and that it is not unlawful, and I submit that advocacy of such a restraint does not tend to deprave and corrupt the public mind, but tends to promote and to increase the morality of the people. I submit further, that the worst evil that could happen, supposing the acceptance of this doctrine, is that unmarried people might cohabit without having children, and that this is not an evil for which we should be held criminally responsible, as the pamphlet urges and insists on marriage in such terms as demonstrates that the insistment is not a colourable pretence; and here I repeat, with all the force that any earnestness can add to the eloquent repudiation by my co-defendant of any consciousness on our part of any colourable pretence by Charles Knowlton, that there was no evidence even tendered of any such consciousness. I say, except the unsupported inuendo of the Solicitor-General, required by the exigencies of his brief, there is not a paragraph from one end of this pamphlet to the other to warrant the supposition that it is directed against marriage; and I say that, in point of fact, at the present time unmarried people do cohabit and have children, and that there are serious consequences flowing from it—consequences so serious that, to use the words of Dr. Lankester, now dead, quoted from the *Journal of Public Health* in 1868, by my co-defendant in her speech—he said that there were in London in that year 16,000 women who had murdered their offspring. I say that at the very worst this pamphlet might have prevented the repetition of

these 16,000 murders annually. I submit to you, gentlemen of the jury, that it is moral to teach poor people to marry early, and that this teaching avoids and will diminish illicit intercourse. I will not weary you with reading the whole of the report on the "Employment of Women and Children in Agriculture," from which my co-defendant quoted that terrible extract from the report of Bishop Fraser. You will there find that the illicit intercourse which we are charged with trying to produce is an illicit intercourse which is going on and bringing with it the birth of the child, and bringing with it the murder of the child by the mother, because there is the pang of starvation and misery and shame to contend with. I say that it is amongst the poor married people that the evils of over-population are chiefly felt, and that it cannot tend to deprave their morals to teach them how to intelligently check this over-population; and I submit, and I ask your gravest attention to this submission, because if you decide it in my favour it will, without anything else, determine your verdict in this case—that the advocacy of all checks is lawful except such as advocate the destruction of the fœtus after conception or of the child after birth. I say that the advocacy of every birth-restricting check is lawful which is not the advocacy of the destruction of human life in any form after that life has been created. Now, gentlemen, if you should decide that in my favour there is an entire end of the whole case; and I submit to your lordship, and to you, gentlemen of the jury, with whom the arbitrament under his lordship's direction rests, and in whose hands our future is placed, that that is a proposition on which we are entitled to ask an affirmative answer at your hands. The proposition is not very long; permit me to repeat it to you again, because it governs the whole of the case I am going to submit to you: That the advocacy of all checks to over-population is lawful except such as advocate the destruction of the fœtus after conception or of the child after birth. I admit in the fullest sense that any advocacy of the destruction of human life is not simply illegal under statute, is not simply illegal under common law, but is illegal under that moral law which obtains wherever there is an intelligent appreciation of what morality should be. That is, such advocacy is moral because it tends to the greatest happiness of the greatest number with the least injury to any. I say that the advocacy of any checks amongst the masses to be useful must of necessity be put in the plainest

language and in the cheapest form, and be widely spread; and I press that upon you because I understand that the learned Solicitor-General in his argument put it that one of the faults of this pamphlet was that it was not obscured in learned language. If we possessed the facility of expressing ourselves in French, or Italian, or Greek, or Latin, or Hebrew, or Arabic, what earthly use would that be to the poor unfortunate wretches whose misery we want to redress? It was objected over and over again, as my co-defendant reminded you, that there seemed to be some crime in the price of the book being sixpence, which made it specially objectionable. But if you take the fact, as fact it is, that in the whole of the counties of Northumberland and Durham, while I speak, the best paid class of hewers of coal are not now averaging much more than £1 per week; take that for a man and his wife and three children only. But suppose him to have five. The Pauper Unions allow 4s. 6d. per week, and sometimes a little more, for boarding out a pauper child. Suppose the coalhewer has a family of five, six, or seven—do the multiplication for yourselves, and leave nothing for luxury or dissipation on the part of the bread winner—I ask what means has he of purchasing the expensive treatises from which I shall quote? If it be right to advocate such checks —and that is why I say that on the decision of this question depend all the other propositions—it must be in language which shall be intelligible to the people whom you want to reach, and at a price at which they can buy it. It must be widely spread, for it is not to the few, but to the many, that the misery comes of crowding—from the many births of the poor—the crowding of people, jostling each other out of life in the search for employment, and the crowding into narrow dwellings, where disease, vice, squalor, and misery attend them. And it must be plainly put, because they are ignorant—very ignorant, because they are poor. They are ignorant because the misfortune of their life has made them so. They have to rise early, and work till they are tired, and then some of you who have opportunities for culture and recreation to which you can turn with intelligent pleasure, you may ask me why some of these men go to the beer-house, or waste their money in the gin-palace? But if your homes were wretched and miserable; if you were crowded as I have seen hundreds and thousands of men and women crowded in different parts of the country—three, four, five, or six in one room, something like that described in Bishop

Fraser's report. Let us take the case of a miner, for example, who has gone down into the mine at four o'clock in the morning and works there till eleven, as they do, in a temperature higher than your Turkish bath in Jermyn Street. He has come out, clogged at every part of the skin with coal-dust and dirt. His home—we will suppose it is a hot day like this—is dirty, the floor is dirty, the drainage of the village is bad, there are a few pit cottages together, and the refuse and filth is in front and behind. Do you wonder that he runs to the public-house, driven away by the misery of the home, and yet you tell me that it is immoral to try to do something to prevent the crowding of these little mouths, that by their hungry needs drive away everything like comfort from the home. If you give a verdict against us it should be with grave consideration as to whether the course we are taking is moral or immoral. And then I admit that such advice is liable to be misused by the criminal classes. I have in memory one of Chambers' Encyclopædias of "Useful Information for the People," in which, dealing with the human frame, the writer points out where it might be extremely easy to destroy life. Unquestionably that passing into the hands of many persons for three-halfpence would enable them to commit murder, but this pamphlet, passing into the hands of hundreds of thousands would enable them to avoid calamities which result in disease and death. Such hypothetical or possible misuse cannot make the ground for an indictment for misdemeanour. To say that some time or other such people may do something we have not recommended under circumstances we have not contemplated, cannot make a ground for indicting us here. I now submit that it is impossible to advocate sexual restraint after marriage amongst the poor without such medical or physiological instructions as may enable them to comprehend the advocacy and utilise it. Of what use is it to take a man or woman, totally uneducated, and to tell them their duty, unless you show them how to perform it. The telegraph is an admirable means of communicating from one country to another: but suppose you took a labourer or his wife into the operating room and showed them the apparatus for working the electric machine; they could not comprehend it, to them it would be useless; you must give them the information which would enable them to turn it to account. If it is right to advocate checks on population, it cannot be wrong to teach the poor how to apply such

checks. I now submit the next question, and I shall use the words of Justice Mellor, in the case of the "Queen against Hicklin." Does this pamphlet, in such physiological details, go beyond what is necessary or legitimate? I reduce it into four propositions: one, that over-population is a cause of immorality, and that which hinders over-population hinders immorality, and, therefore, its advocacy cannot be with intent to corrupt and deprave. I submit upon that, that to restrain the population after marriage necessitates giving to the poor and to the ignorant, from whom the bulk of the population springs, the information which shall enable them to comprehend and utilise these propositions. I submit to you that in this pamphlet there is not a single word which is unnecessary or which is illegitimate, or which goes beyond what is absolutely necessary for instructing the poor and ignorant. I hope I shall succeed in establishing that, and if I do so I shall with confidence ask a verdict at your hands. I am sorry to say that I have a very wearisome task before me, which will not only be wearisome to myself but which, I am afraid, must necessarily be wearisome to you. For I have got to go through the whole of this pamphlet, except the portions gone through by my co-defendant, not one of which I shall touch; and I shall have to make out to you, and I believe I shall succeed in doing so, that there is not a solitary syllable on which the Solicitor-General can put his hands which is not chastely, carefully written, and painstakingly put, in the view of avoiding any sort of morbid excitement, any sort of improper allurement or enticement; and if, during this speech, I shall be occasionally using words which may seem to you better avoided, I will beg you to think that I feel to the fullest the responsibility resting upon me, and that I will try to use no word that is unnecessary in submitting to you the proposition that in this pamphlet there is not a word, so far as the sexual details are concerned, which may not be found in works of the highest class. I shall take work by work; I don't know whether, my lord, you would like to have them as I quote from each work. I have the publisher of each book present in court. I shall ask you, gentlemen, having your books before you, to mark upon the copies of your pamphlets the passages to which I shall draw your attention. The work from which I am now about to quote is "The Functions and Disorders of the Reproductive Organs in Childhood, Youth, Adult Age, and Advanced Life, considered in their

Physiological, Social, and Moral Relations, by William Acton." This was published by Messrs. Churchill, the eminent publishers of New Burlington Street, and has gone through a large number of editions. I will refer you first to page 8 of the Knowlton pamphlet. You will remember that my co-defendant left unread the last paragraph on that page. I will now quote from Acton. He speaks of young men "who have arrived at puberty and whose innocence has been preserved from unfortunate initiation. Their disposition becomes sour, impatient, and sad. They fall into a state of melancholy." (Mr. Bradlaugh here read pages 28, 29, 30, 31, and 32 of Mr. Acton's book.) He then goes on to describe in the strongest language the evils that result from a life of celibacy, and then referring to the last paragraph on the page, I bring you to the part which one has some little difficulty in dealing with, in Acton's own words, which are so much stronger and so very much more terrible than anything which occurs in this Knowlton pamphlet, where he describes the disease dealt with by Knowlton, where he describes the exaggeration of the fears of the person and of his sufferings when his feelings are played upon by improper people, and, where he puts it just as Knowlton puts it, and in precisely the same fashion, except that Knowlton is careful and chaste in the extreme in the language he uses. And then, dealing still with the same subject, he speaks of the necessity for giving instructions on this to boys. I am quoting now from the thirteenth page of Acton. He says—"I have been often urged by parents and schoolmasters to draw up a plan which might be of service in teaching them properly to address children, as well as boys." (Mr. Bradlaugh read, at length, from pages 14 and 15 of Acton's work and also from page 136.) And on pages 65 and 73 and thence to page 80 Dr. Acton deals with some of the terrible evils arising from celibacy in language which I find it difficult here to go right through to you, but respecting which I am placed in the greater difficulty that at some other period in the case I may be told that I had no right to call witnesses to prove this publication or to put it into your hands so that you may read it for yourselves. Acton in some eight or nine pages, from 65 to 73, deals with the whole of the points on pages 8 and 9 of Knowlton, and also with the whole of the points on pages 44 and 45, and I urge to you that the language of Knowlton's summary on this sad topic, if judged by Acton,

is as careful, as chaste, as thoughtful, and as delicate as it is possible for language to be. I come next to page 12 of the Knowlton pamphlet, because there seems to be some suggestion that the first five lines of the Knowlton pamphlet were specially indelicate, and on that I will refer you to pages 115 to 138 of Acton. There the language of Acton is just as precise, except that it is more full, so that, to use the words of Alderman Figgins, into whose hands I put the book when pleading before this case was committed for trial, it would seem as if Acton had taken his words, not as Alderman Figgins said, from Knowlton—it was impossible that Knowlton could have taken from Acton, because Knowlton published 30 years before Acton—but that both must have taken from some common source, which source I believe I have discovered through the aid of Mr. Bohn and which is a work now in the library of the British Museum. Curiously in the works of Acton, Carpenter, Kirke, and Churchill, it is evident that they have all taken, along with Knowlton, from some common and unacknowledged source. The description is however much stronger in Acton, the difference being that Acton had to write for boys and men, whilst I am urging to you that Knowlton wrote a work for women. Acton is more special in his references to the male organs than is Knowlton. Knowlton limits himself entirely to a description of the reproductive organs in the woman, giving only the most general of references to the functions of man, because it was not necessary to his object. Now, it may be said, and in fact it was said by the counsel for the prosecution before the magistrate: "Oh! but Acton's book is a book simply meant to be limited to medical students," or, to use the words of the learned Solicitor-General, only by those in some medical college, or medical school. But on the contrary, in page 21 of Acton—and I may tell you, gentlemen of the jury, that I have furnished more than six weeks ago a list of all the books to which I shall have to refer to the prosecution; and in the case of this book and the two next to which I shall refer, I have given this to them with the references all carefully marked for comparison with the comparison passage in Knowlton; so much do I rely on the strength of my case—Acton says that he means this book to be circulated. He says:—"I would not have that exotic virtue which is kept from the chill blast." And he urges the necessity for instructing the young on sexual questions for the purpose of

avoiding immorality. Now, the learned Solicitor-General talked of the extreme minuteness with which the female organs were described, and to the mind of the learned Solicitor-General that seemed to convey an absolute proof that the book was written for the purpose of depraving and corrupting the public mind. And as the learned Solicitor-General has had Acton's book, or, at least, those who instruct him have had it, and he knows from my own written notices that it is one of those on which I rely, he has doubtless read the paragraph from which, in his presence, I will now read to you, as being the completest answer to his allegation these lines: (Mr. Bradlaugh then read from Dr. Acton, pp. 114 and 115). He goes on to say that he deals with these things not for the purpose of depraving and corrupting the public mind, but because he considers it is necessary to point them out for the purpose of avoiding evil habits and for the cure of disease, against which his book is directed. I am obliged to press that upon you, because this minute particularity was specially alleged as an illustration of what I think the learned Solicitor-General called the "abominable filth" to be found in Knowlton's book. Well, the book is published by Churchill. It has been said that two blacks do not make one white, and I do not want to urge that plea. I urge that neither book is a book which ought to be attacked under the law. I urge that impurity is not to be found either in Acton or in our book, and that both are written for the purpose of promoting morality, and not for the purpose of depraving morals; but having to deal with the sexual functions, you are obliged to use the words which will indicate them for the purpose of making the instruction clear. I will now refer you to page 16, which is one of the incriminated portions of the pamphlet, and I will call your attention to page 142 of Acton, the page furnished to the prosecution six weeks ago, and which they have had the fullest opportunity of considering. I must read this language because it gives you the means of judging of how far in these five lines which I shall ask you to mark, how far they have been distorted by the prosecution, and used in an improper and unfair way. (Mr. Bradlaugh then read from Acton, page 142, and commented on the character and effect of the illustrations used by Acton.) If you take the words of Knowlton and the words of Acton and compare them, I cannot understand how any man could have thought it necessary to lodge an indictment against the former,

knowing that it was impossible, under ordinary circumstances, for poor women to get the necessary knowledge before it was too late, and to avert the misery which was certain to ensue if they were allowed to remain in ignorance, and that the author had made his language as chaste as it was possible for anyone to make it. I will take you now to the analysis on page 16, which has also been urged as part of the immorality. I think of the words of the learned Solicitor-General, "the enormous filth of this book," and here you find that only a few of the baldest lines are given: a few lines in a pamphlet which the Solicitor-General himself had the justice to say had not the faintest semblance of vulgarity, while Acton is not only full in his details, but actually gives printed figures to illustrate his meaning. The Solicitor-General may say "it is published for medical students," but it is advertised and described in Messrs. Churchill's catalogue, and anybody may buy it for himself across the counter, or he may get it by sending postage stamps. And Messrs. Churchill have not been slow to utilise this prosecution, by sending out circulars specially referring to one of these works used by me, in order to increase the sale. I do not complain of that, because I believe the books are useful and instructive publications and intended to promote public morality. But I say it is a horrible thing to put us in danger of imprisonment for giving that information to the poor, which may with impunity be given to the rich. I now take you to page 17 of the Knowlton Pamphlet, to which I will draw your attention. Not only does Acton (177 to 184) say all that Knowlton says, but he gives plates in order to describe the subject, so that there should be no mistake about it. If you hold up the one against the other, the book of Acton far out-Herods Herod, as against that of Knowlton. As I may not have another opportunity of having the learned Solicitor-General to listen to what I say, I will draw his attention to a book circulated by the Government of which he has the honour to be the legal adviser. Acton, I say, is purity itself compared with the books that have been issued for girls' schools by the Government, in the schools at Kensington and the schools under the Science and Art Department, wherein are used the works of Carpenter and of Kirke with plates larger than these, with descriptions fuller than these, with an analysis more complete than these. I say that when a description far much more voluptuous than anything in Knowlton is put into the hands of girls by order of the Government

of which he is the legal adviser, how can he say that that is filth in my case which ten thousand times magnified becomes chaste instruction in theirs? Still keeping you on the same page 17, you will find a subject discussed, which you see carefully stated in Knowlton, discreetly stated in Knowlton, and which you also find stated in Acton, page 180, I do not say without care and discretion, but comparatively stated with an enormous deal of fulness. You will also find the same thing, as I shall show you presently, in the work of Kirke, which is circulated in boys' schools and girls' schools, and also in this work of Carpenter, which, as shown by the certificate in it, was given away as a prize at Greenwich by Sir John Lubbock, Bart., M.P.; and the Right Hon. the Recorder of the City of London, who charged the jury against me, has given away, as a prize, the very book I have in my hand, Carpenter's "Human Physiology." I say that, compared with these works, the details in Knowlton which have been quoted, are chaste and delicate, and are the most carefully-made summary that it is possible for a man to write who wanted to tell the people as much as he could in short compass, so as to give them sufficient information for the purpose. Still keeping on the same page of the pamphlet, I bring you down now to the part treating on the changes at puberty. On that, I may refer you to the language, which I shall read to you from Acton, page 25. Now, while the language in Knowlton is very quiet, you will find, when we come to deal with Kirke and Carpenter, that if the language were intended—which going into the hands of boys and girls of the Science and Art Department, I do not believe it is—to have the effect of depraving the morals, it certainly might be supposed to have that effect from glowing descriptions of the comely figure of the opposite sex, and the attractions which the changes after puberty produce. These are omitted by Knowlton, because it is no part of his business to give such exciting descriptions. He merely wants to give the information which shall prevent men and women being surrounded by a large number of starving children. If the "filth," the "allurements," are to be found in the prize books issued by the Government, the representative of which is pleading for your verdict against me here, they are not to be found in my pamphlet. I ask you to look at the dry way in which in the line and a half Knowlton states the fact which is necessary, and the fuller way in which you have it here, occupying considerable space. Do not under-

stand me as putting any sort of insinuation upon Acton, who wrote that he meant his book to go into schools, and who is now dead; do not let me be supposed to insinuate either that he would think he was writing a work that was filthy, or that he would imagine any one else would think it was filthy. I doubt myself whether, apart from the atmosphere of a law court where it was necessary to win a verdict, the calmer judgment of the Solicitor-General would not feel that the word was unfairly used against a book which he himself describes as entirely free from the faintest trace of vulgarity. How the two ideas can coincide in the learned Solicitor-General's mind is, to me, a problem that I am unable to solve, not having had that high legal training which enables me to misunderstand the case of my antagonist when it is necessary I should do so in order to misrepresent him. You will find that Acton says in page 4, that this point of which he speaks and which the learned Solicitor-General describes as being part of the filth "Ought to be explained to the youngest child." He says, "We must recollect that the child has never been taught." And that which Dr. Acton thought ought to be explained to the youngest child in schools, the learned Solicitor-General coming here, asks you to correct me for circulating, at the same time having himself been a law officer of the Government which does send that kind of instruction into the schools—which not only does that, but in its syllabus on "animal physiology," says to the children: "You are to be examined on the subject of reproduction, and are to give answers to 'the structure of the ovum and of the spermatozoon. The process of yelk division. The formation of the blastoderm and the development therefrom of the body of the embryo, with amnion, allantois, and yelk sac. The nature of the chorion, of the decidua, and of the placenta. The mode in which the fœtus is nourished. The development of the heart and the fœtal circulation. The changes in the circulation which take place at birth. The lacteal glands and lactation. The modifications in the proportions of the body from birth to adult age.'" And now I will ask the learned Solicitor-General, how are children in these schools to explain what these things mean, without much more complete instruction and full detail than even Knowlton can give? Carpenter gives the detail, Kirke gives it, Chavasse gives it, Marion Sims gives it, Graily Hewitt gives it, Kennet gives it, and a large number of other writers give

it to you, and how are you to examine children at all without giving them this knowledge? You are to discuss and be prepared to answer, on the process of yelk division, the nature of the ovum and the placenta, the mode in which the fœtus is nourished, the development of the fœtal germs, &c., and how are your boys and girls to do that in your schools unless you give them this knowledge? This is a syllabus for your science and art schools, issued by the Government, and prepared for their instruction, and they are referred for that instruction to the works of Carpenter, and to the works of Kirke, the works on which I am going to rely to make out more fully that which I am dealing with here. You come next, still on the same page 17, and if you, gentlemen of the jury, do not think it too much trouble to mark the pages as I go on, I will undertake not to leave you a single word by the time I have finished my speech which is not marked with a black line, as corroborated from these authors at least half a dozen times over, and that out of the very books authorized by the Government and circulated and put into the hands of the boys and girls whom the learned Solicitor-General deplored anything of this kind reaching. You will find a description given which is under the last sentence. I read to you of the effect of impotency upon certain classes of people, and I can read to you the words of Acton, of page 120 in his book, which you can compare with the words of Knowlton which you have in your hands, remembering that the prosecution have had all these books in their hands for comparison for six weeks. I ask you whether you are to imagine that Dr. Acton—and it is not of him alone: I take him because I do not think that even a Solicitor-General ever urged anything against his morality—this book has been circulated widely by Messrs. Churchill, who have the character in London of being amongst publishers *par excellence* the head of the branch of the business they pursue. I put it to you, whether indicted at common law, and measuring common law as common usage, whether you will find that to be depraving and corrupting in Knowlton, when published by me, and at the same time find it to be neither depraving nor corrupting in Acton, when published by Churchill? And the Solicitor-General cannot shelter himself by saying that it is a medical work only intended for medical students, for Acton himself says his book is intended for young people; that its knowledge may, if possible, prevent evils which if not prevented in youth can never be remedied

in after age, evils which Knowlton tries in very, very chastest language to put to the poor and the rough with whom he has to come in contact, and which evils he tries to warn them against and prevent; yet the learned Solicitor-General says that this is a book issued to deprave and corrupt the public mind, and that, in the words of the indictment, it is an indecent, a lewd, and a bawdy book. These, gentlemen of the jury, are some of the adjectives which are piled on me, and of which you are asked to find me here guilty. I will now, if you please, take you for one moment, still on the same page, to a reference at the very end of the last paragraph; I may refer to the end of the complete paragraph before it, because, if I understand the Solicitor-General's argument at all, and I am not quite sure that I always did, I find him there putting it to you as a sort of evidence of the immorality of this book, for he refers to the delight which might happen in the gratification of the sexual passions. Compare what Acton says (page 154) with the quiet, chaste description in Knowlton, and then, gentlemen, I ask you can you tell me that this book treating on the same subject has been issued for the purpose of depraving and corrupting the public mind—whether the learned Solicitor-General made a mistake and only read the works of the different doctors instead of the pamphlet he was charged to prosecute? Whether he read Carpenter's "Physiology," now issued to children under his own authority, instead of my pamphlet, in order to find a strong description for it, I do not know; but I will appeal to you, step by step, whether such condemnation is possible here. Now, gentlemen, I will bring you to page 18 of the Knowlton pamphlet, and ask you to take your pencils and then listen to Acton, pages 96 and 97. I will ask you to bear those words in mind when people are talking to you of celibacy, or of restraint after marriage without cohabitation. And the learned Solicitor-General thinks this ignorance, which Knowlton and Acton both deplore, ought to be allowed to continue. At any rate the learned Solicitor-General thinks that the education should not be given to poor people at a cheap price. He would have it limited to circles where they would be unable to get it, sold at a price at which they cannot purchase it. They are to suffer in misery—they are to feel the pain of their diseases, they are to know nothing of the possible remedies; they,

with their 13s. or 14s. a week, are to consult a physician to whom they are unable to pay the guinea fee, and whom from their agricultural parish they are unable to reach. Gentlemen of the jury, I trust your verdict will be a deliverance from the perpetuation of such a state of misery as this. Now, then, at page 20 of the Knowlton pamphlet, and I take you to the bottom of the last complete paragraph on transmitted peculiarities; I will ask you whether Knowlton has not, in two lines and a half, a quiet, delicately worded summary of those facts which Acton considers it necessary to teach. On page 22 of the Knowlton pamphlet your attention is called to the paragraph beginning "In relation to these objections;" and to page 24, where Knowlton speaks of the same subject, Acton writes of it in a far fuller manner (pages 90, 91, 142, 149, 150, and 157). Take and compare then pages 22 and 24 of Knowlton with those of Acton, remembering the words of the learned Solicitor-General, "That the sexual act was described with a minuteness and particularity that could only have been done for the purpose of corrupting and depraving the public morals." I cannot understand how it is that the learned Solicitor-General can have said this, when he had reference to all these books from which I am quoting six weeks ago. Why, I have done what I suppose no other defendant in a criminal prosecution ever did. I have furnished to the prosecution a list of the whole of the books (no sort of compulsion being on me to do so, I might have hidden my case from them as much as I could, and as they have hidden their case from me); but, to put it frankly, I did hope that common sense and common decency would have prevented even a Solicitor-General from having attributed to me that which, having fairly shown to be applicable only to others, he ought to have known should not have been attributed to me at all. Carpenter's work is a book which the learned Solicitor-General's Government puts in the hands of children! Listen, and then compare this to the words given by Knowlton on page 22. (Extract read from Carpenter as given in Acton, page 24). Now, compare that with the three or four lines of Knowlton, and tell me whether Knowlton is not chaste and delicate beside this book, which is put into the hands of girls and boys by the Government, which is represented here by the learned Solicitor-General as one of its law officers. I ask you how can you convict me with this directory of the Science and Art Department of the Com-

mittee of the Council of Education before you, telling the children, on pages 134 and 135, that this Carpenter's "Human Physiology" is a book in which they are to be examined for honours, and which they are expected to know all about. It is simply monstrous to put the words of that indictment to me at all—it is monstrous to tell me that Knowlton is "filth," that he states the act with minute particularity, when, gentlemen, if I do not succeed in winning your assent I shall have to show you in works—in other works by the highest medical men—medical men whom I would rather call to tell their own story, but that I am afraid, my lord, would feel it his duty to rule that such evidence could not be put in, and I am reluctantly striving to make myself my own witness at the risk, I am afraid, sometimes of sorely wearying you. But, if I do not give these statements now, I probably never can give them at all, and I am bound to cover every line of this pamphlet, which can only have been attacked in the manner it has been by a person knowing nothing about medicine or, having the knowledge, wilfully twisting it for the purpose of injuring someone. Here is Carpenter's "Manual of Physiology," published by Churchill, and also Kirke's "Handbook of Physiology," published by James Murray. These are the books which are put in the hands of girls—are given to them as prizes and as books in which they are to be examined. I do not want to use words for which my lord might rebuke me. I do not want to use one wrong phrase, but I am pleading here for my liberty. I am pleading for my future. I am pleading for my reputation. It is not pleasant to be indicted as the utterer of an obscene book. From a charge of theft those who know you will acquit you; from a charge of murder, even, it must be proved ere odium attaches; but the charge of obscenity is one of those sort of charges which is so difficult to deal with. The very wording of the charge casts a shadow. There is mud enough left on the garment however much you may wash it; after filth has been so freely thrown some of it is sure to stick—some one is sure to see the stain of it; some of those who have always malice to see these things kin to their lesser selves. On page 22, of Knowlton, you find in four lines an attempt to state the subject of satyriasis as chastely as possible, with nothing that could be offensive, without anything which could shock any well-regulated mind, or go in any sense beyond the instruc-

tion intended to give ; you find here that which Dr. Acton, I will not suggest unwisely, thought it necessary to state with a degree of fulness, which—while I may not use the words of the learned Solicitor General, "it gives me pain to repeat"—I will say it gives me pain to know that there are such terrible diseases to be dealt with, but most of all to know they prevail from ignorance and from misunderstanding of physical laws. I shall be within the correction of my lord, who has travelled many assizes, and I appeal to him whether there are not, at nearly every agricultural assize, cases which the press wisely refrains from reporting, crimes which though existing, English language hesitates to characterize ; whether they do not come before him, arising from this very satyriasis among the poorer classes of wretched, ill-fed, ignorant people, who if they had been instructed earlier in their lives and wisely trained, would have been probably saved from such a distortment of their nature. (After full comparison of pages 22 and 23 of Knowlton and page 157 of Action, Mr. Bradlaugh went through pages 25 and 27, and then said—Now I go to page 35 upon which the learned Solicitor-General expended a very large amount of denunciation, and the denunciation was then coupled with the word "cayenne." I have heard Frenchmen denounce Cayenne, because it is a criminal colony to which some of the political convicts are transported, but I hear for the first time in this court that the suggestion that cayenne as a possible remedy or a possible alleviation in some cases of disease can be associated with obscenity and denounced as filthy; and if I fail to answer the learned Solicitor-General on that point, it will only be because I utterly fail to comprehend what he meant when he was putting it to you. There is a still stronger remedy on the same page, that of cantharides, and if you will look at page 132 of Acton—and I shall substantiate this over and over again from the works of other physicians —I shall show you the same thing, as to cantharides and cayenne ; indeed, there is not a single prescription in this book of Knowlton's which is not over and over again g ven in all the authorities which I have before me—given with full language as to the diseases, and full details as to the remedies. Does cayenne become obscene put into a pamphlet and published at sixpence? and is it all right when advocated in a medical book published at thirty shillings or two guineas? Oh, gentlemen, I cannot believe you will stultify yourselves in any such fashion. Whether the Solicitor-

General's experience in criminal cases ever included cayenne in any fashion which might convey to him any idea of an obscene kind, I do not know, and I should not have dreamed of trying to answer it, had I not heard it put in a fashion which was to me utterly inexplicable, as part of the ground of the indictment against me. The same things I say as to the remedies on page 35 will apply as to the remedies on page 37. You will find Acton, over and over again, and at great length, showing the effect of study and excess. This chapter as to sterility has been so much spoken on that I must still ask leave to use a little more of Acton's own words, only regretting that the learned counsel for the prosecution did not think it right to state at least some things which he knew might have fairly been said for the defence. I probably have utterly miscomprehended English jurisprudence. I had known that in civil cases, that it was not considered sometimes unfair to leave the advocate for the defence to make out his case, but I had thought that in a criminal case, the second legal leader in England, matched against a man and a woman, with the knowledge before him put into the hands of his clients for six weeks before the commencement of the trial and actually furnished to them by the defendants—I had thought that there was some pressure of honour upon him to put to you in pleading to you for your verdict against us, at least, a little of what we contended for on our side. It was hardly fair to take this chapter, and this was the one that had so "pained" him—it was hardly fair to do that without saying (in justice to the defendants) that they had furnished him with the whole number of books showing the identity of the Knowlton pamphlet with what medical and English doctors of the highest repute had written. You will remember the Solicitor-General's words, "American doctors"—"perhaps some English doctors"—"God forbid"—were the words of the Solicitor-General, "that there should be any writing—such things." If he did not know that we were going to read these authorities it was only because the solicitors who instructed him did not perform their duty—nd I will not do the solicitor to the city the injustice to think that he did not furnish to the Solicitor-General all the detailed references I had written to him, and given him, with every page carefully marked six weeks ago; the learned counsel appeared before the magistrates against me, with some of my references in their hands. And I ask you,

is it fair for the Solicitor-General to trust to our want of ability, or to our want of memory, to make good our case in important details of the kind? You, gentlemen of the jury, as my lord has well said, you are sitting there as arbiters in this case. It is you I have to convince, and from you I have to win a verdict, and is it fair that the learned Solicitor-General should have left out the whole of these facts, which he must have known if he had been properly instructed? At any rate, I know the junior counsel knew it, because I myself saw in their hands on the last occasion of appearing before the magistrate my analysis of Acton, furnished them by myself. I do not think that that suppression is quite right. I can scarcely deem it quite honourable. I quite admit that the learned Solicitor-General is fully occupied by questions to him much more important than the simple one of whether I shall go to jail or not; he has his Parliamentary duties to occupy his time, he has his other important and profitable engagements, but I do not think he should have come here and suppressed and kept hidden from you these matters of our defence which have been so carefully furnished to the prosecution; for when I afterwards found that I should have to use one or two books not included in the first list, I wrote to the City Solicitor acquainting him with the fact, and giving them the authorities, so that in no case can myself or my co-defendant be said to be acting otherwise than honourably and openly. We may be wrong, but, at any rate, we have fought fairly. Without wishing to use any words from which my lord would think that I have exceeded the privilege given to a defendant to plead for his own justification, I am bound to repeat that I do not think it was entirely fair to conceal all these things from you. I did give the prosecution clear notice that Kirke and Carpenter were used in schools, that other works to which I have referred you were so used, and yet the harsh language came from the Solicitor-General as if these things had never been heard of in the history of the English people except in the Knowlton pamphlet. Well, now I come to page 36, on sterility. Now I ask you to look at that while I read to you from page 192 of Acton. I might continue them *ad nauseam*. I am in this difficulty: I do not want to read to you to weary you, to prejudice you against me, but I am trying to prove my case. I must read enough to show you how utterly unreliable is all that the learned Solicitor-General has said about

Knowlton's particularity of detail; I ask you, are not these words as completely chaste as it is possible to be, if he is to deal with the question at all? Then, however, on the same page, 36 of Knowlton, treating of premature, and especially solitary gratification, I read to you on that from page 28 to page 31 of Acton, where he goes on at length page after page, and shows the evils, including insanity, which arise from this. Knowlton has dealt with this sad phase in the most quiet way, the most simple way, the briefest way human pen can touch it, and yet the learned Solicitor-General indicts me for publishing obscenity! The same, in order to prevent repetition, may be said in reference to the Knowlton pamphlet, page 44, at the end. I will try as much as possible to prevent repetition, if I can. If you will mark what I mean in that page it will save me again referring to it. But I will ask you, as indeed I think—I am not quite sure, if not in that, at any rate in another part—my co-defendant did ask you, whether the language at the bottom of page 36 is the language of an indecent writer. He speaks of intemperance in the use of spirits, and says, even a "moderate use of spirits, and even tobacco in any form, have some effect. It is a law of the animal economy, that no one part of the system can be stimulated, or excited, without an expense of vitality, as it is termed." I ask, is that the language of a man who wants to make people immoral? He does not teach them to drink and smoke in excess, but rather speaks against both altogether, and the Solicitor-General insults this man—and I stand here in his place, I acquit myself of no responsibility for his words. He has been dead for more than a quarter of a century, and your verdict, though it may touch his memory, cannot touch him. It is myself, and my co-defendant, who are pleading here; I seeking to win your verdict with all the more force, because the advocacy of these views have been mine for so long and hers for so short a time, and she has to pay, with me, the penalty of inculcating what we both believe to be absolutely, and in every sense, the reverse of what the learned Solicitor-General says. The Solicitor-General talked of the colouring; if we wanted to retort, was not the colouring somewhat in the Solicitor-General's speech? You may think that we have done unwisely in trusting our own tongues to reply to the trained ability matched against us; but we have the confidence, whether right or wrong (a confidence which we

still have), that the liberty of the press, in every age of the history of this country, has been conserved by English juries, and my reading, at any rate, has always compelled me to remember that, even in the worst of our times, when Solicitor-Generals' voices had more influence—I will not venture to say that the Solicitor-Generals themselves had a higher ability, although some of the grandest names afterwards known on the bench were amongst those—it has been the jury that has always stood between the prisoner and the power arrayed against him, and has given him a deliverance from an intent which ought never to have been alleged against him at all. Gentlemen, I am inclined to leave Acton, although I have a very large number of other passages marked right through, dealing with the whole of pages 38 to 41, 42, 43 and 44, because I shall only be repeating to you the same kind of language, and if the learned Solicitor-General in his reply should venture to say to you that I did not read these passages because they did not make out my case so strongly, then I will ask you to ask him why it is that, having had from me the paged references to Acton's book entirely in his own hands for so long, he has not stated to you the slightest word about them. There are one or two points which it is absolutely necessary that I should briefly allude to, although I will not read them at any greater length than I can help. One is on page 38, where there is a reference to the exhaustive efforts of sexual gratification, and I am obliged to allude to that because it was one of the parts that the Solicitor-General said that he alluded to with so much "pain." (Mr. Bradlaugh here read from Acton, pages 93, 94, and 95.) Compare that with the language of Knowlton, and then say, gentlemen, is not the language of our pamphlet carefully chaste? and you will remember that the learned Solicitor-General, in his speech, alleged to you that the happy gratification of the reproductive instinct was one of the most alluring, and most calculated to deprave by its indecency. I now will only take you for one moment to page 43, simply because, although I might occupy a very long time still with Acton, I have so many volumes before me that I am myself feeling that I may be transgressing unduly upon your patience. I will take you to the part of page 43, beginning "Begin temperately." Then on pages 104 to 107, Acton says (Mr. Bradlaugh here read a lengthy extract), and Acton goes into the details of a large number of cases to illustrate it. Now, I might occupy much

time with pages 43, 44, and 45, the whole of which is relied in by the Solicitor-General as warranting your indictment here. I might rely on an enormous number of quotations from Acton to cover every word of these pages, but this is the closing paragraph on page 45, to which I must allude, because I understood the learned Solicitor-General to suggest that these words on this were sufficient to warrant you in finding a verdict of guilty of publishing a filthy book to deprave and corrupt the public mind. I will read the words of Knowlton, although they were read by the Solicitor-General. (Mr. Bradlaugh here read slowly the paragraph on p.45.) I avow, gentlemen, that I do not know what impression that made upon your minds, nor do I know either what impression it made on the mind of his lordship, but I avow that it seems to me that the whole of the argument of the learned Solicitor-General was more than amply answered by his own quotation. He has told you that this book for which we are prosecuted is directed against marriage. It is said that where distinct declarations are made regarding unmarried females, filthy and corrupt inuendoes are intended, but in pages 84 and 85 of Acton we have the most distinct declarations of this character, and corroborations in the most precise way of all that is put in Knowlton. I have now, for one single moment, before I take up another book, just to draw your attention to the character of the book I have been quoting. It is a book published by a man who was in his lifetime one who was accredited with the highest medical reputation, a man against whom either in his lifetime or afterwards there was never uttered the slightest suspicion of quackery, nor was such an insinuation ever urged. The person who reads this book will find it to be full of very painful things. I do not know whether my lord will think that I have the right to hand up to the jury such books as I quote from, where these things——

The Lord Chief Justice : No, I think not.

Mr. Bradlaugh : You think not, my lord. That being so, I am prevented from putting in these books, and I am afraid that I shall in consequence, in the duty that lies before me, be obliged reluctantly, for the sake of the argument, to go line by line through the concurrent statements in other books till I have succeeded in impressing you with the defence upon which I have to rely. I am unable to put these books into your hands because——

The LORD CHIEF JUSTICE: Because they are not evidence.

Mr. BRADLAUGH: Just so, my lord, because they are not evidence, and that being the case, I have only the opportunity of reading them to you as part of my speech. But if I could hand you these books, or if I could put the authors of them into the witness-box, I should be able to show you conclusively that the charges made against this Knowlton pamphlet cannot be sustained. What an unfair position, then, am I in—what a position of difficulty compared with that of the Solicitor-General, who might have told you all these things, as well as saying the ill he did of this pamphlet. I do not say this by way of making any complaint, for since I am in this court I am willing to abide by its decision; but I am simply making the remark because the rules of the court prevent me putting before you these works, and I am reduced simply to telling you in the best way I can what they contain. I am sorry to be obliged to weary you, and to detain you from your usual occupations, while I have to go through book by book, of which some parts are as dreary as parts of books can be; and had not the learned Solicitor-General hurled the inuendo at us that we have made a deliberate attempt to corrupt the public morals, it would not be necessary for me to go through this pamphlet line by line to show that its statements are simply chaste abbreviations of those which are put at greater length, and more elaborated in other works written by the highest physicians and openly sold by the most respectable publishers. I only add one word in laying down Acton, if I may be permitted to do so, and that is that as far as my evidence is worth anything, there has never the slightest attack been made upon it, and no charge of obscenity was ever brought against it. The next book I shall refer to, not being able to hand it up, is "Notes on Uterine Surgery," by J. Marion Sims, which is published by the very respectable firm of Messrs. Hardwick and Bogue. Dr. Sims was a graduate of a university, had obtained a large number of very honourable distinctions, and held a very high position in his profession, and although I am not permitted to put this in evidence, I wish you clearly to understand that I am not quoting from some disreputable quack, or from some person who, for his own ends, would write and circulate any kind of obscenity. With this book I shall have to deal, step by step, or at any rate with so much of it as I think will con-

vince you into the belief that there can be no such charge as the obscenity or indecency maintained against Knowlton after hearing what Sims has written, or if you are not convinced of that, I shall not be able to comprehend the effect of evidence, or at any rate I shall wonder that the plainest possible statements that the English language is capable of can produce upon different minds so different results. Let me direct you to a paragraph on page 12 of the Knowlton pamphlet. I trust you will bear with me now; after the clear and explicit declaration of the Lord Chief Justice, that I cannot put in this medical evidence, the necessity that lies upon me in my speech to put fully before you everything which will entitle me to win a verdict at your hands. I have no wish, believe me, to keep you there a moment longer than is absolutely necessary, still less have I the desire to act in a manner unworthy of the fairness shown to us by the Court; but I am obliged, not only for myself, but also for my co-defendant—who is in this entirely in my hands—to do all that my poor wit will enable me to clear ourselves, and I have no right to allow one thing to escape to bring about the result. On the 12th page of the Knowlton pamphlet, near the end, you note the paragraph (reading it), and I now take you to page 323 and page 324 of Dr. Marion Sims. (Mr. Bradlaugh here read some extremely strong passages.) After that he gives—through several pages, and with great detail—a large number of cases of this disease, and goes on to describe all the operations of this kind which he has had to perform for the purpose of dealing with this which the learned Solicitor-General has put before you, and which he has chosen to allege is part of the filth which we have published. Dr. Sims enters upon this subject with great fulness of detail. Turn now to page 13 of the pamphlet, where Knowlton is dealing with the female reproductive organs. The learned Solicitor-General laid great stress, in his speech, on what he chose to call the obscene particularity of detail; but if I were able to put Sims into your hands, I should, I think, be able to show you that here are far fuller details, and that they are accompanied by a plate of everything described, in order that it should be more certainly understood. I will read the language of Sims, however, and ask you to compare it with the modest reference in Knowlton. (Mr. Bradlaugh then read page 181 and page 234 from Dr. Sims.) And then he spends exactly two pages and a half, which I will not weary you with, in

describing technically the whole of its position, its form, and its size, as well as thickness and capacity. I will still ask you to follow me carefully. We are still at page 12 of Knowlton and 181 in Sims. If you will look at Knowlton, you will see the exact correctness of the description. (Here Mr. Bradlaugh read another long extract, and held towards the jury box the illustrated plates in Sims' book). Go now, a few lines lower on, to page 13 of Knowlton, while I read a piece from page 204 of Sims. (Mr. Bradlaugh read another extract.) This subject is referred to by Knowlton on page 14, and on pages 181-2 of Sims; you will find how accurately he has written. I want, here, to press upon you—because it has been expressly referred to in the speech of the Solicitor-General in opening this case, and may be again referred to when he comes to reply, for he has the right of using every word in this pamphlet against us—that the charge made against Knowlton presses much more heavily upon Sims, for not only is there an enormously long description here, but, if I were able to hand this book up to you, I should show you that it is accompanied by a picture with the end in view of making the description more comprehensible. That which is put here in Sims with a bold completeness of detail, is delicately and chastely abbreviated by Knowlton, and yet you are called upon to believe that I and my co-defendant have set out with the intention of corrupting the public mind by publishing a pamphlet stating the fact in that guarded way. (Mr. Bradlaugh read further from Sims, page 182, and added), Gentlemen, I will not attempt to weary you with the whole of the pages, for it goes on to give every minutest detail: and yet, when the same facts, which to prevent disease, should be known by women, are so briefly stated in Knowlton, they are characterised by the learned Solicitor-General as filth, and I am prevented from showing you by evidence that the pamphlet is a pure work of medical instruction. Although I cannot help thinking that my case is one that should meet with your sympathy, I will not complain as to the disadvantage at which I am placed, for it is my duty to accept the regulations of the court. On the same page, I might read another extract, corroborating Knowlton on this point, but I will leave that, gentlemen. I might indeed occupy much more of your time with this page, but there is nothing in it which suggests sensual ideas to my mind in reading it, although some filthy-minded

persons have tried to manufacture a complaint—in using the word filthy I may have spoken too strongly—I will say that people entirely ignorant of medicine and medical works, or anything of the mass of detail that belongs to them; people who are only used to reading law books, have the impertinence to come here and call scientific facts filth. I avow I cannot understand how they can have come to that conclusion from reading this array of books (Mr. Bradlaugh here pointed to several piles of marked medical works, arranged round him, ready for reference), and if they have not read them, although they had notice six weeks ago that I should refer to them, it is more shameful still for the Solicitor-General to have used such language. I now bring you, gentlemen, to page 15 of the pamphlet; there you will find the subject treated of is menstruation. Sims also treats on the subject. (Mr. Bradlaugh here read at considerable length, from pages 39, 40, and 139 of Sims). I am endeavouring now to limit the words as much as possible to those of Knowlton, leaving out as much I can. Sims then goes on to give a large number of cases in illustration, which are painful, and adduces the reasons, with which I need not trouble you, but contenting myself with simply assuring you that Knowlton is chaste and delicate compared with him. We now come to page 16 of the pamphlet, and the same subject is spoken of on page 5 of Sims. You will notice, gentlemen, the very slight reference to pregnancy and menstruation, and the guarded way in which it is put by Knowlton. Sims on page 29 and 30, and on pages 380 to 385, gives with most full details several unpleasant cases which he investigated. I am told that Knowlton goes into minuteness of detail. I am surprised that the Solicitor could have ventured to say so if he had read this book. Listen to a passage of pp. 384 and 385 of this book of Sims, and tell me what you think. (Mr. Bradlaugh then read a long extract from Sims.) Compare all that with the delicate way in which Knowlton puts it—states the bare, actual facts. I do not think that the book has had the effect upon the mind of the Solicitor-General which it ought to have had, and I urge that he was utterly unwarranted in alleging that it was calculated and published for the purpose of corrupting the public mind. We are still on the same page of Knowlton, gentlemen.) Mr. Bradlaugh then verified further parts of p. 16 by Sims, pages 361 and 367, in each case showing the

superior style of the Knowlton pamphlet, of which he then took page 17. (The learned Solicitor-General talked of the particularity of detail; but if I had the power to put Dr. Sims in the box, I could, I believe, show you that he goes on to speak on all the same topics, accompanied on p. 363 by plates, clearly illustrative of their appearance, and when the learned Solicitor-General speaks of filth, and I find in the books of Carpenter, of Kirke, of Valentine, of Hilles, the same sort of descriptions on this topic, accompanied by similar plates, and that some of these books are put into the hands of girls for instruction and study at schools regulated from South Kensington, surely I have a right to complain of the use of such expressions. Yet I am indicted, and your verdict is asked for against me for the minute particularity with which we put these things. I do not think that I will weary you with the full description on p. 17, but if I could put the book into your hands you would, I am sure, say that the language of Knowlton is unmistakably most chaste and delicate when read side by side with this, notwithstanding the unsupported allegations of a Solicitor-General, who, perhaps, had not even read the pamphlet he vilified. I will go on now to page 11, the second paragraph—it is the first complete paragraph about the middle of the page—and refer you to page 340 of Sims, where I find similar declarations uniformerly accompanied by matter which, when I come to deal with pages 19 and 22 of Knowlton, I shall have to read to you. (Mr. Bradlaugh read a long extract). The same sort of remarks are made by Carpenter, by Kirke, by Valentine, and in the "Ladies' Own Companion," which is issued by one of the most respectable homœopathic publishing firms in London, any of which can be bought openly and without question. Any number of cases in relation to this subject are given in the various books in which young girls have to be examined. In the list of subjects printed on the Government syllabus they have to deal with this, and they are to comprehend the results incident to pregnancy, and do you mean to tell me that the delicate references to the same subject used in this Knowlton pamphlet are fairly called "filth," are more likely to corrupt the public mind or to destroy public morality? And how shall I speak when I am indicted, may be punished, may be sent to prison for doing so, and yet see all these unchallenged. I come now to page 19, where Knowlton repeats the same doctrines as are laid down in the paragraphs to which I have

referred. He then goes on to the question, difficult to treat here and I am afraid I must give you a case preceding the paragraph in Sims which I have annotated in connection with this in order not to be obliged to have to refer to the subject again. I will on the same topic take you to page 22 of Knowlton, and ask you where he uses one word which is impure, or puts one fact which leads you to think libidinously? Sims, on 340, 341, and 342 gives a collection of cases. Now I will ask you again, is not the language of Knowlton chaste and delicate in the extreme compared with that? Dealing with the same subject on page 372, Sims precisely states what Knowlton gives, and on page 197, still dealing with the same subject, he puts the words still more plainly, and he puts it that this is the medical view. If I were permitted to do so I would show you the plate in this page by means of which he describes exactly what he means, so that there is no possibility of misunderstanding, and yet I am told by the Solicitor-General, in this pamphlet I have given currency to the most abominable filth, minutely particular details, calculated to corrupt the public mind. Can that be so? Can the learned Solicitor-General have used such language and yet have read this book by Dr. Marion Sims, which I gave him notice, weeks ago, I should have to refer to? We are still dealing with page 19 of the pamphlet and I go now to page 182 of Sims, where he speaks more plainly and less delicately. (Mr. Bradlaugh read words.) I think I have now also disposed of page 22 of Knowlton, and I need not refer to it again. I come now to page 23, just after the words "John Hunter," about the middle of the page, and go on to the same subject on pages 25 and 26. I will read to you from Sims, who, after long and minute details, gives another series of plates, giving the fullest illustrative descriptions. (Mr. Bradlaugh here read from pages 116, 119, 363, and 372, of Sims). The same facts, however, as you see, are very guardedly and very quietly put by Knowlton at the bottom of page 26. Compare this with the language of Sims, and then say if Knowlton can be called indelicate. I must also trouble you with the whole of the paragraph, beginning page 29 of the Knowlton pamphlet. I am afraid I am asking you to listen to rather too much from Dr. Marion Sims, but, as I am prohibited handing you the book, I must read some of the passages, or you would never imagine to what extent they go. (Mr. Bradlaugh commenced reading

from page 350 into 351). He goes on there to give an enormously long description which I will not pain you with, and adds, on page 354, a plate of the foulest description, according to the theory of the prosecution, which, unfortunately, I must not put into your hands. But plates almost identical are put into the hands of boys and girls at school for the purpose of enabling them to study these and kindred subjects, and are even included among the list of prizes distributed to them. Such facts, I say again, are by Knowlton put in the simplest, most chaste, and delicate language, in his pamphlet. I will now read you a paragraph in Sims, on page 372, and refer you to the bottom of the same page in Knowlton; and on that I will also read you two from pages 381 and 387 of Sims, in which is given, in language as explicit as possible, all that is so briefly said by Knowlton. I will now take you to page 330 Knowlton, to the very last three lines of the page, in which, having stated the plain simple fact, you can easily compare his manner with the way in which Sims treats it. He tells you how he visited his patient, and how, at visit after visit, experiment after experiment was resorted to to discover the best way of ascertaining the facts. He goes on for something like two pages describing that, and I ask you whether, assuming the need of plates to aid in the examination of these subjects, Knowlton is not again and again far more chaste and cautious as to entering too minutely into extremely particular details? I now come to the question of sterility, which is dealt with on page 34 and the first paragraph of chapter 3. Sims says, on page 216, not only that Knowlton gives an accurate summary in a third of a line, but on this point he gives two plates for the purpose of showing what he means. Then you will find a fewer lines further down, on page 34 of the pamphlet, and on that I will again refer you to the exact corroboration to be found in the language used by Sims on page 39. (After reading, Mr. Bradlaugh said.) I must here ask you to remember that the learned Solicitor-General, when pleading against me, read a portion of the book on page 44 as one of the most filthy suggestions which he could conceive it possible to make in a publication. I am not myself unacquainted with medical technicalities, but I know the difficulty without a trained technical skill to pass a criticism upon these dry questions, and to make out a case to you which you will think sufficient; but I venture to say that we find here much more of what the learned gentleman

calls filthy suggestions than in the pamphlet for which I am indicted, and that, too, in a book not published by any common quack, but written by a high authority, and circulated by a publishing firm of the first-class. I say this book is much more calculated to deprave. But this book is circulated at a guinea or two, perhaps; do you mean to tell me that obscenity is measured by the price of a book? I am not pleading, let me crave to observe, that two blacks make one white, and that because one book is published, for which I am indicted, another book of a similar character should not be allowed to be issued; but I am saying, and I do most earnestly contend, that it is unfair to prohibit the circulation of a book merely because it is sold at a low price and distributed among the poor and ignorant for the purpose of improving their minds and instructing them in things they ought to know; and I say that I should not be held responsible for mere facts put in as clear and chaste a way as they can be. I now refer you to the language of Sims on page 5. (Mr. Bradlaugh again read.) Then let me ask you to read the paragraph on page 35 of Knowlton, against which the learned Solicitor-General directed so much of his choicest ire and indignation. You will see that the authority quoted by Knowlton is Dr. Dewees, and I may say that we have luckily just at the last moment procured a copy of his works, for it has been out of print a great number of years, and difficult to get. The remedies given by Knowlton were given on his authority; and on page 144 Sims prescribes exactly the same remedies; among them tincture of guaiac. And, really, gentlemen, it seems to me a little too much that you should send me out of this court branded as a criminal, and commit me to gaol for depraving the public mind, because I have given for the sum of sixpence information which for the last half-century has been given in various forms and shapes, and for printing a recipe as others have done; and because the eye of the learned Solicitor-General caught the word "cayenne" amongst other things, that must forsooth be evidence of the most gross immorality. I will now pass over several pages and go to page 38 of the pamphlet, because there are a number of things referred to there which are more fully given by other books; but I will make my remarks thereupon as short as possible, in what I fear must at briefest be a wearisome and long speech. I will take you to the instrument purchasable for a shilling, which is to be made a ground for convicting me;

and here let me say that I cannot help wishing that the learned counsel who has addressed you had not used language which was capable of being misunderstood. When you talk of an instrument in connection with such a topic instead of a harmless syringe, one of the simplest instruments, here recommended, the mind would be taken by the Solicitor-General's words to instruments familiarly known in medical jurisprudence, and used for the commission of crime. I venture to say it is outraging all reason and sense when you offer the suggestion that it is recommended here for a criminal or immoral purpose. I think, however, I may manage to save time if I take several paragraphs together, so I will take the paragraphs on pages 38, 39, 40, and 41, so as not to have to refer to them again. And, first of all, perhaps you would hardly believe, but I can assure you that in pages 375-6-7, 380-89, Sims in this book actually gives cases where the use of the syringe has been resorted to for the very purpose recommended in Knowlton, in that one case which is given on page 376. If details of that kind are fairly permissible in a book whose distribution and publication are not restricted, I do not see why I should be precluded from publishing statement so carefully worded as those of Knowlton. Oh, but it is said, such things excite sexual feelings. Let me say that I do not believe that they do anything of the kind. At any rate they do not produce any lascivious thoughts in my mind, but, on the contrary, I assure you that going through these details as I have had to do for the purposes of making my defence, produced upon me, unused as I am generally to such a class of study, the very same kind of revolution which is, I venture to say, passing through your minds at this moment, in being compelled to listen to the reading. A syringe can be bought for a shilling, and can be used for sanitary purposes, some of which are enforced on wretched women under police authority, but here, in Sims, we have plate after plate setting forth the manner in which it is to be used, and yet the pamphlet of Knowlton is brought into Court, because it suggests a similar use but in much more decent language, and is, therefore, characterised as "filth" by the learned Solicitor-General. Books of the very same character may be sold to the rich, but the poor are not to be allowed to get the cheap information because they can purchase it for a shilling.

The Lord Chief Justice: The argument of the Solicitor-General, do not understand me for a moment to say

that it cannot be met, was to this effect, that that which it is essential for medical men to know, is not essential for the general public to know, or at least it may not be, and that such information may be used to corrupt the public mind. The Solicitor-General did not say that those things were not to be found in medical works, nor did he argue, as far as I understood, that if those books were published to the world generally they would not be subject to legal consequences, but he said they were allowed to pass unchallenged because they were written for a particular purpose, to give the result of experiment and experience with the view of instructing, and, undoubtedly, in works of that character—works intended to give medical information—it is absolutely necessary to give those minute details to which you have referred. The argument is that it is unnecessary to give these details to the general public, and I refer to it because I think if the argument can be met it should be met, and if they are so given the tendency is to corrupt the public mind. It is, therefore, I think, of no use to multiply instances, and to pile illustration upon illustration without strengthening your argument. In every work intended for medical purposes, or to give instruction in medical studies, it is necessary that these details should be given to enable medical men to treat the diseases of the various organs, but I question whether the same information given to the general public may be of advantage to them, or whether on the other hand it is not calculated to influence them in an opposite direction. That is the argument I think you have to grapple with.

Mr. BRADLAUGH: Quite so, my lord. I agree that if it were possible for this proposition to be conceded in any way by the prosecution it would shorten the case very much —the proposition that there is no fact stated by Knowlton that is not stated in a variety of books, not only written especially for the medical profession, but that the whole of the details which I have given are in Carpenter's physiological school books in plain language, which is put into the hands of children, distributed by authority, and given away in the shape of prizes. If that proposition could be conceded to me it would relieve me from a considerable difficulty and the necessity of inflicting upon the Court and the jury a very long statement, though I trust that your lordship will not think that I have detained you too long.

The LORD CHIEF JUSTICE: Oh no, not at all. That was not my meaning.

Mr. Bradlaugh: If it is even admitted that these details are not entered into with greater particularity than is necessary for the comprehension of the subject I shall gladly relieve the jury of much that I had intended to say. The contention of the learned Solicitor-General is that we have gone into certain facts only for corrupting the public mind, and my proposition is that it is necessary to advocate checks upon over-population, and that it is necessary, for these checks to be properly understood, to give information to poor people, among whom the evil largely exists—information upon sexual and physiological matters, and that in doing this the incriminated pamphlet does not contain one word which is not for that purpose legitimate and necessary, not one word which is not pure and fit for the instructing of the poor and ignorant in these matters. That is why I put this proposition at the outset of my argument, and not for the purpose of any special pleading. I only want to show that every statement is legitimate and necessary to the subject treated, and as I cannot give in evidence the books, I fear I must further, unless in some fashion that proposition is granted to me, pile authority upon authority, as your lordship has observed, to cover my defence and to prove the accuracy of my contention. If the jury think I have said enough upon the subject I would not open another book before them. There is, I contend, nothing indecent, nothing which is not warranted by the matters treated, and we who feel ourselves called upon to face the issue, as the advocates of checks to over-population, contend that, moral or immoral as the book may be thought by others, this pamphlet states neither more nor less than is necessary or legitimate for the purpose.

The Lord Chief Justice: I do not think that any one would say that if this were purely and simply a medical work there would be any redundancy of details, or anything more than it is necessary for a medical man to know, and he would be among the most ignorant of his profession if he did not know them; but then the argument is that this is not a medical book, and that is the point which I think you should meet.

The Court adjourned for half-an-hour.

After the adjournment, Mr. Bradlaugh proceeded: I have myself, with my co-defendant, gravely considered, as we naturally ought to do, any suggestion coming from

your lordship, and we feel the full force and weight of your lordship's suggestion. I am in this difficulty, that, having a little to plead this medical portion, not only for myself, but for the lady who has so ably defended herself, I feel that she relies a little—indeed, without presumption, I may say she relies entirely—upon any advice I may offer to her as to the conduct of these proceedings. I do not want to do anything which may in any way damage either her position or my own; and I think, therefore, I shall be consulting what is due to the Court, which has listened to us with very, very great patience, if I only make use of some of the books which I have here, and which, if I were to attempt to cite passages from them all, judging from the rate at which I have been able to deal with the two already mentioned, would take several days of the time of the Court, and add nothing to the force of what has been adduced. There are, however, one or two books which I think I ought to deal with.

The Lord Chief Justice: By all means.

Mr. Bradlaugh: If your lordship, then, will permit me, I will cite the works of Carpenter and Kirke as works which are being used in schools; and I think, if I take one of these works—namely, Carpenter's—it will suffice for the present, because what is found in the one is to a great extent found in the other. That is a book specially designed for young people. It is not issued for the professional use of students at a university or college, but, as I have said, it is intended for the instruction of young people generally. I also intend to make some comments on a book of Churchill's, which was partially alluded to by my co-defendant, and, with the exception of some references, without going into details, to Chavasse and Bull, I propose to make no further detailed quotations, thinking that we have at all events impressed the jury sufficiently, and feeling that we should not unduly take up their time, after the passages which I am sure your lordship will not think it impertinent in me to have read as I have from the medical works, to show that there had been nothing unfairly stated in the Knowlton pamphlet.

The Lord Chief Justice: No, you may take it that you have shown that what is in Knowlton, if it were a medical work, would not be so full as other medical works treating similar topics.

Mr. Bradlaugh: I feel that I should only be taking

advantage of the patience of the jury if, after that intimation from the Bench, I unduly pressed the other books. I will, therefore, only take Carpenter's "Human Physiology," a work by Burt Wilder, who was a professor in Cornell University, and also some small portions of Churchill's "Diseases of Women," for the reason partially referred to by my co-defendant. These are three large books in wide circulation, and there is no pretence whatever for saying that they are confined to medical men. Before I proceed to deal with them, you will permit me to say—and I hope I shall not unduly put it—that the pretence about the restriction of the circulation of medical books is as utterly hollow as it is possible to conceive. In addition to the works to which I have referred, there are some thirty or forty bulky works which I have very carefully compared with Knowlton's pamphlet. It was my intention to quote from those works, and to point out that they can be purchased with the greatest facility. They are published, some in Dublin by Hewitt, and some in London by Sampson Low and Co., Churchill, Macmillan, and Smith and Son themselves. One which is called "The Ladies' Manual of Homœopathic Treatment," is published by the Homœopathic Company in Moorgate Street—a highly respectable company. Certain details are contained on pages 15, 16, and 17 of that book. I have studied those details, and, while I do not want to characterise another book, I should say that they are almost grossly treated compared with the fashion in which Knowlton has treated them. But I quite agree with what has fallen from the Bench, that we should in no way strengthen our position here by simply going over book after book for several days, wearisomely to you and to myself. I will only put it to you that the richer can afford and do pay 5s., 10s., or even 21s. for a book; not that there is anything indecent in it, but simply because a woman does not like sometimes to mention to medical men things which this Ladies' Manual tells her, but which are matters of great delicacy. Now, look at the other side. Poor women—women whose claims I am here to advocate, and whose husbands and children are also my clients—they need the same information; but at the prices I have quoted it is beyond their reach. I cannot help thinking that if there were, as I believe there is not, any offence in the publication of such things as are published here—I cannot help thinking that it is a little hard in the City of London to single out for prosecution those whose

only desire is to teach the poor how to help themselves. The poor have their wants, the poor have their needs, the poor have their failings, the poor have their diseases, and the poor are the most numerous class of society. As a matter of fact, there is no restriction in the circulation of medical works at all. As a matter of fact, since this prosecution has been pending, Messrs. Churchill have issued special circulars, drawing attention to these works, and both they and Messrs. Smith and Son have circulated this book of Chavasse's, not simply as I have got it here, but divided into two parts and done up in paper covers, and scores of copies are to be found on every bookstall. I do not blame the publishers for utilising the notoriety given to the book. All I want to point out is the fact that, since these proceedings began, the publishers are issuing advertisements, and that there has been an increased sale of the work. There is no pretence whatever that it is meant for the medical profession exclusively. No fewer than eleven thousand of the last edition have been sold, and that is the eleventh edition of the book.

The LORD CHIEF JUSTICE: What is the name of it?

MR. BRADLAUGH: It is Chavasse's "Advice to Wives," and deals particularly with menstruation, and the development of the fœtus, and it treats also on pregnancy and conception. I do not want to say anything against Chavasse; but I think he has written a book to sell, with more padding and jokes than can be found in Knowlton's pamphlet—a book, in short, which, though not in any way of an obscene tendency, yet occasionally gives details in a very broad style. He deals also with the question of sterility, and indicates the remedies necessary to prevent it. The book of Dr. Bull's is of the same character; but on the whole I should regard it as a much superior production, though you find in every page the same subjects discussed. These books are to be seen on every bookstall in the country, and are circulating by scores of thousands.

The LORD CHIEF JUSTICE: Are you sure they are sold by Smith and Son?

Mr. BRADLAUGH: I am quite sure, my lord. At the same time I do not want to cover myself by imputations on other people.

The LORD CHIEF JUSTICE: I am quite certain that the Messrs Smith would not sell a single copy of a work which they considered at all injurious to public morals.

Mr. BRADLAUGH: I fully admit that. Both in London

and elsewhere the name of Messrs. Smith can be vouched for as being of the highest standing. My contention is not because other people have done worse than I have, that, therefore, I should be let off. My contention is that the rich have certain useful information within their reach which they have no more right to have it at their disposal for 1s. 6d. than the poor have at 6d. Chavasse's book, which, on the branches on which it treats, gives fuller details than Knowlton's pamphlet, is divided into two parts, one giving hints to wives, and the other hints to mothers, and the object of the division is to make the work cheap. It is, as I have said, done up in paper covers, and published at eighteen pence. It will be forwarded to any one on the receipt of stamps at Churchill's, Smith's, or at any bookstall, so that the question of restricted circulation in reference to this class of works is at once got rid of. I purposely limit myself in this case to three books only, hoping the jury will believe that I am not over-stating the truth when I say that I have annotated for reference nearly forty volumes. They over and over again cover every page of Knowlton, and I refrain from reading the passages simply because I acknowledge the justice of his lordship's observation that by doing so I should be piling fact upon fact *ad nauseam* without strengthening my case. Therefore I shall not do anything which the jury, judging as between man and man, may have anything to complain of. I shall take Carpenter's "Human Physiology," reminding you that that is a book recommended by the Committee of Council on Education in their directory which regulates the establishing and conducting of science schools and classes. I feel bound to bring that book before you, because I cannot help regretting the point urged by the Solicitor-General—I will not say unfairly but strongly, and put by my lord, from the bench—that there is some difference between a work written, as my lord says, by medical men for medical men or students, or for people desiring to make themselves acquainted with the science of medicine, in which it may be necessary to use certain language for the sake of humanity, and to enter into a variety of details which are not pleasant reading for the general public. But, to use the analogy of my co-defendant, the details of the process of digestion and what takes place in that process, would not enable you to enjoy your dinner if you went into the study of them immediately before the dinner hour. Now,

Carpenter's "Human Physiology" is one of the books in which the young folks are to be examined, and of which many editions have been published. According to the directory of the Committee of Council on Education, this book is to be made one of the standard works for examination, and if the contention is to be made that the giving of the information contained in this book is obscenity, and that the tendency of giving that information is to corrupt and deprave the public mind, then you are landed in a difficulty as regards this case, because the whole of that information is given in the book which I shall bring before you. There is this to be said—and I hope I shall not neglect the view which his lordship put—that there is a distinction to be drawn. Carpenter's "Human Physiology," though given to young boys and girls in schools for the purpose of instructing them, among other things, as to what happens during sexual connection, and what happens after it, although it tells them how birth may be forwarded, and how it may be retarded, by giving illustrations in relation to it, the object simply is to instruct them so far, and there is no design in the book of inducing them to limit the number of their offspring. I hope I have fairly stated the point which his lordship put to me; but there is one thing which I ask you to consider in giving your verdict, namely—Is the advocacy of all checks lawful, except the advocacy of such checks as involve the destruction of the fœtus after conception or the destruction of the child after birth? I am not asking you to lay down the doctrine that Knowlton is altogether correct. A doctrine may be unscientific without being immoral; and I repeat that the point which I desire to put to you is this, Is the advocacy of all checks lawful, except such as involve the destruction of the fœtus after conception, or of the child after birth? I will take you first to page 11 of Knowlton's Pamphlet, beginning with the second small paragraph in the middle, where you will find a description of the female parts. In Carpenter's "Human Physiology," pages 1021, 1022, and 1023, you will find the same much more fully. I will not trouble to read a word of it to you, because the curious thing which struck me when I first commenced to compare Carpenter with Knowlton was that in nearly every respect the language was precisely identical, with the one exception that Knowlton was simply an epitome of Carpenter, cooled down. One reason perhaps was that Knowlton had to get all his facts

into a very limited space—I do not want to take more credit for the author than he deserves—and, therefore, he had to express them in very small compass indeed. To show that I am correct I will put to you an illustration about four lines down the paragraph, ending page 11. (Mr. Bradlaugh then read a long extract from Carpenter.) The author then goes into a description which covers several pages, and is as exact in accord with Knowlton as it possibly can be; and considering that Carpenter's book is used by children in schools, and has a number of plates and pictures of the organs described, it is remarkable that the same language is employed in both Carpenter and Knowlton, page by page, and step by step. Now, bearing in mind that one may overshoot one's mark by continually reading the same things, I will, although several other passages intervene, proceed to take illustration of puberty. It is given on page 15 of Knowlton. You will find that it says simply—"A girl acquires a more womanly appearance." On page 958 of Carpenter—and this is a book which is put into the hands of girls—you find the same thing thus stated. (Mr. Bradlaugh read a long extract.) Now, I put it to you, as a mere matter of fact, whether the few words "A girl acquires a more womanly appearance," is not the excess of delicacy compared with the other description contained in a book put into the hands of young boys and girls from 12 to 16, who are not only instructed in the book, but actually receive copies of it as prizes. The whole of the facts relative to menstruation are there stated with the excess of detail. Pardon me for a moment while I refer you to one passage in order to show how Carpenter deals with the sexual act itself, and I do so simply as an answer to the argument of the Solicitor-General as to the circulation of this book in girls' schools. It is on page 961 section 743, and refers specially to the function of the female which happens to be dealt with by Knowlton as you know. (Mr. Bradlaugh again read.) You find that Carpenter deals with such matters as are on pages 12 to 17 of the Knowlton pamphlet, and gives many pages of description with appropriate plates for the instruction of young girls, and I cannot help thinking that if such descriptions by Carpenter are considered advantageous to moral training, it is a little too hard to say that Knowlton's pamphlet is indecent. In Carpenter reference is also made to the changes which take place in the male. (Mr. Bradlaugh

here read from pages 952—953, section 734). In dealing with the sexual act, the particularity is much more extreme in Carpenter's than in Knowlton's work. I will not trouble you with reading one more word from Carpenter. I simply tell you that I have carefully marked page after page of his book, and I have selected passages which do not come within the range of ordinary medical works, but which are considered by the Science and Art Department of the Committee of Council on Education as fit subjects in which young men and young women are to be instructed and examined. The subjects, you will remember, I have already stated to you. I am unfortunately precluded, by the ruling of my lord, from putting this Government syllabus into your hands. I trust I am endeavouring as far as possible to save your time consistently with the merest approach to justice to my case. There is not a page of this pamphlet of Knowlton's relating to the female, her organs and functions, which is not over and over again covered by this volume of Carpenter's, and covered in such a way as to show that the latter writer wanted to make his book interesting. It is amply clear that Knowlton had no such object. He had no interest in making his pamphlet even approach indecency, and, on the whole, it is a dry book. Why, we have in court a cyclopædia of anatomy and physiology, published by Longmans, in which all the parts are given with a degree of particularity, and with plates to aid the comprehension, which was not limited in circulation solely among medical men. I will now refer—and not more than is absolutely necessary—to a book written by Burt G. Wilder, a professor of Cornell University, and published in London by Trübner, and in Boston by Estes and Lauriat. I have some knowledge of that Boston firm. It is as respectable as Trübner or Longman, and would not knowingly publish anything whatever of an improper character. The author says he wrote the book chiefly for students and unprofessional readers, and denies that the subject cannot be presented with safety to the minds of the young. On the contrary, he says it is a duty to enlighten the young on sexual physiology, in order that they may not be ignorant of matters of this kind. The book is not written by a quack. You may tell me that it is written by an American professor only. The Solicitor-General, eminent himself as a scientist, sneered at American doctors. I have been treated with great kindness in the United States, and feel bound to resent the slurs cast

upon American doctors. They are as highly educated, and possess as high characters in America as in London, and though, in this great city, from its population, antiquity, and wealth, there are special advantages offered, excelling most cities in the world, there are medical men of as much eminence and probity in New York and Boston, and in Paris and Vienna, as can be found in any city in England. It was my intention to refer to a large number of French and Italian books, and especially to the "Elementi de Igieni," by Dr. Paolo Mantegazza, one of the present deputies in the Italian Chamber, which defends, in the strongest terms, the checks on population advocated by Knowlton. I do not mention that fact by way of excusing myself; but if you put this case as a precedent, which I think you must, you must consider that in fairly dealing with it. Now, Wilder, who, in his work, gives the fullest physiological instruction, deals with the fact of celibacy, which is also dealt with at page 8 of Knowlton's pamphlet. In his book, written for the young, he says—[Here Mr. Bradlaugh read from pages 148 and 149.] Wilder's book, you will see, goes into far greater detail than the Knowlton pamphlet. Its motto is, "Honi soit qui mal y pense"—a motto which, if I may do so without impertinence, I would commend to the Solicitor-General and those who conduct this prosecution. On pages 30, 38, 40, and 49 of this book, which, bear in mind, is intended for young people, there are given the fullest descriptions, not only of the female organs, but of the male organs as well, with plates to explain them. The descriptions are very plain and explicit, and if they had been copied from some enlarged edition of Knowlton, they could not have been more completely in accord. I must repeat that Wilder's book has been sold in London by Trübner, and at Boston, by Estes and Lauriat, and that it is intended, not for medical men, but for young people. I think you will find there almost the exact words of pages 11, 12, 13, and 14 of Knowlton's pamphlet. I do not want to seem to savour of impertinence, and I do not want to read the extracts at all. But the passages are often word for word identical, except where Wilder is much more detailed, and there is, in addition to the letterpress, plates which it is impossible to mistake, and which are given in such a way that those who read the book could not help understanding the whole. And yet, I am told that particularity of detail is evidence of an intention to deprave and corrupt. What does Wilder

say? I will only give a brief summary. (Mr. Bradlaugh here read extracts covering much of pages 19 to 44 of the Knowlton pamphlet.) The Solicitor-General does not seem to know what Carpenter and Kirke have written, or that their lessons are taught in the Science and Art Schools of England, and yet we are sought to be prohibited from putting similar knowledge in the hands of the masses of the people at a cheap price. Now, for a moment, I will refer you to another work as to which there cannot be any pretence for saying that it is confined to medical men. It is a work on Anthropology, by Dr. Nichols, who says that it is such a book we would wish to see in the hands of every man and woman who is wise enough to profit by its pages. There is contained in that book exactly the same information as is contained in the works of Carpenter and Kirke, with pictures showing the different organs of the human body, so that there should be no mistake. One more topic I must allude to. In my allusions to Carpenter and Wilder, I have not done what I had sketched out in my brief, because if I had done so, there is not one line that would not have been as fully dealt with as in Marion Sims. But I think, in addressing the court and jury, I have no right to thrust upon them anything at unfair length. There now remains, not contention that we have highly coloured or coloured at all, but it is proved we have, or rather Knowlton has, softened down and chastened that with which he had to deal in the discharge of what he deemed to be his duty—if that were not practically conceded to us, I should have felt it necessary for my own sake and for the sake of the lady who is co-defendant with me, to have gone through every line at the risk of wearying you. But no such responsibility rests upon me. In this pamphlet there is no attempt at indecent statement. The only object is to teach people how to check population after marriage. Is it, then, I ask, such a book that you must give your verdict against it? I will refer you for an instant to a book by Dr. Fleetwood Churchill on "The Theory and Practice of Midwifery." There is also a book called "The Diseases of Women," by the same author, nearly to the same effect. The one portion I wish to allude to in each work is more as a measure of argument than as a measure of comparison. Dr. Churchill argues that it is lawful and morally right, in a case where you know that a woman is so diseased or deformed that she cannot on a future pregnancy bring into the world a healthy child,

so to operate upon her that future conception must be impossible. In addition to that, on pages 298 and 299, he argues that it is right, where you know that a pregnant woman is so much malformed, or is diseased to such an extent that she cannot bring into the world a healthy child at the full term, to procure what is sometimes called the premature delivery of the child by drugs or instruments, the object being to save the life of the mother or the child, or prevent the child being born alive so malformed that life would be a misery to it. Now, if that be right, I ask where is the iniquity of seeking to prevent the conception of children at all, whose life, if created, will be a misery to them and to others? I am inclined here—and I hope by so doing I shall not have done injustice to the cause—I am inclined to abandon the whole of the books I had intended to rely upon in addressing you. I am inclined to abandon them, because if I go through them, I must occupy you for several days, and I do think, with a jury and judge so patient and kind as you have been, I have no right to take up so much of your time. I ask you, then, to consider the issues which I have put to you already and which I put to you again, viz., Is over-population the cause of poverty? Is over-population the cause of misery? Is over-population the cause of crime? Is over-population the cause of disease? Is it moral or immoral to check poverty, ignorance, vice, crime, and disease? I can only think you will give one answer, that it is moral to check these evils. You may say: Try to restrain them, like Malthus, by late marriage. Ay, but even to get late marriage, you must teach poor men and women to comprehend the need for it, and, even then, if you get real celibacy, Acton and others will tell you what horrible diseases are the outcome of this state of things. Really, you never can get even celibacy. You know what takes place in London and Paris. I have passed through Naples and Rome, and I have been shocked at being stopped by lads at night. In Florence, in Berlin, in Paris, you all know what arises from this pretence of celibacy. Even in our own large centres of population, such as Dublin, Edinburgh, and Glasgow, you know what this false pretence of celibacy means. Take the case of Birmingham as an illustration. Walk through the streets of that city between nine and eleven in the evening, and as the gaslight shows the flaunting shame, tell me whether celibacy is a reality or a sham.

Tell me whether or not that terrible word "prostitution," written everywhere in letters of festering curse, is not a disfiguring scar upon the surface of society. It is said that this pamphlet tries to defend immorality. You must contradict every page of it—ignore every word in it—to warrant that assumption. You may say it is very unfair, for example, that the agricultural labourer should have children to burden the poor's-rate. But put yourself in the position of the agricultural labourers. They have not the training and education that you have, and sometimes mere sexual gratification is the only pleasure of their lives. They cannot read Virgil; they cannot read Dante. They cannot listen to Beethoven; they cannot listen to Handel. They cannot go to a musical réunion; and they cannot visit a sculpture gallery. They have no time occasionally to run across the Alps. They have no opportunity of finding recreation in the Pyrenees. They cannot yacht in the North Sea. They cannot fish for salmon at New Brunswick or St. John's. They are limited to their narrow parish bound, and their bound is only the work, the home, the beerhouse, the poorhouse, and the grave. We want to make them more comfortable; and you tell us we are immoral. We want to prevent them bringing into the world little children to suck death, instead of life, at the breasts of their mother; and you tell us we are immoral. I should not say that, perhaps, for you, gentlemen, may judge things differently from myself; but I know the poor. I belong to them. I was born amongst them. Among them are the earliest associations of my life. Such little ability as I possess to-day has come to me in the hard struggle of life. I have had no University to polish my tongue; no Alma Mater to give to me any eloquence by which to move you. I plead here simply for the class to which I belong, and for the right to tell them what may redeem their poverty and alleviate their misery. And I ask you to believe in your heart of hearts, even if you deliver a verdict against us here—I ask you, at least, to try and believe both for myself and the lady who sits beside me (I hope it for myself, and I earnestly wish it for her), that all through we have meant to do right, even if you think that we have done wrong. I have to put to you this proposition: you jurymen are to be convinced that we are guilty. If a shadow of doubt go through your minds you have no right to make a deliverance of guilty against us; and unless you

feel we are the fit associates of those horrible Holywell Street men, who circulate foul literature day by day, and that we are deserving even of being put in the scale with those who circulate obscene prints, your deliverance must be one of not guilty. It is not a question whether you agree with the methods of checking population; it is not a question whether you are Malthusians or anti-Malthusians. I put it to you, and I ask you to consider it carefully, that the question which you have to determine is this:—Is the advocacy of all checks to population lawful, except such as advocate the destruction of the fœtus after conception, or of the child after birth? Is it possible to preach abstinence and prudence to the poor without instructing them in the various matters of physiology which have been dealt with in this pamphlet? There is not one line in it which goes beyond what is legitimate or necessary. Is there any pretence whatever for saying that we have given any sort of colouring to it which would make it otherwise acceptable? My co-defendant referred, in earnest language, to the letters which she had received from women, and clergymen, and others, throughout the country. I, too, have received many warm words of sympathy from those who think that I am right. It is true many of them may be ignorant people, and therefore may be wrong; but they have written to encourage me with their kindly sympathy in my pleading before you. If we are branded with the offence of circulating an obscene book, many of these poor people will still think "No." They think such knowledge would prevent misery in their families, would check hunger in their families, and would hinder disease in their families. Do you know what poverty means in a poor man's house? It means that when you are reproaching a poor and ignorant man with brutality, you forget that he is merely struggling against that hardship of life which drives all chivalry and courtesy out of his existence. Do not blame poor men too much that they are rough and brutal. Think mercifully of a man such as a brick-maker, who, going home after his day's toil, finds six or seven little ones crying for bread, and clinging around his wife for the food which they cannot get. Think you such a scene as that is not sufficient to make both himself and her hungry and angry too? Gentlemen, it is for you, in your deliverance of guilty or not guilty, to say how we are to go from this court—whether, when we leave this place, if you mark us guilty, his lordship may feel it to be

his duty to sentence us, and put upon us the brand of a doom such as your verdict may warrant; or whether, by your verdict of not guilty—which I hope for myself and desire for my co-defendant—we may go out of this court absolved from that shame which this indictment has sought to put upon us. (There was applause in court at the conclusion of Mr. Bradlaugh's address.)

Mr. BRADLAUGH: I do not intend, my lord, after the intimation which your lordship has been good enough to give me, to offer any evidence that would really be in any way unnecessary. There are three or four witnesses only which I will call, with the permission of your lordship. If your lordship should think that I should briefly state the character of the evidence I am about to offer to the court and the jury, and you should think such evidence to be inadmissible, I would ask your lordship to make a note of the point, so that, if necessary, we may raise it afterwards. I intend, then, to call Miss Vickery, a medical student in London and Paris, for the purpose of proving a number of facts that have come within her own experience as a medical student. I shall also put in the box Dr. Drysdale, to give evidence of a similar character, because his experience is much wider, and perhaps I shall call the well-known publisher, Mr. Bohn, to give his experience in London and elsewhere regarding the publication of such works as those of Dr. Carpenter, or of this pamphlet by Dr. Knowlton.

The LORD CHIEF JUSTICE: It is impossible to tell exactly beforehand what the evidence may be, and therefore I think you had better call the witnesses, and any objection that may be raised can be considered when it is made.

Mr. BRADLAUGH: Very well, my lord; I will now call Miss Vickery.

Miss Alice Vickery was examined by Mrs. Besant.

Mrs. BESANT: I presume, my lord, I can put any question until some objection is raised. To witness: Your name is Alice Vickery?—It is.

And you reside at number 333, Albany Road?—Yes.

Are you a chemist by examination of the Pharmaceutical Society of Great Britain?—I am.

And the first lady, I believe, who passed the regular examination of that Society?—Yes.

Did you study midwifery and diseases of women at any London hospital?—Yes; at the Women's Medical College.

For how long?—I have studied medicine for six years.

Are you at present a fourth-year student of l'École de Médicine at Paris?—I am.

Have you attended practical midwifery at the City of London Lying-in Hospital?—I have.

Have you received a certificate for this?—I have.

You have sent your certificates to Ireland, I believe, for a special purpose?—Yes, but I wrote for them, and have them with me.

It was intimated to me, my lord, that they had been sent to Ireland, as the witness intends to go up for the Dublin examination. To witness: Do you produce it?—I have it here.

Have you also the certificate for midwifery of the Obstetrical Society of London?—I have.

Do you produce it?—I can do so (producing papers).

Have you attended hospital practice for several years in London and Paris?—I have.

And attended the practice of Surgery, I believe, under the famous Professor Verneuil of Paris?—Yes.

And you have devoted some six years of your life, you say, to these studies?—I have studied at least six years.

Have you read the pamphlet which is the subject of the present charge?—I have.

With the means of judging derived from the experience of which you have told us, do you consider this pamphlet to have been written by one well-acquainted with medical science at the date of its publication?—Most decidedly I should say it had been written by one well acquainted with medical science nearly 40 years ago.

You consider that it is a work written by a competent medical man for general circulation?—I think it a most important work.

What I wish to ask you is this: Do you, from your own personal knowledge and experience, consider that, writing 40 years ago, his knowledge of physiology was accurate and real?—Certainly. He must have been a most competent and experienced man.

In your hospital experience have you any knowledge of the effects of large families?—I have seen a good deal of them.

You are speaking from the experience of which you have told us, when you say that?—I am speaking from my own experience and knowledge. I am not dealing with books,

but with facts. I am speaking of my knowledge of families and of the mothers who bear them.

Then your opinion of the evil effects of over large families is drawn from your own experience, and you know what the effects are upon mothers and children?—I have studied the question from that point, and there is no doubt, in my mind, from the experience I have gained in hospitals, that a very great deal of suffering is caused by over child-bearing to the mothers themselves; to the children, because of the insufficient nutriment which they are able to give them and to the children before birth from the condition of the mothers.

Have you found, in your experience, any bad result to the health of the mother from over-lactation of children amongst the poor?—Most certainly. There are many evils resulting from over-lactation. One thing is a falling of the uterus, and another the permanent weakening of the mother's health.

The next question I have to ask you is a most important one. It is: Is it within your own knowledge and experience that poor married women desire very often to check the increase of their families, and that they very frequently seriously injure themselves, by adopting detrimental means, such as deleterious drugs, from complete ignorance of those means which might be adopted without any injury to their health?

The Lord Chief Justice: That is a very complicated question, and if it is competent to put it at all, I think it should, if possible, be simplified.

Mrs. Besant: I am afraid, my lord, it is rather complicated, but I think I could, if you would allow me to do so, divide it. To witness: You have told us that, in your opinion, the health of married women is sometimes injured by over-childbearing. Are you aware whether they ever adopt any means to check the increase of their families?—Most certainly.

Do you say that from your own experience?—I am quite aware that they sometimes do so.

Do you mean apart from your own experience, or have any instances come within your own knowledge?—I have in my own experience instances where women have taken means to prevent conception, and after it has taken place to do away with the results.

Do you know if this is done by the advice of the husband? —Yes, by his advice to prevent conception.

Is it generally considered that over-lactation is one of those means?—It is; I have known many women who have continued to suckle their children as long as two years, and even longer than two years, because they believed that that would prevent them from conceiving again so rapidly.

How long is it usual to suckle a child?—It depends; in some cases a year. Nine months would be as much as could often be done in safety, but a child might in most cases, I think, be suckled a year without injury.

The LORD CHIEF JUSTICE: Is that the usual time for suckling children among women generally, or among the poor?

The WITNESS: Twelve months is a reasonable time, but, as I have said, that may in some cases be excessive.

The LORD CHIEF JUSTICE: And when it is double that time, is it very injurious in its effect?

The WITNESS: It is, my lord, on the mother as well as on the child.

Mrs. BESANT: And you say that that method of warding off an increase is fairly often adopted by poor women?—Yes, I should say so from my own experience.

You tell us only from your own experience. Have you had women under your care who have been suffering from the result of over-lactation?—I have.

What is the result?—The result is very great weakness and general debility, and these are the fruitful source of other diseases.

The LORD CHIEF JUSTICE: That is if pregnancy occurs during the period of lactation?—Whether it does or not, my lord.

Mrs. BESANT: And you have found that pregnancy does occur in spite of over-lactation?—Certainly, over-lactation is no preventive whatever against pregnancy.

The LORD CHIEF JUSTICE: But many people, you say, think that it is?—Many think it is, my lord, but it is not.

Mrs. BESANT: And is the result of that ignorance an injury to the mother as well as to the suckling child and to the child unborn?—Certainly; it results in weakness to the mother, very often excessive discharge, which is very weakening to the child in the womb, and is the cause of rickets in children, and that leads to numerous other disorders.

That is the direct result, in your opinion, of trying to

check an over-increase of family without the physiological knowledge of how to do so without dangerous results? —Certainly.

The Lord Chief Justice: You must draw the conclusion in your summing up.

Mrs. Besant: Certainly. I hope, my lord, that I have not asked any question which is illegal, and not according to the courtesies of the bar; if I have done so I hope your lordship will at once give me some intimation of it, so that I may know where I err.

The Lord Chief Justice: I have not stopped you so far, because I see a gentleman behind you (Mr. Douglas Straight) who will, if there is anything of that kind, put a stop to it with promptitude.

Mr. Douglas Straight: My lord, I have not interrupted hitherto because I am anxious that everything should be asked in this case which comes within the limits of the defence under the most liberal interpretation.

Mrs. Besant: I would not do an unfair thing under any circumstances, if I knew it, and I desire to keep within the four corners of the legal restrictions of the court if possible, but I might do so from lack of legal knowledge, so that I hope I shall be stopped so soon as I contravene them. To witness: Have you any experience on this head in Paris?—My experience there is only small; I have not much experience of that kind in Paris, because there, as a rule, families are very small indeed; I have known very few women there who have had more than two or three children.

Mrs. Besant: What, if any, is your experience on that point?—My experience on that point is not so large as to entitle me to offer a very decided opinion; I have been engaged in the study of medicine and surgery in Paris, and I have not had there any particular practical obstetrical experience. What obstetrical experience I have has been gained in London, and that will not enable me to give any opinion worthy of weight as to the circumstances obtaining in Paris.

You are aware, I suppose, from what experience you have had, that there are in Paris married women whose husbands consent to the use of mechanical means for the restriction of their families?—So far as my own knowledge goes, I cannot answer either one way or the other; but my patients have told me more than once that their husbands have suggested means for preventing conception.

They told you that it was so?—I have heard it in several cases.

I am going to ask you a rather curious question, but I mean no discourtesy. Is it your experience among your fellow-students that knowledge of physiological details tends to deprave and corrupt?—Most certainly not.

Have you found that women possessing such knowledge are less pure-minded than hte ignorant?—Oh, no.

The Lord Chief Justice: But those would be strong-minded ladies, Mrs. Besant.

Mrs. Besant: I hope, my lord, that all women are strong-minded enough not to use knowledge for an improper purpose. To the witness: Is it your opinion that such knowledge, where it exists, is used for improper purposes?—No.

Cross-examined by Mr. Bradlaugh: With the medical experience of which you have told us, are the statements of fact in relation to disease and the remedies for those diseases fairly stated in the pamphlet which you say you have read?—Most certainly.

Most certainly. Speaking solely from your experience of medical treatises, would you describe the physiological portions of this pamphlet as highly-coloured or over-stated?—Certainly they are not highly-coloured in comparison with other books that I have read both in Paris and in London. Compared with these, they are not highly-coloured, but very mildly and quietly put.

Mr. Douglas Straight: I have no question to put.

Dr. Drysdale was called and examined by Mr. Bradlaugh:

Mr. Bradlaugh: Your name is Charles Robert Drysdale?—Yes.

Are you a member of the Royal College of Physicians of London, and a Fellow of the Royal College of Surgeons?—Yes, I am.

Are you also Consulting Physician to the Farringdon General Dispensary of London, of which Alderman Figgins was recently chairman of Committee?—I was physician of that Society for many years, and I am now consulting physician to it.

You are also, I believe, Senior Physician to the Metropolitan Free Hospital of London, and Physician to the North London Consumption Hospital?—Yes.

And physician to the Rescue Society's Lock Hospital?—I am.

Now tell me, have you written several medical works?—Yes.

And you have been a long time in practice?—For many years.

May I ask you, have you read this pamphlet which is the subject of the present charge?—Yes, I read it many years ago; I cannot say how many, perhaps twenty. And so far as that goes I read it again only last night, because I thought I might be examined upon it to-day.

Well, to your knowledge, this book was published at least twenty years ago?—I have been in London some twenty-five years, and I know I read it shortly after I came, and that must have been a long time—at least twenty years ago.

Guided by the medical experience of which you have told us, do you consider it a fair work on the subject on which it professes to treat, and are its statements accurate?—I have always considered it an excellent treatise, and I have found among my professional brethren that they have had nothing to say against it.

As a medical man of position and experience, do you judge that it is written by a competent medical man?—It is certainly written by a physician, and an excellent man. Considering that it was written forty years ago, when it is thought that people did not know so much as we do—although I do not believe that we are so very far in advance of the men of those days—the writer must have been a profound student of physiology, and far advanced in the medical science of his time.

This is your professional opinion of the scientific merit of the book?—It is, and it is the opinion of many men in the profession?

The Lord Chief Justice: You can only speak from your own experience.—Certainly, my lord.

The Lord Chief Justice: Is there anything in the pamphlet calculated to raise libidinous feelings?—On the contrary; no one reading the book would be affected in that way.

Mr. Bradlaugh: If I might introduce my own personal experience, my lord, that is exactly what I have felt in reading these medical books.

The Lord Chief Justice: Is there, do you think, anything prurient about it?—Certainly not. It is a most excellent little book.

Mr. Bradlaugh: Have you, as a medical man, much

experience, or any experience, amongst the poor of London?—A great deal too much, unfortunately. I have seen nothing but poverty since I came to this great metropolis.

Have you any experience as to poverty being productive of sickness, especially among the poorer classes, by the production of large families?—As I have already told you, my professional life has been amongst the hospitals for many years, and that has led me into a situation of contact with the poor of this city. I have been obliged to see what a miserable condition there is of squalor, utter distress, and sickness, even in the great metropolis of the empire.

Has your experience connected this circumstance with the large families which the poor generally bear?—Yes, certainly.

Witness here referred to some papers in his hand; whereupon,

Mr. STRAIGHT asked: What are you looking at?

Dr. DRYSDALE: I am only referring to some notes. May I not look at them?

Mr. STRAIGHT: I am afraid you must put them away, and trust to your memory.

Dr. DRYSDALE: I am much obliged to you; but I do not know who you are. I would rather be guided by my lord than by you. (Laughter.)

The LORD CHIEF JUSTICE: I think you may take it from the learned counsel. I do not think there has been any desire as yet to act unfairly on either side.

Mr. BRADLAUGH: I am afraid you cannot refer to your notes, Dr. Drysdale. So, if you will kindly, from your own experience, answer my question——

Dr. DRYSDALE: Then I suppose I must put my notes away, my lord?

The LORD CHIEF JUSTICE: Unless they were put down fresh from memory.

Dr. DRYSDALE: That is just what I have done, my lord.

Mr. BRADLAUGH: Can you say, from your own experience, that poverty and preventible sickness exist among the poorer classes in consequence of large families?

Dr. DRYSDALE: I have been continually obliged to lament the excessive rapidity with which the poorer classes bring unfortunate children into the world, who, in consequence, grow up weak and ricketty. You see such children suffering from the rickets and in a very unfortunate condition. Sir

William Jenner has written a great deal upon this subject, and he used to say, what my experience has continually confirmed since, that when a working man marries, the first child or two look very healthy, whilst the third will look ricketty because the mother is not able to give them that proper nourishment which she lacks herself. And so with both the fourth and fifth. They get more and more ricketty, and if you search the courts and alleys of London you will find great numbers of children whose life is simply a pain to them. If the mother had only had two children she could have supported them well enough, but when three or four are born they get that terrible disease—the rickets—which is a great cause of death in London, a much greater cause than is generally supposed. Many children supposed to die of measles, and other infantile diseases, really die of rickets. In the case of a healthy child such a disease as measles passes off without much damage, but when it attacks a weak and ricketty child the child dies, the death is ascribed to measles, instead of the more largely contributing rickets. Hence the death-rate is largest in large families.

Mr. BRADLAUGH: Have you read the essay on population by Mr. Malthus?

Dr. DRYSDALE: I read it some thirty years ago; perhaps more.

Mr. BRADLAUGH was proceeding to ask whether it was a fair summary of Mr. Malthus's views to say that population was necessarily limited by the means of subsistence, and as to the operation of checks, when——

The LORD CHIEF JUSTICE said he scarcely thought the question a fair one.

Dr. DRYSDALE said: One fact I will mention to draw the attention of yourself and jury to the very important point of infant mortality. That is a very interesting point indeed. With all our advances in science we have not been able to decrease the general death-rate in London. Twenty years ago it was 22·2 per thousand persons living. In 1876 it was almost exactly the same, being, in fact, 22·3. Instead of dying more slowly than we did twenty years ago, we die a little faster. That fact might seem to be a great disgrace to the medical profession, and to those who had to advise as to the public health. Indeed, it has been asked, what is the use of public health officers at all. The real reason of this increase in the death-rate is, that the children of the poor die three times as fast as the children

of the rich. If all the parents of the children were as well off as, say the gentlemen of the bar—(laughter)—or of the special jury, the consequence would be that the number of children that would die would be very small indeed. Mr. Hanson has pointed out that to every 100,000 children amongst the richer classes—which would, of course, include the barristers—(laughter).

The Lord Chief Justice: And solicitors, too, I should think—(laughter).

Dr. Drysdale: And solicitors, too, my lord, no doubt—in 100,000 children of the richer classes, it was found that there were only 8000 who died during the first year of life; whereas looking at the Registrar-General's returns we find that 15,000 out of every 100,000 of the general population die in their first year. If you take the children of the poor in the towns you will find the death-rate three times as large as among the rich—instead of 8000 there would be 24,000 among the children of the poor. So that you see, the children of the poor are simply brought into the world to be murdered. Hence, on the general average, we do not increase in longevity. The great number of poor people we have accounts for the rate of mortality being kept as high as it has been. If we were all brought up we should live to about an average of 80 years—(laughter)—except we died by accident—(laughter).

Mr. Bradlaugh: Have you any experience as to whether large or small families prevail in France?

Dr. Drysdale: I have lived there much, and I have been to France every year for the last fifteen years; and once took the case of 100 of the most famous gentlemen of l'Ecole de Médicine. Not one had more than three children. Most of them had not more than two; and I took this as a little index as to the rest of France. French statistics show that there are not more than two children to each family, on an average. They never think of having more than two or three children.

Mr. Bradlaugh: Do you happen to know, from your own experience, whether checks to population of the character referred to in this book are adopted by the peasant families in France?

Dr. Drysdale: I should like to know if I am allowed to say what I like? (Laughter.) Will it be safe? (Loud laughter.)

Mr. STRAIGHT: If it will re-assure the witness, I may say that it will be quite safe so far as I am concerned.

Dr. DRYSDALE: I do not know, I am sure. (Laughter.)

The LORD CHIEF JUSTICE: You can only state what are the facts.

Dr. DRYSDALE: I mean: is there any privilege in a witness from being prosecuted? (Loud laughter.) I should like to know I shall not be prosecuted by the Government.

Mr. STRAIGHT: If it is any satisfaction to Dr. Drysdale, I will not prosecute him. (Laughter.)

The LORD CHIEF JUSTICE: But we do not know who your clients are, Mr. Straight.

Mr. STRAIGHT: I think there is not much doubt about it.

Mr. BRADLAUGH: I have much doubt. (Laughter.) You have told us as to the number of children in French families. My question is now, whether your French experience, as a medical man, enables you to say whether or not checks of the description mentioned in this pamphlet are used by the French peasantry?

Dr. DRYSDALE: The first check mentioned in the pamphlet is used universally.

Mr. BRADLAUGH: It is, perhaps, not necessary to read out this check?

The LORD CHIEF JUSTICE: I think not.

Mr. BRADLAUGH: If the jury refer to page 38 of the book, they will find this check specified, and that will be sufficient. To the witness: You say that that check is largely practised in France?

Dr. DRYSDALE: It is practised by almost every male in Paris, and all over the country.

Mr. BRADLAUGH: I believe you are a Member of the London Dialectical Society?

Dr. DRYSDALE: I am.

Mr. BRADLAUGH: Were you present on the 1st of July, 1868, at a meeting of that Society?—Witness (after referring to the minutes): I was.

Mr. BRADLAUGH: Was Lord Amberley present?

The LORD CHIEF JUSTICE: I wouldn't go into that, Mr. Bradlaugh.

Mr. BRADLAUGH: Very well; then I won't press one word more

Mrs. BESANT (to witness): You have stated that you have had a large English hospital experience, and a wide experience amongst the poorer classes: is it within your experience

that any attempts are made by mothers to check the increase of their families?

Dr. DRYSDALE: I hardly ever go to my hospital, where on a certain day of the week I usually see about 80 or 90 women, that there are not 5 in 6 cases of women who have suckled children for 18 months or two years in order to prevent conception.

Mrs. BESANT: That is the reason they give for suckling their children so long?

Dr. DRYSDALE: They will tell you so if you ask them quietly; but they would probably give some other reason if other people were present. I tell them it is not a good way to act, and advise them to find out a better.

Mrs. BESANT: And the effect of this over-lactation on the child at the breast?

Dr. DRYSDALE: It is robbing the child at the breast of its proper food, which ought to be more substantial than the milk of the breast.

Mrs. BESANT: And what is the effect on the unborn child, supposing the mother conceives during the time she is suckling?

Dr. DRYSDALE: It suffers from want of nourishment because it does not get enough blood, which should go to feed it before birth.

Mrs. BESANT: What is the effect of very rapid child-bearing upon the mother herself?

Dr. DRYSDALE: You very often see women worn to death by getting children too rapidly. They hardly seem fit to keep up their own lives, and very often fall into consumption.

Mrs. BESANT: Is one of the results of over-large families to gradually undermine the constitution?

Dr. DRYSDALE: I think so among town mothers, though a strong woman, with plenty of food, brought up in the country, might, without much injury, have a large number, say, twenty-one. (Laughter). Oh, I have known many women with twenty or twenty-one children, all living. (Loud laughter.) A strong countrywoman might, perhaps, have twenty-five—(laughter)—but among the majority of cultivated women, and women brought up in towns, that would be impossible.

Mrs. BESANT: When the father's wage is 13s. a-week, would twenty-one children be healthy?

Dr. DRYSDALE: To bring so many children into the world,

under such circumstances, I should think one of the greatest social crimes a man could commit. I should look upon it in the same light as habitual drunkenness and other social crimes.

Mrs. BESANT: Is not falling of the womb—to use the common expression—very common amongst poor women?

Dr. DRYSDALE: It is extremely common. Indeed, when I was obstetrical assistant at Edinburgh, it was one of the commonest diseases among women—the principal one, in fact. Women ought never to get up from confinement for some weeks after the child is born; but these poor women are so utterly unable to do without work that they are compelled to get up in a day or two. The womb, being full of blood, falls down and produces infirmity for life.

Mrs. BESANT: Have you any knowledge as to endeavours among women of the poorer classes to procure abortion?

Dr. DRYSDALE: It is not alone among the poor. I have known it, time after time, amongst educated ladies, who have taken most drastic medicines to try and get rid of the effects of conception.

Mrs. BESANT: Would it not be better to prevent conception than attempt to procure abortion?

Dr. DRYSDALE: To procure abortion, I consider, is almost as bad as murder. But I do not see any crime in preventing conception, otherwise those who remain unmarried should all be prosecuted. (Loud laughter.)

Mrs. BESANT: Leaving that point, and returning to another part of my opening address, where I dealt with over-crowding—have you, in your own experience, seen many cases of over-crowding?

Dr. DRYSDALE: Near to my dispensary in Holborn I have seen too much of it. In the neighbourhood of Gray's Inn, where these gentlemen of the bar abound (laughter)—and these gentlemen of the bar might see for themselves if they would (laughter)—I must confess to have been ashamed to find such an amount of misery existing there from over-crowding. I wish that two or three gentlemen would only take the trouble to go into the little courts and alleys off Chancery Lane and Gray's Inn Lane and see the frightful misery and crowding there as I have seen there. I have seen six children in one room all huddled up together, and all down with typhus fever, the same room being used by three adults; I have seen such things repeatedly, over and over again.

Mrs. BESANT: What is the largest number of human beings you have seen crowded into one room?

Dr. DRYSDALE: That is the largest—six children and three adults, with only one bed.

Mrs. BESANT: Is it your experience that typhus fever spreads most rapidly in crowded rooms?

Dr. DRYSDALE: The great reason that typhus fever is so terrible a disease is that people are crowded. In all zymotic diseases, if people are crowded together, when one gets it they all get it.

Mrs. BESANT: Then large families actually produce disease?

Dr. DRYSDALE: It is impossible to have health with large crowded families.

Mrs. BESANT: Does not over-crowding give rise to a terrible amount of sexual vice amongst the young of both sexes?

Dr. DRYSDALE: I do not know that of my own experience, but one can scarcely doubt that that would be the case. I am surgeon to the lock ward of a Hospital for fallen women, and I know from my own experience there that prostitution is very often brought about in consequence of over-crowding.

Mrs. BESANT: The associations of over-crowding corrupt the young mind, I suppose, and loss of modesty is followed by prostitution?

Dr. DRYSDALE: They do not know what modesty is.

Mrs. BESANT: Do you know anything of disease caused to young children by being compelled to work at a very early age?

Dr. DRYSDALE: You see, children in big families are taken out to work very early, and premature exertion often injures them for life. It seems to me I have had numbers of cases of that kind. Children are not fit to do very much work so long as they are half-developed, and early death is often the consequence.

Mrs. BESANT: But I suppose they must either work to death or starve to death?

Dr. DRYSDALE: There is no doubt hosts of children are worked to death.

The witness then stepped down.

Mr. H. G. BOHN was next called and sworn.

Mr. BRADLAUGH: Your name is Henry George Bohn, I believe?

Mr. BOHN: Yes.

Mr. BRADLAUGH: And you were formerly, and until latterly, a publisher in a very large way of business?

Mr. BOHN: Yes, for about sixty years.

Mr. BRADLAUGH: And a series of works, called "Bohn's Scientific Series," was issued by you?

Mr. BOHN: It was.

Mr. BRADLAUGH: Did you publish a book called "Animal Physiology," by W. B. Carpenter?

Mr. BOHN: I did.

Mr. BRADLAUGH: Do you know that that book has been largely used as a text-book in schools?

Mr. BOHN: I do.

Mr. BRADLAUGH: How long were you a publisher?

Mr. BOHN: Always; for the last sixty years, and for forty-five years of that time entirely on my own account.

Mr. BRADLAUGH: Had you large experience in the sale of works on physiology?

Mr. BOHN: I had one of the largest connections in our trade. It was a subject I cultivated in my early days, and nearly all works on the subject passed through my hands. Some of them were my own property.

Mr. BRADLAUGH: Have you read the pamphlet which is the subject of the present indictment?

Mr. BOHN: I have.

Mr. BRADLAUGH: Does your experience, extending over forty-five years, in works on physiology, enable you to say whether the statements in that book are statements which you have found in many of the standard works on physiology which you have published?

Mr. BOHN: One important book which was familiar to me years ago—De la Motte Ligniac's "Physical Essay on Man and Woman in a State of Marriage," published with plates—entirely covered your book, and gave a great deal more. Another similar book was Venette's "Tableau de l'Amour Conjugal," of which there have been more than forty editions.

Mr. BRADLAUGH: And are you able, from your own knowledge of this pamphlet, to say that the facts in "Carpenter's Physiology" and other books, and in the "Fruits of Philosophy," allowing for the necessary compression of the latter, are identical?

Mr. BOHN: Substantially so.

Mr. BRADLAUGH: Having said there are a number of works on physiology which have been generally sold by you,

containing the same statements and facts as in the "Fruits of Philosophy," have you ever been prosecuted for obscenity?

Mr. BOHN: I am not aware that any of them have been molested.

Mr. BRADLAUGH: You communicated with me through your solicitor, so that you might give this evidence?

Mr. BOHN: I did. I felt very strongly on the subject, because many years ago one of my publications had been attacked by what I understood to be the action of the Society for the Supression of Vice, a society from which I am glad to find Mr. Beresford Hope, the vice-president, has just withdrawn his support. I subsequently discovered that the attack on my book was made at the instigation of some Roman Catholic priests, but after a resolute remonstrance on my part I heard no more of the matter. In consequence of the interference of this society, the Society for the Suppression of Vice, which I presume to be at the bottom of the present prosecution, my successors, Messrs. Bell and Sons, have been induced to suppress the "Memoirs of the Comte de Grammont," a very amusing book, "Boccaccio's Decameron," the works of "Rabelais," and all the other books forming my so-called extra volumes.

Mrs. BESANT: I will only put one question to you, Mr. Bohn; have you ever put any restriction on the sale of medical works?

Mr. BOHN: None whatever; on the contrary, I should willingly have halved the price had I thought this would double the circulation.

This concluded the examination of the witnesses for the defence, none of whom were cross-examined on behalf of the prosecution.

Mr. BRADLAUGH: We had intended, my lord, to call some clergymen to speak as to over-crowding, but as that would only lengthen the case, and is not necessary, I think I will make this the whole of the evidence. The over-crowding is so clear that further evidence on the point would not strengthen my case one whit.

Mrs. BESANT: I had intended to call Mr. Smith, of the firm of Messrs. Smith and Sons, to prove the general and unrestricted sale of Chevasse and Bull, but that will, perhaps, not be necessary, as I believe the fact will not be disputed.

Mr. STRAIGHT: Certainly not.

Mr. BRADLAUGH: I think, my lord, as a matter of right,

myself and co-defendant are entitled to say one or two words, in summing-up, to the jury.

The Lord Chief Justice: Certainly. Would you do that to-morrow?

Mr. Bradlaugh: That would be better, my lord, as we could then make it much more brief. Both our summings-up would be included in the hour in which the Court opens.

Mrs. Besant: I should not take more than half an hour to three-quarters.

Mr. Straight: The reply for the prosecution will be very short, my lord.

The Lord Chief Justice: Then we shall finish to-morrow.

Mr. Straight: Certainly, my lord, without doubt.

The Court then rose, and Mrs. Besant and Mr. Bradlaugh were again loudly cheered as they left the hall.

FOURTH DAY.

THE Lord Chief Justice took his seat at 10.30 a.m., and the Clerk having handed to him an intimation, in writing, from the jury,

The LORD CHIEF JUSTICE, after reading it, said: It is not consistent with our procedure to put a question to a person who is on trial; it is not permitted by law.

Two jurymen stated that they were not aware of such a communication having been made.

The LORD CHIEF JUSTICE: It is a very pertinent question to be put, but I cannot pass from the rules of procedure, which do not allow any question to be put to prisoners on their trial.

Mrs. BESANT: My lord and gentlemen of the jury, in summing up now the defence I have laid before you, I propose to do it very briefly, because, practically, one may say one has made the main part of one's defence, and I need do nothing more at the end of this long trial than remind you how much the case has become narrowed since its opening by the learned Solicitor-General. You will remember, gentlemen, without my going from point to point, or from argument to argument—I do not propose to press any of the points on you—you will remember that when the learned Solicitor-General opened the case he stated that we had to deal with a thoroughly obscene book, written with intent to deprave, using the cloak of philosophy to cover that intent, using the colouring of marriage in order to destroy marriage and to increase illicit intercourse, and that all this was done with such disgusting particularity of language as tended to deprave the minds of the young, making altogether a publication which he summarised as a whole by a word of one syllable which I will not repeat. The first point is as to the cloak of philosophy; I think the defence has proved that the philosophy, at least, is real; also that there is not one word which has been put into the philosophical part which is in any sense impure, and if you are to judge of the philosophy as being written with intent to deprave, it must be because there is some other portion of the book

which you read into the philosophy, making that which, in itself, is not there. As to the colouring of marriage, which is the next point raised by the learned Solicitor-General, I will put it to you that marriage is urged all through the book, and that profligacy is spoken against in the strongest terms the writer can use. Not only are profligacy and illicit intercourse spoken against, but the writer goes further, and warns the young of the great dangers resulting, not only from profligacy, but also from the intemperate use of the sexual functions. So that, I think, I may say, concerning the cloak of philosophy and the colourable use of marriage, that there is not one syllable in the book to warrant the argument of the Solicitor-General. You have, then, only to deal with the mere empty assertion of the learned counsel, unsupported by one shadow of evidence, which he has thought right to lay before you. As to the language having a disgusting particularity of detail, you will remember that it has been proved to be delicate and careful in comparison with ordinary medical literature; and I will put it that the extra delicacy of Knowlton is simply because Knowlton was writing a work for general circulation, and avoided, as much as possible, the use of terms which, on the general ear, would strike somewhat harshly. And I put it further, that Miss Vickery told us that the language of Dr. Knowlton, so far from being highly coloured, was, on the contrary, extremely mild and quiet compared with those books which her medical studies, during the last six years, had compelled her to peruse. You are aware, gentlemen, of the large number of medical books we have here, and you will remember an intimation from his lordship, yesterday, on the subject. My co-defendant, and myself, talked the matter over, and I felt strongly, that it being apparently put, that provided only the book were a medical book, no objection could be raised to the language in which the medical details were couched, it would be taking advantage of your patience, and of the consideration of your lordship, if we wearied you and ourselves—and it is even more wearying to those who speak than to those who have to listen—and so have unreasonably dragged on the trial for some five or six days, as would have been necessary had we gone through these books, and piled proof upon proof as to the delicate nature of the language used by Knowlton. I will only say, therefore, that we had begun with those most delicately worded; and if we had gone

through the whole of them some would have been found to be couched in language of so startling a character that I am only glad the course of justice has not compelled us to quote it in a court like this. The only reason why we felt it to be our duty to put these two books to you was that unless, gentlemen, you have some medical training, an idea of coarseness is inspired by the plainness of ordinary medical language, and that idea could only be destroyed by showing the language used in a standard medical work. We may take it that it is practically allowed that if Knowlton's is a medical work then the contention of the learned Solicitor-General as to a disgusting particularity of language falls to the ground, equally with his contention of the cloak of philosophy, or the colourable use of marriage. Thus the case is narrowed down to this: Is Knowlton a medical work? or is it, on the contrary, an utterly obscene book, written with intent to deprave? So far as its being a medical work is concerned, I think I may fairly urge that the defence has proved the accuracy of its details from the books read by my co-defendant. I may say also that there are medical notes right through the book referring to standard authors of eminence who teach the same facts. We find, in referring to Miss Vickery's evidence, that in answer to a question put by me whether with the means of judging derived from the experience she told us she possessed, she thought the pamphlet to have been written by one well acquainted with medical science at the time of its publication, she replied that she did so consider it; and when Dr. Drysdale was in the box—a man known equally in England, in America, and on the Continent as a physician of eminence and as an author of many scientific works—he said, in answer to a question put to him by Mr. Bradlaugh, that he considered the work a most excellent work, written by a scientific man, writing with a full knowledge of his subject, and writing with that care and accuracy characteristic of a scientific man. You will remember that you had the strongest testimony as to the thorough medical character of the work, and this is not surprising when you remember that Charles Knowlton held the diploma of Doctor of Medicine in Boston, and was the author of many scientific works; and I may point out to you that some of his hypotheses have lately been verified by experiment, showing him to have been a man of thought beyond the ordinary range of his time. We have the fact that 40 years ago he struck on some intricate physiological points,

on which his ideas have since been proved to be right, to put against the mere assertion of the learned counsel for the prosecution that the pamphlet is not a medical book written by a medical man — a scientific treatise for a scientific purpose. To succeed, then, in the contention of the prosecution, the prosecution must show an intent to deprave, and the first thing that is done to show the intent is to urge that the book was not written in learned language. I avow, gentlemen, that I do not see that obscenity couched in a learned language becomes any less obscene, nor do I understand the contention that as Knowlton is an obscene pamphlet we should have improved Knowlton by translating him either into Latin or into Greek. So far from that, I cannot help remembering that the great Italian Giordano Bruno was burned to death because he spread scientific heresies among the Italian people in the Italian tongue; agreeing, as he did, with one of his contemporaries, that the dead languages were too often used as a cloak put over science, to cover its real emptiness, and wishing to teach the people, he insisted on speaking in his mother tongue to the people whom he desired to influence. The next thing that is urged to show the desire to deprave is the "unrestricted circulation of the book." I and my co-defendant quite agree that society properly lays a restriction upon showing in shop-windows of streets where people pass, not only anatomical pictures, but also any pictures of a coarse or a disgusting description. I conceive that as you live in society you have no right to be a nuisance to your neighbours, or to annoy those who pass your shop-windows, by anything of a disgusting character: and the law has defined it to be an indictable misdemeanour to expose in a public place any disgusting object. I allow that to the fullest extent. There are plates in the medical books we have here which it would be most indecent to expose in the public thoroughfares, but so far as concerns anything short of that kind of forcing the thing upon the public notice, I must put it that every medical book is an unrestricted publication. The only restriction upon such books as that of Marion Sims is the restriction of price, and that restriction of price is not one that I think, with all submission, ought to be listened to in a court like this; it would be a most unfortunate thing if, from the highest court of justice in England, which knows no difference before the law between rich and poor, it should go

forth by verdict of the jury that an expensive medical book was a pure book, while a cheap medical book was an obscene publication, which puts its publishers in peril of their liberty. I must remind you of what Mr. Bohn said on this point, when he was dealing in the witness-box with his 60 years of a publisher's life, a life which I believe all will acknowledge to be one without blemish, and whose standard library is one of the credits of our modern English literature. Mr. Bohn distinctly stated that he had published books containing substantially the same as, and much more than, is contained in Knowlton's Pamphlet; that he thought he knew the book, published very many years ago, from which Knowlton, and Carpenter, and Kirke, had all equally been taken; that that book was out of print, but was now in the British Museum; that he had read a similar book before he was twenty-one years of age; and that during his whole publishing life of sixty years he had never known one case where a prosecution was brought against a physiological treatise on the ground that it was obscene. He told us he remembered about people being warned as to selling the tales of Rabelais, and the "Memoirs of the Comte de Grammont." But this has nothing to do with the selling a physiological treatise, and Mr. Bohn told us that if he had known any way of selling twice as many as he did he would have done so. As to the argument of restriction, I reminded you that we had these books here; I personally bought one of these medical treatises; I obtained another through the post; Mr. Parris bought some of them, and a young man of eighteen or nineteen years of age also bought some that might be characterised as strictly medical books; I only put that to you to show how much easier it is to talk of restriction than to practise it; nor is any effort made to keep them from the general public, else why are these books advertised in the columns of the daily papers, as well as where doctors would naturally look for them, in the *Lancet*, the medical journal? Then we are told, that though these details are necessary for doctors, they are not necessary for the public. I would urge upon you that poor women need to know the facts concerning menstruation and pregnancy quite as much as do the doctors, for they are often unable, from their poverty, to obtain the advice of medical men. It was acknowledged by the prosecution that no kind of accusation had been brought against Dr. Chavasse or Dr. Bull, and it would have been, indeed, rather awkward if a

principle had been laid down which would apply adversely in the case of books issued by one of the Government, of whom the learned Solicitor-General is the adviser. But if these details show an intent to deprave, I would ask you to carry your memories back, for one moment, to the terrible passage read by Mr. Bradlaugh, from Marion Sims, and ask whether it is not a much greater depravation to suggest putting a woman under chloroform for a certain purpose; whether that is not a suggestion whereby a wicked person might inflict a most cruel wrong on a helpless woman. Then we come to Carpenter, of whom the prosecution cannot pretend that it is written for medical men, for the instruction in Carpenter is not couched in the phraseology you generally find in books intended specially for medical students. That book, as well as Kirke's Handbook, are books circulated in schools for girls—the girls whose purity of mind the prosecution is so anxious to guard. In speaking of generally-circulated books, I drew your attention to a book, sold for a shilling by Longman & Co., in which the checks advocated by Knowlton for a good purpose are advocated for a bad purpose. The use of an injection is therein advocated for the purpose of keeping an unfortunate class of women in a state which will enable them to carry on their most unhappy trade. If you give a verdict against us, I cannot but think that it will be a most unfair verdict, for I cannot help remembering that it is not only in this country that such books are sold. We find the French Government authorising a book to be sold for one franc—and my lord, with his knowledge of France, will know that a book cannot be hawked by a colporteur without bearing the imprint of the Government—a book advocating such checks to prevent over-large families. I am the more encouraged to have faith in my case from the fact that one of the leading writers of the Paris press, Yves Guyot, one of the leading French writers on law, Professor Emile Acollas, as well as one of the champions of the people, General Garibaldi—all stand round us on our Defence Committee to show their feeling as to the struggle in which we are engaged. Gentlemen, not only is there no intent shown in the book to deprave, but, on the contrary, there is much to disprove that allegation of the Solicitor-General. I would repeat to you the answer which Dr. Drysdale made to the Lord Chief Justice, when the distinct question was put to him, as a medical man, "Is it your opinion that the book is calculated

to arouse prurient or immodest feelings?" To this the reply was, "No, my lord; certainly not." I put that opinion of a medical man against the allegation of the Solicitor-General, and I point also to the utter omittance by Knowlton of every unnecessary word of description; I remind you of his careful avoidance of any outside description, which might tend to arouse those feelings that might be aroused by the work of Dr. Carpenter. The prosecution is now driven to make its case rest on the advocacy of checks after marriage, which is the only point remaining to them. You have seen that Dr. Fleetwood Churchill advocates checks after marriage of a far more terrible character than any of those which Knowlton proposes. You will remember the proposition put by my co-defendant yesterday was that it is lawful to advocate checks after marriage, provided that those checks do not destroy life. I am quite content to rest my case upon that contention. There are but three checks after marriage—celibacy, the check advocated by Dr. Fleetwood Churchill after conception, and the check before conception advocated by Knowlton. The first—that of celibacy—is impossible, for you cannot teach people absolute celibacy after marriage, and unless celibacy is absolute it could be of no sort of use. To teach it would simply mean that men and women were to go through the ceremony of marriage as a mere empty mockery. This is a proposition which, if carried out, would be injurious to health even to the rich people, who would be able to live apart under the same roof. I ask you what it would be to the poor married couples, obliged to keep in the same room, on the same bed? I ask you if the poor man's life is to be one long and terrible temptation, lest he should commit the sin of bringing into the world children he cannot support? The check advocated by Churchill I look upon as almost a crime; from my point of view I cannot but think it wrong that, when a doctor has found that a woman cannot bring a living child into the world, he should counsel a check after conception, instead of before. This is a suggestion so horrible, so revolting, that most women would rather, by going the full time, run the risk of perishing in the birth-struggle than adopt such a check; I feel that to be a most immoral proposition; and if the learned Solicitor-General had turned his attention in that direction instead of in ours, he might have had some ground on which to base his prosecution. The only other check is a check which we advocate, a check

before conception; I am only contending for the principle that Knowlton lays down, and for the right of doctors to discuss this question. You have heard of the efforts of the poor to find some sort of check to prevent the rapid increase of their families. Miss Vickery, in answer to a question I put to her, told you that poor married women seriously injure their health by over-lactation, imagining that it will stop conception. Dr. Drysdale carried this further, and said it was injurious both to the mother, to the child at the breast, and to the unborn child, and that the most terrible diseases resulted from those women resorting to this check in their ignorance. He told us that not only do women strive in that fashion to meet the terrible evil with which we are trying to grapple, but that, in his own practice, he found cases of both rich and poor, who used the most deleterious drugs, all this being done with the same hope of warding off pregnancy, and injury to health is thus caused, instead of the moral means advocated by Knowlton being used. You have heard of the checks adopted by the French against over-large families, and yet you know the affection the French entertain for their children; parental and filial love is one of the distinguishing features of that nation. I ask you not to put on a great people the brand of immorality for practising that which is thoroughly moral, and I beg you that it should not be said that what is sanctioned throughout France, as a duty to society, is put down by the criminal law in England. Dr. Drysdale has told us of the evils of over-crowding; he told us how he saw mother, father, six children, and another relative, all down with typhus fever, in one room, and he told us that disease is the direct result of large families; you will remember how he said that too many women did not even know what modesty was because of the conditions of their youth. I ask you if we are to go to prison from this court because we try to make modesty something more than an unknown word? We have only called three witnesses, because the facts are so indisputable; but if we have injured our case by not calling more, it would, of course, be a great cause of regret to us; but I imagined that to call more would only be a repetition of the same thing over and over again. I said, in my opening speech, that it was my intention to call the Rev. Mr. Horsley and the Rev. Mr. Headlam into the box but the case closed sooner than I had anticipated, and I had released Mr. Horsley from attendance yesterday, as

his duties required his presence at the House of Detention. I did not ask, however, this morning, to be allowed to call any further witness, our case being really proved beyond possibility of reasonable dispute. I ask you now, gentlemen, what proof has been given by the prosecution of our intent to deprave, of our hatred of marriage, or of our intention to promote illicit intercourse? The intention of the writer of this book and of its publishers is the same; and whatever is Knowlton's, that intention is also that of myself and my co-defendant. The intention of one is the intention of the others. If Dr. Knowlton uses the word "marriage" in a colourable sense, we have used it in the same. If the author disguises his evil intent under the word "marriage," we have used the same guilty weapon in publishing his pamphlet. Whatever the one intended in writing the work, we have intended the same thing in publishing it and in distributing it broadcast throughout the land. I leave that question of intention upon perfectly intelligible grounds. But what proof of an evil intention has been brought before you? You must give a clear and definite answer to the question before you can convict us under this indictment; and upon this point, perhaps, you will allow me to remind you of the verdict that was returned in the case of the King *v.* Eaton, where the jury unanimously decided against the book, but as it was not published with a criminal intention, no verdict of guilty was recorded. The case was carried to the Court of King's Bench, and there a verdict, meant to exclude evil intent, was returned, and no sentence followed. That was all the more strange because the judge summed up evidently against the prisoner, and there the publisher was not fortunate enough to be tried, as we are, before a fair and upright judge, one who administers the law with the equity and impartiality seen in this court. That case of the King *v.* Eaton fell to the ground, after a double trial, and I ask you whether we can be seriously held to be open to be convicted of obscenity if we have no evil intention to set ourselves deliberately to debase and corrupt the youth of this country? When you are considering the question of intention, it will be well for you to contrast the course which has been followed by the prosecution right through, with the course which has been adopted by myself and by my co-defendant—the utter dissimilarity between the tactics of the two parties—the concealment which characterised the prose-

cution, and the straightforwardness and openness of the defence. Remember, I pray you, that up to this moment, the name of the prosecutor in this case has remained concealed. We do not know who our prosecutor is; and so far as we have any statements at all on the subject, those of the learned Solicitor-General and the junior counsel are directly contradictory to the letter of their own solicitor. It may be a prosecution by the Government, by the police, by a magistrate, or by some individual who is actuated in the matter by some private spite or malice. We have no knowledge how it has arisen, whence it comes, and I ask you not to leave this out of your consideration when dealing with this case. And what is our position? Why, from the first we have been perfectly open and frank. We told the prosecution what we were going to do. Weeks ago we sent them notice of every book we were going to use, the titles of all the works upon which we relied. And that frankness has been carried out from beginning to end of this prosecution. Do you think that if we had had the criminal intention imputed to us we should have proceeded in that way? And yet we stand charged with a criminal offence before his lordship. Will you, I ask you gentlemen, give a verdict of guilty against me? You do not know very much of my life, it is true, and you may not be able to judge from it how far such a criminal charge is well or ill founded. You are not able to judge how thoroughly absurd—if it were not fraught with such danger—how utterly ludicrous this charge of intent to deprave and corrupt is when levelled against me. I was not, as my co-defendant said he was, born among the poor—I have not the glory, I have not the honour of having risen from among them by sheer brain power and persistent labour, to stand here in right of the position I have made, I have not so won that right of speech which I take to-day. No, that honour is not mine; but do you think I should have put myself in this position, do you think I should have placed myself in this danger, merely from an intent to deprave and corrupt humanity? You do not know much of me, it is true, but surely you can judge something of me by my speech, by my argument before you. Am I one whom you dare convict of intent to deprave and to corrupt? You may convict me, you may send me to prison, you may bid me herd with those depraved and dissolute women whose very language would be agony to me, worse agony than I can

put into words—unless, indeed, that, even in that prison, I might even there find means of prosecuting my work among my degraded fellow-prisoners, among the wretched women with whom I should be obliged to consort, as I have for long years carried it on in the cottages and homes of the poor. You cannot give a verdict of guilty against me, guilty of intent to deprave—my whole life gives the lie to it. Think a moment what such a verdict means. It means destruction of all I have worked for in the past, humiliation in all the labours of the future. You cannot convict me, and so take from me whatever influence for good I may have won. Yet, no, not the loss of my influence among the poor I have worked for. I cannot believe that, whatever your verdict may be, that there will be any loss of influence among them, for they will know how hard I have worked for them even in this court. You cannot convict me. Think for one moment upon all those who are watching this trial with the keenest anxiety. Can you let it go forth from this court, and from you, gentlemen, that there is to be no word of consolation or of comfort for the downtrodden, no change in the brutality and the misery of those overcrowded hovels which we seek to purify—that you tell of no star of hope for those who are writhing under poverty, and racked by pain—no word, no remedy for their misery, no breaking of the chains that bind them, no deliverance from the despair into which they are fast settling down? You cannot convict me if you think of the past and look forward to the future. Think of the juries in this great country who have over and over again stood between tyrannical Governments and the oppressed and helpless brought before the power of a court. Think what juries in this country have done. They have stayed the march of power against liberty, have widened freedom, and have protected discussion. Juries, too, have also sometimes done irreparable harm, have bound faster the chain upon the slave, and have been assistants of wrong for the sake of a momentary applause. Think, I pray you, of those juries who declared in favour of Horne, Tooke, and Thelwall. Make them your examples, and set us free to-day. A verdict of guilty? You cannot give it if you speak for justice and for truth, if you believe in innocence and in purity. We cannot yield, for we are working for the cause of the poor and the right to speak. But if, by some misdirection, some mismanagement of justice, you give a verdict against us to-day, you will

be doing what John Stuart Mill spoke of, you will be committing one of those crimes by which the men of one generation surprise and amaze posterity. A verdict of guilty? If you do this thing, remember that it will be to brand innocence with the infamy of guilt. If you do commit this wrong, then, from your verdict of guilty, we appeal to the verdict to a wider court, of a grander jury. We appeal from you to the people of the civilised world, from this bar to the bar of public opinion, and whatever your verdict may be, that greater jury will bring in a verdict of Not Guilty against us. We appeal from you to the verdict of the history which shall judge us when we have all passed away—that history which shall bring us in not guilty, whatever the verdict may be to-day. History, that weighing us in the far-off to-morrow, shall say that this man and this woman who stood on their trial here, who, knowing the misery of their time, the sufferings of their fellows, the agony of the people of their day, joined their hands and their lives together to bring salvation to the homes of the poor, did good service in their day and in their generation—that history shall say to us, "Well done," whatever your verdict may be.

The address was received with applause in court.

Mr. BRADLAUGH said: Gentlemen, whatever may be your verdict, and I do not think you will give one which you do not think to be right, I and my co-defendant owe you thanks for the very great patience with which you have listened to what we have felt it to be our duty to urge; and as my co-defendant has done, I, too, will try to show those thanks by at least abridging as much as possible the few words I have now the right to address to you in summing up the arguments I have thought it necessary to submit to you. It is, I think, now fairly conceded that if it is lawful to advocate any checks upon over-population after marriage, we do not in this book say one word to advocate anything against the institution of marriage itself. There is no word here that is redundant, prurient, unjust, or unfair; and the real issue which you will have to decide, and in which you will have to give a verdict—and, after all, the ultimate decision in this case rests with you—is this: that men in England, in the nineteenth century, and the latter quarter of the century—that men in England, where scientific discussion is free and unfettered—free beyond what is allowed in any other country of the world—shall here stop, once and for all, at any rate so far as their verdict can stop it, the discus-

sion of the checks to over-population. I will not attempt to insult you by in any fashion going over again all that which in your kindness you permitted me to go over in the long address with which I am afraid I wearied you. I have now only one difficulty present upon my mind with regard to that address; and it is whether, where it was needful to go through those medical details, some of which I saw were so distinctly unpleasant to you—as I shall ask you to believe that they were to me, and have been during the last six or seven weeks that I have been obliged to study them—whether I in any fashion weakened the eloquent pleadings of my co-defendant, because in the school in which I have been trained—the rude school of experience in the world—in which I have studied and have been pushed about, I have learned that the want of tact is about as great a fault as any man can commit. Well, I felt that I was bound to show from some of those books that the book which was impeached in this court did not deal with the matter in hand either impertinently, with undue particularity, with immorality with prurience, or with redundancy; but thatl on the contrary, it proved in a just, a plain, a simple abridgment that which it intended, and gave to poor people the knowledge thought needful for them, written so that they might understand it, without one word to raise feelings that ought not to be raised. I will ask you to believe that in the oral evidence that we have called—and I do not think we have troubled you with more of that than was necessary—we have a repetition and corroboration of the same kind of evidence that I have drawn from the books. If you allow me, I just want to add one word to that which has fallen from my co-defendant regarding the justice and openness of our case. I gave to the prosecution, at very considerable trouble, the name of every book I was going to use, and in the two books I used yesterday, I gave the precise references to each page to be quoted and its bearing upon the corresponding page of Knowlton, where the same subject is dealt with. We did not, it is true, give every page and every reference throughout these books, because to annotate them was a work of great time and great labour, but we gave the references so far as we had gone, and a great many which we had not used at all. We called attention to every passage in the first books which we were going to use, in order that they might be able, accurately, to follow every line of our defence.

Was that the conduct of criminals? Was that the conduct of those actuated by intention to corrupt by the unfair use of the word marriage, or of those who would use the word merely to conceal their desires under the word to promote something worthy of punishment here? The books that I annotated are amongst the best of their kind, and you may judge from the rate at which I got through the two I used yesterday—though they were nothing like the thickness of several others—that my address, as originally intended, would have occupied some days. I felt the difficulty of doing as I intended even before the suggestion was given by his lordship. I felt the difficulty of keeping you, gentlemen, from your business advocations, taking up the time of the Court and of all connected with it, while I went over detail after detail; but, on the other hand, I also felt that it was necessary to do something, not, perhaps, so much for myself as to clear my co-defendant from the charge on which she was indicted before you. I also felt it necessary because of the words that were used by the learned counsel for the prosecution in opening this case, because if they had not been refuted they might have been taken as evidence, or, at any rate, as being incapable of refutation. However, I will say no more about that. Take now the oral evidence which we offered you. Remember that the witnesses did not come here predisposed in favour of a certain case or a certain theory. Miss Vickery, who, asked of one particular of which she was not certain, at once said so, and did not try to answer what she did not know. She did not come here to support persons guilty of possible crime, or of anything which in her view was a crime, but she came here to give testimony from the knowledge and experience which she has gained in her profession. She was not prepared to come here and support those whose views on this point, in her opinion, would have been a stigma upon her professional honour. She is a woman, and she read this book without seeing anything shocking, anything indecent, and you can judge of the value of her opinion by the character of her evidence, in which there was nothing audacious, either in the manner in which it is given or in the treatment of he subject. Dr. Drysdale from his wider experience, gained by his long association with hospital practice, was able to speak more fully and thoroughly of all this. Dr. Drysdale, I think, proved that within his own knowledge this book had circulated in London for twenty-five years, and during that

time had remained unchallenged by any prosecution until now. Again, upon this point, Mr. Bohn—a gentleman entirely unconnected with either of us, one of the most famous publishers of our times, one who has not only an English or a European, but a world-wide, reputation from his well-known series of classical and standard works, a gentleman retired from his business and living in privacy, who could feel no necessity upon him of mixing himself up with this case, or with a book which has been characterised as this has—Mr. Bohn came forward and told you that he had been a publisher on his own account for forty-five years, and that altogether he had been connected with the publishing business for a period of nearly sixty years. He has, therefore, great experience in publishing books, and full knowledge of the character of those that are sold openly. Indeed, he has himself published a great many physiological works containing discussion of the very same matters, only that they were discussed with more particularity of detail, and were more full in some cases. His works have been issued freely for many years, and he told you that he knew this work had been in circulation for a long time. He also told you that a work so rare that it could only be found in the library of the British Museum was the foundation work upon which those of Knowlton, Carpenter, and Kirke were mainly, if not entirely, founded. I am not now alluding to Carpenter's "Animal Physiology," but to his "Human Physiology," which I referred to at some length yesterday, and which I told you was used as a handbook and a school-book. There was no necessity on Mr. Bohn to come forward and give evidence. Now, I want to make this further remark, that all this evidence was unimpeached and unimpeachable, and that none of the counsel on the other side attempted to cross-examine any of the witnesses. I do not say that with any ulterior intention, or put it unfairly to you against the prosecution, for I wish, on the contrary, to give them every credit for having left it open to us to call any evidence we chose, and not to shut out any answer that might come from these witnesses; and when I say that, I do not mean to make it a matter of reproach to the prosecution that they did not cross-examine; I hope I may say that the evidence of the witnesses we called may help you in coming to a decision upon your verdict. I want to remind you, also, because it may weigh against me—although in common with my co-defendant, I may say that I have not

taken up this case in any spirit of bravado or defiance—that you should not pay any attention to the publicity, or, perhaps, notoriety, of my name, for a man's name may become notorious justly as well as unjustly, and one must not always listen to what the public impression regarding a man is. I may, therefore, state generally that this question is to me no new question; that for many years I have advocated this subject in public; that I have issued a journal declared to be Malthusian in its policy for nearly twenty years, and, as I told you before, Lord Amberley referred to it and to me in a speech which he made at a science assembly in 1868, and thanked me for having pressed this question upon the attention of the working-classes, and the same estimate of my labours in this direction has been left on record by that eminent thinker John Stuart Mill. Gentlemen, I should have been disloyal to my views enunciated long ago, to my programme in connection with the population question issued some twenty years ago, and thoroughly believed in by me ever since, if I had not defended this action. And, gentlemen, I ask you, I ask you confidently—do not think me too bold or too presumptuous when I use the word confidence—for your verdict of not guilty. Let me remind you again what the proposition is for which I contend—the proposition I have already put to you in my address, and stated again yesterday. It is this: Is it lawful or not to advocate the application of checks to the evils of population, provided that such checks do not destroy the fœtus after conception, nor the child after birth? If I needed to strengthen my case, which I don't think I do, I might show you by a reference to the extracts which have already been given to you from Churchill that he ventured to advocate abortion, and I think you will say it is far more moral to prevent, if possible, all conception, than to have recourse to such a check as that. My co-defendant has put that point before you very forcibly, and I refrained from characterising my sense of the inducement offered to procure abortion or to bring on premature labour, because, as I thought, my medical knowledge is not profound enough to enable me—for I doubt whether a man, unless he be trained and profoundly read in medicine, has a right to express a decided opinion on such a subject to enable me with confidence to dogmatize on the question. From our standpoint we believe that to touch human life in any way whatever, or in any fashion—whether overtly or otherwise—is the highest crime. When it comes to be a

question of saving the child or of losing the mother, and in that crisis a man who is responsible, a man who has been trained to the profession of medicine, and has had large experience in the practice of it, comes to a decision one way or the other, he has the right to act; but on such a solemn question it is not necessary for me, nor for my defence, that I should urge one way or the other here. What I do say is that to touch human life wantonly is one of the highest crimes. I leave myself then in your hands, asking you, when the learned Solicitor-General comes to address you, to remember that it is to you I leave the refutation of any matters in his speech which I cannot then deal with, and which, if I had the right, I would not urge myself. There is another speech to which you have to listen, and to which I for one shall listen with very great attention; there will be the address of his lordship, which will have the greatest weight with me, as doubtless it will deserve to be with you, and I will hear it, whether it be for or against me, with reverence and respect, believing that in either case it will be just, if it may be severe; but I will ask you, gentlemen, to remember that, after all, the ultimate deliverance is in your hands, and unless in your heart of hearts you feel that we intended to deprave and corrupt public morality by the publication of this book, I ask you to say that we are not guilty of the charge preferred against us. And after you have delivered your verdict, I leave myself to the greater verdict of enlightened public opinion, the verdict which carries weightier and remoter issues than any verdict here can do; and thus I leave myself in your hands.

The SOLICITOR-GENERAL: I do not, gentlemen, wish to add to the inordinate length of this discussion by any serious prolongation of it by many words, and so my remarks to you will be very brief. The question you have to try is a very simple one, though the broad one may be very intricate indeed. Let me say one word—and it shall be but one—as to the matters so ably urged upon you by the defendants in this case, and which do not properly arise out of the issue before you at all. You have heard it avowed by both the defendants that they challenged this inquiry, and tha they raised the question before you by giving notice to th police that at certain hours and in a certain place on e particular day they would sell this book to anybody tha might present themselves as purchasers. There is a police man, who is here as the prosecutor, in the ordinary sense o

the term; but it appears to me that whoever the prosecutor may be that is quite immaterial to the issue before you. Whether it is a policeman, or the authorities that are behind the policeman, it is quite certain that if the persons who challenged the prosecution had not been brought before you, the persons who have claimed the right to circulate this book to any persons who might present themselves and offer sixpence for it, they would have been entitled to say, and you will judge whether they would have availed themselves of that or not, that they were selling the book openly in the City of London, after having given notice to the authorities that they would do so. Then the authorities were placed in this dilemma: either they must institute proceedings against these persons—and a most unfortunate prosecution I admit it is, and, as I admitted to you at the first, and repeat to you now, a most mischievous prosecution in its character, and, probably, in its result—or they must have taken the other alternative, admit what they considered, and what they still consider, something more mischievous still—the admission by the proper authorities that this book might openly be published and circulated in the streets of London. That was the dilemma with which we had to deal, and the circumstances under which we felt bound to interfere. The prosecution is one which, I admitted to you at first, was likely to have the most serious effect; and I think I may now put it to you that it has, since, as the defendants have told you, the attention to the book has raised its circulation from, comparatively, a trifling to the enormous amount of 125,000 copies. It appears to me a most disastrous thing that it should have been so; but, from their point of view, it is not so, for they think the book should be circulated as widely as possible. But those who take the opposite view think that it is indeed indecent, and likely to deprave and corrupt the morals of the people. What were they to do? Were they to allow it to be circulated in that way, or to attempt to suppress it, as in future I hope it will be suppressed, by the strong hand of the law? That observation reminds me of another, and that is, that the circulation of this book is not an unimportant observation in relation to another question. It is unfair to suppose that if this had been a medical book, treating of the liver, or the brain, or the stomach, or any other organs but those which it did treat of, that it would have reached the circulation it had done. Why is it that

it has been circulated to that extent? Because, unfortunately, in a very great number of persons, particularly in the young, there is a prurient curiosity on subjects of this sort, books would reach a circulation of many thousands, while, if it had been a treatise on the other organs of the body it would, probably, not have been many hundreds. That is the sort of thing that this is. Let us go back to the question here. We must distinguish between the use of words (no persons are more able to use words in a more fallacious sense than the two defendants who have addressed you)—the motive and intention of the persons in circulating a book may be one thing, and the motive, intention, and effect of the book when circulated may be a totally different thing, and as I said to you originally, I did not care to inquire what the motives of the persons may have been. I would rather invite you—although some misrepresentations have been made on their behalf—I invite you to accept, for the purpose of this inquiry, the suggestion made that their conduct was actuated by the desire to benefit their species. Be it so. But there are some persons who take a reverse view of what is likely to be for the benefit of their species, and the question is, what this book will do when circulated? It is an entire misapprehension to suppose that a man's virtues, the desire of one's mind to benefit his fellow-creatures, will shield them from responsibility if the character of the book published is one which will corrupt and deprave the morals.

The Lord Chief Justice: But here they are distinctly charged with intending to vitiate and corrupt morals.

The Solicitor-General: Yes, my lord, because everybody in a criminal court must be taken to apprehend the natural consequences of his acts, and if the natural consequences of the act is that it will deprave and corrupt the morals of persons among whom that person's book is circulated, he must be taken to intend that.

The Lord Chief Justice: But you seem to me to acquit them of any such intent, while the indictment distinctly charges them with it. It is a strange state of things, although that may turn out to be a legal view of the case. It will certainly be a startling result if the person who is representing the prosecution in this case—the Solicitor-General of England—says that the defendants do not intend to corrupt the morals, and at the same time, notwithstanding, their indictment charges this, and they should be found guilty of having so intended and so done.

The SOLICITOR-GENERAL: I shall illustrate what I wish to show, my lord. Now, there is a sect in India, as all of us know, who advocate murder.

The LORD CHIEF JUSTICE: Then their intent is to murder.

The SOLICITOR-GENERAL: So I say that this book is in effect to corrupt the morals. I care not what the intention was in the mind of the man not connected with the book itself. I shall put for your consideration that this sect of whom I speak hold it to be a holy sacrifice to their Deity whom they wish to worship, to sacrifice human life, and if they, in that sense, meaning to do right, should circulate a book which suggested the enforcement and necessity of the Thug practice, who could doubt that that was an indictable offence, and a misdemeanour in this country? I shall here (not that I admit the motives of these persons put forward as guiding them), but I say I rather invite you to accept that without inquiry for the purpose of the argument. Their notion is that the population ought to be limited, that it would be a desirable thing that conception should be prevented. I say that that is contrary both to the law of God and the law of man, and if they choose to circulate a document of that sort, which is intended to produce that result, and intended to produce that result in that way, I say that it is immoral, and under the circumstances of the case, an obscene book, and one which ought to be condemned by any jury before whom this question might come. I rather would protest against arguing, as some of the defendants have endeavoured to argue it, as if it had been necessary to go into some abstruse and recondite questions of political economy. I say that this is a dirty, filthy book, and the test of it is that no human being would allow that book to lie on his table; no decently educated English husband would allow even his wife to have it, and yet it is to be told to me, forsooth, that anybody may have this book in the City of London or elsewhere, who can pay sixpence for it! It does not require any abstruse or recondite arguments. The object of it is to enable persons to have sexual intercourse, and not to have that which in the order of Providence is the natural result of that sexual intercourse. That is the only purpose of the book, and all the instruction in the other parts of the book leads up to that proposition. Is not that so? Is not that calculated to deprave and destroy the morals of the persons

among whom it may be circulated? Look at the object of the proposition and the contents, that a man and woman may ["marry and yet limit their family," is a paraphrase of what was said here]. First of all, is that, or is it not, calculated to deprave the public morals? The recommendation, indeed, is that it may be done under the sanction of marriage. Do you limit your sanction, as the original book appears to have intended, as the private companion for young married couples? Now, gentlemen, I should also submit to you that it is an obscene book. Are we to argue it on that point? There is an unreality in the argument. If any boy and girl, of sixteen or seventeen, may go to Stonecutter Street, and buy it for sixpence, and when it is in their hands you are to suppose that the suggestion that this is to be done after marriage, will have a powerful effect upon the young inflamed passions of these young persons, and what they will consider themselves only to be done under the restraint of marriage. A young man and woman have this book put into their hands. They are unmarried; there are means in the shop of every chemist which can be obtained for one shilling, whereby ["they may give way to their passions without fear of results:" we again paraphrase for our readers' sakes]. I submit to you, that this is a matter to be dealt with, not on abstruse considerations, but with a little manly common sense. Let every man of common sense ask himself what is the inevitable result of disseminating such things among the common people? They are to study this, forsooth, to study these physiological details, which might do when we reverted to our original state of innocence, and entirely get rid of the ordinary state of decency which keeps certain subjects from common observation and conversation. But the common sense of mankind recognises the fact that we are not perfectly pure nor perfectly innocent. "Avoid temptation" is the Christian exhortation; is this, or is it not, temptation to circulate a pamphlet of this sort amongst the young? Ask yourselves what the inevitable result would be, and when we look at the third chapter, up to which all the rest of it leads . . . . [the learned Solicitor-General is here too coarse for "the common people" to read, and it is too much trouble to veil him in Latin, and impossible to paraphrase him]. What underlies all this means that you must have free discussion in everything, and that there must be an absolute free discussion to everybody. That seems

to be the suggestion made more than once by both the defendants. But that is a question, of course, which the tribunal which has to decide this question—the tribunal of the average English mind is the best that can be obtained. That is the question you have to determine. Is it, or is it not an obscene publication? It is suggested, Why you may collect from various books, from various medical works, equivalent passages to this? Be it so. What then? You may collect from Johnson's Dictionary the foulest and most obscene language in the world, by putting the words together. What is the difference? Who do you suppose would go and pay the two or three guineas for a medical work with plates for the express purpose of looking at the one plate which might represent the reproductive organs, and which treated of the diseases to which they are subject, and of the mode in which they are treated just to satisfy a prurient curiosity? Is that an equivalent publication to the one we have here? We will put that a medical book and the circulation of it under certain circumstances might be a most improper thing. The book itself might, being circulated in that particular way, be a most improper thing to do, and properly form the subject of an indictment. But we are not dealing with that question here. We are dealing with a book which does not profess to treat of diseases; what it professes to treat is the destruction of the conceptive power after the sexual act has taken place, and that is the thesis which is put forward before you. Gentlemen, of course it is for you to say whether this is a book which can properly be circulated in the way this book has claimed to be circulated; and let there be no mistake about it. This is the question which I invite you to consider. This is not a question of whether this matter might or might not be discussed with certain restrictions, and under certain circumstances. The claim is here put to you to affirm that that claim ought to be conceded to circulate this book in this manner. It is not necessary for me to do anything more than to ask you to read the book; and let me in one word—and I decline to go into their long discussions about the questions which might or might not arise—I ask you to treat it very shortly and very plainly. Is this book a book when circulated in this manner—is it calculated by the tendency of the work itself (never mind the motives of the persons who circulated it)—is the tendency of the book, which they admit they circulated, and which,

if they succeed in gaining your verdict, they will say that you have justified them in circulating—is that a book, or is it not a book, calculated to degrade and destroy public morals? If it is, then there are no circumstances which justify them in its publication. There are no circumstances which justify them by a supposed relief to human suffering, or anything of that sort; there is no such justification as may seem proper, though, probably, it is a medical work aimed at the cure or the prevention of disease. That which the work was supposed to do is, as I venture to submit to you, to recommend to the people a mode which is both contrary to the law, which is immoral, which is wicked in itself, and that by describing with minute particularity the organs comprised in the reproductive system; and, having described these details, proceeds with a degree of detail which I described before as filthy—and I do not retract my words — to describe the sexual act, and what follows thereon, with a degree of filthy detail, and all that because, they say, we are entitled to recommend to you the practice of checking conception and preventing life, and assume for themselves that, while they agree that if conception proceeds to a certain extent (I know not to what particular extent), it is wrong, they assume to themselves to discover at what moment the process of fecundity begins, and yet, after a certain time, it is not lawful, while before that time it is. I deny both principles. I say it is of itself immoral and wicked, and having submitted that to you, you will judge for yourselves whether it is true. If that is true, of course a minute description by which that principal object is to be effected does not become more lawful or more proper, or less obscene or less likely to deprave the public morals; because a minute particularity is given, not as a medical work, or that it is a work of science, but because it is a matter able to be discussed in public as a matter of national welfare, and, therefore, every boy and girl in the City of London may buy the book for 6d. I said before you were the guardians of the public morals, and the defendants seem to have fully adopted that, and recommended it to you. The case is, therefore, fairly before you. You are to say, on looking at this work, whether it is not an obscene work, and whether it may to-morrow—after your verdict is given, if in favour of it—be sold to anybody who applies for it, and the only reason I refer to the price is because it is that which enables anybody to circulate it, and

get it to be bought with the greatest facility. Everybody can, therefore, at that cost, go to Stonecutter Street to-morrow, after your verdict is returned, if your verdict should be in favour of the defendants, and buy this book, and scatter it broadcast over the country. I cannot believe that any English jury, having any reverence for the marriage state, for the chastity and purity of their own wives and daughters, can do any such thing, and, therefore, I do not think it necessary to do any more than invite your attention to what I have laid before you.

The Lord Chief Justice, in summing up, said: Gentlemen of the jury: There is one point on which I think every one who has attended to this trial will cordially concur with the Solicitor-General, who has just addressed you—that is as to the mischievous character and effect of this prosecution. A more ill-advised and more injudicious proceeding in the way of a prosecution was probably never brought into a court of justice. Here is a book which has been published now for more than forty years, which appears never to have got into general circulation to any practical extent, and which by this injudicious proceeding has been resucitated and sent into general circulation to the extent of thousands of copies. And when the learned Solicitor-General says that in consequence of the challenge sent forth by the defendants to the police authorities after the work had been given up at Bristol, that they were prepared to publish it and sell it with a view to challenge the question whether it was a work which might really be circulated, when the Solicitor-General says that left no alternative to the authorities but to meet that challenge, I must say that I do not agree with him; and when he talks of the authorities I should like to know who are the authorities and what are the authorities to whom he refers. He did not venture to tell us that anybody except the policeman who was put into the box on the part of the prosecution is, in fact, the prosecutor in this case. I should very much like to know who are the authorities who are prosecuting, because that has not yet transpired. The Solicitor-General tells us it may have been the magistracy. I do not believe it. I do not believe it. I, however, entirely concur with him that, however ill-advised may have been this prosecution, here it is. Every man has a right, even if he is only a detective policeman, to put the criminal law of the land into motion, if he thinks he has ground for so doing, so long as the Government of this

country thinks proper to have the administration of justice defective in that which, from this place I say, is an essential necessity with a view to its proper administration (I mean the office of a public prosecutor)—so long as every individual, however rash, however ill-advised, has the right to put the criminal law of the land in motion, if he does so he has the right to ask that the case shall be treated with due consideration, and shall be disposed of according to justice and to law. Therefore, we have the case here, and however much we may deplore the rashness which set this prosecution going, we must deal with it as though it had had the sanction of the Crown, which I do not think it has, although the Solicitor-General appears to conduct it. It is not a Government prosecution, nor have we any evidence that it is a prosecution set on foot by any authority which we should be disposed to treat with any great amount of consideration, but it is a case certainly deserving of your most serious attention. There is one thing in which I cordially agree with the Solicitor-General, and that is that no better tribunal can be found in the world to judge of such a question as this than the average sound sense and enlightened judgment which is to be found in English society, and I quite agree with what has been said on both sides that the decision in this case, when I have told you what the indictment is, and what the law is, rests solely and entirely and exclusively with you. If you are of opinion that this book in its details, or in its scope, or in its effects, deserves the character that the Solicitor-General says has set its stamp upon it, your verdict ought to be undoubtedly given for the prosecution. But before you arrive at that conclusion, you must carefully consider this work, both in its detail and in its general effect. The indictment charges the defendants that they "unlawfully and wickedly devising, contriving, and intending, as much as in them lay, to vitiate and corrupt the morals as well of youth as of divers other liege subjects of our said lady the Queen, and to incite and encourage the said liege subjects to indecent, obscene, unnatural, and immoral practices, and bring them to a state of wickedness, lewdness, and debauchery, therefore, to wit, on the 24th day of March, A.D. 1877, in the City of London and within the jurisdiction of the Central Criminal Court, unlawfully, wickedly, knowingly, wilfully, and designedly did print, publish, sell, and utter a certain indecent, lewd, filthy, and obscene libel, to wit, a

certain indecent, lewd, filthy, bawdy, and obscene book, called 'Fruits of Philosophy,' thereby contaminating, vitiating, and corrupting the morals." That is the charge, and here, again, I agree with the Solicitor-General that if the effect of the work is as the words here designate it, and the defendants did, as they openly avow, intentionally publish the work, and that be its character, they must abide by the result, however strange and anomalous that may seem; while it is admitted that they were acting under the belief that they were doing good in what they did, nevertheless they are to be held responsible to the extent of its being found against them that they published this work, which tends to deprave the morals of society. Now, gentlemen, as I have already said, you are the judges in this matter, and you have had this book before you, and you have had it in all its details and in its general effects commented on by both sides, and by this time you must be pretty familiar with it. I am bound to tell you what the law says about it. Although it is a law of modern times, and unknown, I believe, to the old common law of England, and forming a portion of that part of our law which is called "judge-made law," there it is—it is the law of the land, and we must all abide by it. It is not for the defendants to say that the law is a bad law, and inconsistent with that perfect freedom of discussion which is essential to the welfare of mankind. We are a law-abiding people, and no man has a right to set himself above the law and to defy the law. If the law is a bad law, an immoral law, or an impolitic law, and you have it in your power in any way to change it, to abrogate or reverse it, your duty, as a good citizen, would be to do so. But while the law exists it is your first and bounden duty as citizens to obey it; therefore, we must not listen to arguments upon moral obligations arising out of any motive or out of any desire to benefit humanity, or to do good to your species. You must not say, I will set the law at defiance, or, I will do what the law forbids. No matter what the motives of the defendants may have been, if the work is what the Solicitor-General for the prosecution alleges it, although we may think we see—and probably we shall be right in saying so—here, in this instance, are two enthusiasts, who have been actuated by the desire to do good in a particular department of society, nevertheless, if in this desire to do good they have done wrong, they must abide by the result.

Now, gentlemen, the law is this—that whatever outrages public decency and actually tends to corrupt the public morals is an offence. It is not necessary to load it with all the opprobrious epithets which have been applied to this work. It is enough to say that the work is a corrupt publication, that it tends to corrupt the morals of the population, and that it is, therefore, an offence against morality. But we must be careful in applying this general principle of law when we come to its practical application, so as not to abridge the full and free right of public discussion, and the expression of public and private opinion on matters which are interesting to all, and materially affect the welfare of society. There is a difficulty in a case of this kind in determining whether that which is put forward in the shape of a publication is matter tending to vitiate and corrupt public morals, or whether it is matter which it is of interest to mankind to have discussed, and which calls for an expression of opinion upon it. Now, the Solicitor-General, in opening this case—as he did also in replying to the case for the defence—has asserted not only that this publication is filthy and obscene, but also that the purpose of it—and all the details are intended to lead up to that purpose—is inconsistent with public morality, so that we have to divide the consideration of the subject into two parts. In the first place, are there in this publication details inconsistent with decency—details calculated to enkindle the passions and desires of lust, and excite libidinous thoughts in the minds of the readers? Even if that should not be the case, the second point is whether the purpose advocated in the work, and the purpose and effect of the details so elaborately given, is a purpose inconsistent with the morals of society? If so, the work is an illegal work, and the offence with which the defendants are charged is made out. If, on the other hand, that is not established, the defendants are entitled to a verdict of acquittal. It must not be forgotten that it is for the prosecution to prove its case, and it lies on them to make out that the defendants are guilty. Now, gentlemen, let us see what the work purports to be, and let us inquire whether it is published in the way of information or whether it is at all calculated to corrupt the mind of any one. I divide that into two parts. Is this publication in its scope and object a thing calculated to deprave and debase the morals of those who read it? That

is one part. Independently of that, are the details given, irrespective of the ultimate purpose of the work, calculated to inflame the passions and corrupt the morals of those readers? These are two separate and distinct things. Before I call your attention any further to the details, let me allude for a few moments to what, as it appears to me, is the scope and purpose of the work. The author, Dr. Knowlton, professes to deal with the subject of population. Now, a century ago a great and important question of political economy was brought to the attention of the scientific and thinking world by a man whose name everybody is acquainted with, namely, Malthus. He started for the first time a theory which astonished the world, though it is now accepted as an irrefragable truth, and has since been adopted by economist after economist. It is, that population has a strong and marked tendency to increase faster than the means of subsistence afforded by the earth, or that the skill and industry of man can produce for the support of life. The consequence is that the population of a country necessarily includes a vast number of persons upon whom poverty presses with a heavy and sad hand. It is true that the effects of over-population are checked to a certain extent by those powerful agencies which have been at work since the beginning of the world. Great pestilences, famines, and wars, have constantly swept away thousands from the face of the earth, who otherwise must have contributed to swell the numbers of mankind. The effect, however, of this tendency to increase faster than the means of subsistence, leads to still more serious evils amongst the poorer classes of society. It necessarily lowers the price of labour by reason of the supply exceeding the demand. It increases the dearth of provisions by making the demand greater than the supply, and produces direful consequences to a large class of persons who labour under the evils, physical and moral, of poverty. You find it, as described by a witness called yesterday, in the over-crowding of our cities and country villages, and the necessarily demoralising effects resulting from that over-crowding. You have heard of the way in which women—I mean child-bearing women—are destroyed by being obliged to submit to the necessities of their position before they are fully restored from the effects of child-birth, and the effects thus produced upon the children by disease and early death. That these are evils—evils which, if they could be prevented, it would be the first business of human charity

to prevent—there cannot be any doubt. That the evils of over-population are real, and not imaginary, no one acquainted with the state of society in the present day can possibly deny. Malthus suggested, years ago, and his suggestion has been supported by economists since his time, that the only possible way of keeping down population was by retarding marriage to as late a period as possible, the argument being that the fewer the marriages the fewer would be the people. But another class of theorists say that that remedy is bad, and possibly worse than the disease, because, although you might delay marriage, you cannot restrain those instincts which are implanted in human nature, and people will have the gratification and satisfaction of passions powerfully implanted, if not in one way, in some other way. So you have the evils of prostitution substituted for the evils of over-population. Now, what says Dr. Knowlton? There being this choice of evils—there being this unquestioned evil of over-population which exists in a great part of the civilised world—is the remedy proposed by Malthus so doubtful that probably it would lead to greater evils than the one which it is intended to remedy? Dr. Knowlton suggests—and here we come to the critical point of this inquiry—he suggests that, instead of marriage being postponed, it shall be hastened. He suggests that marriage shall take place in the hey-day of life, when the passions are at their highest, and that the evils of over-population shall be remedied by persons, after they have married, having recourse to artificial means to prevent the procreation of a numerous offspring, and the consequent evils, especially to the poorer classes, which the production of a too numerous offspring is certain to bring about. Now, gentlemen, that is the scope of the book. With a view to make those to whom these remedies are suggested understand, appreciate, and be capable of applying them, he enters into details as to the physiological circumstances connected with the procreation of the species. The Solicitor-General says—and that was the first proposition with which he started—that the whole of this is a delusion and a sham. When Knowlton says that he wishes that marriage should take place as early as possible—marriage being the most sacred and holy of all human relations—he means nothing of the kind, but means and suggests, in the sacred name of marriage, illicit intercourse between the sexes, or a kind of prostitution. Now, gentlemen, whatever may be

your opinion about the propositions contained in this work, when you come to weigh carefully the views of this undoubted physician and would-be philosopher, I think you will agree with me that to say that he meant to depreciate marriage for the sake of prostitution, and that all he says about marriage is only a disguise, and intended to impress upon the mind sentiments of an entirely different character for the gratification of passion, otherwise than by marriage, is a most unjust accusation. (Applause in court.) I must say, that I believe that every word he says about marriage being a desirable institution, and every word he says with reference to the enjoyments and happiness it engenders, is said as honestly and truly as anything probably ever uttered by any man. I can only believe that when the Solicitor-General made that statement he had not half studied the book. But I pass that by. I come to the plain issue before you. Knowlton goes into physiological details connected with the functions of the generation and procreation of children. The principles of this pamphlet, with its details, are to be found in greater abundance and distinctness in numerous works to which your attention has been directed, and, having these details before you, you must judge for yourselves whether there is anything in them which is calculated to excite the passions of man and debase the public morals. If so, every medical work is open to the same imputation. We know there are books which have, for their purpose, the exciting of libidinous thoughts, and are intended to give to persons who take pleasure in that sort of thing the impure gratification which the contemplation of such thoughts is calculated to give. If you think this book is of that character, and is therefore calculated to produce in the mind of any man thoughts of this description, then the work would be condemnable upon that point. Though the intention is not unduly to convey this knowledge, and gratify prurient and libidinous thoughts, still if its effect is to excite and create thoughts of so demoralising a character to the mind of the reader, the work is open to the condemnation asked for at your hands. I quite agree that a work of this kind sold at the corners of the streets—or capable of being sold at the corners of the streets and at bookstalls to everyone who has sixpence to spare—may be purchased by persons who think there is something in it that will gratify their prurient desires. But it may be contended—and it is per-

fectly true—that details of this kind are absolutely necessary in a medical or physiological work treating of the human organs, and which professes to give useful information to every person able to pay even sixpence. At the same time, you must consider whether the details given are calculated to do more than give you that fair information which every human being may be assumed to fairly desire to possess—a knowledge of his own organisation. But if you think that it has a tendency to excite unholy desires; if you think it deserves the character which the Solicitor-General has given to it, and that it outrages decency and tends to corrupt public morals, you are bound by your verdict to condemn the work. Now, let us suppose that you should be of opinion that there is nothing inconsistent with physiological details that may properly be given. I will not trouble you by reading extracts, because you have the book before you. Suppose you are of opinion that there is nothing in those details which should not be given. But here allow me to make one remark. We are not dealing with this work as a matter of taste or feeling. We may think it would be better that such details were not given, and so become liable to be placed in the hands of boys and girls. That is quite another matter. You must be satisfied that these details, even if not intended for that purpose, have the effect of corrupting the mind before you condemn the book. That is the charge or proposition which must be made out in order to bring the book within the reach of the law. Suppose now you are satisfied that the Solicitor-General was wrong when he said that, while Knowlton advocates marriage he advocates something else. Suppose you set aside that as groundless, and believe that the physiological details as to conception and procreation have not in themselves any corrupting tendency, you then cannot find the defendants guilty upon that ground. Now, we come to what, as it appears to me, is the very essence of this inquiry. We come to that part of the case on which your verdict must hinge. The argument with respect to marriage being hastened, instead of, according to the Malthusian theory, being delayed, having been disposed of by the author, we come to the point as to how the existence of over-population is to be dealt with, and the misery, disease, and immorality which it necessarily engenders in those classes upon whom over-population presses, and to whom it brings the most serious and fatal of diseases and con-

sequences. How are those consequences to be averted according to this book? It is by means to be taken, not to prevent intercourse between married people, but to present the consequences of that intercourse which naturally before place between the sexes in the married state, and therefore means are suggested which, having read the book, you are familiar with. The learned counsel for the prosecution, says, in emphatic terms, that these means are contrary to the law of God and the law of man; in other words, to prevent the natural fruits of matrimonial union is contrary to the law of God and man, and contrary to the sound morals which ought to prevail. The question is whether that is the view which you will take of the proposition contained in this book. Over-population, says Knowlton, is productive of abundant misery. How can we prevent the over-procreation of the species? If you check marriage, prostitution takes its place; and, therefore, the only possible way in which you can grapple with it is to allow legitimate intercourse between man and woman after marriage, but to prevent procreation by applying artificial checks after conjugal and connubial intercourse. Says the Solicitor-General, that is obscene, no matter in what form that is presented. There are three or four forms in which the preventive checks are proposed. One is specially recommended as efficacious, but it is open to the same objection as the others—that, it is said, it tends to destroy the morality of conjugal life. Now, there is one of these means which occurs to me in the first instance. Knowlton points out as a physiological fact established by long experience and consistent with the present scientific theory on the subject of procreation, that if conjugal intercourse is avoided at a particular period, and within a certain time of menstruation, conception cannot take place, in fact it becomes physically, or all but physically, impossible. Now, suppose a married man and woman, with limited means, and having as many children as they can maintain, were to come to the resolution to avoid conjugal intercourse at the particular period at which that conjugal intercourse mainly produces its natural result, would that be an immoral course of proceeding? If it would be an immoral course of proceeding, the man who recommends an immoral course of proceeding in an open publication is guilty of an offence against the law. Another artificial check suggested

[Knowlton, p. 39]. These are very unpleasant details in a public court, but we must deal with them. Is that inconsistent with morality? There may be a certain degree of indelicacy in such a suggestion, but the question for your decision—and for your decision only—is whether it could have the effect of corrupting the morals of those persons who resort to the practice. A man and woman may say, "We have more children than we can supply with the common necessaries of life; what are we to do? Let us have recourse to this contrivance." Then, gentlemen, you should consider whether that particular course of proceeding is inconsistent with morality, whether it would have a tendency to degrade and deprave the man or woman. The Solicitor-General, while doubtless admitting the evils and mischiefs of excessive population, argues that the checks proposed are demoralizing in their effects, and that it is better to bear the ills we have than have recourse to remedies having such demoralizing results. These are questions for you, twelve thinking men, probably husbands and fathers of families, to consider and determine. That the defendants honestly believe that the evils that this work would remedy, arising from over-population and poverty, are so great that these checks may be resorted to as a remedy for the evils, and as bettering the condition of humanity, although there might be things to be avoided, if it were possible to avoid them, and yet remedy the evils which they are to prevent—that such is the honest opinion of the defendants, we, who have read the book, and who have heard what they have said, must do them the justice of believing. I agree with the Solicitor-General if, with a view to what is admitted to be a great good, they propose something to the world, and circulate it especially among the poorer classes, if they propose something inconsistent with public morals, and tending to destroy the domestic purity of women, that it is not because they do not see the evils of the latter, the while they see the evils of the former, that they must escape; if so, they must abide the consequences of their actions, whatever may have been their motive. They say we are entitled to submit to the consideration of the thinking portion of mankind the remedies which we propose for these evils. We have come forward to challenge the inquiry whether this is a book which we are entitled to publish. They do it fairly, I must say, and in a very straightforward manner they come to demand the

judgment of the proper tribunal. You must decide that with a due regard and reference to the law, and with an honest and determined desire to maintain the morals of mankind. But, on the other hand, you must carefully consider what is due to public discussion, and with an anxious desire not, from any prejudiced view of this subject, to stifle what may be a subject of legitimate inquiry. But there is another view of this subject, that Knowlton intended to reconcile with marriage the prevention of over-population. Upon the perusal of this work, I cannot bring myself to doubt that he honestly believed that the remedies he proposed were less evils than even celibacy or over-population on the one hand, or the prevention of marriage on the other hand, in that honesty of intention I entirely concur. But whether in his desire to reconcile marriage with a check on over-population, he did not overlook one very important consideration connected with that part of society which should abuse it, is another and a very serious consideration. What the Solicitor-General has here put before you is, I think, very well deserving of your consideration. The Solicitor-General assumes, for the purposes of argument, that Knowlton is sincere in assuming that he desires to see marriage keeping its proper place in the institutions of mankind, that he desires, by early marriages, to prevent prostitution and the evils of celibacy, and that, even as regards married people, that which he recommends might be held to be consistent with a proper state of morals; yet some things that he recommends in marriage may also be made available by those who are not married, and every young man and young woman who may have a tendency to gratify their sexual instincts and desires without entering into matrimony have here a means suggested to them whereby they may gratify their instincts and desires without running the risk of having children. Say the defendants, in answer to that very obvious argument: "We have nothing to do with any abuse of what we recommend; we recommend it only to those who are married, with whom sexual intercourse is a perfectly rightful thing. We don't recommend it to those in whose case sexual intercourse is not a rightful thing, and if they choose to do that which is wrong and, in order to cover their wrongdoings and prevent evil result, they choose to have recourse to knowledge which is not intended for them we are not to blame, and we ought not to be prevented from recommend-

ing to the married that which could be useful to them because other persons abuse that which we recommend." Well, that is true to a certain extent, but, on the other hand, if that which is offered to the married, though in their case—and I say this only hypothetically—it might not be productive of immoral effects, yet if you extend it over the whole of society it may subvert the morals of a portion of society, and it becomes the question whether the thing proposed is not a thing which from its nature will corrupt the morals of the young. Therefore, it is open to the objection that brings it within the law. It is very true, it may be said in answer—an answer not altogether unworthy of consideration—that the reason why the law makes the publication of works of an improper description illegal is that their tendency is to corrupt the public morals; but in the case you suppose the persons are already corrupt, and are prepared to give way to passion and set aside the laws of virtue; therefore, their minds are already corrupt, and will not be corrupted by the remedies we recommend; they are already willing to go wrong, but for the dangers which they foresee from sexual intercourse. Well, that is very true. That argument may be presented in answer to the one founded upon the possible publication of this work to unmarried persons. It is very true that that answer may be given, but there is a reply to it. If the instincts of unmarried persons are restrained simply by the fear of the consequences of illicit intercourse, namely, the begetting of children, by suggesting these preventive checks you remove a salutary restraint. Therefore, it may be argued, not without foundation, that if the use of these preventive checks were consistent with morality among the married, you are offering to the unmarried a strong temptation by means of the removal of those restraints which keep many in the right course. These are the various forms in which this question may be put. I can only tell you what the general course of the law is. I can only repeat that if you are of opinion that this work of Knowlton's, although well intended, and although the publication of it by the defendants may be intended for the benefit of mankind, if you think they have taken an erroneous view as to the effect of the work, and that its entire scope is subversive of the morals of society, if that is your opinion, it is then your bounden duty to find the defendants liable. But whilst that is the case, it is for the prosecution to make out the charge they have undertaken to establish. If you think they have

failed—if you think these are matters which may fairly be discussed—that the proper answer to them is by refuting them by argument and not by prosecution, the defendants are entitled to your verdict. Or if you have any doubt as to the effect of this work you are bound to bring them in not guilty. I would only say in conclusion, that whatever outrages decency, whatever tends to corrupt the morals of society, and especially the morals and purity of women—whatever tends to have that result is, when published, an offence against the law. But that offence like every other must be made out. If you think it is made out, if there is a conviction in your minds that though they have acted from a desire to do good, yet in your opinion they have done wrong, they have then brought themselves within the definition of the statute.

The jury at a quarter to one asked for leave to retire to consider their verdict.

His Lordship directed that they should do so.

They returned into court at twenty minutes past two, having been absent an hour and thirty-five minutes.

The LORD CHIEF JUSTICE, to the clerk of the court: You had better call over the names.

The CLERK: My Lord, there are twelve gentlemen in the box.

The LORD CHIEF JUSTICE: Very well.

The CLERK: Gentlemen, have you agreed upon your verdict?

The FOREMAN of the jury: We have.

The CLERK: Do you find the defendants guilty or not guilty of this charge?

The FOREMAN: We are unanimously of opinion that the book in question is calculated to deprave public morals, but at the same time we entirely exonerate the defendants from any corrupt motives in publishing it.

The LORD CHIEF JUSTICE: I am afraid, gentlemen I must direct you, on that finding, to return a verdict of guilty under this indictment against the defendants. As I have already explained to you the motive and intention of the defendants cannot, in this case, be taken into account at all. If you find that the book is calculated to corrupt and deprave public morals, you must, although you did not think they had a motive to corrupt public morality, yet as their intention to publish was deliberate, you must find that as it is calculated to do so they had a corrupt motive in publishing it. Of

course your exoneration of them will be taken into account at the proper time, but I am afraid you must find a verdict for the Crown.

The foreman bowed, and turned to his fellow jurymen, some of whom also in that way signified their acquiescence in his lordship's ruling, while the majority neither assented nor dissented.

The CLERK: Gentlemen, you all say that the defendants are guilty upon this indictment?

The foreman again bowed, but did not speak, and a verdict of guilty was entered upon the records of the court.

The LORD CHIEF JUSTICE (addressing defendants): Under these circumstances I will not pronounce sentence against you at present, but I shall order you to come up this day week, when the Court will be sitting in banco; you will then be heard, as you have given notice upon a point as to the legality of the indictment, you will be heard in exception to it upon any legal grounds you may urge on that day, and if that objection should be over-ruled, the circumstances under which the verdict has been pronounced against you will be taken into consideration, and you can urge anything you desire in mitigation. Until this day week then.

His lordship then rose.

Mr. BRADLAUGH: My lord, do I understand that till this day week we are at liberty to go on the same recognisances as before?

The LORD CHIEF JUSTICE: Oh yes, certainly.

The Court then rose, and a large crowd which had gathered outside to learn the result, heartily cheered the defendants as they passed to their carriage.

FIFTH DAY.

SITTINGS IN BANCO.

JUNE 28TH.

MR. BRADLAUGH and Mrs. Besant attended the Court of Queen's Bench this morning to receive judgment on a verdict which was found by a special jury on Thursday last. The judges were Lord Chief Justice Cockburn and Mr. Justice Mellor.

When the Court met the Lord Chief Justice said: Mr. Solicitor-General, do you move?

The Solicitor-General bowed in assent.

After several unopposed motions had been made and disposed of,

The Solicitor-General rose, and said: I move the Court for judgment in the case of the Queen against Bradlaugh and another. I understand there is some difficulty about the *postea*.

The LORD CHIEF JUSTICE: Where is the *postea?* It ought to have been made out and presented to the Court.

The SOLICITOR-GENERAL: My lord, there was some difficulty, as I understand, in regard to that matter, the Crown Office being unable to get it ready in time for the meeting of the Court.

The MASTER: The Crown Office has nothing to do with it; it is the duty of the Associate.

The LORD CHIEF JUSTICE: Yes; of course it is the duty of the solicitor for the prosecution to instruct the Associate to prepare the *postea*.

The SOLICITOR-GENERAL: I do not understand, my lord, that that is the practice of the Court. I have always understood that it was the duty of the Associate and not of the prosecution to produce the *postea*.

The LORD CHIEF JUSTICE: It is clearly the Solicitor's duty. I don't know how long it may be before you get it, and if you do not get it now it will be very inconvenient, as, after to-day, we do not sit in *banco*.

The SOLICITOR-GENERAL: I have not got the *postea* in court, but I understand it is being prepared.

The LORD CHIEF JUSTICE: I don't understand why it has not been prepared.

The SOLICITOR-GENERAL: My lord, we have taken steps to get it prepared, and I believe that at this moment it is being prepared.

The LORD CHIEF JUSTICE: Really, I must say that it is very careless on the part of the prosecution not to have had the *postea* in court.

The SOLICITOR-GENERAL: It is not the prosecutor's duty at all, it is the business of the Associate.

The LORD CHIEF JUSTICE: It is the business of the Associate to make it up after it has been applied for.

The SOLICITOR-GENERAL: I don't know when it was applied for.

The LORD CHIEF JUSTICE: Only this morning. It appears to me that that places us in a difficulty.

The SOLICITOR-GENERAL: My lord, I have never felt that difficulty, nor have I understood it to be the practice of the Court to demand it.

The LORD CHIEF JUSTICE: That is not so. It is the commonest thing in the world to have the *postea* produced.

The SOLICITOR-GENERAL: According to the ordinary practices, both here and elsewhere, it is not usual to apply to have the *postea* made out. I am told the practice is equally the same on the Crown side.

The LORD CHIEF JUSTICE: It is not so in criminal cases.

Mr. JUSTICE MELLOR: It is not so when there is an exchange to this Court.

The SOLICITOR-GENERAL: When a motion of this kind is made, after a removal by *certiorari*, it takes the usual course of a civil trial; and under these circumstances I should have understood that the *postea* would have been made up by the proper officers of the court.

Mr. JUSTICE MELLOR: It is not so made up.

The SOLICITOR-GENERAL: I would not contradict those who say so, but if anybody says that, I must confess it is an inconvenient practice. When once a case is moved by *certiorari* to this court, it becomes a civil trial, and I am

told by a solicitor of 40 years' experience that, in that case, the *postea* is made up by the Associate, as in a civil process, whether it is applied for or not.

The LORD CHIEF JUSTICE: All the materials in a case of this kind should have been here, and, if they are not here, it is your duty to have applied for them.

The SOLICITOR-GENERAL: I have always understood that the Associate must send the *postea*.

Mr. Justice MELLOR: When was the application made in this motion?

The SOLICITOR-GENERAL: It was made, at any rate, in time, but I do not know when.

The LORD CHIEF JUSTICE: It ought to be ready in court.

The SOLICITOR-GENERAL: I think it is assumed to be ready.

The LORD CHIEF JUSTICE: It is not assumed at all, Mr. Solicitor-General. The solicitors in this case should have asked the Master what was to be done.

The SOLICITOR-GENERAL: If that were so, there ought to have been no mistake about the thing, as a matter of course. According to practice, the Associate should have made up the record, and it is not at all usual for the prosecution to give notice for the requirement of such a record. The rule varies where there is no time fixed; but in this case it was perfectly well known when it would come on.

The LORD CHIEF JUSTICE: The Associate cannot be supposed to make up the *postea* until he gets notice.

The SOLICITOR-GENERAL: My lord, that is not the practice, I am told.

The LORD CHIEF JUSTICE: Do the defendants intend to move for a new trial or not?

The SOLICITOR-GENERAL: I don't know whether they do or do not.

Mr. BRADLAUGH: Yes; certainly we do. My lord, I have three propositions to submit to you. The first one is a motion to quash the indictment; the second is a motion for arresting judgment on the same ground; and the third is a motion for a new trial, which my co-defendant will make. I do not know, my lord, in what order these propositions should be taken, whether the first motion should be to quash the indictment, or whether I should make to your lordship a motion for arrest of judgment.

The LORD CHIEF JUSTICE: I was not aware, at the time,

what course the trial would take, or what would be the issue which would eventually go to the jury—whether their attention was to be directed to particular parts of the work upon which the prosecution relied, or whether these points were set out in the indictment.

Mr. BRADLAUGH: I did not state my objection fully to your lordship; but I asked if I should state the grounds on which I moved, and your lordship said "No."

The LORD CHIEF JUSTICE: I beg your pardon, you did state the grounds. You objected that those parts were not set out. If the Solicitor-General had relied upon any particular parts of the work, I should have thought it worth notice, and have explained it to the jury. I should have asked them whether that was well founded. But the argument of the Solicitor-General was not that—it was whether the whole work was not an offence against the law.

Mr. BRADLAUGH: With all respect to your lordship, I understood your lordship to put it that I was not then moving at the time I should have moved; and I did not press upon your lordship the grounds upon which, if I had been in time, I should have moved. I stated to you simply that I moved to quash the iudictment.

The LORD CHIEF JUSTICE: I declined to quash the indictment.

Mr. BRADLAUGH: I thought it was a refusal to hear the motion. If I had understood that you refused to quash the indictment, I should not have suggested to your lordship the grounds on which I felt entitled to move at *nisi prius*; but, on the contrary, I thought that your lordship said you could not hear the motion at all, and I understood your lordship to say that you would reserve the point to me.

The LORD CHIEF JUSTICE: So I have; but if you move for a new trial you must state the grounds for saying that the indictment is illegal, and you have a perfect right to do so.

Mr. BRADLAUGH: Quite so, my lord. Then I move to quash the indictment, or to arrest judgment on the ground that the indictment is for an obscene libel, and that the words supposed to be criminal in that libel ought to have been expressly specified in the indictment, and they are not specified in the indictment. In Archbold's "Criminal Practice," page 58 (18th edition), he says that "where words are the gist of the offence, they must be set forth with particularity in the indictment."

Mr. Justice MELLOR: That is, in a case of libel, it might be so.

Mr. BRADLAUGH: Very well, my lord. And in the case of the Queen against Sacheverell, which is reported in the 15th Howell, page 466, the Lord Chancellor put this question to the judges: "Whether by the law of England and the constant practice in the courts in all prosecutions by indictment, or information for crimes or misdemeanours, either by writing or by speaking, the particular words supposed to be criminal must not be expressly specified in such indictment or information?" Baron Lovell replied: "I have always taken it to be so, and by constant experience we have practised it so, that all words or writings which are supposed to be criminal ought to be expressly mentioned in the information or indictment."

The LORD CHIEF JUSTICE: Yes, I understand that to be so.

Mr. BRADLAUGH: Mr. Justice Dormer said, "I am of opinion that by the laws of England and constant practice in all prosecutions by indictment or information for crimes or misdemeanours in speaking or writing, the particular words supposed to be criminal ought to be specified in such indictment, or information in the Courts of Westminster." Baron Bury said, "I am of the same opinion with my brothers." Mr. Justice Tracy said, "I am of the same opinion." Mr. Justice Gould expresses precisely the same opinion, but he states it with a little more particularity. He says, "It is our practice in the Court of King's Bench, and we specify the words in the indictment, or it is cause of demurrer." Mr. Justice Blencove and Mr. Justice Powys express the same opinion.

The LORD CHIEF JUSTICE: Well, we take it to be so from all.

Mr. BRADLAUGH: My lord, the whole of the judges, thirteen in all, delivered the same opinion, except that some put it more elaborately than others. There is only one case which I have been able to find which in any way goes against us, and that is the case of the King *v.* Christopher Layer for high treason, and which you will find reported in the sixteenth volume of Howell, page 317; but in the case of the King *v.* Goldstein, which is reported in the third Broderick and Bingham, page 210, in a judgment referring to another matter, it was then declared that the words in the original libel must be set out. The same thing was put in

the case of Zenobia *v.* Axtell, which is reported in vol. six of the Term Reports, page 162; and I submit to your lordship that the setting out of the words in the indictment has been the constant practice in the courts. Folkard, on "The Law of Slander and Libel," says that the libellous matter must be set out in the indictment, and that care should be taken to express it correctly. On page 773, he gives the form for publishing and selling an obscene libel and there directs the passage to be set out. In Mr. Prentice's recent edition of Russell on Crimes, page 219, he says, "The libellous matter must be set out in the indictment, and the libel proved must appear to correspond with the statement of it in the indictment." And on page 252, he gives another illustration of the same contention. Archbold, in his book, on pleading in criminal cases, on page 808, says pretty nearly the same. He says distinctly, "that the libel itself must be produced in evidence, and must correspond in substance with the indictment." On page 803, he gives the form of an indictment, and in that form he specifies that the words to be relied upon ought to be set out. On page 806, he says that the indictment must contain the libellous passages, and that these must be set out correctly, and on page 806, he says that besides setting out the words there must be averments to support the indictment on those libellous passages. What I would submit to you, my lords, is this—that the necessity for that procedure becomes very clear. Broom, in his "Commentaries," says (vol. 4, page 408) that the indictment must have precise and sufficient certainty in order that the defendant may know what it is that he is called upon to answer. Our difficulty, my lord, is this, that it does not appear from the indictment under which we are charged, what we are precisely called upon to answer.

The Lord Chief Justice: The whole book is complained of, and you are called upon to answer that complaint.

Mr. Bradlaugh: Quite so, my lord; but we did not know when this prosecution commenced whether we had to answer for the argument of the whole or for the language of a part.

The Lord Chief Justice: Suppose that they had set out the whole of the book.

Mr. Bradlaugh: Then, my lord, I should have had nothing to say.

The Lord Chief Justice: But if that had been so, you would still have been in the same difficulty. It is a book

and you must assume that that means the whole of the book.

Mr. BRADLAUGH: No, my lord, because the difficulty here is that I did not know, at the commencement of these proceedings, and I do not know now after having been tried, and having listened to the address of the learned Solicitor-General, whether the point which makes this book criminal is the advocacy of particular checks to over-population, or whether it consists in the alleged obscenity of some language in which those particular checks are advocated.

The LORD CHIEF JUSTICE: Just so; that is a perfectly valid argument.

Mr. BRADLAUGH: My lord, supposing the advocacy to have been obscene in some points, or the language used to have been obscene, that would have been an issue definite and clear; but, even then, I should argue that the book as a whole, or the parts specified, ought to have been set out in the indictment at length.

The LORD CHIEF JUSTICE: Suppose it to be so, then you have a twofold objection. First, that the book is not obscene in its language, and, secondly, that if it is obscene at all, the thing that makes it so is the advocacy of practices that are obscene. In the argument the whole book, it is said, is open to the charge of obscenity.

Mr. BRADLAUGH: Then, my lord, I say that if that is the offence, it should appear on the face of the indictment I have to answer.

The LORD CHIEF JUSTICE: No doubt; so it is if the whole book is charged, and, if the whole ought to be set out.

Mr. BRADLAUGH: I submit, my lord, that the setting out of the title of the book is not setting out the obscene words which it is said constitute our offence, and which we have to answer here. I submit, my lord, that the whole of the cases, so far as I have from reports been able to gather them, either put the libel on the ground of obscenity of parts, or of the obscenity of whole books. My lord, in the case of the King against Curll, reported in the 17th of Howell, which is the first case of this character which was ever tried and decided, the libellous passages are set out at length on the face of the indictment. There was one other case prior to Curll which was partially tried, but for some reason or other it dropped through. The first case, however, of an obscene libel which was ever punished by the

Court was the case of Curll, and there, as I have said, the libellous parts of the book were set out. And, my lord, in almost every case that I can find since reported in the books, the parts of the books which have been considered libellous have been set out. The difficulty we are in, my lord, is this: that, as the indictment stands, we do not know whether our offence is for publishing obscene words or for propounding a theory which the jury now find to be within the penalty of the common law. There have been, undoubtedly, cases in which the statute has very much limited the practice as to setting out documents; and I shall put it to your lordship that where the statutory limitation in some cases has been made it is ample for the support of my contention that there is a strictness to be observed in all cases in which the statutory limitation has not been made, and that this must be so defined in this case. Our difficulty, my lord, is that a new kind of offence is manufactured here, and that deals with the second point which I will put before you, that through the quashing of the indictment, or the arresting of judgment, you will say whether there is any offence against the law made out against us. If our offence be the advocacy of checks to over-population, we say that that is an offence which has not hitherto been known to the common laws of England.

The Lord Chief Justice: That is matter for a new trial, but not for quashing the indictment.

M. Bradlaugh: It is, my lord, matter for a new trial, and on that point my co-defendant will address you.

The Lord Chief Justice: Do you move for a new trial or not?

Mr. Bradlaugh: Well, I will.

The Lord Chief Justice: You are here two defendants; unless you now ask for a new trial on the ground you have stated, you cannot afterwards do so.

Mr. Bradlaugh: Then, my lord, I ask for a new trial on the ground that the advocacy of checks to over-population does not constitute a libel within the common law. I do think, my lord, from the dictum of my Lord Mansfield in the case of Woodfall, that it would have been also a fair matter for the arrest of judgment, but I do not want to put it improperly to your lordship. I say that the common law on this matter is the common usage, and this common usage commenced with the case of the King against Curll, before which no offence of this character was known to the

common law at all. But at the same time, to be perfectly fair, I admit that it was before that time known to the ecclesiastical law. Since that period, however, the common usage for at least 100 years has been to discuss checks to over-population, without any sort of limitation against such discussion, nor has it been even hinted to be an offence against the law.

The LORD CHIEF JUSTICE: The difference is obvious. The offence clearly is in the suggestion itself. There are checks consistent with morality, and on the other hand there are checks inconsistent with morality, and the question here was, whether the proposal contained in this book for the use of certain checks to over-population was culpable or not. That was the matter for the jury to consider and determine, and they have done it.

Mr. BRADLAUGH: But they have not determined it; they had not even the power to determine it, so as to create a new offence.

The LORD CHIEF JUSTICE: It is not a new offence. It is an offence against law to publish anything inconsistent with public morality. Before the case of the King *v.* Curl there was no decision on this matter, but judges have held from that time to the present—and we must take it to be settled law—that you cannot publish a book which is inconsistent with public morals.

Mr. BRADLAUGH: With all submission, my lord, I will put it to you that Sir James Stephen, in his work of criminal law, page 505, in a note suggests that "A man may write with perfect decency of expression, and in complete good faith maintain doctrines as to marriage, the relation of the sexes, &c., which would be considered highly immoral by most people, and yet I think he would commit no crime." The obscene and the immoral are, in this wide sense, distinct from each other, and I understood the contention of the learned Solicitor-General to be that those checks were immoral because they might imply, and, in fact, did imply incitements to unchastity amongst unmarried people, and I submit that even if this were so, you could not convict us under this indictment.

The LORD CHIEF JUSTICE: As I understood the learned Solicitor-General, his contention was that the practice of such things amongst married people would have a demoralising effect, and would have a yet more demoralising effect amongst unmarried people by one of the restraints which now exist being removed.

Mr. BRADLAUGH: Even then, my lord, I should submit that this would not be an indictable misdemeanour.

The LORD CHIEF JUSTICE: What you argue, then, is that promiscuous intercourse might be lawfully advocated?

Mr. BRADLAUGH: I do not go so far as that, nor does it arise under the circumstances; but according to the case of the King *v.* Pearson, which is reported in Salkeld, page 382, —which goes to a length which this pamphlet does not— even supposing it had contained solicitations to unchastity, that would not have been an indictable offence.

The LORD CHIEF JUSTICE: Then, Mr. Bradlaugh, would you say that it is lawful to advocate promiscuous intercourse, or do you say that if a man publish a book recommending illicit intercourse that would not be an indictable offence?

Mr. BRADLAUGH: I do not go so far as that, and the case of the King *v.* Pearson is much stronger than I would be disposed to contend before your lordship. That case is reported in Salkeld, page 382. I should be personally inclined to regard the illustration which your lordship has just been kind enough to give to me as a fair illustration of a libellous writing. But here I contend that there is no such solicitation to unchastity, no violation of public morality, no outrage of good manners in the mere discussion of such a subject as this, or in the advocacy of checks to over-population, which the jury have found to be depraving and tending to corrupt public morals; and I say, my lord, that this verdict has so been found, condemning the advocacy of checks, against the common usage, for works advocating such checks have been allowed to be freely printed and openly circulated for nearly one hundred years, and moreover it seems to me that such advocacy is peculiarly moral and reasonable at the present time in this country. I think I shall be within your lordship's remembrance if I put it to the Court that so far as the mere language of the pamphlet is concerned, no fault can be found with it, if it is once conceded to me that the advocacy of checks is anywhere permissible, and if there is nothing immoral in the checks themselves. If that is so, I need not trouble to contend that the pamphlet is not in its language immoral, and so far I think I have said all that is necessary for the sake of meeting the argument which has been used against me here. I would ask simply, may the jury construe this book, because it advocates checks to the population, as coming within a con-

travention of those unwritten laws which are specially against the depraving of public morals? An advocacy of a particular class of check being, as I think, permissible, I am entitled to advocate such checks here, because clearly there would not be the slightest pretext, if Malthus may advocate the delay of marriage in order to check the overgrowth of population, for saying that I may not advocate scientific prudential checks for the same purpose; and therefore it cannot come within the scope of juries to judge and condemn a book on that ground. If the argument is fair in the mouth of the Solicitor-General that this case is to be raised into a precedent for condemning that for which there has up to this time been no precedent, I think I am entitled to say that we should look with very great disfavour upon such a mode of extending the law of the land, and I say further that, if your lordship allows this verdict of the jury to be permitted to stand, a new offence will be created—an offence which has hitherto been completely unknown to our law. In the case of the King *v.* Hicklin, we see that which I am contending for—*i.e.*, that if it is a subject which may be discussed at all, it cannot be discussed without to a certain extent producing authorities and quoting necessary facts. Now, I contend that the right to discuss checks is permissible, and that there is nothing in the pamphlet which is not necessary and legitimate to that discussion.

Mr. Justice MELLOR: Is it your contention that if the subject is one which may be discussed at all, it can be discussed without violating the law, if the manner in which you discuss it is found to have the tendency to corrupt the public morals?

Mr. BRADLAUGH: My lord, I am contending that the Population Question is one which may be fairly discussed, and for my right to produce scientific and medical authority in the discussion of that subject, and for the right to advocate checks which in themselves are not immoral, and to urge upon people the adoption of such checks to over-population; and even if we should have made a mistake by publishing a book containing a particular character of check which a jury declares to have an immoral tendency, unless we have done that which we have done with a wicked and corrupt motive, and with a bad intention, there is no pretence for saying that we have done anything to violate the law. Nor can it be said that in this book there is anything obscene arising from an exaggeration, indelicate allusion, or highly-coloured

statement of fact, and, therefore, I contend that you ought to pause before accepting this verdict at the hands of the jury and thus create a new offence for which your lordships might lawfully punish us. If there is any word regarding such an offence in the statutes of the country, we might be concluded under this indictment, but if there is no such word we can only be concluded by the common usage of the country.

The LORD CHIEF JUSTICE: There you are wrong—the common law of the country.

Mr. BRADLAUGH: An eminent judge, my lord, has put it that the common law of the country was made by the common usage of the country.

The LORD CHIEF JUSTICE: We have got a proposition of law to deal with here, and not that it is understood that we are to allow a usage, however common, to override the law.

Mr. BRADLAUGH: My lord, I bow, of course, to your lordship's doctrines. Some references were made to the work of Churchill, who in the case of some diseases thought it was permissible to advocate the procuring of premature delivery. Suppose that the jury were asked to construe its illegality, although there is no violation of good manners, the book of Churchill would be indictable in the same fashion.

The LORD CHIEF JUSTICE: We cannot suppose that any jury would be so foolish as to find that what a medical man may professionally recommend, in dealing with certain cases amongst his patients in the exercise of his judgment, in order to save life, might be construed into an offence against the law.

Mr. BRADLAUGH: I do not think, especially with the evidence of scientists on our side, that the jury should have come to the conclusion that the check which we advocate for the hindrance of our population is illegal, and yet they have so held. There are other grounds upon which I might urge upon your lordship, that we are entitled to a new trial, with which I shall not trouble the Court, because they are to be argued by my co-defendant, and I have no wish to take up the time of the Court unnecessarily. I have now stated the different points upon which I rely. It would have been easy for me to have gone into the matter at greater length. I would just add that I specially rely upon the first point which I submitted to your lordship.

Mrs. BESANT: I move, my lord, as my co-defendant has just done, to quash the indictment: in the first place, on the very ground put by the Lord Chief Justice—viz., that the

whole of the book is supposed to be in the indictment, and, therefore, that the whole of the book must be taken to be obscene.

The LORD CHIEF JUSTICE: No, no. You put it wrongly. Not the whole of the book, but the book as a whole, is obscene.

Mrs. BESANT: The book, as a whole, is to be taken as obscene. But your lordship drew the distinction between the checks that are advocated and those parts of the book which are not obscene, and I put it to your lordships that the jury in their verdict did not draw that distinction, and that from the verdict of the jury we have no means of knowing what parts of the book they condemn.

The LORD CHIEF JUSTICE: They condemn the whole of it.

Mrs. BESANT: They condemn the whole of it; and if I publish another pamphlet in which I should leave out those parts containing the advocacy of checks to population, that pamphlet would also be condemned, because the advocacy of the law of population is condemned by that verdict.

Mr. JUSTICE MELLOR: No.

Mrs. BESANT: My lord, should we not, by that verdict of the jury, know what it is that constitutes our offence?

The LORD CHIEF JUSTICE: Your offence is that of publishing such a book as has been declared to be obscene.

Mrs. BESANT: But, my lord, is it for advocating the checks to population that we are condemned?

The LORD CHIEF JUSTICE: I am bound to say that is the gist of the inquiry.

Mrs. BESANT: My lord, I feel that it is, but the jury did not say so.

The LORD CHIEF JUSTICE: I agree that the language of the book is not open to any particular objection, and if it had been a medical book it would have been still less objectionable. The question is, are you entitled to say that it is a medical work? When we come to the checks proposed, that was a question for the jury, and it was for them to say whether the proposals were such as ought to be practised at all, and without considering whether your motive was this or that, or that you published the book with this or that object, whether the book was one consistent with public morality or not. That was the issue, and it was determined against you.

Mrs. BESANT: When I come to the arguments for a new

trial I shall put it to you that a jury ought not to be permitted, without grave hesitation, to lay down the law on a question of ethics which has never yet been decided, and to decide that the practices recommended by Churchill were right as a recommendation to be made by a medical man, and that another recommendation which is made by another medical man — Dr. Knowlton — was wrong. Besides, there is this difference between the two recommendations, that in the first it is advocated under certain circumstances to destroy life, and in the second the recommendation is that there should be no necessity for destroying life at all. I will therefore move that the verdict entered on behalf of the Crown should really and truly have been entered for the defendants, on the ground that the verdict was a special verdict, and was really a verdict of not guilty. And I move for a new trial on the ground that the form of words used in the delivery of the verdict was self-contradictory, was utterly against the weight of evidence, and that when the verdict was brought in, it was recorded as a verdict of guilty by misdirection. I feel there might be a difficulty here in speaking of misdirection, were it not that I am practically appealing from the decision of the Lord Chief Justice at *Nisi Prius* to the Lord Chief Justice in *Banco*, and I am therefore sure of a patient hearing. The verdict as given, was: "We are of opinion that the book is calculated to deprave the public morals, but we entirely exonerate the defendants from any corrupt motive in publishing the book;" and in the indictment, one copy of which has been handed up to the Bench, we were charged with a wicked and corrupt motive.

The Lord Chief Justice: I did not so regard it.

Mrs. Besant: We are distinctly charged with having a corrupt intention, and with the object in the publication of the book of corrupting public morals. We are charged with having intended to have caused a corruption of public morals by having published an obscene book. However, my lord, I contend that the special verdict is a verdict of not guilty, because a corrupt intention is distinctly charged in the indictment, and the jury have specifically acquitted us of the corrupt intention. If the jury had returned a verdict of guilty, of course I should not have had the right to make this motion, for a verdict of guilty on the indictment would necessarily imply, or at least it would presuppose, a corrupt intention, and such a corrupt intention

must have been found to bring us in guilty. Where the jury, however, brought in a special verdict and particularly put the negative on the intention, in that case I contend that they have negatived a vital part of the indictment, and cannot bring us in guilty on the whole, the special verdict having specifically declared that we are not guilty of such a corrupt intention. I find that Lord Mansfield laid it down in the case of the King *v.* Woodfall, which is reported in Howell's State Trials, vol. 20, column 919, that this must be so. The verdict there was in the nature of a special verdict, although the phraseology used in favour of the accused was not so strong as that on which I am addressing your lordship. I find Lord Mansfield laid it down there: "That where an act in itself indifferent, if done with a particular intent, becomes criminal, there the intent must be proved and found; but where the act is in itself unlawful, as in this case, the proof of justification, or excuse, lies on the defendants, and in failure thereof, the law implies a criminal intent." I urge upon your lordships that we have not failed in proving our intention to be good, because the jury expressly exonerated us of any criminal intention, and I quote Lord Mansfield to show that where there is such an exoneration by the jury the verdict should be one of not guilty. I will urge further upon your lordships that where the act charged is indifferent—and in this case it surely is indifferent, because unless the intention is corrupt the book is not corrupt—the intent to corrupt must be proved: that on that ground also the verdict should be one of not guilty.

The Lord Chief Justice: I beg your pardon. It is found that the book is calculated to deprave public morals——

Mrs. Besant: Yes, my lord, to deprave public morals.

The Lord Chief Justice: And that being so I shall be obliged to hold that the publication of the book is contrary to law.

Mrs. Besant: When the indictment was drawn up there was no reason to suppose that a physiological treatise was illegal, and therefore the act was presumably an indifferent act.

The Lord Chief Justice: The person who publishes a work of the kind we are dealing with, and which is open to the objection found against it, must, whatever his intention, abide by the results of his act.

Mrs. BESANT: Where the act charged is not known to be unlawful, the defendant surely has the right to show that in the act itself there was a good intention; and I affirm that in this case we have succeeded in proving that good intention.

The LORD CHIEF JUSTICE: There is where you are mistaken in your law. You do an unlawful act, and you are bound to abide by the consequences. You cannot say, "I disobeyed the law, but I did so with a good intention." Your business is loyally to obey the law, and not to do something which violates it.

Mrs. BESANT: My lord, I should not have argued as I am doing if the jury had brought in a verdict of guilty. In that case I would have loyally acknowledged your lordship's proposition, and felt myself constrained to submit to the decision; but where they go out of their way to find a special verdict, I plead that it is not a verdict of guilty.

The LORD CHIEF JUSTICE: The answer to that is that on the part of this indictment which charges you with an unlawful offence, the jury have found you guilty. And if the part had never been written which charges the intention, I should have held that the indictment was good without it. It was not necessary to the validity of the verdict that the superfluous part should be found, and the indictment would have been good without it. If you publish a book which is calculated to deprave public morals, that is an offence against the law; and although, in the unnecessary and superfluous part of the indictment, there is no judgment against you, the primary matters not being objected to and being found guilty here, the verdict is a perfectly valid one.

Mrs. BESANT: Then, my lord, I must urge upon you that if the indictment is badly drawn——

The LORD CHIEF JUSTICE: It is not badly drawn if something is put in that might have been left out altogether. If it is useful enough for the purpose, the useful part is not corrupted by the useless part.

Mrs. BESANT: My lord, I argue that the corrupt intention is a vital part of the indictment.

The LORD CHIEF JUSTICE: Oh, if that is so, you can argue it.

Mrs. BESANT: I argue that it is so, my lord; and that being so, that vital part has been negatived by the jury, and, therefore, the verdict must fall to the ground. I say

that a good verdict required that the vital part should be found, and that the part which really is vital is shut out by the special verdict given ; and I will put it to you on the authority of Broom, who lays it down on page 41, vol. iv., that in an act which is criminal, the act must be such as affects and prejudices the public ; and, secondly, that the act must have proceeded from a guilty mind, and must have been done with criminal intent. And I urge upon your lordships that throughout the whole course of English law it has invariably been held to be so. Your lordship pointed out to the learned Solicitor-General that it would be a most strange anomaly if a defendant charged with the intention to vitiate and corrupt public morality was, notwithstanding being so charged, acquitted of such intent by the prosecution, and yet found guilty on the indictment. My lord, there is no such anomaly in English law, as I shall hope to show you. Right through the authorities I think your lordships will find that a malicious intent is necessary to the crime. If you take the case of homicide, the offence, whether it be murder or manslaughter, lies in the intention ; and if there was not such intention found or supposed, the charge could not be sustained. If the charge were one of murder, the negativing of the bad intention would make that verdict for murder fall to the ground. The man could be prosecuted after for manslaughter, I suppose, but not convicted of it there and then if the indictment were only one for murder.

The Lord Chief Justice : Oh, yes, he could.

Mrs. Besant : If there was a count for manslaughter in the indictment, my lord.

The Lord Chief Justice : Not necessarily An indictment for murder would include manslaughter, because the greater includes the less.

Mrs. Besant : Mr. Erskine, arguing in the case of the King *v.* John Cuthell, which is reported in Howell, vol. 27, cols. 661 and 662, puts it there that the indictment charging the bookseller with publishing a seditious libel must say that he did so with a malignant intention, and argues that if the bookseller had no such malignant intention he should not be brought in guilty. He puts the very point I have just urged : " Let it, for argument's sake, be taken that such an indictment [for malignantly publishing] may, even as the law stands, be properly maintained ; but, if this be so, why should not the indictment, in conformity with the universal

rules of pleading, charge such negligence by a distinct count? Upon what principle is a man who is guilty of one crime to be convicted, without a shadow of evidence, or in the teeth of all evidence, of another crime, greatly more heinous and totally different?" That is our own case; we are brought in by direction of the judge guilty on an indictment which charges us with a crime from which the jury expressly exonerated us. Erskine might have been pleading our case as he goes on; he says: "The Libel Act lies before me, which expressly and in terms directs that the trial of a libel shall be conducted like every other trial for any other crime; and that the jury shall decide, not upon the mere fact of printing or publishing, but upon the whole matter put in issue—*i.e.*, the publication of the libel with the intentions charged by the indictment. This is the rule by the Libel Act, and you, the jury, as well as the Court, are bound by it. What, then, does the present indictment charge? Does it charge merely that Mr. Cuthell published, or negligently published, the 'Reply to the Bishop of Llandaff'? No; it charges, 'that the defendant being a wicked and seditious person, and malignantly and traitorously intending to secure the invasion of Great Britain by the French, and to induce the people not to defend the country, had published,' &c., setting forth the book. This is the charge, and you must believe the whole complex proposition before the defendant can be legally convicted. No man can stand up to deny this in the teeth of the Libel Act, which reduces the question wholly to the intention, which ought to be a foundation for their verdict. Is your belief of negligence sufficient to condemn Mr. Cuthell upon this indictment, though you may discredit the criminal motive which is averred? The best way of trying that question is to find the negligence by a special verdict, and negative the motives as alleged by the indictment; do that and I am satisfied." He asks, in fact, for the very verdict which was given to us. He goes on to urge that a publisher, whose whole life disproves the charge, cannot, "by virtue of an abstract legal proposition," be brought in guilty of wicked intent. "I positively deny," he says, "such a doctrine, and I am sure that no judge ever risked his character with the public by delivering it as law from the Bench. The judges may have been bound at Nisi Prius, as I admit they are, to decide according to the current decisions. I will meet my learned friend, the Attorney-General, in the

Lords' House of Parliament on that question, if you, the jury, will assist me with the fact to raise it by finding as a special verdict—'That the book, if you please, was a libel —that Mr. Cuthell, the defendant, published it; but that he published it from negligence and inadvertency, without the motives charged by the indictment.'" My lords, Lord Erskine did not even ask for a verdict such as ours, a verdict exonerating us from all fault; and he goes on: "If you, gentlemen of the jury, will find such a verdict, I will consent never to re-enter Westminster Hall again, if one judge out of the twelve will, upon a writ of error, pronounce judgment for the Crown." That contention, my lord, has been sustained in many cases. In the case of the King *v.* W. Owen, which you will find reported in the 18th vol. of Howell, it was argued that you must find the intention before you can find a verdict of guilty. Mr. Pratt, afterwards Lord Camden, says (column 1227): —"To show you how necessary it is to prove the intention; if there is an indictment preferred against a man for an assault, with an intention to ravish, the intention must be proved, or else the jury cannot find him guilty. The same of an assault, with an intention to kill, if the intention is not proved he must be acquitted. If he kills, and the intention is not proved—that is, if it is not proved that he killed premeditatedly, and of forethought—it is but manslaughter. Therefore, in the case before us, if that part of the information is not proved, that he published maliciously, &c., you must acquit him." Erskine, in another trial, pointed out that he had argued against Lord Mansfield on this ground, and that the legislature, by statute, had maintained his contention. You will also find that, in the case of the King *v.* James Lambert, Perry, and Gray, which is reported in the 22nd vol. of Howell, column 1019, that the verdict there given was "Guilty of publishing, but with no malicious intent." In the case of the King *v.* Daniel Isaac Eaton the same kind of verdict was returned. In Howell, vol. 22, column 780, the verdict is given :—"We find the defendant guilty of publishing, but not with a criminal intention." In that case the counsel for the defendant said that was a verdict of not guilty, and that the verdict must be entered so. The Recorder said that the verdict must be entered as the jury gave it, and when he was going to explain to the jury, the counsel said :—"I contend that the verdict of the jury is given, and that it is complete and irrevocable;" and he

urged that it was in fact a verdict of acquittal in the form of a special verdict. The prisoner was let out on bail, and the question as to the meaning of the verdict was referred to the twelve judges, and appears never to have been decided. The man was taken up on another indictment to the Court of King's Bench, where he was tried for practically the same offence. There the verdict given was one of "Guilty of publishing." The Attorney-General, who afterwards became Lord Eldon, moved the Court of Queen's Bench that the verdict should be entered as one of guilty, but he never took any further action, and the whole trial dropped to the ground. The verdict given in the case of Eaton was given against a hostile summing-up, instead of, as in our case, one which was perfectly fair and impartial right through. In spite, however, of that the verdict was not accepted as one of guilty. It stood on the record as a special verdict, and on its first delivery there was a new trial.

Mr. JUSTICE MELLOR: What do you say the precise terms were which the jury delivered in this case.

Mrs. BESANT: "We are of opinion that the book is calculated to deprave public morality, but we entirely exonerate the defendants from any corrupt motive in publishing the book."

Mr. JUSTICE MELLOR: Well, what happened then?

The LORD CHIEF JUSTICE: I told the jury it being found that the publication before them was a publication of the defendants, if they were of opinion that the publication was contrary to public morals, and if its tendency was to deprave, then the question of intention was not one of which they might take into account. The want of evil intention might be considered in the question of punishment. But a person that has been intentionally the publisher of a work which the jury found was contrary to public morals was guilty of the offence charged. Therefore the jury found a verdict of guilty.

Mrs. BESANT: I urge, with all possible submission to this Court and with every respect to the judge who gave the direction, that the special verdict of the jury, by all precedent, ought to have been put on record.

The LORD CHIEF JUSTICE: You cannot argue so. It must either be a verdict of guilty or not guilty. It is open to you to argue that I ought to have directed the jury otherwise, but you must have, in criminal cases, a verdict of guilty or not guilty.

Mrs. BESANT: Such a verdict as this has been entered, my lord, as these cases show.

The LORD CHIEF JUSTICE: If there was nothing in the verdict which was favourable to the book, then I must put it to you that there could not, in the end, be a verdict of anything else but guilty.

Mr. Justice MELLOR: If the verdict of the jury acquitted the defendants of matter essential to the offence, the verdict should be one of not guilty, but that depends upon the previous question, "What did constitute the elements of the offence?"

Mrs. BESANT: Quite so, my lord.

Mr. Justice MELLOR: I also think that the direction of the judge was perfectly unimpeachable. The intention was the publication of the book, and the part of the indictment which laid the intention was not proved; and, on the other hand, the intention to publish was not disproved. But the intention was to publish the book, and if the book itself be a book having the tendency to corrupt public morals, although the defendants have no corrupt intention, the publication itself is an offence, and, as such, punishable, and whatever the intention was, the publishing is no less an offence, the book being of the character found. Besides you intended to circulate, and in circulating the book you are doing an overt act, and the judge directed very rightly, I think. That is really the essence of the matter.

Mrs. BESANT: I am afraid I shall be obliged to press upon your lordships that, as the indictment stands, we have been found guilty of an intention to corrupt, in the words of the indictment itself, and it is not quite fair when that is distinctly done away with that the verdict should stand as a verdict of guilty on that indictment, although no such intention as is alleged is found.

The LORD CHIEF JUSTICE: That is as far as you are morally concerned. The jury have acquitted you of any corrupt intention.

Mrs. BESANT: And, my lords, having done so, can there be a verdict of guilty? The verdict of guilty will be recorded on that indictment, and there will be no record of the acquittal of evil motive.

Mr. JUSTICE MELLOR: You are found guilty of an offence against the law.

Mrs. BESANT: In the cases of Lambert and Eaton, in both of which there was the same verdict as that returned

here, and in all the cases, without one exception, so far as I know, when it was moved that the verdicts be set aside, a new trial was granted. There was one case where the verdict was one of "guilty of publishing only." That was the case of Woodfall, and there, by an appeal to the House of Lords, a decision for a new trial was given. Lord Chief Justice Mansfield delivered the judgment, and he said that the word "only" entirely vitiated the verdict: "It is impossible to say with certainty what the jury really did mean; probably they had different meanings. If they could possibly mean that which is expressed would acquit the defendant, he ought not to be concluded by this verdict. It is possible some of them might mean not to find the whole sense and explanation put upon the paper by the inuendoes in the information. If a doubt arises from an ambiguous and unusual word in the verdict, the Court ought to lean in favour of a *venire de novo.* We are under the less difficulty, because, in favour of a defendant, though the verdict be full, the Court may grant a new trial. And we are all of opinion, upon the whole of the case, that there should be a *venire de novo.*"

Mr. Justice Mellor: There is no doubt as to what the jury intended in your case. They intended to find that the book was one which had a tendency to corrupt public morals.

Mrs. Besant: And yet they found that we had no such intention to corrupt, which, I venture to say, is a contradiction of terms.

Mr. Justice Mellor: You must not confound corrupt intention with intentions of a moral quality.

Mrs. Besant: It was presumably a case of malicious and corrupt intent when a book was alleged to be dangerous to the State, and yet, as I have shown, where the verdict was of this character, the Court granted a new trial on the ground of the ambiguity of the verdict returned. I have, I think, therefore, the right to ask your lordships, seeing that the jury were undecided for an hour and thirty-five minutes, and that, at last, they brought in a verdict acquitting us of all intention to corrupt, to grant us a new trial. It is not contended that the book contains language not proper in a medical book; and it is altogether a case of such difficulty that I think we ought to have a new trial, and so have the opportunity of arguing the case once more. Especially is that reasonable when so many cases are found where special

verdicts have resulted in new trials, and I trust that this Court will not make the new precedent of pressing against a defendant, where a verdict such as this has been given. If it is maintained by this Court that our demand for a new trial should not be allowed, a new law will have been made by the verdict of the jury, because the offence of advocating checks upon over-population was not known to the law until that verdict was given; and I will venture to urge that, if the verdict be sustained as a verdict of guilty, it will be maintaining a verdict of guilt of opinion, and not a verdict of guilt of act; and, however confident the jury may be that their verdict is right, it should not be allowed that they are a competent tribunal to judge of the character of opinions; they should have no power to bring the holders of such opinions, whether the opinions be right or wrong, within the reach of the criminal law. If you do that you will be acting in a most high-handed way, and introducing a precedent of a most dangerous character. You will be giving the right to a jury of stopping the discussion of any question on which they disagree with the prisoner, and to maintain that verdict in this Court will be to bring a large number of people within the reach of the law, because they come before a jury whose opinions happen to disagree with those which they hold.

The Lord Chief Justice: If you put that as a matter of law, I agree that it would be very unfair to create such a precedent, but I doubt whether this verdict does so.

Mrs. Besant: I contend that it does, my lord.

The Lord Chief Justice: You both concurred with the remark of the Solicitor-General, that this was a matter entirely for the jury.

Mrs. Besant: That is very true, my lord.

The Lord Chief Justice: It is not a question for the judge, but eminently for the jury; but now you say, although on the trial it was entirely for the jury, that because the verdict happens to be against you it should not be allowed to stand.

Mrs. Besant: No, my lord, I do not say that. I say that the verdict ought to be set aside because it is self-contradictory, and also because the decision of the jury was given, your lordship says, not against the language of the book, which they might fairly judge, but against the advocacy of preventive checks to population—a question of ethics which, I submit, they are not competent to decide. I

acknowledge that their verdict was supreme in the court below, but many verdicts have been set aside, and there is a right of appeal against verdicts given by juries.

The LORD CHIEF JUSTICE: No doubt; but it was a matter entirely and eminently for the jury, entirely within their cognizance, and the Court cannot say that the jury have gone wrong. Why are we to take upon ourselves to say, then, that their verdict should be set aside?

Mrs. BESANT: They did not bring in a verdict of guilty, my lord.

The LORD CHIEF JUSTICE: They did, indeed. They brought in the verdict they intended. They said, our opinion is that the book is corrupt, but we do not think the intention of the defendants in publishing the book is corrupt, direct us what to do. And I directed them that if they found the book to be of that character the intention was not for them, and that the verdict was one of guilty.

Mrs. BESANT: My lord, I will leave it, then, upon that point.

The LORD CHIEF JUSTICE: They did not know how the law would affect the case under the special circumstances.

Mrs. BESANT: This verdict, I think, is of so doubtful a character that it ought to be taken as ground for a new trial.

The LORD CHIEF JUSTICE: Suppose another jury had sat upon the case, and that they said the book is not one that ought to be published, but we think the defendants published it with the motive that they thought they were acting for the good of the people, or that they published it in ignorance.

Mrs. BESANT: My lord, that happened in the case of the prosecution of the publisher of Paine, and after the second expression of opinion the prosecution dropped, and the right to publish the works became admitted, and they are now openly sold. A verdict of this kind has, many times, been made the ground of a new trial before, and I trust you will think it a ground for ordering a new trial now. I simply leave that for your lordships' decision.

The LORD CHIEF JUSTICE: Do you wish to add anything on the subject of the indictment now, Mr. Solicitor-General?

The SOLICITOR-GENERAL: I would not have been sorry if the defendant had not quoted the case of Dr. Sacheverell. The decision of the House of Lords was, that it was not necessary to set out the particular words upon the face of an indictment, after the opinion of the judges was known.

In a note appended to the case there is a reference to the case of Layer, where the whole matter was brought up and discussed. It is to be found reported in Howell's State Trials, volume xvi., where it was contended that the matter that was charged was treason, and the act of publishing ought to have been set out in the indictment. It was decided that the opinions given in the case of Sacheverell were wrong. That is stated in the note to the passage in the report which was quoted by the defendant.

The LORD CHIEF JUSTICE: The difficulty I have, and my learned brother concurs, it may well be said that the matter relied upon by the prosecution as libellous should be set out in the indictment in order to enable the defendant to demur. He might say we admit the facts; we admit the publication; but we deny that it is libellous matter, and we challenge the decision of the Court upon that. He may raise it when this matter is brought before the Court, and say that it is not libellous.

The SOLICITOR-GENERAL: I submit that he could not do so in this particular case. I am anxious to call your attention to the fact that the words said to be libellous are used in two different senses, and where it consists of obscene language, it is a nuisance and an offence against public morality. One distinction which will strike you is, that in an indictment for an obscene libel, which is a nuisance, he may urge that it is truthfully and plainly uttered; that was the defence made at the Sessions, and it is the observation and arguments that are made now.

The LORD CHIEF JUSTICE: I do not know that.

The SOLICITOR-GENERAL: What we say is, that all libellous matter is calculated to injure public morality—and in this particular case it consists of printed words—and that it would be equally obscene if it had consisted in a representation by a picture.

The LORD CHIEF JUSTICE: So we might have a form of line in the shape of figures instead of words.

The SOLICITOR-GENERAL: No doubt; but observe what we would come to if the contention were carried out. Could it be said that an indictment for an obscene libel consisting of a picture, the picture itself should be described, and not only the figures themselves, but the particular indecency which the figures suggest, should be fully set out. I am not aware that the question has ever been before the Courts in England, but it has been twice before the Courts

in America. But I argue that this matter should be decided by common sense. Whether the illustration is contrary to public morals, or whether it is described as a printed book, it is sufficient notice to the defendant to give its title, and, whether the indictment charges the whole of the book or not, to call attention to matters which will be proved on the hearing of the charge.

The Lord Chief Justice: What you rely upon was not the particular tendency of the work, but upon particular passages charged as obscene and indecent. Is a man to go through the whole book to ascertain what passages you may mean?

The Solicitor-General: If the whole book treated of is not indicted, but if the book as a whole is charged, one of two things would happen—either the whole of it would have to appear upon the records, or it would be sufficient to simply call it an obscene book. It cannot be contended that the whole of a book should be so set out—in this case the book we are dealing with consists of 47 pages, but it might be 447, then it would seem to be bringing the administration of that part of the practice of our law to ridicule—to say that the Court must have the whole of the matter which may be complained of, and which might be of the most offensive character, perpetuated upon its records. There are books which one knows to be of the most indecent possible character, and will it be said that all these books should become public, by being placed upon the official records of this court?

The Lord Chief Justice: I remember that in the indictment against Wilkes which I recently had occasion to look up, and which was for publishing and circulating indecent matter, that the notice of the book was not considered enough, but the whole of the indecent lines are fully set out.

The Solicitor-General: Yes, my lord, but that was before the passing of Fox's Libel Act, and up to that time that might have been the recognized practice. At that time it was held that libel or no libel was the question for the Court to decide. Then it was not a question for the jury—the only question of fact being that of publication. At that time it was intelligible enough that upon the records should appear that which constituted the subject of the offence, for the Court had to say whether it was libellous or not.

The Lord Chief Justice: This course might take away

from the defendant the right to demur. The defendant might say: I admit I published the book, but it is not a libel. You may say that it is a nuisance against public morals. I do not agree to that, and I want to see the matter which is to be brought to the knowledge of the Court for its decision, because I deny that it amounts to a libel.

The SOLICITOR-GENERAL: That is a question which, in the present state of the law, the Court could never determine. It is a question entirely for the jury. That, in my opinion, is one reason why the matter in contest need not be set forth in length upon the indictment. The Courts now have no right to say what is libel, or what is not.

The LORD CHIEF JUSTICE: That is for the prosecution, not for the defendant, to contend. Suppose the defendant were to say, I do not desire to have the verdict of the jury. I take my stand upon the law, and say that upon the face of the thing it is no libel.

The SOLICITOR-GENERAL: I submit to your lordship that the Court could not decide that question; it would be exclusively a question for the jury to decide.

The LORD CHIEF JUSTICE: If once the case comes to the hearing, then it becomes a matter for a jury, and a jury only. But if he takes the preliminary objection, you cannot avoid meeting it.

The SOLICITOR-GENERAL: The answer to that, my lord, would be, if it was a question of demurrer, that it is not a matter for the Court to decide.

The LORD CHIEF JUSTICE: If the defendant says so, and I do not see why he should not, the difficulty would then arise.

The SOLICITOR-GENERAL: At the time I am referring to my lord, the judges had all held, as a matter of law and practice, that it was for the Court and the Legislature combined to declare what was the issue that should go to the jury.

The LORD CHIEF JUSTICE: I do not care who has asserted these opinions: I venture to say, in my humble judgment, that it was a most preposterous and tyrannical law.

The SOLICITOR-GENERAL: This precise question has come before the Courts in America, and they have held that the indecent matter in the case of "The Commonwealth *against* Peter Holmes," which you will find in the 17th

Massachusetts Reports, the defendant was prosecuted for an obscene libel, and was indicted at the Circuit Court charged with circulating the "Memoirs of a Woman of Pleasure," and publishing the same book, the same objection was made there that is made here. It was contended that the obscene matter ought to have been set out in the indictment. Chief Justice Parker says that where the charge is for publishing an obscene book, it never can be required that the whole of the obscene book or picture should be displayed upon the records of the Court, This would be to require that the public records should give prominence and notoriety to the obscene libels in order to punish the defendant. This was the state of the law up to the time that the prosecution of the Queen *v.* O'Connell reversed it.

Mr. Justice Mellor: Are you aware of any case in England where there is a conviction for libel contained in any book or newspaper in which the libel has not been fully set out?

The Solicitor-General: This book was indicted at Bristol, but I am not aware that any book has been indicted in this particular form till then. That is very recent, and that it has been indicted in this form is certain, and the person who drew up this indictment drew it up from that precedent. Both here and at the Old Bailey that has been done.

The Lord Chief Justice: What is the other case to which you refer? You say there is another case?

The Solicitor-General: The first is the Commonwealth *against* Sharples and Others, and the case reported in vol. 2 of Sargerton and Rawle in the Pennsylvania Court. There the indictment was for exhibiting an indecent picture, and the particular objection taken was that it was not obscene. That was the very form of the objection which your lordship put to me just now. It was said by the defendant that it must set out distinctly, so that he might prepare his defence, and that the Court might know precisely the charge it had to try. Then follows the argument upon that subject. Chief Justice Tilman delivers the judgment of the Court. The second reason urged, he says, "is that the picture is not sufficiently described. The indictment describes the position of the figures; if necessary the jury will judge from the description whether it is sufficient or not. I am of opinion that it is sufficient." That was stated when the Court was sitting *in banco*. Mr. Justice Yates

and Mr. Justice Brackenbridge were of a similar opinion. These are the only cases which I can find bearing upon the point. There is no authority in our own courts where a precedent of the same kind is to be found. In Dearsley, page 64, Queen *v.* Dugdale, is reported, and that is the only English case that bears in any way on this particular point of law. In that case the defendant was indicted for having these works in his possession for the purpose of distributing, and in his business libels had been printed for the purposes of circulation, but the parts held by the whole Court to be libels had not been set out on the indictment, the only allegation being that, in printing, he had done so with the intention of publishing obscene libels.

The LORD CHIEF JUSTICE: The exception taken there was that the libels were not set out.

The SOLICITOR-GENERAL: I cannot find that that point appears to have been suggested.

The LORD CHIEF JUSTICE: Then it is not a precedent.

The SOLICITOR-GENERAL: All that one can say was that it was a discussion upon a point of error, and that it was before Lord Campbell that the case was originally tried at the Middlesex Sessions, and brought here upon a writ of error. The case was argued before Lords Campbell, Cole, and Crompton, and they gave judgment upon the question, whether this nuisance disclosed an offence in point of law.

The LORD CHIEF JUSTICE: Well?

The SOLICITOR-GENERAL: That appears to be the objection urged, and coming as the case did before such a Court, it seems strange that the objection raised in this case was not urged by the counsel that were engaged in it.

The LORD CHIEF JUSTICE: On a point of error you can only deal with the objection raised.

The SOLICITOR-GENERAL: And I say, my lord, that it is too late to raise any objection now, for I take it that the defendants are in the same position now as they were before the trial, for it would have been too late to have raised it even then. It should have been raised by demurrer. I say it was not competent for him to have raised the question as to demurrer at the beginning of the trial, though if the contention was good then, it is good now. Issue was joined, and the pleadings proceeded, and even if he had applied in time to quash the indictment, the universal usage is that the Court will not quash an indictment for defects, but requires that that shall be taken by demurrer.

The LORD CHIEF JUSTICE: It may be taken on a motion of arrest of judgment.

The SOLICITOR-GENERAL: But if the Court had held that the intent was proved, and if it was an averment improperly made, your lordship must have directed the jury to find the defendants guilty, unless the allegation which was improperly made, was protested against at the trial. It is upon the Queen *v.* Robert Goldsmith, where the indictment charged overt acts and false pretence, without setting out the false pretence, that the motion in arrest of judgment was too late. You cannot make a motion of that kind on trial which ought to have been taken on demurrer. It is an indecent book, and the jury have found it to be so. If this is so, then the case of the Queen *v.* Dugdale becomes a distinct authority, especially as the specific objection was not in the higher court. If there was error upon the face of it, the Court could then have taken notice of it, although I think, however, as I have said, that coming before such a Court as that, the question would have been raised. It would produce great scandal to set out the words in an indictment, and would be putting upon public record such obscene books as those that are sold in Holywell Street, and yet that must be done if the objection is valid.

The LORD CHIEF JUSTICE: Where do you find authority for saying that? The law applicable to offences by libel seems to act in this way.

Mr. Justice MELLOR: I cannot find any reference to setting out words. It was a question whether it was an offence to have such works for publication, and I cannot find anything in the case upon the point you are arguing.

The SOLICITOR-GENERAL: In the case of Dugdale, the point was not decided.

The LORD CHIEF JUSTICE: Nor does it appear to be present in the minds of the counsel.

The SOLICITOR-GENERAL: It was argued by able counsel, and the point is not raised. It was raised in the American courts.

The LORD CHIEF JUSTICE: Whose decisions are always to be highly respected by us.

Mr. Justice MELLOR: The offence was that it was a libel affecting the public, and not individuals.

The SOLICITOR-GENERAL: Just so, and that is the very question that is raised here, and the Courts both gave judgment that the books and picture were against public morality.

It was held that it was not necessary that these should be set out on the face of the indictment or the records of the court.

Mr. MEAD: I should like to add a word or two to what has been said by the Solicitor-General. I contend that this is not a libel in the technical sense of the word; and if it is so at all, it is so only in common parlance. If your lordship takes a dictionary, you will find that two meanings are given. The first, its corrupt sense, as something in the nature of a defamatory statement; secondly, it is described as a small book. Its primary meaning is taken from the Latin word *libellus*, and in that sense it is taken in the Ecclesiastical Courts of Scotland. It is used here in its primary sense, and it is not necessary, in framing an indictment, to use the word libel at all; and it is so understood by Archibald.

The LORD CHIEF JUSTICE: They are charged with selling a libel.

Mr. MEAD: It is used here merely in its primary sense.

The LORD CHIEF JUSTICE: What do you mean by its primary sense?

Mr. MEAD: That it is merely a small book.

The LORD CHIEF JUSTICE: That is not the sense of libel in English law. It may be a very big book. The bigger the book, the bigger the libel. (Laughter.)

Mr. MEAD: It comes from the word *libellus*.

The LORD CHIEF JUSTICE: We all know that; but in English law a libel is not a little book.

Mr. MEAD: In Archibald the word "published" is not used, nor is the word "libel."

The LORD CHIEF JUSTICE: Here it is used, and in our Courts, and has always been treated so.

Mr. MEAD: I contend that it is not a libel; and in the case of The King *against* Sedley, it is so put expressly, and the argument that it is a libel is not applicable to the present case. In the 14th and 15th Vic., cap. 100, sec. 29, certain principles are made applicable, as in common law misdemeanours; and one of the words is that the book should be obscene, and I contend that the word libel need not be used.

Mr. BRADLAUGH: I regret that the learned Solicitor-General thought right to represent me as having omitted to refer your lordships to the case of Christopher Layer,

because the decision was hostile to me. I thought that I have stated precisely where it could be found, and that it was a case of high treason.

Mr. Justice Mellor: You referred to it in general terms.

Mr. Bradlaugh: I am afraid that the Solicitor-General and myself must have different reports both of the case of Layer and that of Sacheverell, for it is impossible to imagine that any one in his high position would misrepresent, and it is almost as difficult to comprehend how a gentleman of his ability can have misunderstood. The Solicitor-General stated that the decisions of the judges upon which I relied for a favourable answer to my motion had all been over-ruled by the House of Lords. This is utterly the reverse of the case. The trial of Sacheverell was an impeachment by Parliament, and the decision of the Lords in no sense over-ruled or even questioned the dicta of the judges who were all agreed "that by the laws of England and constant practice in all prosecutions by indictment or information for crimes or misdemeanors in writing or speaking, the particular words supposed to be criminal ought to be specified in the indictment or information;" after hearing the judges the House of Lords resolved that the practice in indictments did not apply to parliamentary procedure. The words are, 15 Howell, p. 467: "It is resolved by the Lords, spiritual and temporal, in Parliament assembled, that by the law and usage of Parliament in prosecutions by impeachments for high crimes and misdemeanours, by writing or speaking, the particular words supposed to be criminal are not necessary to be expressly specified in such impeachment." The words of the House of Lords' decision are expressly limited to their own parliamentary practice, and do not in the most remote degree overrule the solemn opinions of the judges; indeed the Lord Chancellor told Sacheverell, p. 473, "the answer of the judges which related only to the course used in indictments and information does not in the least affect the case." In the case, too, of Layer, my reading of it is very different from that of the Solicitor-General. I have read the case with special care, and, with the exception of the judgment of Mr. Justice Eyre, I cannot find a single word to justify the view of the case given by the learned Solicitor-General; so far from all the judges agreeing to reverse the opinions in Sacheverell's case, Mr. Justice Powys shows that there was a clear distinguishment in the case of treason. No doubt Justice

Eyre is strong against me, but Layer was tried when party feeling ran high as to the rights of the House of Hanover as against the Stuarts, and he is only one judge against all the others. I quite admit that the note in Sacheverell's case is as represented by the Solicitor-General, but the note is utterly incorrect, as notes very often are, if made by those who have no special responsibility. The difficulty in regard to the American cases is that I have not had the advantage of reading them, and can hardly judge whether the Solicitor-General has fairly gathered their effect. I ask your lordships to dismiss from your minds one of the American cases that has been quoted, because it refers to a print, and not to a book. I do not and will not contend that the same argument should be applied to paintings or prints as I seek to apply here. I contend that the decision and practice of the court is specific as to the words spoken or written being set out. I ask your lordships to dismiss from your minds one of the two cases which have been referred to. In the first case my difficulty is that, according to the learned Solicitor-General—and I have no doubt that he has given the fullest information—there are two counts—the first count for publishing prints and the second count for publishing books. Well, without examination of the case, I cannot tell how much of the decision related to the print, how much to the book, or whether it may be correctly apprehended by the learned Solicitor-General, or with what correctness he has represented it, or whether he may be as mistaken in this case as I have found he has been mistaken in his views on the Sacheverell case. With reference to the Queen *against* Dugdale, allow me to say that it has nothing whatever to do with this case. There one count was objected to that it was no offence to have obscene works in defendant's possession with intent to utter. The errors specially assigned do not raise the point I now make; surely it is not because the learned counsel for the defendant in that case might have overlooked the point, that I am to be damnified by some decision which was not given. This is really putting the case a little too much against me. I assume the learned Solicitor-General only brought in the case of the Queen *against* Dugdale because the other English decisions were so much in my favour that it was necessary to do something. Again, the learned Solicitor-General suggests that my motion is too late. Now, I will quote to you the 14th and 15th Victoria, chap. 100

sec. 25, which says that every objection by demurrer to quash the indictment shall be taken before the jury shall be sworn. Then the learned Solicitor-General comes to the case of the Queen *v.* Goldsmith ; and here again I was utterly surprised that my apprehension of the case should have been so entirely different from that of the learned Solicitor-General. I rely for making out the right to ask you to quash the conviction upon the decision of Lord Chief Justice Bovill in that case, who, in deciding against the application, says : " If the judge thought the objection clearly a good one he might have quashed the indictment, and that would have left the prisoner open to another indictment. He was, however, not bound to quash the indictment, bad as it might be ; and further, he might think the point a doubtful one, and, if doubtful, he might leave the party to his writ of error or reserve the point. In this case the Deputy Recorder did not quash the indictment, but reserved the point not as to whether he ought to quash, but as to whether the count was a good one or not." I submit, my lord, that the Queen *v.* Goldsmith is distinctly in my favour, and I seek to have this point put before you as clearly as possible. I avow that, probably, though from my utter unacquaintance with the exigencies of special pleading, I utterly failed to understand how Fox's Act could be any impediment to me, and the 33rd George III., chapter 60, does not deprive me of any rights in this Court to ask whether there is, in law, any libel. I understand that the express wording of the statute is : " it shall be lawful for the defendant to move in arrest of judgment :" and that there is no sort of restriction put upon the defendant. It is an additional privilege or right given to the defendants by statute, and not in any sort of fashion a restriction of any rights they may have had before. I submit, my lord, that we are in this position. Instead of putting your lordships to a long trial and a *nisi prius* argument, as has been the case, if we had got the reports in the record, we might have demurred. There was a doubt in our minds as to whether there was any offence in law. If we had had the material on the face of the indictment, we should have taken the easiest and quickest steps to settle the matter. In no sense have I delayed the procedure, for the very moment I got the writ of *certiorari* I proceeded at once to give notice and get a day named. The practical effect of this would be that the Solicitor-General says the Crown may shut out of the record

what is material for the Court to know, for I will not condescend to discuss whether your lordships would have the right on a demurrer to say whether the indictment raised the offence at all or not. I should not have thought that a gentleman with so long an experience at the bar would have been capable of maintaining a proposition so outrageous. Surely the Court is the supreme judge as to whether the record puts any difficulty in the way of the defence ; and if the difficulty which he has raised with regard to the demurrer be well-founded, my difficulty would be this, that in demurring to the indictment without knowing the point, I should be laying myself open to a wild fight in the dark.

The Lord Chief Justice : No, that was not it. The Solicitor-General suggests that you might have demurred on this point—on the ground that the indictment did not set out the words.

Mr. Bradlaugh : I suppose I still have a right to move for the quashing of the indictment on the same ground?

The Lord Chief Justice : No, no.

Mr. Bradlaugh : Well, in that alternative I shall move for an arrest of judgment. If I am not right in my motion to quash the indictment I am right in a motion for an arrest of judgment ; if the argument on the one ground fails, that on the other must go. I do not know that I need trouble your lordship with the sort of appeal made to the feelings of the Court as to whether or not good sense required that the words of the indictment should be set out. I submit that it is admitted to be a distinct matter of law and practice that we are entitled to have the offence with which we are charged clearly brought to our knowledge. Really, my lord, until entering this Court we did not know—and the language of the learned counsel before the magistrates aggravated the inconvenience—whether it was that the advocacy of checks was unlawful, or whether the language of the advocacy was obscene. And we were left in that difficulty until we came into the Court here, and I submit that your lordships will not put the defendants in that position. I submit, further, that when the learned Solicitor-General pleads that on some other indictment, in some other place of which I know nothing, and of which I can have no knowledge, the same blunder was made, that your lordships will not entertain the argument for a moment to cover a similar blunder here. In Folkard, where the form of indictment is given, it states clearly that the passages are to be set out. I am

told that in Archbold you will find an indictment for publishing a print, in which the exact reproduction of the print is not set out. I do not pretend that in the case of a picture my argument would hold good, but I do maintain that the words complained of must be specifically set out, so that the defendant may see what is the charge he has to meet. It is clearly put on page 803. I submit that, bearing in mind the real verdict of the jury, this is a case in which your lordships would be disposed to give me and my co-defendant the fullest advantage of every objection that could be urged by us, and which would keep us from the additional stigma that would otherwise be cast upon us.

The LORD CHIEF JUSTICE: No more than in any other case. If you can take objection to the procedure upon which the verdict has been arrived at, you are entitled to take it, but as far as I am concerned there is no difference between one case and another.

Mr. BRADLAUGH: I submit that the learned Solicitor-General has said nothing which would induce your lordships to say that the point has not been decided in my favour by the whole of the authorities I have quoted.

Mrs. BESANT: I do not think I need trouble your lordships with more than a word after the remarks of my co-defendant. The learned Solicitor-General seemed to be under some difficulty in regard to the English cases, for he was obliged to quote American. He was unable, apparently, to find a single one which supported his contention in the practice of our own courts to set against the number in our favour, and he was therefore obliged to go to the practice of the courts in foreign countries. I argue, on the contrary, that we are not bound by the decisions of the courts in any other country, however friendly that country may be to us.

Mr. JUSTICE MELLOR: We do not say that we are bound by such cases, but we say that we pay great respect to them, because in America they administer to a large extent the same law.

Mr. BRADLAUGH: I have to state that I have studied the law of Massachusetts, and that the common law of Massachusetts is not on all fours with the common law of England.

Mrs. BESANT: It is evident that the case of the learned Solicitor-General is so extremely weak that he could not find a single English case to help his contention, but is

obliged to fall back upon cases cited from a foreign country. As to spoiling the records of the Court, if the learned Solicitor-General will look through them, he will find that the invariable practice of the Court has been to set out the libels. I do not know why a sudden change should be made simply to injure the present defendants. In the case of the Queen *v.* Curll you will find that the libel was set out, and that it is the invariable practice right through. The effect on us of the contrary is most unfair. We thought from the indictment that the whole book was attacked, and we thought we had covered everything, and it was not until after the verdict of the jury was given that we discovered the crime alleged. Had we known that there was an objection to the whole theory of preventive checks we should have acted differently; but we considered, I say, that we had covered the whole of the book, and we were not aware that one special point upon which we had no information was the point upon which a verdict was to be given by the jury.

The Lord Chief Justice: I am clearly of opinion that there should be no new trial. In this case the question was eminently one for the decision of a jury. There can be no better tribunal than twelve men taken, as the Solicitor-General, I thought, happily expressed it, from an average of the intelligence of society, or one better competent to dispose of a question of this kind, namely, whether this publication was calculated to be subversive of public morals or not; and lest any feelings of sentiment, prejudice, or passion might interfere with the deliberate judgment of the jury, I thought it right—especially after the powerful address of the learned Solicitor-General in reply, when he appeared to me to address himself to the sentiment as well as to the judgment of the jury—I thought it ought to bring the case finally before them in all the various aspects in which it has been presented for discussion, and without the slightest desire in one way or the other to bias or influence the judgment of the jury, who, I thought, ought to proceed from their own spontaneous sense of what was right. All parties, at that time, seemed to be agreed that the question was one for a jury, and exclusively for a jury, and I left it to the jury. I presented to them the case from all the different points of view, and, finally, repeated to them what had been said on one side and on the other, and the various views of the case

which had been advocated by the prosecution and by the defendants. The jury were a most patient and attentive jury, and listened in uninterrupted attention and care to all that was said. They took time to deliberate, and they pronounced a verdict that this book is a book which ought not to have been published, and that it is a book calculated to deprave public morals. Now, that being so, there is nothing brought before us that, in my opinion, turns on the question of fact as to whether this book was a proper or improper one, or that calls for a review of the judgment and decision of the jury. But it is said that it is open for the defendants to contend that the verdict of the jury was not a verdict of guilty. Now I think that the contention is wrong. The jury were evidently in doubt as to the effect of the facts upon which their minds were agreed. They were agreed that the tendency and effect of the book was to corrupt public morals; but, on the other hand, they were satisfied that, under the influence of a strong belief that the evils of over-population were so great that it was desirable to have recourse to means of preventive checks, and that, impelled by this opinion and desire, the defendants had published this work, but not with the intention to corrupt the morals of young or old. The jury specially found upon these facts, and it was my duty to tell the jury and I believe so now, that where persons publish a word which is contrary to the morals of mankind, and they do that with their eyes open, it is not for them afterwards to say, "I did that either with the view of doing something in itself so good as to warrant the infraction of the law," or to say, "I did it in ignorance of the law." Nobody can allege either of these two things as an excuse for a breach of the law; no one can put himself above the law, no one can refuse obedience to the law. I think, therefore, that upon the facts found by the jury I was right to tell the jury that it amounted to a verdict of guilty. In that direction they acquiesced, and returned a verdict of guilty, evidently taking the view that I had done. The foreman turned round and took the opinion of the jury, and they acquiesced. I think, therefore, there can be no question as to a new trial, either upon the ground that the verdict was in the first instance a special one, or that the verdict was not in accordance with the facts which were before them. It is said that although there could be no new trial, as the verdict of the jury was conclusive on the facts, nevertheless the

indictment cannot be sustained and that we ought now to arrest the judgment upon the verdict by reason of the legal insufficiency of the indictment. Well, that is founded upon this proposition, that in an indictment for libel where the libellous matter consists of words, the words must be set out in order, so that the defendant may know what it is that he is called upon to answer, and that if he chooses to take the legal objections, which he may do on demurrer, on the sufficiency of the indictment, he may have the opportunity of doing so. We agree with that proposition. It is said that it would be highly inconvenient that obscene matters should be set out upon the records of the court, and that the same argument and the same rule would apply to the case of an indecent print which applied to the case of indecent words, and that it would be impossible, or at all events in the highest degree objectionable, to exhibit an indecent print upon an indictment which would afterwards form part of the records of this court. We have had pressed upon us two decisions of the American courts in banco, which we treat with the utmost respect. These decisions are not so conclusive upon us as if they were decisions of courts having equal jurisdiction in this country, but we look to the decisions of the American courts with very great respect, and take advantage of them in the solution of questions of law. Putting these decisions on one side, the question of convenience presses upon us strongly. I agree that where particular passages in the work, as contradistinguished from the work itself, are made the subject-matter of an indictment, it would be highly expedient that the attention of those against whom the publication of such matters is made the subject-matter of an indictment and a prosecution, should have the opportunity of knowing what it is that they are to direct their defence upon, and what the attention of the jury will be afterwards directed to. I admit that; but on the other hand if not particular portions of the work, but the work itself in its entirety and as a whole is made the subject-matter of a prosecution, one cannot but see that it would lead to the greatest inconvenience to have the whole of the work, set out from beginning to end. We were told the other day that a prosecution has recently been instituted, or was about to be instituted, in respect of the publication of the "Memoirs of the Comte de Grammont," on the ground that that was an indecent and obscene publication, because it

describes with a great deal of particularity the licentious habits of the court of Charles II. While I don't express any opinion with reference to a prosecution founded upon the publication of a work which has existed for a great many years, and which has gone through many editions and been translated into several languages, I merely mention that as an instance of what would be the monstrous inconvenience of setting out *in extenso* the whole of the publication, which might consist of two or three volumes. With regard to many other works which could be mentioned which are more or less of an indecent and indelicate character, and more or less inconsistent with good morals, and which may therefore be made the subject matter of an indictment, where the objection to the work is not that it contains particular passages which are objectionable, but that it is objectionable *in toto*, it would lead to a degree of inconvenience that we cannot help taking notice of. At the same time there is a good deal to be said on both sides, but I do not think it was competent that I could proceed upon that to quash the indictment. The Solicitor-General said the defendants should have applied earlier if they desired to have the indictment quashed. For that reason it appears to me that I went too far, and that I was not called upon to give leave to move upon it. I do not think I was competent to do it. I do not think the defendants could have an advantage of that sort. With reference to this objection the difficulty I feel is that that objection must have been taken by demurrer. If the omission be set out in the indictment, the specific matter upon which the offence is alleged to rest—if that be the objection, and it be a valid one, it is an objection that must have been taken by demurrer, and, therefore, not without some sense of the exigencies of the case as put in the arguments used by the defendants. I cannot help thinking that, upon the balance of convenience of the authorities we shall do more wisely to say that the judgment pronounced upon this indictment ought not to be set aside by making the motion absolute to arrest the judgment; but if there be any valid foundation for the contention the defendants have raised upon the indictment it should be taken by demurrer. As far as we are concerned, it will not be necessary to act upon it, the more so because the balance of convenience or inconvenience, looking to the particular nature of this form of libel—it is not specifically within the law of libel, but in

saying that it does not come within the category of a libel, it, to a certain extent, arises out of the law of libel generally, as it is *commune documentum*—which renders it not a matter for the Crown on the one hand or a particular individual on the other, but a matter complaint as to which arises as to its being subversive of the public morals and therefore a matter of public nuisance. Therefore, I cannot feel that the authorities which have been cited for the purpose of showing that in an indictment for libel the words must be specially set forth, applies to this case. There are the inconveniences under which the defendant may labour, so that he may be put to the inconvenience and expense of a further trial, when judgment should be given in his favour at once. You will find that advantage is not in this form of indictment, and I think it is an advantage of which it is very hard that the defendants should be deprived. There is that inconvenience on the one side. We shall, therefore, shelter ourselves under the decisions of the American courts, but we leave this matter to be carefully gone into by the Court of Error. I do not think that there should be any new trial nor any rule for an arrest of judgment.

Mr. Justice Mellor: I am of the same opinion; I quite think there is no ground urged for a new trial, and that some of the points raised for a new trial are more properly points for an arrest of judgment. One point was raised by Mrs. Besent, which had considerable *primâ facie* ingenuity, that on the question as to the intention of the parties to publish this book, the jury had found there was no corrupt intention, and, therefore, the jury had not found on an essential part of the indictment. I have already expressed the opinion in regard to that, that the jury have found that the book was calculated to corrupt the morals, and that was not denied, although the corrupt intention was denied. It appears to me that, upon the finding of the jury, and upon the facts of the case, there could be no objection to the verdict upon that ground. I say if a person publishes a book calculated to deprave, although his own intention may not be malicious, wicked, or immoral, still the very fact of the intention to publish a book which is calculated, and which the jury have found is calculated, to produce great damage to the morals of the community, makes it, therefore, a book which comes within the rule which applies to this prosecution in so far as the public is concerned; and it appears to me that no objection can be taken on that

ground. I also think the course taken with regard to the finding of the jury was rightly taken by the Lord Chief Justice. If he had said just before the conclusion of his summing-up : " If you find that so and so, if they did not do so in meaning, yet did so in substance, you must find the defendants guilty," there could be no possible form of objection urged to it. But it is said that because the jury has found what Mrs. Besant calls a special verdict as to the essential fact, coupled with the expression that they were not guilty of the offence stated in the indictment, the Lord Chief Justice ought to have directed the jury to return a verdict of not guilty. The Lord Chief Justice took the right course. The jury were asked if they understood that they were finding a verdict of guilty and they said they did. You cannot say, therefore, that anything arises by way of error or arrest of judgment; with regard to the other point, there is nothing which renders it undesirable that an objection of this character should be taken by demurrer upon the indictment. It is a point of demurrer. If it is taken on demurrer, judgment is at once given for the defendant if the demurrer succeeds. It was not taken upon demurrer, which I think would have been the wisest, best, and easiest course when dealing with this case to see that it contained the offence. There are the gravest doubts whether the point would have been successful on demurrer, but the jury have now interpreted and applied the general description to the book in the indictment as obscene. But if it be an essential and most material part of the indictment to set forth the terms in which the libel was published, that is still a question that may be taken on error, but it cannot be made available for arrest of judgment. We do not arrest judgment unless we are satisfied that there has been some error. My contention is that there has been none; whether that be so or not I am clear now that the only remedy which is open to the defendants is by bringing error on the indictment, so as to obtain the opinion of the highest tribunal to see whether it is so essential a part of the procedure that it vitiates utterly and entirely the whole proceedings. Therefore I can see no ground for either setting aside the verdict or for arrest of judgment.

Mr. BRADLAUGH : Might I ask your lordship to stay execution until the error is determined? There are cases of misdemeanour in which that has been done.

Here the Court adjourned for luncheon. On re-assembling,

The SOLICITOR-GENERAL said: I now pray the judgment of the Court, the record being now in Court. My lord, I have two affidavits, and I have to say that no notice of them has been given to the defendants as the persons who have made the affidavits could only be found last night, and consequently they have only been made this morning.

The LORD CHIEF JUSTICE: Have you any affidavits?

Mr. BRADLAUGH: None at all, my lord.

Master Cockburn then read the following affidavit:—

IN THE HIGH COURT OF JUSTICE.

QUEEN'S BENCH DIVISION.

THE QUEEN *against* CHARLES BRADLAUGH AND ANNIE BESANT.

JOHN RIVETT makes oath and saith as follows:—

1. I reside at Number 15, Devonshire Street, Bishopsgate, in the City of London, and am a news-agent.
2. In the beginning of the month of May, 1877 (the exact date I do not recollect), I saw the two above-named defendants in their shop at Number 28, Stonecutter Street, in the City of London.
3. I then asked the defendant, Charles Bradlaugh, for some copies of the book called "Fruits of Philosophy," when he told me that they could not sell any more copies there, as copies had been stopped going through the post.
4. The said Charles Bradlaugh then gave me a card, which had printed thereon the name of Mr. Ramsey, Number 10, Shacklewell Street, Bethnal Green Road, but which said card I have since destroyed.
5. The said Charles Bradlaugh told me at the time he handed to me the said card that I could obtain thousands of copies of the said book called "Fruits of Philosophy" at the address indicated on the said card.
6. I immediately went to the said address, and purchased several copies of the said book, which were

similar to that which is now shown to me, and marked "A."

7. At the end of the said month of May (the exact date I do not recollect), the person who sold me the said copies of the said book at the said Number 10, Shacklewell Street aforesaid, and who, to the best of my belief, is W. J. Ramsey, and manager in the employment of the said defendants, Charles Bradlaugh and Annie Besant, told me he could in future supply me with copies of the said book at Number 9 in Shacklewell Street aforesaid.

8. Since the day I received the said card I have from time to time on several occasions—that is to say, twenty or thirty times—been to the said 9 and 10, Shacklewell Street, and purchased large quantities of copies of the said book.

9. On Saturday morning last, the 23rd day of June, 1877, I went to the said house, Number 9, Shacklewell Street, and purchased of the said W. J. Ramsey one dozen copies of the said book called "Fruits of Philosophy," one copy of which is the copy now shown to me and marked "A."

10. On the same day my partner, Frederick Fennell, obtained, as he has informed me, and as I verily believe, two dozen copies of the said book at the same address.

11. I believe the said Mr. W. J. Ramsey referred to in the said book now shown to me, and described therein as the manager to the Freethought Publishing Company, to be the person who sold to me the said copies of the said book.

Sworn at my Office, No. 10, Basinghall Street, in the City of London, this 27th day of June, 1877.
Before me,
M. Downing,
A Commissioner to administer oaths in the Supreme Court of Judicature.

JOHN RIVETT.

IN THE HIGH COURT OF JUSTICE,
QUEEN'S BENCH DIVISION.

THE QUEEN *against* CHARLES BRADLAUGH AND ANNIE BESANT.

DANIEL THOMAS LYSAGHT, makes oath and saith as follows :—

1. I am a reporter and shorthand writer, residing at 66, Doddington Grove, Kennington Park.
2. On Sunday last, the 24th day of June, A.D. 1877, I was present at a meeting held at the Hall of Science, Old Street.
3. The meeting was convened for the purpose of discussing the Population Question.
4. Both the defendants were present on the platform, and addressed the meeting. The defendant, Annie Besant, acted as President.
5. Numerous copies of the book, "The Fruits of Philosophy," the subject of this indictment, were sold in the room for the price of sixpence each, many of the purchasers being young persons of both sexes.
6. There were about 600 persons present at the meeting, and there was a crowd outside of those who were unable to obtain admission. The said book was freely sold to many of the said persons outside.
7. I purchased the book now shown to me, and marked "A," at the said meeting.
8. The report in the newspaper, the *Morning Advertiser*, now shown to me, and marked "B," was written by me, and is a correct report of the said meeting.

Sworn at the Westminster Hall, in the County of Middlesex, the 28th day of June, 1877.
Before me,
W. J. CLEAVE,
A Commissioner, &c.

DANIEL THOMAS LYSAGHT.

Filed on the part of the Prosecution.

A newspaper report was attached to Lysaght's affidavit, and the Master asked if he should read it.

The LORD CHIEF JUSTICE: The paper has been sent to me, and, I must say, that a most unjustifiable use of my name has been made—most unwarranted.

Mr. BRADLAUGH: Allow me to say that the report in the *Morning Advertiser* is totally incorrect.

The LORD CHIEF JUSTICE: All I know is, that in my summing-up, I endeavoured, and I feel satisfied that I did, hold the scales of justice evenly.

Mr. BRADLAUGH: We never said what is imputed to us.

The LORD CHIEF JUSTICE: You say that I summed up in your favour. I did nothing of the kind.

Mr. BRADLAUGH: The report is simply stupidly incorrect from beginning to end.

Mrs. BESANT: I have not seen the report, and if it is to be used against me, I must ask that it be read. I spoke with the most extreme respect of your lordship.

The LORD CHIEF JUSTICE: I mean that to represent me as stating views different from the jury is wholly incorrect. All that I endeavoured to do, as I said before, was to take care that the verdict should not be given in a storm, but that it should be the result of mature deliberation of the case in all its bearings. That is all I endeavoured to do, and I am quite sure it is all I did.

Mrs. BESANT: All I said in my speech was that the summing-up was absolutely impartial. And I rejoiced that there had gone forth from the Bench an endorsement of Malthusianism which it had never before received.

Mr. BRADLAUGH: I have seen the report, which is ridiculously inaccurate. If anything is to turn upon it, I must ask to be allowed to answer it.

The LORD CHIEF JUSTICE: The part of the report which is most material is the part which represents you and Mrs. Besant as saying that you would go on with the publication, let what would happen.

The SOLICITOR-GENERAL: That is the only reason why I use the report.

Mrs. BESANT: I ask as a matter of justice that the report should be read.

The CLERK here read the paragraph in question from the *Morning Advertiser*.

Mrs. BESANT: Well, my lord, I have one or two points to

put to your lordship, as to the accuracy of the report. Am I permitted to say anything?

The Lord Chief Justice: Oh, certainly.

Mrs. Besant: Only in answer to the report.

The Lord Chief Justice: Strictly speaking, it should be by affidavit.

The Solicitor-General: I have no objection.

Mrs. Besant: I must remark, my lord, that the report is utterly and grossly inaccurate. The meeting was not called for the discussion of the Population Question, and no discussion of any kind took place. The value of the oath of the reporter, as a matter of accuracy, may be judged by the fact that he stated that there were 600 persons, whereas 1418 paid for admission, as shown by the books. I do not put that as a matter of importance, but merely to show that he is not a man whose judgment should be brought here as reliable on a matter of fact. Then he says that numerous copies of the book were sold in the hall. If that is urged against us, the sale must be proved, for neither I nor my co-defendant have anything to do with selling on Sunday night. That we have the hall for lecturing cannot make us responsible criminally for what occurs there. When I said that the jury did not all assent to the direction of the judge, I alluded to a letter that I had received, in which it was stated that he did not assent to the verdict, and that it was by the action of the foreman, and not of the jury, that the verdict of guilty was given.

The Lord Chief Justice: He should have objected at the time.

Mrs. Besant: No doubt, my lord, he ought to have had the manliness to object there and then. It was no good to talk to his friend about it afterwards. I mentioned it in the hall as a moral justification at the time, and I did not presume to mention it here until now, knowing that it had no legal value. The report says that I said that one of the most highly-trained brains in England had declared in favour of our views. It is true that I spoke of one of the "most highly-trained brains in England"; and if that be any discourtesy to the Court, I can only apologise for it. (Much laughter.) I said what I believed, my lord, in simple honesty, but it is what I should not have had the impertinence to say in this presence if it had not been alluded to. I did not say that that brain had declared in favour of the whole of our views,

but I did say that it declared in favour of Malthusianism, as a law which could not be disputed.

The LORD CHIEF JUSTICE: You must take it with reference to the only proposition I had in my mind, namely that the tendency of population is to increase in a greater ratio than the production of food, and that that was a law which could not be disputed.

Mrs. BESANT: Yes; the law which is ordinarily spoken of as the law of Malthus; but unless people are trained in these works they do not know what that refers to. I said that from the Bench we had had a declaration in favour of the law of Malthus, and this, whether we went to gaol or not, was a sufficient recompense for having gone before a jury.

The LORD CHIEF JUSTICE: You would have done much better if you had left such propositions alone.

Mrs. BESANT: I was only repeating what has been said by the whole press of the country, that the trial had spread the principles for which we pleaded. With regard to the question of stopping the circulation, I can only say that if the law desires to stop the circulation of the book it must be stopped legally, and no amount of prejudice that is tried to be raised can be allowed to govern. As to the man who swears that Mr. Bradlaugh gave him a card with Mr. Ramsey's address on it and sent him there, I can only say that I am one of the two partners of the "Freethought Publishing Company," and that no card has been printed by us with the name and address of Mr. Ramsey upon it. Such a card has never been printed, and it seems a pity to bring forward an affidavit sworn to by a man whose statement is so utterly false from beginning to end. We stopped the sale at Stonecutter Street for a reason of our own, but never gave any kind of card or direction as here stated.

The LORD CHIEF JUSTICE: The man says he was sent from Stonecutter Street to another address.

Mrs. BESANT: He says so, and he swears falsely.

The LORD CHIEF JUSTICE: We must have this upon affidavit.

Mr. BRADLAUGH: There is no doubt, and no pretence on our part to the contrary, my lord, that we have circulated, and are continuing to circulate, the book. The witness, for some reason or other, has been extremely stupid; but whether we gave a card or not is a matter of no importance, although, as a matter of fact, we did nothing of

the kind. There is no doubt that up to this time we have circulated the book.

The Lord Chief Justice: I gave you fair warning that you ran a risk in so doing.

Mr. Bradlaugh: Your lordship did. I do not wish it to be thought that I say this out of bravado, but simply as a matter of fact, so that we should not represent anything incorrectly.

Mrs. Besant: It is not well to put too much stress upon two affidavits so utterly inaccurate on these small points.

The Lord Chief Justice: The statement in that affidavit which is not denied is, that since the verdict of the jury the circulation of the book is still going on.

Mrs. Besant: That is so, my lord.

Mr. Bradlaugh: While I have no personal knowledge of it, I have no doubt that that is so.

The Lord Chief Justice: The matter assumes, then, a very serious aspect, because I gather from that fact, as well as from the language used at the meeting, taking it with the qualification that Mrs. Besant has put upon it, that it does imply a determination, notwithstanding the verdict of the jury that this book is unfit for publication, that you will persist in publishing it. The case, therefore, assumes a very serious aspect indeed.

Mr. Bradlaugh: My lord, I do not wish, in any way, to take up the time of the Court unfairly. I have nothing whatever to say, except that the ultimate decision of the Court had not then been given; we thought we had not got that ultimate decision of the Court.

The Lord Chief Justice: The ultimate decision of the Court has now been given, and the question is, what is to be the future course of your conduct? The jury have acquitted you of any intention to deliberately violate the law; and that, although you did publish this book, which was a book that ought not to have been published, you were not conscious of the effect it might have, and had no intention to violate the law. That would induce the Court, if it saw a ready submission on your part, to deal with the case in a very lenient way. The jury having found that it was a violation of the law, but with a good motive or through ignorance, the Court, in awarding punishment, upon such a state of things, would, of course, be disposed to take a most indulgent view of the matter. But if the law has been openly set at defiance, the matter assumes a very different

aspect, and it must be dealt with as a very grave and aggravated case.

Mrs. BESANT: If an extra charge is to be brought against me, I ask that some kind of proof be offered.

Mr. BRADLAUGH: If your lordships thought it right to take into consideration the application I made to you before the adjournment, both I and my co-defendant would in the fullest manner undertake that during the pendency of the appeal no sort of advantage will be taken of the indulgence of the Court.

The LORD CHIEF JUSTICE: What do you mean?

Mr. BRADLAUGH: I mean if you stayed proceedings until the writ of error was argued.

The LORD CHIEF JUSTICE: I think we must pass sentence. Have you anything to say in mitigation?

Mr. BRADLAUGH: I respectfully submit myself to the sentence of the Court.

Mrs. BESANT: I have nothing to say in mitigation of punishment.

The SOLICITOR-GENERAL: The two persons before your lordships are the publishers of the book. Their names are to the preface, in which they state that they intend to publish this book. This shows the importance of the evidence as to their intention of continuing the circulation.

The LORD CHIEF JUSTICE, after having conferred for some minutes with Mr. Justice Mellor, said: The case has now assumed a character of very, very grave importance. We were prepared, if the defendants had announced openly in this Court that having acted in error as the jury found—of which finding I think they are entitled to the benefit—but still having been, after a fair and impartial trial, found by the jury guilty of doing of that which was an offence against the law, they were ready to submit to the law and to do everything in their power to prevent the further publication and circulation of a work which has been declared by the jury to be a work calculated to deprave public morals, we should have been prepared to discharge them on their own recognisances to be of good behaviour in the future. But we cannot help seeing in what has been said and done pendingthis trial, and since the verdict of the jury was pronounced, that the defendants instead of submitting themselves to the law, have set it at defiance by continuing to circulate this book. That being so I must say that that which before was an offence of a comparatively slight

character—looking to what the jury have found in reference to the contention of the defendants—now assumes the form of a most grave and aggravated offence, and as such we must deal with it. The sentence is that you, Charles Bradlaugh, and you, Annie Besant, be imprisoned for the term of six calendar months; that you each pay a fine of £200 to the Queen; and that you enter further into your own recognizances in a sum of £500 each to be of good behaviour for the term of two years, and I tell you at the same time that you will not be of "good behaviour" and will be liable to forfeit that sum if you continue to publish this book. No persuasion or conviction on your part that you are doing that which is morally justifiable can possibly warrant you in violating the law or excuse you in doing so. No one is above the law; all owe obedience to the law from the highest to the lowest, and if you choose to set yourself at defiance against the law—to break it and defy it—you must expect to be dealt with accordingly. I am very sorry indeed that such should be the result, but it is owing to your being thus contumacious, notwithstanding that you have had a fair trial, and the verdict of a competent jury, which ought to have satisfied you that you ought to abstain from doing what has been clearly demonstrated and shown to be wrong.

Mr. Bradlaugh: Would your lordship entertain an application to stay execution of the sentence?

The Lord Chief Justice: Certainly not. On consideration, if you will pledge yourselves unreservedly that there shall be no repetition of the publication of the book, at all events, until the Court of Appeal shall have decided contrary to the verdict of the jury and our judgment; if we can have that positive pledge, and you will enter into your recognizances that you will not avail yourselves of the liberty we extend to continue the publication of this book, which it is our bounden duty to suppress, or do our utmost to suppress, we may stay execution; but we can show no indulgence without such a pledge.

Mr. Bradlaugh: My lord, I meant to offer that pledge in the fullest and most unreserved sense, because, although I have my own view as to what is right, I also recognise that the law having pronounced sentence, that is quite another matter so far as I, as a citizen, am concerned. I do not wish to ask your lordship for a favour without

yielding to the Court during the time that I take advantage of its indulgence.

The LORD CHIEF JUSTICE: I wish you had taken this position sooner.

Mr. BRADLAUGH: If the sentence goes against us, it is another matter; but if you should consent to give us time for the argument of this writ of error, we would bind ourselves during that time. I should not like your lordship to be induced to grant this request on the understanding that in the event of the ultimate decision being against me I should feel bound by that pledge.

The LORD CHIEF JUSTICE: I must do you the justice to say that throughout the whole of this battle your conduct has been straightforward since you took it up.

Mr. BRADLAUGH: I would not like your lordship to think that, in the event of the ultimate decision being against us, there was any sort of pledge. I simply meant that the law having pronounced against us, if your lordship gives us the indulgence of fighting it in the higher Court, no sort of direct or indirect advantage shall be taken of the indulgence.

The LORD CHIEF JUSTICE: You will not continue the publication?

Mr. BRADLAUGH: Not only will I stop the circulation of the book myself, but I will do all in my power to prevent other people circulating it.

The LORD CHIEF JUSTICE: Then you can be discharged on your own recognisances for £100, "to be of good behaviour," which you will understand to mean, that you will desist from the publication of this work until your appeal shall have been heard, and will engage to prosecute the appeal without delay.

Mr. BRADLAUGH: Certainly; until the present, I have undoubtedly circulated the book. Although there is a blunder in the affidavits I do not disguise the matter of fact. I shall immediately put the thing under my own control, and I will at once lock up every copy in existence, and will not circulate another copy until the appeal is decided.

Mr. JUSTICE MELLOR: It must be that you will really, to the best of your ability, prevent the circulation of this book until this matter has been determined.

The LORD CHIEF JUSTICE: And what Mr. Bradlaugh says, I understand that you, Mrs. Besant, also assent to?

Mrs. BESANT: Yes; that is my pledge until the writ of

error has been decided. I do not want to give a pledge which you may think was not given honestly until the appeal is decided. I will give my pledge, but it must be understood that the promise goes no further than that.

Mr. JUSTICE MELLOR: You will abstain yourself from circulating the book, and, so far as you can, suppress its circulation?

Mr. BRADLAUGH: Every copy that is unsold shall be at once put under lock and key until the decision of the case.

The SOLICITOR-GENERAL: My lord, I think there should be no misunderstanding upon this; I understand that the defendants have undertaken that during the pendency of the appeal this book shall not be circulated at all. But if the decision should be against them they are under no pledge not to publish.

Mr. BRADLAUGH: I hope your lordship will not ask us what we shall do in future.

The LORD CHIEF JUSTICE: We have meted out the amount of punishment upon the assumption—there being no assertion to the contrary, but rather an admission—that they do intend to set the law at defiance. If we had understood that they were prepared to submit themselves to the law, we should have been disposed to deal with them in the most indulgent manner; but as we understood that they did not intend this, we have meted out to them such a punishment as we hope, when undergone, will have a deterrent effect upon them, and may prevent other people offending in like manner. We have nothing to do with what may happen after the defendants obtain a judgment in their favour, if they do so, or after the sentence is carried out, if they do not. Our sentence is passed, and it will stand, subject only to this, that we stay execution until a writ of error may be disposed of, the defendants giving the most unqualified and unreserved pledge that they will not allow another copy of the book to be sold.

Mr. BRADLAUGH: Quite so, my lord; quite so.

The defendants were then taken into the judges' clerks' room, in custody of the tipstaff, and were thence taken to the Crown Office, to get the form for the required recognizance drafted and engrossed. They were then brought back to Westminster, where they remained for an hour and a-half, until the Court was at leisure, and they were delivered over to it by the tipstaff. The recognisance was then read over

to them by Master Mellor, and formally taken by Mr. Justice Mellor, and the defendants were once more set at liberty.

THE INDICTMENT.

Central Criminal Court.—To wit.

THE Jurors for our Lady the Queen, upon their oath present that Charles Bradlaugh and Annie Besant unlawfully and wickedly devising and contriving and intending, as much as in them lay, to vitiate and corrupt the morals as well of youth as of divers other liege subjects of our said Lady the Queen, and to incite and encourage the said liege subjects to indecent, obscene, unnatural, and immoral practices, and bring them to a state of wickedness, lewdness, and debauchery, therefore, to wit, on the 24th day of March, A.D. 1877, in the City of London, and within the jurisdiction of the Central Criminal Court, unlawfully, wickedly, knowingly, wilfully, and designedly did print, publish, sell, and utter a certain indecent, lewd, filthy, and obscene libel, to wit, a certain indecent, lewd, filthy, bawdy, and obscene book, called "Fruits of Philosophy," thereby contaminating, vitiating, and corrupting the morals as well of youth as of other liege subjects of our said Lady the Queen, and bringing the said liege subjects to a state of wickedness, lewdness, debauchery, and immorality, in contempt of our said Lady the Queen and her laws, to the evil and pernicious example of all others in the like case offending, and against the peace of our said Lady the Queen, her crown, and dignity.

Second Count:—And the Jurors aforesaid, upon their oath aforesaid, do further present that the said Charles Bradlaugh and Annie Besant unlawfully and wickedly devising, contriving, and intending as much as in them lay, to vitiate and corrupt the morals as well of youth as of divers other liege subjects of our said Lady the Queen, and to incite and encourage the said liege subjects to indecent, obscene, unnatural, and immoral practices, and bring them to a state of wickedness, lewdness, and debauchery, heretofore, to wit, on the 29th day of March, A.D. 1877, in the City of London, and within the jurisdiction of the said Central Criminal Court, unlawfully, wickedly, and knowingly, wilfully, and

designedly did print, publish, sell, and utter a certain indecent, lewd, filthy, bawdy, and obscene libel, to wit, a certain indecent, lewd, filthy, bawdy, and obscene book, called "Fruits of Philosophy," thereby contaminating, vitiating, and corrupting the morals as well of youth as of other liege subjects of our said Lady the Queen, and bringing the said liege subjects to a state of wickedness, lewdness, debauchery, and immorality, in contempt of our said Lady the Queen, and the laws, to the evil and pernicious example of all others in the like case offending, and against the peace of our said Lady the Queen, her crown, and dignity.

THE SENTENCE AS OFFICIALLY RECORDED.

Thursday, the Twenty-eighth Day of June, in the Forty-first Year of the Reign of Queen Victoria,

IN THE HIGH COURT OF JUSTICE,

QUEEN'S BENCH DIVISION.

Central Criminal Court, Middlesex. The Queen *v.* Charles Bradlaugh and Annie Besant. } The Defendants, Charles Bradlaugh and Annie Besant, being present here in Court, and being, by a jury of the country, convicted of certain misdemeanours, whereof they are indicted in this prosecution: Upon reading the several affidavits of John Rivett and the exhibit therein referred to, and Thomas Lysaght and the exhibit therein referred to: And upon hearing the said Defendants in person and Mr. Solicitor-General of Counsel for the Crown: It is considered and adjudged and ordered by the Court here upon each of the said counts of the said indictment severally and respectively that for the offence and offences charged upon the said Defendants in and by each and every of the said counts of the said indictment severally and respectively whereof they are so convicted as aforesaid, they, the said Defendants, be severally imprisoned in Her Majesty's gaol at Holloway for the space of six calendar months each, to commence and be computed from the day on which they shall severally be first taken to the said gaol in execution of this sentence, and severally pay a fine to our Sovereign Lady the Queen of £200 each of lawful money of Great Britain: And that they, the said Defendants, do severally

give security by their own recognisances in the sum of £500 each, with two sufficient sureties in the sum of £200 each, for their good behaviour for the space of two years, to be computed from and after the end and expiration of the said six calendar months:

And it is further ordered that execution be stayed until after judgment shall have been delivered upon any Writ of Error which may hereafter be issued to reverse this judgment or the proceedings upon such Writ shall have failed for want of prosecution or otherwise, upon the said Defendants giving security by their own recognisances in the sum of £100 each to prosecute such Writ of Error, and to be of good behaviour in the meantime.

The Defendants to be placed in the First Class of Misdemeanants. } By the Court.

London: Printed by C. Bradlaugh & Annie Besant, 28, Stonecutter Street, E.C.

CATALOGUE

OF

WORKS

SOLD BY THE

Freethought Publishing Company,

28, STONECUTTER STREET,

FARRINGDON STREET, E.C.

All Orders should be addressed to the Manager, Mr. W. J. RAMSEY, and should be accompanied with Post Office Order or Cheque.

Cheques should be crossed "London & South Western Bank."

THE

NATIONAL REFORMER,

Journal of Radicalism and Freethought.

EDITED BY C. BRADLAUGH.

THIS Journal, established 1860, which has successfully defeated a prosecution commenced by the Derby Government, and carried on by the Gladstone Ministry, and which is now rapidly increasing in circulation, can be obtained on order from most Booksellers, and from the Freethought Publishing Company; or will be sent by post, if required —one copy 2s. 8½d. per quarter, three copies or upwards post free.

The NATIONAL REFORMER is the largest and most popular organ of the English Freethought Party, and contains Reports of Lectures and Meetings in London and throughout the Provinces. In Theology its editorial policy is Atheistic; in Politics, Republican; in Political Economy it maintains the views of the late J. S. Mill.

The NATIONAL REFORMER is, nevertheless, a free platform, where every antagonist is welcome to be heard so long as he writes clearly, and with reasonable courtesy.

WEEKLY—PRICE TWOPENCE.

With its large and constantly-increasing circulation the NATIONAL REFORMER is an admirable Advertising Medium.

Charles Bradlaugh

A FEW WORDS ABOUT THE DEVIL,

AND OTHER BIOGRAPHICAL SKETCHES AND ESSAYS

By Charles Bradlaugh
New York:

A. K. Butts & Co., 36 Dey Street.

1874.

AUTOBIOGRAPHY OF CHARLES BRADLAUGH.

A PAGE OF HIS LIFE.

At the request of many friends, and by way of farewell address on leaving for America, I, for the first time in my life, pen a partial autobiographical sketch. I do not pretend that the narrative will be a complete picture of my life, I only vouch the accuracy of the facts so far as I state them. I have not the right in some cases to state political occurrences in which others now living are involved, nor have I the courage of Jean Jacques Rousseau, to photograph my inner life. I shall therefore state little the public may not already know. I was born on the 26th September, 1833, in a small house in Bacchus Walk, Hoxton. My father was a solicitor's clerk with a very poor salary, which he supplemented by law writing. He was an extremely industrious man, and a splendid penman. I never had the opportunity of judging his tastes or thoughts, outside his daily labors, except in one respect, in which I have followed in his footsteps. He was passionately fond of angling. Until 1848 my life needs little relation. My schooling, like that of most poor men's children, was small in quantity, and, except as to the three R's, indifferent in quality. I remember at seven years of age being at a national school in Abbey Street, Bethnel Green; between seven and nine I was at another small private school in the same neighborhood, and my "education" was completed before I was eleven years of age at a boys' school in Coalharbor Street, Hackney Road. When about twelve years of age I was first employed as errand lad in the solicitor's office where my father remained his whole life through. After a little more than two years in this occupation, I became wharf clerk and cashier to a firm of coal merchants in Britannia Fields, City Road. While in their employment the excitement of the Chartist movement was at its height in England, and the authorities, frightened by the then huge continental revolution wave, were preparing for the prosecution of some of the leaders among the Chartists. Meetings used to be held almost continuously all day on Sunday, and every week-night in the open air on Bonner's

Fields, near where the Consumption Hospital now stands. These meetings were in knots from fifty to five hundred, sometimes many more, and were occupied chiefly in discussions on theological, social, and political questions, any bystander taking part. The curiosity of a lad took me occasionally in the week evenings to the Bonner's Fields gatherings. On the Sunday I, as a member of the Church of England, was fully occupied as a Sunday-school teacher. This last-named fashion of passing Sunday was broken suddenly. The Bishop of London was announced to hold a confirmation in Bethnal Green. The incumbent of St. Peter's, Hackney Road, the district in which I resided, was one John Graham Packer, and he, desiring to make a good figure when the Bishop came, pressed me to prepare for confirmation, so as to answer any question the Bishop might put. I studied a little the Thirty-nine Articles of the Church of England, and the four Gospels, and came to the conclusion that they differed. I ventured to write the Rev. Mr. Packer a respectful letter, asking him for aid and explanation. All he did was to denounce my letter to my parents as Atheistical, although at that time I should have shuddered at the very notion of becoming an Atheist, and he suspended me for three months from my office of Sunday-school teacher. This left me my Sundays free, for I did not like to go to church while suspended from my teacher's duty, and I, instead, went to Bonner's Fields, at first to listen, but soon to take part in some of the discussions which were then always pending there.

At the commencement I spoke on the orthodox Christian side, but after a debate with Mr. J. Savage, in the Warner Place Hall, in 1849, on the "Inspiration of the bible," I found that my views were getting very much tinged with Freethought, and in the winter of that year, at the instigation of Mr. Packer, to whom I had submitted the "Diegesis" of Robert Taylor, I—having become a teetotaler, which in his view brought out my infidel tendencies still more vigorously—had three days given me by my employers, after consultation with my father, to "change my opinions or lose my situation." I am inclined to think now that the threat was never intended to have been enforced, but was used to terrify me into submission. At that time I hardly knew what, if any, opinions I had, but the result was that sooner than make a show of recanting, I left home and situation on the third day, and never returned to either.

I was always a very fluent speaker, and now lectured frequently at the Temperance Hall, Warner Place, Hackney Road, at the small Hall in Philpot Street, and in the open air in Bonner's Fields, where at last on Sunday afternoons scores of hundreds congregated to hear me. My views were then Deistical, but rapidly tending to the more extreme phase in which they ultimately settled. I now took part in all the gatherings held in London on behalf of the Poles and Hungarians, and actually fancied that I could write poetry on Kossuth and Mazzini.

It was at this time I made the acquaintance of my friend and co-worker, Mr. Austin Holyoake, at his printing office in Queen's Head Passage, and I remember him taking me to John Street

Institution, where, at one of the pleasant Saturday evening gatherings, I met the late Mrs. Emma Martin. At Mr. Austin Holyoake's request, Mr. George Jacob Holyoake, to my great delight, presided at one of my lectures in Philpot Street, and I felt special interest in the number of theReasonerwhich contained a brief reference to myself and that lecture.

I wrote my first pamphlet, "A Few Words on the Christian's Creed," about the middle of 1850, and was honored by Dr. Campbell of theBritish Bannerwith a leading article vigorously assailing me for the lectures I had then delivered. After leaving home I was chiefly sheltered by Mrs. Sharpies Carlile, with whose children, Hypatia, Theophila, and Julian, I shared such comforts as were at her disposal. Here I studied hard everything which came in my way, picking up a little Hebrew and an imperfect smattering of other tongues. I tried to earn my living as a coal merchant, but at sixteen, and without one farthing in my pocket, the business was not extensive enough to be profitable. I got very poor, and at that time was also very proud. A subscription offered me by a few Freethinkers shocked me, and awakened me to a sense of my poverty; so telling no one where I was going, I went away, and on the 17th of December, 1850, was, after some difficulty, enlisted in the Seventh Dragoon Guards. With this corps I remained until October, 1853, being ultimately appointed orderly-room clerk; the regiment, during the whole of the time I remained in it, being quartered in Ireland. While I was in the regiment I was a teetotaler, and used often to lecture to the men in the barrack-room at night, and I have more than once broken out of Portobello barracks to deliver teetotal speeches in the small French Street Hall, Dublin. Many times have I spoken there in my scarlet jacket, between James Haughton and the good old father, the Rev. Dr. Spratt, a Roman Catholic priest, then very active in the cause of temperance. While I was in the regiment my father died, and in the summer of 1853 an aunt's death left me a small sum, out of which I purchased my discharge, and returned to England, to aid in the maintenance of my mother and family.

I have now no time for the full story of my army life, which, however, I may tell some day. Before I left the regiment I had won the esteem of most of the privates, and of some of the officers. I quitted the regiment with a "very good character" from the Colonel, but I am bound to add, that the Captain would not have concurred in this character had he had any voice in the matter. The Lieutenant-Colonel, C. P. Ainslie, earned an eternal right to grateful mention at my hands by his gentlemanly and considerate treatment. I can not say the same for my Captain, who did his best to send me to jail, and whom I have not yet quite forgiven.

On returning to civilian life I obtained employment in the daytime with a solicitor named Rogers, and in the evening as clerk to a Building Society; and soon after entering this employ I began again to write and speak, and it was then I, to in some degree avoid the efforts which were afterward made to ruin me, took the name "Iconoclast," under which all my anti-theological work

down to 1868 was done. I give Mr. Rogers' name now for he is dead, and malice can not injure him. Many anonymous letters were sent to him to warn him of my irreligious opinions; he treated them all with contempt, only asking me not to let my propaganda become an injury to his business.

Soon after my discharge from the army I had a curious adventure. While I was away a number of poor men had subscribed their funds together and had erected a Working Man's Hall, in Goldsmith's Row, Hackney Road. Not having any legal advice, it turned out that they had been entrapped into erecting their building on freehold ground without any lease or conveyance from the freeholder, who asserted his legal right to the building. The men consulted me, and finding that under the Statute of Frauds they had no remedy, I recommended them to offer a penalty rent of £20 a year. This being refused, I constituted myself into a law court, and without any riot or breach of the peace, I, with the assistance of a hundred stout men, took every brick of the building bodily away, and divided the materials, so far as was possible, among the proper owners. I think I can see now the disappointed rascal of a freeholder when he only had his bare soil left once more. He did not escape unpunished, for to encourage the others to contribute, he had invested some few pounds in the building. He had been too clever; he had relied on the letter of the law, and I beat him with a version of common-sense justice.

I lectured once or twice a week in the small Philpot Street Hall, very often then in the Hall of Science, City Road, and then in the old John Street Institution, until I won myself a name in the party throughout the country. In 1855 had my first notable adventure with the authorities in reference to the right of meeting in Hyde Park, and subsequently gave evidence before the Royal Commission ordered by the House of Commons, presided over by the Right Hon. Stuart Wortley. I was very proud that day at Westminster, when, at the conclusion of my testimony against the authorities, the Commissioner publicly thanked me, and the people who crowded the Court of Exchequer cheered me, for the manner in which I denied the right of Sir Richard Mayne, the then Chief Commissioner of Police, to issue the notices forbidding the people to meet in the Park. This was the first step in a course in which I have never flinched or wavered.

In 1855 I undertook, with others, the publication of a series of papers, entitled "Half-Hours with Freethinkers," the late John Watts being one of my co-workers. I also by myself commenced the publication of my "Commentary on the Pentateuch," which has since been entirely re-written and now forms my "Bible: what it is."

During the autumn of 18571 paid my first lecture visit to Northampton. Early in 1858, when Mr. Edward Truelove was suddenly arrested for publishing the pamphlet, "Is Tyrannicide Justifiable?" I became Honorary Secretary to the Defense, and was at the same time associated with the

conduct of the defense of Simon Bernard, who was arrested at the instigation of the French Government for alleged complicity in the Orsini tragedy. It was at this period I gained the friendship of poor Bernard, which, without diminution, retained until he died; and also the valued frendship of Thomas Allsop, which I still preserve. My associations were from thenceforward such as to encourage in me a strong and bitter feeling against the late Emperor Napoleon. While he was in power I hated him, and never lost an opportunity of working against him until thedecheancecame. I am not sure now that I always judged him fairly; but nothing, I think, could have tempted me to either write or speak of him with friendliness during his life.Le sang de mes amis etait sur son ame. Now that the tomb covers his remains, my hatred has ceased; but no other feeling has arisen in its place. Should any of his family seek to resume the Imperial purple, I should remain true to my political declarations of sixteen years since, and should exert myself to the uttermost to prevent France falling under another Empire. I write this with much sadness, as 1870 to 1873 have dispelled some of my illusions held firmly during the fifteen years which preceded. I had believed in such men as Louis Blanc, Lodru Rollin, Victor Hugo, as possible statesmen of France. I was mistaken. They were writers, talkers, and poets; good men to ride on the stream, or to drown in honest protest, but lacking force to swim against, or turn back, the tide by the might of their will. I had believed too in a Republican France, which is yet only in the womb of time, to be born after many pangs and sore travailing.

In 1859 I saw Joseph Mazzini for the first time, and remained on terms of communication with the great Italian patriot until the year 1869, from time to time bringing him correspondence from Italy, where my business sometimes took me. After 1869 we found ourselves holding diverse opinions on the Franco-Prussian question—Mazzini went for Prussia, I for France—and I never saw him again.

In June, 1858, I held my first public formal theological debate with the Rev. Brewin Grant, B.A., at that time a Dissenting Minister at Sheffield. Mr. Grant was then a man of some ability, and if he could have forgotten his aptitudes as a circus jester, would have been a redoubtable antagonist. During this year I was elected President of the London Secular Society, in lieu of Mr. George Jacob Holyoake, who had theretofore led the English Free-thought party, but who has of late years devoted himself more completely to general journalistic work.

In November, 1858, I commenced editorial duties with theInvestigator, formerly conducted by the late Robert Cooper, which I continued until August, 1859. It had but a small circulation, and was financially a very great failure. For the encouragement of young propagandists, I may here insert a little anecdote of my early lecturing experience. I had lectured in Edinburgh in mid-winter, the audience was small, the profits microscopical. I, alter paying my bill at the Temperance Hotel, where I then stayed, had only a few shillings more than my Parliamentary fare to Bolton, where I

was next to lecture. I was out of bed at five on a freezing morning, and could have no breakfast, as the people were not up. I carried my luggage (a big tin box, corded round, which then held books and clothes, and a small black bag), for I could not spare any of my scanty cash for a conveyance or porter. The train from Edinburgh being delayed by a severe snow-storm, the corresponding Parliamentary had left Carlisle long before our arrival. In order to reach Bolton in time for my lecture, I had to book by a quick train, starting in about three-quarters of an hour, but could only book to Preston, as the increased fare took all my money, except 4 1/2d. With this small sum I could get no refreshment in the station, but in a little shop in the street outside I got a mug of tea and a little hot meat pie. From Preston, I got with great difficulty on to Bolton, handing my black bag to the station-master there as security for my fare from Preston, until the morning. I arrived in Bolton about quarter to eight; the lecture commenced at eight, and I, having barely time to run to my lodgings, and wash and change, went onto the platform cold and hungry. I shall never forget that lecture; it was in an old Unitarian Chapel. We had no gas, the building seemed full of a foggy mist, and was imperfectly lit with candles. Everything appeared cold, cheerless, and gloomy. The most amusing feature was that an opponent, endowed with extra piety and forbearance, chose that evening to specially attack me for the money-making and easy life I was leading. Peace to that opponent's memory, I have never seen him since. It was while in Scotland on this journey I made the acquaintance, and ultimately won the frendship, of the late Alexander Campbell, of Glasgow—a generous, kindly-hearted old Socialist Missionary, who, at a time when others were hostile, spoke encouragingly to me, and who afterward worked with me for a long period on this journal [The National Reformer]. Occasionally the lectures were interfered with by the authorities, but this happened oftener in the provinces than in London. In March, 1859, I was to have lectured in Saint Martin's Hall on "Louis Napoleon," but the Government—on a remonstrance by Count Walewski, as to language used at a previous meeting, at which I had presided for Dr. Bernard—interfered; the hall was garrisoned by police, and the lecture prevented. Mr. Hullah, the then proprietor, being indemnified by the authorities, paid damages for his breach of contract, to avoid a suit which I at once commenced against him. Later in the same month I held a debate in Northampton with Mr. John Bowes, a rather heavy, but well-meaning, old gentleman, utterly unfitted for platform controversy. The press now began to deal with me tolerably freely, and I find "boy," "young man," and "juvenile appearance" very frequent in the comments. My want of education was an especial matter for hostile criticism, the more particularly so when the writer had neither heard nor seen me.

Discussions now grew on me so thick and fast that even some of the most important debates may perhaps escape notice in this imperfect chronicling. At Sheffield I debated with a Reverend Dr. Mensor, who styled himself a Jewish Rabbi. He was then in the process of gaining admission to the Church of England, and had been put forward to show my want of scholarship. We both scrawled Hebrew characters for four nights on a black board, to the delight and mystification of

the audience, who gave me credit for erudition, because I chalked the square letter characters with tolerable rapidity and clearness. At Glasgow I debated with a Mr. Court, representing the Glasgow Protestant Association, a glib-tongued missionary, who has since gone to the bad; at Paisley with a Mr. Smart, a very gentlemanly antagonist; and at Halifax with the Rev. T. D. Matthias, a Welsh Baptist Minister, unquestionably very sincere. All these were formal debates, and were reported with tolerable fullness in the various journals. In the early part of 1860 I, aided by my friends at Sheffield, Halifax, and other parts of England, projected theNational Reformerin small shares. Unfortunately just after the issue of its prospectus, Joseph Barker returned from America, and was associated with me in the editorship. The arrangement was peculiar, Mr. Barker editing the first half of the paper and I the second. It was not precisely a happy union, and the unnatural alliance came to an end in a very brief period. In August.1861, I officially parted company with Joseph Barker as editor. We had been practically divorced for months before: the first part of the paper usually contained abuse of those who wrote in the second half. He came to me originally at Sheffield, pretending to be an Atheist and a Republican, and soon after pretended to be a Christian, and spoke in favor of slavery. I am sometimes doubtful as to how far Mr. Barker deluded himself, as well as others, in his various changes of theological and political opinions. If he had had the slightest thoroughness in his character, he would have been a great man; as it is, he is only a great turn-coat.

In June, 1860, I debated again with the Reverend Brewin Grant, every Monday for four weeks, at Bradford, and during this debate had a narrow escape of my life. In one of my journeys to London, the great Northern train ran through the station at King's Cross, and many persons were seriously injured. I got off with some trifling bruises and a severe shaking.

Garibaldi having at this time made his famous Marsala effort, I delivered a series of lectures in his aid, and am happy to be able to record that, though at that time very poor, I sent him one hundred guineas as my contribution by my tongue. This money was chiefly sent through W. H. Ashurst, Esq., now Solicitor to the General Post Office, and among the letters I preserve I have one of thanks from "G. Garibaldi," for what I was then doing for Italy.

In this year I debated for four nights with Dr. Brindley, an old antagonist of the Socialists, at Oldham; for two nights with the Rev. Dr. Baylee, the President of St. Aidan's College, at Birkenhead, where a Church of England curate manufactory was for some time carried on; and for two nights with the Rev. Dr. Rutherford, of Newcastle. Dr. Rutherford has since so identified himself with the cause of the Tyneside workers, that I read with regret any harsh words that escaped me in that debate. Although during late years I have managed to keep all my meetings free from violence or disorder, this was not always so. In October, 1860, I paid my first visit to Wigan, and certainly lectured there under considerable difficulty, and incurred personal clanger,

the resident clergy actually inciting the populace to physical violence, and part destruction of the building I lectured in. I, however, supported by one courageous woman and her husband, persevered, and despite bricks and kicks, visited Wigan again and again, until I had,bon gre malgreimproved the manners and customs of the people, so that now 1 am a welcome speaker there. I could not improve the morals of the clergy, as the public journals have recently shown, but that was their misfortune not my fault. In the winter of 1860, I held two formal debates in Wigan, all of which were fully reported in the local journals; one with Mr. Hutchings, a respectable Nonconformist layman, and the other with the Rev. Woodville Woodman, a Swedenborgian divine.

Early in 1861 I visited Guernsey in consequence of an attempt made by the Law Courts of the Island to enforce the blasphemy laws against a Mr. Stephen Bendall, who had distributed some or my pamphlets to the Guernseyites, and had been condemned to imprisonment in default of finding sureties not to repeat the offense. Not daring to prosecute me, although challenged in writing, the authorities permitted drink and leave of absence to be given to soldiers in the garrison on condition they would try to prevent the lecture, and the house in which I lectured was broken into by a drunken and pious mob, shouting "Kill the Infidel." My antagonists were fortunately as cowardly as they were intolerant, and I succeeded in quelling the riot, delivering my lecture in spite of all opposition, although considerable damage was done to the building.

Shortly after this I visited Plymouth, where the Young Men's Christian Association arranged to prosecute me. They were, however, a little too hasty, and had me arrested at an open air meeting when I had scarcely commenced my speech, having only uttered the words: "Friends, I am about to address you on the bible." Having locked me up all night, and refused bail, it was found by their legal adviser that a blunder had been committed, and a charge of "exciting a breach of the peace, and assaulting the constable in the execution of his duty," was manufactured. It was tolerably amusing to see the number of dinners, suppers, and breakfasts, all accompanied with pots or cups of Devonshire cream, sent in to the Devonport Lock-up, where I was confined, by various friends who wanted to show their sympathy. The invented charge, though well sworn to, broke down after two days' hearing, under the severe cross-examination to which I subjected the witnesses. I defended myself, two lawyers appeared against me, and seven magistrates sat on the bench, predetermined to convict me. Finding that the evidence of the whole of the witnesses whom I wished to call was to be objected to, because un-believers in hell were then incompetent as witnesses according to English law, I am pleased to say that several Nonconformists, disgusted with the bigotry and pious perjury of my prosecutors, came forward. The result was a triumphant victory, and a certificate of dismissal, which I wrung from the reluctant bench of great unpaid. I was not yet satisfied; some of the magistrates had tried to browbeat me, and I announced in court that I would deliver the lecture I

had been prevented from delivering to an audience assembled in the borough, and that I should sue at law the Superintendent of Police who had arrested me. The first portion of my defiance was the most difficult to give effect to; not a hall could be hired in Devonport, and nearly all the convenient open land being under military jurisdiction, it was impossible to procure the tenancy of a field for an open-air meeting. I, however, fulfilled my promise, and despite the police and military authorities combined, delivered my lecture to an audience assembled in their very teeth. Devonport, Stonehouse, and Plymouth form one garrisoned and fortified town, divided by the River Tamar. All the water to the sea is under the separate jurisdiction of Saltash, some miles distant. I obtained a large boat on which a temporary platform was built, and this boat was quietly moored in the River Tamar on the Devonport side, about two fathoms from the shore. Placards were issued stating that, acting under legal advice, I should address the meeting and deliver the prevented lecture "near to the Devonport Park Gates." Overwhelming force was prepared by the Devonport authorities, and having already erred by too great haste, this time they determined to let me fairly commence my lecture before they arrested me. To their horror I quietly walked past the Park Gates where the crowd was waiting, and passing down a by-lane to the river side, stepped into a little boat, was rowed to the large one, and then delivered my lecture, the audience who had followed me standing on an open wharf, all within the jurisdiction of the Borough of Devonport, and I being about 9 feet outside the borough. The face of the Mayor ready to read the riot act, the superintendent with twenty-eight picked policemen to make sure or my arrest, and a military force in readiness to overawe any popular demonstration —all these were sights to remember. I am afraid the Devonport Young Men's Christian Association did not limit themselves to prayers and blessings on that famous Sunday.

As I had promised, the authorities refusing any apology for the wrongful arrest, I commenced an action against Superintendent Edwards, by whom I had been taken into custody. The borough magistrates indemnified their officer and found funds to resist me. I fought with very little help save from one tried, though anonymous friend, for Joseph Barker, my co-editor, but not co-worker, in our own paper, discouraged any pecuniary support. The cause was made a special jury one, and came on for trial at Exeter Assizes. Unfortunately I was persuaded to brief counsel, and Sir Robert Collier, my leader, commenced his speech with an expression of sorrow for my opinions. This damaged me very much, although I won the case easily after a long trial. The jury, composed of Devonshire landowners, only gave me a farthing damages, and Mr. Baron Channell refused to certify for costs. I was determined not to let the matter rest here, and myself carried it to the Courtin Banco, where I argued it in person for two whole days, before Lord Chief Justice Erie and a full bench of Judges. Although I did not succeed in improving my own position, I raised public opinion in favor of free speech, and the enormous costs incurred by the borough authorities, and which they had to bear, have deterred them from ever again interfering either with my lectures or those of any other speaker, and I now have crowded audiences in the finest

hall whenever I visit the three towns. These proceedings cost me several hundred pounds, and burdened me with a debt which took long clearing off.

In 1802, I held a four nights' discussion with a Dissenting clergyman, the Rev. W. Barker. My opponent was probably one of the most able and straightforward among my numerous antagonists. About this time a severe attack of acute rheumatism prostrated me, and having soon after to visit Italy, I, at first under medical advice, adopted the habit of drinking the light Continental wines, and although continuing an advocate of sobriety, I naturally ceased to take part in any teetotal gatherings.

In the struggle between the Northern and Southern States of America, my advocacy and sympathies went with what I am glad to say was the feeling of the great mass of the English people—in favor of the North; and my esteemed friend, and then contributor, W. E. Adams, furnished most valuable aid with his pen in the enlightenment of public opinion, at a time when many of our aristocracy were openly exulting in what they conceived to be the probable break-up of the United States Republic. During the Lancashire cotton famine I lectured several times in aid of the fund.

I began now also to assume a much more prominent position in the various English political movements, and especially to speak on the Irish Church and Irish Land questions. On the Irish questions, I owe much to my late co-worker and contributor, poor Peter Fox Andre, a thoroughly honest and whole-souled man, whose pen was always on the side of struggling nationalities.

One of the disadvantages connected with a public career is, that every vile scoundrel who is too cowardly to face you openly can libel you anonymously. I have had, I think, my full share of this kind of annoyance. Most of the slanders I have treated with utter contempt, and if I had alone consulted my own feelings, should probably never have pursued any other course. Twice, however, I have had recourse to the judgment of the law—once in the case of a clergyman of the Church of England, who indulged in a foul libel affecting my wife and children. This fellow I compelled to retract every word he had uttered, and to pay £100, which, after deducting the costs, was divided among various charitable institutions. The reverend libeler wrote me an abject letter, begging me not to ruin his prospects in the Church by publishing his name; I consented, and he has since repaid my mercy by losing no opportunity of being offensive. He is a prominent contributor to theRock, and a fierce ultra-Protestant. He must have greater confidence in my honor than in his own, or fear of exposure would compel him to greater reticence. The other case arose during the election, and will be dealt with in its proper order.

It was my fortune to be associated with the Reform League from its earliest moments until its dissolution. It is hardly worth while to repeat the almost stereotyped story of the successful struggle made by the League for Parliamentary Reform. E. Beales, Esq., was the President of the League, and I was one of its Vice-Presidents, and continued nearly the whole time of its existence a member of its executive. The whole of my services and journeys were given to the League without the slightest remuneration, and I repeatedly, and according to my means, contributed to its funds. When I resigned my position on the executive I received from Mr. George Howell, the Secretary, and from Mr. Beales, the President, the most touching and flattering letters as to what Mr. Beales was pleased to describe as the loyalty and utility of my services to the League. Mr. George Howell concluded a long letter as follows: "Be pleased to accept my assurance of sincere regards for your manly courage, consistent and honorable conduct in our cause, and for your kindly consideration for myself as Secretary of this great movement on all occasions." These letters have additional value from the fact that Mr. Beales, whom I sincerely respect, differs widely from me in matters of faith, and Mr. Howell is, fortunately, far from having any friendly feeling toward me. It was while on the Executive of this League that I first became intimately acquainted with Mr. George Odger, and had reason to be pleased with the straightforward course he pursued, and the honest work he did as one of the Executive Committee. Mr. John Baxter Langley and Mr. R. A. Cooper were also among my most prominent co-workers.

My sympathy with Ireland, and open advocacy of justice for the Irish, nearly brought me into serious trouble. Some who were afterward indicted as the chiefs of the so-called Fenian movement, came to me for advice. So much I see others have written, and the rest of this portion of my autobiography I may write some day. At present there are men not out of danger whom careless words might imperil, and as regards myself I shall not be guilty of the folly of printing language which a government might use against me. My pamphlet on the Irish Question, published in 1866, won a voluntary letter of warm approval from Mr. Gladstone, the only friendly writing I ever received from him in my life.

At Huddersfield, the Philosophical Hall having been duly hired for my lectures, pious influence was brought to bear on the lessee to induce him to break the contract. Fortunately what in law amounted to possession had been given, and on the doors being locked against me, I broke them open, and delivered my lecture to a crowded and most orderly audience. I was arrested, and an attempt was made to prosecute me before the Huddersfield magistrates; but I defended myself with success, and defeated with ease the Conservative solicitor, N. Learoyd, who had been specially retained to insure my committal to jail.

In 1868 I entered into a contest with the Conservative Government which, having been continued by the Gladstone Government, finished in 1869 with a complete victory for myself. According to the then law every newspaper was required to give sureties to the extent of £800 against blasphemous or seditious libel. I had never offered to give these sureties, as they would have probably been liable to forfeiture about once a month. In March, 1868, the Disraeli Government insisted on my compliance with the law. I refused. The Government then required me to stop my paper. I printed on the next issue, "Printed in Defiance of Her Majesty's Government." I was then served with an Attorney-General's information, containing numerous counts, and seeking to recover enormous penalties. I determined to be my own barrister, and while availing myself in consultation of the best legal advice, I always argued my own case. The interlocutory hearings before the Judges in Chambers were numerous, for I took objection to nearly every step made by the government, and I nearly always succeeded. I also brought the matter before Parliament, being specially backed in this by Mr. Milner Gibson, Mr. John Stuart Mill, and Mr. E. H. J. Crawford. When the information was called on for trial in a crowded court before Mr. Baron Martin, the Government backed out, and declined to make a jury; so the prosecution fell to the ground. Strange to say, it was renewed by the Gladstone Government, who had the coolness to offer me, by the mouth of Attorney-General Collier, that they would not enforce any penalties if I would stop the paper, and admit that I was in the wrong. This I declined, and the prosecution now came on for trial before Baron Bramwell and a special jury. Against me were the Attorney-General, Sir R. Collier, the Solicitor-General, Sir J. D. Coleridge, and Mr. Crompton Hutton. I found that these legal worthies were blundering in their conduct of the trial, and atnisi priusl let them obtain a verdict, which however, I reversed on purely technical grounds, after a long argument, which I sustained before Lord Chief Baron Kelly and a full court sitting in Banco. Having miserably failed to enforce the law against me, the Government repealed the statute, and I can boast that I got rid of the last shackle of the obnoxious English press laws. Mr. J. S. Mill wrote me: "You have gained a very honorable success in obtaining a repeal of the mischievous Act by your persevering resistance." The Government, although beaten, refused to reimburse me any portion of the large outlay incurred in fighting them.

It has always been my ambition to enter Parliament, and at the General Election for 1808 I, for the first time, entered the arena as a candidate. I was beaten; but this is scarcely wonderful. I had all the journals in England except three against me. Every idle or virulent tale which folly could distort or calumny invent was used against me. Despite all, I polled nearly 1,100 votes, and I obtained unasked, but not ungratefully listened to, the public acknowledgments from the Mayor of the borough, also from one of my competitors, Mr. Charles Gilpin, as to the loyal manner in which I had fought the contest through.

During the election struggle libels rained from all sides. One by the late Mr Capper, M. P., seeking reelection at Sandwich, was the monstrous story, that in the open square at Northampton I had taken out my watch and defied God to show his power by striking me dead in five minutes. Challenged for his authority Mr. Capper pretended to have heard the story from Mr. C. Gilpin, M. P., who indignantly denied being any party to the falsehood. I insisted on an apology from Mr. Capper, which being refused I sued him, but he died soon after the writ was served. The story was not an original invention by Mr. Capper; it had been reported of Abner Kneeland thirty years before, and is still a favorite one with pious missionaries at street corners. A still more outrageous slander was inserted in theRazor, a pseudo-comic weekly. I compelled this journal to give a full apology, but not until after two years' litigation, and a new trial had been ordered. When obliged to recant, the Christian proprietor became insolvent, to avoid payment of the costs. Unfortunately born poor, my life had been one continued struggle, and the burden of my indebtedness was sorely swollen in this and similar contests.

Probably the most severe, and to me certainly the most costly, struggle has been on the oath question. Formerly it was a fatal objection against the competency of a witness who did not believe in a Deity and in a future state of rewards and punishments. Several attempts had been made to alter the law, but they had all failed; and indeed Sir J. Trevelyan's measures only provided for affirmation, and did not seek to abolish the incompetency. In a case in which I was plaintiff in the Court of Common Pleas, my evidence was objected to, and I determined to fight the matter through every possible court, and to get the law changed if possible.

I personally argued the case before Lord Chief Justice Bovill and a full Bench, in the Court of Common Pleas, and with the aid of the present Mr. Justice Denman and the late Lord Chancellor Hatherly, the law was twice altered in Parliament. Before victory was ultimately obtained I had to carry the case into the Court of Error, and I prepared and sent out at my own cost more than two hundred petitions to Parliament. Ultimately the Evidence Amendment Act, 1869, and the Evidence Further Amendment Act, 1870, gave Freethinkers the right to enter the witness box, and I won my suit. The Christian defendant finished by becoming bankrupt, and I lost a terribly large sum in debt and costs. The original debt and interest were over £300, and the costs of the various proceedings were very heavy.

In the winter of 1870 the Mirfield Town Hall, which had been properly taken and paid for for two nights' lectures, was refused by the proprietors, who barricaded the hall, and obtained a great force of police from the neighborhood. In order that the law might be clearly settled on this matter, I brought an action to try the question, and although the late Mr. Justice Willis expressed himself strongly in my favor, it was held by Mr. Justice Mellor atnisi priusthat nothing, except a deed under seal or an actual demise, would avail. A mere agreement for a user of a hall was a

license revocable at will, even when for a valuable consideration. This convinced me that when hall proprietors break their contracts, I must enforce my rights as I did at Huddersfield, and have done in other places.

During the Franco-Prussian struggle I remained neutral until the 4th of September. I was against Bismark and his blood-and-iron theory, but I was also against the Empire and the Emperor; so I took no part with either. I was lecturing at Plymouth the day thedecheancewas proclaimed, and immediately after wrote my first article in favor of Republican France. I now set to work and organized a series of meetings in London and the provinces, some of which were cooperated in by Dr. Congreve, Professor Beesly, and other prominent members of the Positivist party. These meetings exercised some little effect on the public opinion in this country, but unfortunately the collapse on the part of France was so complete, and the resources commanded by Bismark and Moltke so vast, that, except as expressing sympathy, the results were barren. In October, 1870, I, without any previous communication from myself to them, received from the Republican Government at Tours a long and flattering letter, signed by Leon Gambetta, Adolphe Cremieux, Al Glais Bizoin, and Admiral Fourichon, declaring that they, as members of the "Gouvernement de la Defense Nationale, reunis en delegation a Tours," "tiennent a honneur de vous remercier chalereusement du noble concours que vous apportez a la cause de la France." On the 2d of February, 1871, M. Tissot, the Charge d'Affaires of France in England, wrote me: "Quant a moi, mon cher ami, le ne puis que constater ici, comme je l'ai deja fait, comme je le feraien toute occasion, la dette que nous avons contracted envers vous. Vous nous avez donne votre temps, votre activite, votre eloquence, votre ame, la meilleure partie de vous meme, en un mot; la France que vous avez ete seule a defendre ne l'oubliera jamais." This is probably a too flattering estimate of my services to France, but coming from the official representative of the French Republic, I feel entitled to insert it. In September, 1871, Monsieur Emmanuel Arago, member of the Provisional Government of the 4th of September, wrote the following words upon the letter which had been sent me, as above mentioned, in October, 1870, by the Delegate Government of Tours: "En lisant cette lettre, j'eprouve tres vivement le regret de n'avoir pu, en-ferme dans Paris, joindre ma signature a celles de mes collegues de la delegation de Tours. Mr. Bradlaugh est et sera toujours dans la Republique notre concitoyen."

During 1870, 1871, and 1872, 1 held several debates with the Rev. A. J. Harrison, formerly of Huddersfield. The first at Newcastle, in the splendid Town Hall of that place, was attended by about 5,000 persons. The second debate at Bristol, was notable from being presided over by Professor Newman. The third discussion was at Birmingham, and was an attempt at the Socratic method, and the last platform encounter, was in the New Hall of Science, London. Of the Rev. Mr. Harrison it is enough I should say that, a few weeks since, when rumor put my life in danger, he was one of the first to write a kindly and unaffected letter of sympathy to Mrs. Bradlaugh.

When the great cry of thanksgiving was raised for the recovery of the Prince of Wales, I could not let it pass without protest. While he lay dangerously ill I had ceased to make any attack on himself or family, but I made no pretense of a grief I did not feel. When the thanksgiving day was fixed, and tickets for St. Paul's were sent by the Lord Chamberlain to working men representatives, I felt it right to hold a meeting of protest, which was attended by a crowded audience in the New Hall of Science.

The "right of meeting" has given me three important occasions of measuring swords with the Government during the last few years, and each time defeat has attended the Government. The first, the Hyde Park meeting, where I acted in accord with Mr. Beales, to whom as chief, let the honor go of this conflict. The second was on the 31st July, 1871, under the following circumstances. A meeting had been held by Mr. G. Odger and some of his friends in Hyde Park, on Sunday the 30th of July, to protest against the grant to Prince Arthur; this meeting was adjourned until the following evening. Late on the Sunday afternoon, the adjourned meeting was forbidden by the Government. Early on Monday morning Mr. Odger applied to me to give the friends the benefit of my legal knowledge and personal influence. I consented, and the Government persevering, I took my share of the responsibility of the gathering, and signed with Mr. Odger a new notice convening the meeting. The Home Office not only served us also with a written prohibition, but threatened and prepared to use force. I immediately gave Mr. Bruce notice that the force would be illegal, and that it would be resisted. At the last moment, and in fact only some half hour before the meeting commenced, the Government abandoned its prohibition, and an enormous meeting of a most orderly character was held in absolute defiance of the authorities.

The more recent case was in December, 1872, when finding that Mr. Odger, Mr. Bailey, and others, had been prosecuted under some monstrous and ridiculous regulations invented by Mr. Ayrton, I, on my own responsibility, determined to throw down the gauntlet to the Government. I did this most successfully, and soon after the opening of Parliament the obnoxious regulations were annulled.

It is at present too early to speak of the Republican movement in England, which I have sought, and not entirely without success, to organize on a thoroughly legal basis. It is a fair matter for observation that my lectures on "The Impeachment of the House of Brunswick," have been delivered to crowded audiences assembled in some of the finest halls in England and Scotland, notably the Free Trade Hall, Manchester, the Town Hall, Birmingham, the Town Hall, Northampton, and the City Hall, Glasgow. It is, as far as I am aware, the first time any English citizen has, without tumult or disorder and in buildings belonging to various Municipalities, directly challenged the hereditary right of the reigning family.

In penning the foregoing sketch I had purposely to omit many facts connected with branches of Italian, Irish, and French politics. I have also entirely omitted my own struggles for existence. The political parts are left out because there are secrets which are not my own alone, and which may not bear full telling for many years to come. The second, because I hope that another year or two of hard work may enable me to free myself from the debt load which for some time has hung heavily round me.

A FEW WORDS ABOUT THE DEVIL

To have written under this head in the reign of James Rex, of pious memory, would have, probably, procured for me, without even the perusal of my pamphlet, the reputation of Dr. Faustus, and a too intimate acquaintance with some of the pleasant plans of torturing to death practiced by the clever witch-finders of that day. I profess, however, no knowledge of the black art, and am entirely unskilled indiablerie, and feel quite convinced that the few words I shall say about his Satanic Majesty will not be cause of any unholy compacts in which bodies or souls are signed away in ink suspiciously red.

In many countries, dealing with the Devil has been a perilous experiment. In 1790, an unfortunate named Andre Dubuisson was confined in the Bastile, charged with raising the Devil. To prevent even the slightest apprehension on the part of my reader that I have any desire or intent toward placing him unpleasantly near a black-visaged, sulphureous-constitutioned individual, horned like an old goat, with satyr-like legs, a tail of unpleasant length, and a disposition to buy a body from any unfortunate wight ready to dispose of it, I have only to assert my intention of treating the subject entirely from a biblical point of view. Doubtless I ought to do this; the Christian Devil is a bible institution. I say, \ advisedly, the Christian Devil, because other religions have boasted their Devil, and it is well to prevent confusion. But I frankly admit that none of these religions have the honor of a Devil so devilish as our own. Indeed our Devil ought to be the best: it costs the most. No other religion besides our own can boast the array of Popes, Bishops, Conferences, Rectors, Incumbents, and paid preachers of various titles. And all these to preach against the Devil!

It is necessary, before entering upon my subject, that I should confess my little ability to do it justice. I am unable to say, certainly, whether I am writing about a singular Devil or a plurality of Devils. In one text "Devils" are mentioned,* recognizing a plurality; in another, "the Devil,"** as if there was but one. We may, however, fairly assume that either there is one Devil, more than one, or less than one; and, having thus cleared our path from mere numerical difficulties, we will proceed to give the Devil his due. Satan appears either to have been a child of God, or, at any rate, a most intimate acquaintance of the family; for we find that on "a day when the children of

God came to present themselves before the Lord, that Satan came also among them;"*** and no surprise or disapprobation is manifested at his presence. The conversation narrated in the Book of Job as occurring between God and the Devil has, for us, a value proportioned to the rarity of the scene, and to the high character of the personages concerned.

* Leviticus xvii, 7.** Luke iv, 2.*** Job i, 6

We are, therefore, despite the infidel criticism of Martin Luther, who condemns the Book of Job as "a sheerargumentum fabulæ" determined to examine carefully the whole particulars for ourselves; and, in so doing, we are naturally surprised to find God, the omniscient, putting to Satan the query, Whence comest thou? We cannot suppose God, the all-wise, ignorant upon the subject, and we can not avoid a feeling of astonishment that such an interrogatory should have been made. Satan's reply, assuming its correctness—and this the text leaves us no reason to doubt—increases our surprise and augments our astonishment. The answer given is, "From going to and fro in the earth, and from going up and down it," In remarking on this answer, I do not address myself to those wretched persons who, relying on their reason and common sense, ignore the divine truth. I address myself to the true believer, and I ask, is he not astonished to find, from his bible, that Satan could have gone to and fro in the earth, and walked up and down, and yet not have met God, the omnipresent, occasionally during his journeying? The Lord makes no comment on Satan's reply, but says, "Hast thou not considered my servant Job, that there is none like him in the earth, a perfect and an upright man, one that feareth God and escheweth evil?" It is rather extraordinary that God should wish to have the Devil's opinion on the only good man recorded as then living in the world: the more extraordinary when we know that God is all-wise, and knew Satan's opinion without asking it, and that God is immutable, and, therefore, would not be influenced by the expression of the Devil's opinion when uttered. Satan's answer is, "Doth Job fear God for naught? Hast thou not made an hedge about him, and about all that he hath on every side? Thou hast blest the work of his hand, and his substance is increased in the land; but put forth thine hand now and touch all that he hath, and he will curse thee to thy face." What is God's reply to this audacious assertion? Does he express his determination to protect the righteous Job? Does he use his power to rebuke the evil tempter? No. "The Lord said unto Satan, Behold all that he hath is in thy power; only upon himself put forth not thine hand." And this was Job's reward for being a perfect and upright man, one that feared God and eschewed evil. He was not sent to the Devil, but the Devil was sent to all that he had. And he lost all without repining—sons, daughters, oxen, asses, camels and sheep, all destroyed, and yet Job sinned not. Some divines have urged that we here get a beautiful picture of patience and contentment under wrong and misfortune. But I reply that it is not good to submit patiently to wrong, or to rest contented under misfortune. I urge that it is manlier far to resist wrong, nobler far to wage war against wrong, better far to carefully investigate the causes of wrong and misfortune, with a

view to their removal. Contentment under wrong is a crime, voluntary submission under oppression is not the virtue some would have it to be.

"Again there was a day when the sons of God came to present themselves before the Lord [as if God's children could ever be absent from him], and Satan came also among them to present himself before the Lord. And the Lord said unto Satan, From whence comest thou? And Satan answered the Lord and said, From going to and fro in the earth, and from walking up and down in it. And the Lord said unto Satan, Hast thou considered my servant Job, that there is none like him in the earth? a perfect and an upright man, one that feareth God and escheweth evil? and still he holdeth fast his integrity, although thou movedst me against HIM TO DESTROY HIM WITHOUT CAUSE."

Can God be moved against a man to destroy him without a cause? If so, God is neither immutable nor all-wise. Yet the bible puts into God's mouth the terrible admission that the Devil had moved God against Job to destroy him without cause. If true, it destroys God's goodness; if false, then the bible is no revelation.

But Satan answered the Lord and said, "Skin for skin, yea, all that a man hath will he give for his life; put forth thine hand now and touch his bone and his flesh, and he will curse thee to thy face."

Does the Lord now drive the Devil from his presence? Is there any expression of wrath or indignation against his tempter? Not so. "The Lord said unto Satan, Behold, he is in thine hand, but save his life." And Job, being better than everybody else, finds himself smitten in consequence with sore boils from the sole of his foot unto his crown. The ways of the Lord are not as our ways, or this would seem the reverse of an encouragement to virtue.

We turn over the pages of our bible for further information on this diabolic theme.

After reading the account of the numbering by David attentively, one is puzzled by the apparent contradiction, that in one place "God" and in another "Satan" occurs.*

* 1 Chron. xxi, 1; 2 Sam. xxiv, 1

But it may be that there is more harmony between God and the Devil than ordinary men are aware. Unfortunately, we have not the advantage of great scholarship, but one erudite commentator on the bible tells us, in speaking of the Hebrew word Azazel: "This terrible and venerable name of God, through the pens of biblical glossers, has beena Devil, a mountain, a wilderness, and a he-goat."* Well may incomprehensibility be an attribute of Deity, when, even to

holy and reverend fathers, God has been sometimes undistinguishable from a he-goat or a Devil. Goats and Devils are alike represented with horns and tails. We trust that profanity will not enlarge on this sad confusion of ideas. Not possessing great lingual acquirements, we adhere to the English bible, believing that religion can never be improved by mere common sense, or human effort. We admire, without understanding, the skill of the Missionary, who makes the word "Mooigniazimoongo" an equivalent for God in the Sooahelee dialect, and who represents "original sin" to the Ottomi Indian by the word "Teacatzintiliztlatlacolli," and who recommends the Delaware to repentance as "Schiwelendamowitchewagan."

We do not wonder that in these translating thaumaturgic exploits God and Devil get mistaken for each other.

God is a spirit. Jesus was led up of the Spirit to be tempted of the Devil; and it is also true that spirits are very likely to lead men to the Devil. Too intimate acquaintance with whisky toddy overnight is often followed by thedelirium tremensand blue-devils on the morrow. We advise our readers to eschew alike spirituous and spiritual mixtures. They interfere sadly with sober thinking, and play the Devil with your brains.

The history of the temptation of Jesus by the Devil has been dealt with in another essay.** Yet it may be well to add the opinion of a Church of England divine in this place: "That the Devil should appear personallytothe Son of Godis certainly not more wonderfulthan that he should, in a more remote age, have appearedamongthe sons of God, in the presence of God himself, to tempt and torment the righteous Job."

* G. R. Gliddon's extract from "Land's Sagra Scritura,"chap. iii, sec. 1.** "Who was Jesus Christ?" p. 8.

But that Satan should carry Jesus, bodily and literally, through the air—first to the top of a high mountain, and then to the topmost pinnacle of the temple—is wholly inadmissible, it is an insult to our understanding.* It is pleasant to be able to find so many clergymen, in these days, zealously repudiating their own creeds. I am not prepared to speak strongly as to the color of the Devil; white men paint him black, black men white; but, allowing for the prejudices of dark-colored and fair-skinned believers, an invisible green would not be an unreasonable tint. We presume that he is not colorless, as otherwise the Evangelists or the persons present would have labored under considerable difficulties in witnessing the casting out of the Devil from the man in the synagogue.** This Devil is described as an unclean Devil, and it is, therefore, a fair inference that there are some clean Devils as well as dirty Devils. Printer's Devils are mostly unclean Devils, but then they are only little Devils, and we must not make too much of them.

Nearly all the Devils seem to talk, and it has therefore been conjectured by some bachelor metaphysicians that they are of the feminine gender, but I see no reason to agree in this, and my wife is of a contrary opinion. The Devils are probably good Christians—one text tells us that they believe and tremble. It is a fact with some poor Devils that the more they believe the more they tremble. We are told in another text that the Devil goeth about like a roaring lion, seeking whom he may devour. He will have extremely bad taste, however, if he eat up the lean and bony working-classes, while so many fat bishops and stout archdeacons remain unconsumed.

*"Christian Records," by the Rev. Dr. Giles, p. 144.** Luke iv, 35, 36.

Devils should be a sort of eternal salamander, for we are told there is everlasting fire prepared for the Devil and his angels,* and that there is a lake of brimstone and fire, into which the Devil was cast.** Perhaps instead of being salamander they will, while in the fire, be rather of the 'otter tribe; but this is a question which Mr. C. H. Spurgeon, who is a far better judge of brimstone than myself, would be more competent to settle. The Devil has, at least upon one occasion, figured as a controversialist. He disputed with the archangel Michael, contending about the body of Moses;*** and in these degenerate days of personality in debate it is pleasant to know that the religious champion, unlike the Grants, Coopers, and Brindleys of the present period, was very civil toward his Satanic opponent. The Devil was once imprisoned for 1,000 years in a bottomless pit.**** If a pit has no bottom, it seems but little confinement to shut the top; but with faith and prayer, even a good foundation may be obtained for a bottomless pit.

It is urged by some that the Devil was the serpent of Genesis—that is, that it was really Satan who, in this guise, tempted Eve. There is this difficulty in the matter: the Devil is a liar,***** but in the interview with Eve the serpent seems to have confined himself to the strict truth.****** There is, in fact, no point of resemblance—no horns, no hoof, nothing except the tail—which can be in any way identified.

* Matt, xxv, 41.** Jude, 9.*** John viii, 44.**** Rev. xxi, 10.***** Rev. xxi, 2.****** Genesis iii, 4, 5, 22.

The Old Testament speaks a little of the Devils, sometimes of Satan, but never of "The Devil," and it seems almost too much, in Matthew, to usher him in, in the temptation scene, without introduction, and as if he were an old acquaintance. I do not remember reading, in the Old Testament, anything about the lake of brimstone and fire; this feature of faith was reserved for the warmth of Christian love to inspire; the Pentateuch makes no reference to it. Zechariah, in a vision, saw "Joshua, the High-Priest, standing before the angel of the Lord, and Satan standing at his right hand to resist him."* Why the Devil wanted to resist Joshua is not clear; but as Joshua's

garments were in a very filthy state, it may be that he was preaching to the Priest the virtues of cleanliness. It is often said that cleanliness is next to godliness; I honestly confess that I should prefer a clean sinner to a dirty saint. Jesus said that one of the twelve disciples was a Devil,** but I am not prepared to say whether he meant the unfaithful and cowardly Peter, to whom he intrusted the keys of Heaven, or Judas who sold him for money, just as would nearly any bishop of the present day. The bishops preach that it is as difficult for a rich man to get into Heaven as for a camel to go through the eye of a needle; yet they enrich themselves, and their families, as greedily and carelessly as if they, at any rate, never expected to smell brimstone as a consequence. You are told to resist the Devil, and he will flee from you;*** if this be true, he is a cowardly Devil, and thus does not agree quite with Milton's picture of his grand, defiant, almost heroism. But then Milton was a poet, and true religion has but little poetry in it.

* Zechariah iii, 1.**John vi, 70.***James iv, 7.

Jeroboam, one of the Jewish monarchs, ordained priests for the Devils,* and this may be the reason why, at the present day, all the orthodox clergy are gentlemen in black. In the time of Jesus, Satan must, when not in the body of some mad, deaf, dumb, blind, or paralytic person, have been in Heaven; for Jesus, on one occasion, told his disciples that he saw Satan, as lightning, fall from Heaven.** Of course, this would betoken a rapid descent, but although a light affair, it is no laughing matter, and we reverently leave it to the clergy to explain the text. Jesus told Simon Peter that Satan desired to have him, that he might sift him as wheat;*** in this text it may be urged that Jesus was chaffing his disciple. Paul, the apostle, seems to have looked on the Devil much as the magistrates of Guernsey, Devonport, and Yarmouth look on the police, for Paul delivered Hymeneus and Alexander unto Satan, that they may learn not to blaspheme.****

Revivalists are much indebted for their evanescent successes to Hell and the Devil, if the following extract from the experience of a Christian preacher be reliable:

"Thomas English was one of those very noisy and active preachers who do so much in promoting revivals." he would tell his hearers of "dwelling with devouring fire, bearing everlasting burning, roasting on the Devil's spit, broiling on his gridiron, being pitched about with his fork, drinking the liquid fire, breathing the brimstone fumes, drowning in a red-hot sea, lying on fiery beds,"***** etc.

* 2 Chron: xi, 15.** Luke x, 18.*** Luke xxii, 31.**** 1 Tim. i, 20.***** "Pilgrim's Progress from Methodism to Christianity."

In the present year the vulgar tirades of Reginald Radcliffe, Richard Weaver, and C. H. Spurgeon (some of them delivered in Exeter Hall) will serve to evidence that the above quotation is not the exaggeration which some might think. In London, before crowded audiences, Mr. Weaver, without originality, and with only the merit of copied coarseness, has called upon the Lord to "shake the ungodly for five minutes over the mouth of Hell." Mr. Spurgeon has drawn pictures of Hell which, if true and revealed to him by God, are most disgustingly frightful, and which being, as we believe, false, and but the creation of his own vulgar, morbid fancies, induce, on our part, a feeling of contempt as well as disgust.

The Wesleyans, some years since, made the Devil a prominent feature in the famous "Fly-Sheet" controversy, so much so that a Wesleyan, speaking and writing on the subject, suggested that the authors of the "Fly-Sheets" were Devils, and another once-Wesleyan writer says: "The first thing which made me inquire about the Devil was that I thought him abused. I thought him bad enough, but could not help fearing that people told lies about him. R. S———, a very zealous prayer-leader, stole some oats, and imputed the blame to the Devil. T. C——— got drunk, and complained in the love-feast that the Devil had been very busy with him for some time, and then took him in an unguarded moment. B. S——- was detected in lying, and complained that Satan had gained the advantage over him. Old George White burned his fingers in lighting his pipe, and declared that it was the Devil that caused him to do it; and Farmer Duffy horsewhipped his wife, and said that he did it to beat the Devil out of her. This make me desirous to know what influence the Devil really had, and I was stimulated to this inquiry by my friend, Mr. Trelevan, who assured mo that the Devil was as necessary as the Almighty to the orthodox faith."* The fashionable preachers in the neighborhood of Belgravia mostly eschew the Devil, and avoid the taint of brimstone; treacle is the commodity they dispense.

* "Pilgrim's Progress from Methodism to Christianity."

For myself, the only Devil I know is that black Devil ignorance, fostered by knavery and tyranny; a Devil personified by the credulous many, and kept up in the past by the learned but treacherous few, who preferred to rule the masses by their fears, rather than to guide them through their love. This devil has, indeed, not been a roaring lion, but a cowardly and treacherous boa constrictor; it has enveloped in its massive folds glorious truths, and in the fierceness of its brute power has crushed them in its writhings. But oh! a glorious day is coming: amid the heretofore gloom of night the bright rays of the rising sun are piercing, the light of truth dispels the mists of ignorance. Bright facts drive out dark delusions; mighty truths triumph over pious frauds, and no longer need men be affrighted by the notion of an omnipotent fiend, wandering through the earth, ever seeking their damnation.

Yes—to partially adopt the phraseology of a writer in "Macmillan's Magazine"—I do refuse to see in God a being omniscient as omnipotent, who puts us into this world without our volition, leaves us to struggle through it as we can, unequally pitted against an almost omnipotent and supersubtile Devil, and then, if we fail, finally drops us out of this world into Hell-fire, where a legion of inferior Devils find constant and never-ending employment in inventing fresh tortures for us; our crime being that we have not succeeded where success was rendered impossible. No high, no manly, no humane thinkings are developed in the doctrine of Devils and damnation. If a potent faith, it degrades alike the teacher and the taught, by its abhorrent mercilessness; and if a form, instead of a faith, then is the Devil doctrine a misleading sham, which frightens weak minds and never developes strong men.

NEW LIFE OF DAVID.

In compiling a biographical account of any ancient personage, impediments mostly arise from the uncertainty of the various traditions out of which we gather our biography, and from the party bias and coloring which often pervade and detract from their value. In the present case no such obstacle is met with, no such bias can be imagined, for, in giving the life of David, we extract it from an all-wise God's perfect and infallible revelation to man, and thus are enabled to present it to our readers free from any doubt, uncertainty, or difficulty. The father of David was Jesse, an Ephrathite of Bethlehem-judah. Jesse had either eight sons (1 Samuel xvi, 10, 11, and xvii, 12) or only seven (1 Chron. ii, 13 to 15), and David was either the eighth son or the seventh. Some may think this a difficulty to commence with, but such persons will only be those who rely on their own intellectual faculties, or who have been misled by Colenso's arithmetic. If you, my dear reader, are in any doubt, at once consult some qualified divine, and he will explain to you that there is really no difference between eight and seven when rightly understood with prayer and faith, by the help of the spirit. Arithmetic is an utterly infidel acquirement, and one which all true believers should eschew. In proof of this, I may observe that the proposition three times one are one is a fundamental article of the Christian faith. David's great grandmother was the holy harlot Rahab, and his grandmother was a lady who when unmarried went in the night and lay at the feet of Boaz, and left in the morning before it was light enough for any one to recognize her like her grandson she was "prudent in matters." When young, David tended his father's sheep, and apparently while so doing he obtained the reputation for being cunning in playing, a mighty valiant man, and a man of war and prudent in matters. He obtained his reputation as a soldier early and wonderfully, for he was "but a youth," and God's most holy word asserts that when going to fight with Goliath he tried to walk in armor, and could not, for he was not accustomed to it (1 Samuel xvii, 39, Douay version). Samuel shortly prior to this anointed David, and the spirit of the Lord came upon him from that day forward. If a man takes to spirits his life will probably be one of vice, misery, and misfortune, and if spirits take to him the result in the end is nearly the

same. Saul being King of Israel, an evil spirit from the Lord troubled him. The devil has no ear for music, and Saul was recommended to have David to play on a harp in order that harmony might drive this evil spirit back to the Lord who sent it. The Jews' harp was played successfully, and Saul was often relieved from the evil spirit by the aid of David's ministrations. There is nothing miraculous in this; at the people's concerts many a working man has been released from the "blue devils" by a stirring chorus, a merry song, or patriotic anthem. David was appointed armor-bearer to the king, but curiously enough this office does not appear to have interfered with his duties as a shepherd; indeed the care of his father's sheep took precedence over the care of the king's armor, and in the time of war he "went and returned to feed his father's sheep." Perhaps his "prudence in matters" induced him thus to take care of himself.

A Philistine, one Goliath of Gath (whose hight was six cubits and a span, or about nine feet six inches, at a low computation) had defied the armies of Israel. This Goliath was (to use the vocabulary of the reverend sporting correspondent of a certain religious newspaper) a veritable champion of the heavy weights. He carried in all two cwt. of armor, offensive and defensive, upon his person, and his challenge had great weight. None dared accept it among the soldiers of Saul until the arrival of David with some food for his brethren. David volunteered to fight the giant, but Saul objecting that he was not competent to take part in a conflict so dangerous, David related how he pursued alion and a bear, how he caughthimby his beard and slewhim. David's offer was accepted, he was permitted to fight the giant. In one verse David slew the Philistine with a stone, in another verse he slew him with the giant's own sword, while in 2 Samuel, c. xxi, v. 19, we are told that Goliath the Gittite was slain by Elhanan. Our transalators, who have great regard for our faiths and more for their pulpits, have kindly inserted the words "the brother of" before Goliath. This saves the true believer from the difficulty of understanding how Goliath of Gath could have been killed by different men at different times. David was previously well known to Saul, and was much loved and favored by that monarch. He was also seen by the king before he went forth to do battle with the gigantic Philistine. Yet Saul had forgotten his own armor-bearer and much-loved harpist, and was obliged to ask Abner who David was. Abner, captain of the king's host, familiar with the person of the armor-bearer to the king, of course knew David well; he therefore answered, "As thy soul liveth, O king, I can not tell." One day the evil spirit from the Lord came upon Saul and he prophesied. Men who are spiritually inclined often talk great nonsense under the influence of spirits, which they sometimes regret when sober. It is, however, an interesting fact in ancient spiritualism to know that Saul prophesied with a devil in him. Under the joint influence of the devil and prophecy, he tried to kill David, and when this was repeated, even after David had married the king's daughter (for whose wedding trousseau he had procured an interesting and delicate offering by the slaughter of two hundred men), then to save his own life David fled to Naioth, and Saul sent there messengers to arrest him, but the king's messengers having all become prophets, in the end Saul went himself,

and this time the spirit of the Lord came upon him, and he stripped off his clothes and prophesied as hard as the rest. What he phrophesied about we do not know. In fact, the priests have made so great deduction from the profits during the plenitude of their power, that there has been little which is profitable in connection with religion left for the people.

David lived in exile for some time, having collected around him every one that was in distress, and every one that was in debt, and every one that was discontented. Saul made several fruitless attempts to effect his capture, with no better result than that he twice placed himself in the power of David, who twice showed the mercy to a cruel king which he never conceded to an unoffending people. David having obtruded himself upon Achish, King of Gath, and doubtful of his safety, feigned madness to cover his retreat. He then lived a precarious life, sometimes levying a species of blackmail upon defenseless farmers. Having applied to one farmer to make him some compensation for permitting the farm to go unrobbed, and his demand not having been complied with, David, who is a man after the heart of the God of mercy, immediately determined to murder the farmer and all his household for their wicked reluctance in submitting to his extortions. The wife of farmer Nabal compromised the matter. David "accepted her person" and ten days afterward Nabal was found dead in his bed. David afterward went with six hundred men and lived under the protection of Achish, king of Gath; and while thus residing (being the anointed one of a God who says "Thou shalt not steal,") he robbed the inhabitants of the surrounding places; being also obedient to the statute "Thou 1 shalt do no murder," he slaughtered, and left neither man nor woman alive to report his robberies to King Achish; and as he "always walked in the ways" of a God to whom "lying lips are an abomination," he made false reports to Achish in relation to his actions. Of course this was all for the glory of God, whose ways are not as our ways. Soon the Philistines were engaged in another of the constantly recurring conflicts with the Israelites. Who offered them the help of himself and band? Who offered to make war on his own countrymen? David, the man after God's own heart, who obeyed his statutes and who walked in his ways to do only that which was right in the sight of God. The Philistines rejected the traitor's aid, and saved David from the consummation of this baseness. While David was making this unpatriotic proffer of his services to the Philistines, his own city of Ziglag was captured by the Amalekites, who were doubtless endeavoring to avenge some of the most unjustifiable robberies and murders perpetrated by David and his followers in their country. David's own friends evidently thought that this misfortune was a retribution for David's crimes, for they spoke of stoning him. The Amalekites had captured and carried off every thing, but they do not seem to have maltreated or killed any of their enemies. David was less merciful. He pursued them, recaptured the spoil, and spared not a man of them, save 400 who escaped on camels. In consequence of the death of Saul, David soon after was elevated to the throne of Judah, while Ishbosheth, son of Saul, was made King of Israel. But Ishbosheth, having

been assassinated, David slew the assassins, when they, hoping for reward, brought him the news, and he reigned ultimately over Israel also.

As my religious readers are doubtless aware, the Lord God of Israel, after the time of Moses, usually dwelt on the top of an ark or box, between two figures of gold, and on one occasion David made a journey with his followers to Baal, to bring thence the ark of God. They placed it on a new cart drawn by oxen. On their journey the oxen stumbled and consequently shook the cart, and one of the drivers, whose name was Uzzah, fearing that God might be tumbled to the ground, took hold of the ark, apparently in order to steady it, and prevent it from overturning. God, who is a God of love, was much displeased that any one should presume to do any such act of kindness, and killed Uzzah on the spot as a punishment for his error. This shows that if a man sees the Church of God tumbling down, he should never try to prop it up; if it be not strong enough to save itself the sooner it falls the better for human kind—that is, if they keep away from it while it is falling. David was much displeased that the Lord had killed Uzzah; in fact, David seems to have wished for a monopoly of slaughter, and always manifested displeasure when killing was done unauthorized by himself. Being displeased, David would not take the ark to Jerusalem; he left it in the house of Obed Edom, but as the Lord proved more kind to Obed Edom than he had done to Uzzah, David determined to bring it away, and he did so, and David danced before the ark in a state of semi-nudity, for which he was reproached by Michal. The story is one which, by itself, would be as entertaining to a depraved mind as any Holywell-Street pamphlet, if Lord Campbell's act did not prevent the publication of indecencies. The pages of God's most holy word, we believe, do not come within the scope of the act, and lovers of obscene language may therefore have legal gratification so long as the bible shall exist. The God of Israel, who had been leading a wandering life for many years, and who had "walked in a tent and in a tabernacle," and "from tent to tent," and "from one tabernacle to another," and who "had not dwelt in any house" since the time that he brought the Isrealites out of Egypt, was offered "an house for him to dwell in," but he declined to accept it during the lifetime of David, although he promised to permit the son of David to erect him such an abode. David being now a powerful monarch, and having many wives and concubines, saw one day the beautiful wife of one of his soldiers. To see, with this licentious monarch, was to crave for the gratification of his lust. The husband, Uriah, was fighting for the king, yet David was base enough to steal his wife's virtue during Uriah's absence in the field of battle. "Thou shalt not commit adultery," was one of the commandments, yet we are told by God of this David, "who kept my commandments, and who followed me with all his heart to do only that which was right in mine eyes" (1 Kings, c. xiv, v. 8). David having seduced the wife, sent for her husband, wishing to make him condone his wife's dishonor, as many a man has done in other lands, when a king or prince has been the seducer. Some hold that virtue in rags is less worth than vice when coroneted. Uriah would not be thus tricked, and David, the pious David, coolly planned, and without mercy caused to be executed,

the treacherous murder of Uriah. God is all just; and David having committed adultery and murder, God punished and killed an innocent child, which had no part or share in David's crime, and never chose that it should be born from the womb of Bathsheba. After this the king David was even more cruel and merciless than before. Previously he had systematically slaughtered the inhabitants of Moab, now he sawed people with saws, cut them with harrows and axes, and made them pass through brick-kilns. Yet of this man God said he "did that which was right in mine eyes." So bad a king, so treacherous a man, a lover so inconstant, a husband so adulterous, of course was a bad father, having bad children. We are little surprised, therefore, to read that his son Ammon robbed his sister, David's daughter Tamar, of her virtue; and that Ammon was afterward slain by his own brother, David's son Absalom, and are scarcely astonished that Absalom himself, on the house-top, in the sight of all Israel, should complete his father's shame by an act worthy a child of God's selected people. Yet these are God's chosen race, and this is the family of the man "who walked in God's ways all the days of his life."

God, who is all-wise and all-just, and who is not a man that he should repent, had repented that he, had made Saul king because Saul spared one man. In the reign of David the same good God sent a famine for three years on the decendants of Abraham, and upon being asked his reason for thus starving his chosen ones, the reply of the Deity was that he sent the famine on the subjects of David because Saul slew the Gibeonites. Satisfactory reason!—because Oliver Cromwell slew the Royalists, God will punish the subjects of Charles the Second. One reason is to profane eyes equivalent to the other, but a bishop or even a rural dean would show how remarkably God's justice was manifested. David was not behindhand in justice. He had sworn to Saul that he would not cut off his seed—i.e. that he would not destroy Saul's family. He therefore took two of Saul's sons, and five of Saul's grandsons, and gave them up to the Gibeonites, who hung them. Strangely wonderful are the ways of the Lord! Saul slew the Gibeonites, therefore years afterward God starves Judah. The Gibeonites hang men who had nothing to do with the crime of Saul, except that they are his decendants, and then we are told "the Lord was intreated for the land." Perhaps David wanted to get rid of the royal family of Saul. The anger of the Lord being kindled against Israel, and he wanting some excuse for punishing the decendants of Jacob, moved David to number his people. The Chronicles say that it was Satan, and pious people may thus learn that there is little difference between God and the Devil when rightly understood. Both are personifications founded in the ignorance of the masses, and their continuance will cease with their credulousness. David caused a census to be taken of the tribes of Israel and Judah. There is a trivial disagreement to the extent of about 270,000 soldiers between Samuel and Chronicles, but the readers must not allow so slight an inaccuracy as this to stand between them and heaven. What are 270,000 men when looked at prayerfully? The idea that any doubt should arise is to a devout mind at the same time profane and preposterous. Infidels suggest that 1,570,000 soldiers form a larger army than the Jews are likely to have

possessed. I can only add that as God is omnipotent, there is no reason to limit his power of increasing or decreasing miraculously the armament of the Jewish nation. David, it seems, did wrong in numbering his people, although we are never told that he did wrong in robbing or murdering their neighbors, or in pillaging peaceful agriculturists. David said, "I have sinned." The king having done wrong, an all-merciful God brought a pestilence on the people, and murdered 70,000 Israelites for an offense which their ruler had committed. The angel who was engaged in this terrible slaughter stood somewhere between heaven and earth, and stretched forth his hand with a drawn sword in it to destroy Jerusalem itself, but even the blood-thirsty Deity of the bible "repented him of the evil," and said to the angel, "It is enough." Many volumes might be written to answer the inquiries—Where did the angel stand, and on what? Of what metal was the sword, and where was it made? As it was a drawn one, where was the scabbard? and did the angel wear a sword belt? Examined in a pious frame of mind, much holy instruction may be derived from the attempt at solution of these problems.

David now grows old and weak, and at last, notwithstanding that he has the advantage of a pretty maiden to cherish him, he wears out, and his death hour comes. Oh! for the dying words of the Psalmist! What pious instruction shall we derive from the deathbed scene of the man after God's own heart! Listen to the last words of Judah's expiring monarch. You who have been content with the pious frauds and forgeries perpetrated with reference to the deathbeds and dying words of the great, the generous, the witty Voltaire, the manly, the self-denying, the incorruptible Thomas Paine, the humane, simple, child-like man, yet mighty poet, Shelley—you who have turned away from these with horror, unfounded if real, come with me to the death couch of the special favorite of God. Bathsheba's child stands by his side. Does any thought of the murdered Uriah rack old David's brain, or has a tardy repentance effaced the bloody stain from the pages of his memory? What does the dying David say? Does he talk of cherubs, angels, and heavenly choirs? Nay, none of these things pass his lips. Does he make a confession of his crime-stained life, and beg his son to be a better king, a truer man, a more honest citizen, a wiser father? Nay, not so—no word or sigh of regret, no expression of remorse or repentance escaped his lips. What does the dying David say? This foul adulterer, whom God has made king; this red-handed robber, whose life has been guarded by "our Father which art in Heaven;" this perjured king, whose lying lips have found favor in the sight of God, and who when he dies is safe for Heaven. Does David repent? Nay—like the ravenous tiger or wolf, which once tasting blood is made more eager for the prey, he yearns for blood; he dies, and with his dying breath begs his son to bring the grey hairs of two old men down to the grave with blood. Yet this is the life of God's anointed king, the chief one of God's chosen people.

David is alleged to have written several Psalms. In one of these he addresses God in the phraseology of a member of the P. R. praising Deity that he had smitten all of his enemies on the

cheek bone and broken the teeth of the ungodly. In these days, when "muscular Christianity" is not without advocates, the metaphor which presents God as a sort of magnificent Benicia Boy may find many admirers. In the eighteenth Psalm, David describes God as with "smoke coming out of his nostrils and fire out of his mouth," by which "coals were kindled." He represents God as coming down from heaven, and says "he rode upon a cherub." The learned Parkhurst gives a likeness of a one-legged, four-winged, four-faced animal, part lion, part bull, part eagle, part man, and if a cloven foot be any criterion, part devil also. This description, if correct, will give some idea to the faithful of the wonderful character of the equestrian feats of Deity.

In the twenty-sixth Psalm, the writer, if David, exposes his own hypocrisy in addition to his other vices. He has the impudence to tell God that he has been a man of integrity and truth; that he has avoided evildoers, although if we are to believe the thirty-eighth Psalm, the vile hypocrite must have already been subject to a loathsome disease—a penalty consequent on his licentiousness and criminality. In another Psalm, David the liar tells God that "he that telleth lies shall not tarry in my sight." To understand his malevolent nature we can not do better than quote his prayer to God against an enemy (Psalm cix, 6-14):

"6. Set thou a wicked man over him: and let Satan stand at his right hand.

"7. When he shall be judged, let him be condemned: and let his prayer become sin.

"8. Let his days be few: and let another take his office.

"9. Let his children be fatherless, and his wife a widow.

"10. Let his children be continually vagabonds, and beg: let them seek their bread also out of their desolate places.

"11. Let the extortioner catch all that he hath: and let the strangers spoil his labor.

"12. Let there be none to extend mercy unto him: neither let there be any to favor his fatherless children.

"13. Let his posterity be cut off: and in the generation following let their name be blotted out.

"14. Let the iniquity of his fathers be remembered with the Lord: and let not the sin of his mother be blotted out."

A full consideration of the life of David must give great help to each orthodox reader in promoting and sustaining his faith. While he is spoken of by Deity as obeying all the statutes and keeping all the commandments, we are astonished to find that murder, theft, lying, adultery, licentiousness, and treachery are among the crimes which may be laid to his charge. David was a liar, God is a God of truth; David was merciless, God is merciful, and of long suffering; David was a thief, God says "Thou shalt not steal;" David was a murderer, God says "Thou shalt do no murder;" David took the wife of Uriah, and "accepted" the wife of Nabal, God says "Thou shalt not covet thy neighbor's wife;" Yet, notwithstanding all these things, David was a man after God's own heart.

Had this Jewish monarch any redeeming traits in his character? Was he a good citizen? If so, the bible has carefully concealed every action which would entitle him to such an appellation, and in lieu has given us the record of his attempted extortion in the case of Nabal, and furnished us with a notice of his horde of followers—outlawed, discontented, and in debt. Was he a kind and constant husband? Was he grateful to those who aided him in his hour of need? Nay; like the wounded serpent which, half frozen by the wayside, is warmed into new life in the traveler's breast, and then treacherously stabs him with his poisoned fangs, so David robbed and murdered the friends and allies of the King of Gath, who had afforded him refuge against the pursuit of Saul. Does his patriotism outshine his many vices? Does his love of country efface his many misdoings? Not even this. David was a heartless traitor who volunteered to serve against his own countrymen, and would have done so had not the Philistines rejected his treacherous help. Was he a good king? So say the priesthood now; but where is the evidence of his virtue? His crimes brought a plague and pestilence on his subjects, and his reign is a continued succession of wars, revolts, and assassinations, plottings and counterplots.

The life of David is a dark blot on the page of human history, and our best hope is that if a spirit from God inspired the writer, then that it was a lying spirit, and that he has given us fiction instead of truth.

NEW LIFE OF JACOB.

It is pleasant work to present to the reader sketches of God's chosen people. More especially is it an agreeable task to recapitulate the interesting events occurring during the life of a man whom God has loved. Jacob was the son of Isaac; the grandson of Abraham. These three men were so free from fault, their lives so unobjectionable, that the God of the bible delighted to be called the "God of Abraham, the God of Isaac, and the God of Jacob." It is true, Abraham owned slaves, was not exact as to the truth, and, on one occasion, turned his wife and child out to the mercies of a sandy desert. That Isaac in some sort followed his father's example and

disingenuous practices, and that Jacob was without manly feeling, a sordid, selfish, unfraternal cozener, a cowardly trickster, a cunning knave, but they must nevertheless have been good men, for God was "the God of Abraham, the God of Isaac, and the God of Jacob." The name Jacob is not inappropriate. Kalisch says: "This appellation, if taken in its obvious etymological meaning, implies a deep ignominy; for the root from which it is derived signifiesto deceive, to defraud,and in such a despicable meaning the same form of the word is indeed used elsewhere (Jeremiah ix, 3). Jacob would, therefore, be nothing else but the craftyimpostor; in this sense Esau, in the heat of his animosity, in fact clearly explains the word, justly is his name called Jacob (cheat) because he has cheated me twice" (Genesis xxvii, 30). According to the ordinary orthodox bible chronology, Jacob was born about 1836 or 1837 B. C, that is, about 2,168 years from "in the beginning," his father Isaac being then sixty years of age. There is a difficulty connected with Holy Scripture chronology which would be insuperable were it not that we have the advantage of spiritual aids in elucidation of the text. This difficulty arises from the fact that the chronology of the bible, in this respect, like the major portion of bible history, is utterly unreliable. But we do not look to the Old or New Testament for mere commonplace, everyday facts; or if we do, severe will be the disappointment of the truthseeker; we look there for mysteries, miracles, paradoxes, and perplexities, and have no difficulties in finding the objects of our search. Jacob was born, together with his twin brother, Esau, in consequence of special entreaty addressed by Isaac to the Lord on behalf of Rebekah, to whom he had been married about nineteen years, and who was yet childless. Infidel physiologists (and it is a strange, though not unaccountable, fact that all who are physiologists are also in so far infidel) assert that prayer would do little to repair the consequence of such disease, or such abnormal organic structure, as would compel sterility. But our able clergy are agreed that the bible was not intended to teach us science; or, at any rate, we have learned that its attempts in that direction are most miserable failures. Its mission is to teach the unteachable; to enable us to comprehend the incomprehensible. Before Jacob was born God decreed that he and his descendants should obtain the mastery over Esau and his descendants—"the elder shall serve the younger."* The God of the bible is a just God, but it is hard for weak flesh to discover the justice of this proemial decree, which so sentenced to servitude the children of Esau before their father's birth.

* Gen. xxv, 23.

Jacob came into the world holding by his brother's heel, like some cowardly knave in the battle of life, who, not daring to break a gap in the hedge of conventional prejudice, which bars his path, is yet ready enough to follow some bolder warrior, and to gather the fruits of his courage. "And the boys grew: and Esau was a cunning hunter, a man of the field: and Jacob was a plain man, dwelling in tents." One day Esau returned from his hunting faint and wearied to the very point of death. He was hungry, and came to Jacob, his twin and only brother, saying, "Feed me, I

pray thee,"* "for I am exceedingly faint."** In a like case would not any man so entreated immediately offer to the other the best at his command, the more especially when that other is his only brother, born at the same time, from the same womb, suckled at the same breast, fed under the same roof? But Jacob was not a man and a brother, he was one of God's chosen people, and one who had been honored by God's prenatal selection. "If a man come unto me and hate not his brother, he can not be my disciple." So taught Jesus the Jew, in after time, but in this earlier age Jacob the Jew, in practice, anticipated the later doctrine. It is one of the misfortunes of theology, if not its crime, that profession of love to God is often accompanied with bitter and active hate of man. Jacob was one of the founders of the Jewish race, and even in this their pre-historic age, the instinct for driving a hard bargain seems strongly developed. "Jacob said" to Esau, "Sell me this day thy birthright." The famished man vainly expostulated, and the birthright was sold for a mess of pottage.

* Gen. xxv, 30** Douay version.

If to-day one man should so meanly and cruelly take advantage of his brother's necessities to rob him of his birthright, all good and honest men would shun him as an unbrotherly scoundrel and most contemptible knave; yet, less than 4,000 years ago, a very different standard of morality must have prevailed. Indeed, if God is unchangeable, divine notions of honor and honesty must to-day be widely different from those of our highest men. God approved and endorsed Jacob's conduct. His approval is shown by his love afterward expressed for Jacob, his endorsement by his subsequent attention to Jacob's welfare. We may learn from this tale, so pregnant with instruction, that any deed which to the worldly and sensible man appears like knavery while understood literally, becomes to the devout and prayerful man an act of piety when understood spiritually. Much faith is required to thoroughly understand this;for example, it looks like swindling to collect poor children's halfpence and farthings in the Sunday schools for missionary purposes abroad, and to spend thereout two or three hundred pounds in an annual jubilatory dinner for well-fed pauper parsons at home; and so thought the noble lord who wrote to theTimesunder the initials S. G. O. If he had possessed more faith and less sense, he would have seen the piety and completely overlooked the knavery of the transaction. Pious preachers and clever commentators declare that Esau despised his birthright. I do not deny that they might back their declaration by scripture quotations, but I do deny that the narrative ought to convey any such impression. Esau's words were, "Behold I am at the point to die: and what profit shall this birthright be to me?"

Isaac growing old, and fearing from his physical infirmities the near approach of death, was anxious to bless Esau before he died, and directed him to take quiver and bow and go out in the field to hunt some venison for a savory meat, such as old Isaac loved. Esau departed, but when

he had left his father's presence in order to fulfill his request, Jacob appeared on the scene. Instigated by his mother, he, by an abject stratagem, passed himself off as Esau. With a savory meat prepared by Rebekah, he came into his father's presence, and Isaac said, "Who art thou, my son?" Lying lips are an abomination to the Lord. The Lord loved Jacob, yet Jacob lied to his old blind father, saying, "I am Esau, thy first-born." Isaac had some doubts: these are manifested by his inquiring how it was that the game was killed so quickly. Jacob, whom God loved, in a spirit of shameless blasphemy replied, "Because the Lord thy God brought it to me." Isaac still hesitated, fancying that he recognized the voice to be the voice of Jacob, and again questioned him, saying, "Art thou my very son Esau?" God is the God of truth and loved Jacob, yet Jacob said, "I am." Then Isaac blessed Jacob, believing that he was blessing Esau: and God permitted the fraud to be successful, and himself also blessed Jacob. In that extraordinary composition known as the Epistle to the Hebrews, we are told that by faith Isaac blessed Jacob. But what faith had Isaac? Faith that Jacob was Esau? His belief was produced by deceptive appearances. His faith resulted from false representations. And there are very many men in the world who have no better foundation for their religious faith than had Isaac when he blessed Jacob, believing him to be Esau. In the Douay bible I find the following note on this remarkable narrative: "St. Augustine (X. contra mendacium c. 10), treating at large upon this place, excuseth Jacob from a lie, because thi's whole passage was mysterious, as relating to the preference which was afterward to be given to the Gentiles before the carnal Jews, which Jacob, by prophetic light, might understand. So far it is certain that the first birthright, both by divine election and by Esau's free cession, belonged to Jacob; so that if there were any lie in the case, it would be no more than an officious and venial one." How glorious to be a pa triarch, and to have a real saint laboring years after your death to twist your lies into truth by aid of prophetic light. Lying is at all times most disreputable, but at the deathbed the crime is rendered more heinous. The death hour would have awed many men into speaking the truth, but it had little effect on Jacob. Although Isaac was about to die, this greedy knave cared not, so that he got from the dying man the sought-for prize. God is said to love righteousness and hate iniquity, yet he loved the iniquitous Jacob, and hated the honest Esau. All knaves are tinged more or less with cowardice. Jacob was no exception to the rule. His brother enraged at the deception practiced upon Isaac, threatened to kill Jacob. Jacob was warned by his mother and fled. Induced by Rebekah, Isaac charged Jacob to marry one of Laban's daughters. On the way to Haran, where Laban dwell, Jacob rested and slept. While sleeping he dreamed; ordinarily dreams have little significance, but in the bible they are more important. Some of the most weighty and vital facts (?) of the bible are communicated in dreams, and rightly so; if the men had been wide awake, they would have probably rejected the revelation as absurd. So much does that prince of darkness, the devil, influence mankind against the bible in the daytime, that it is when all is dark, and our eyes are closed, and the senses dormant, that God's mysteries are most clearly seen and understood. Jacob "saw in his sleep a ladder standing upon the earth, and the top thereof touching heaven;

the angels of God ascending and descending by it, andthe Lord leaning upon the ladder." In the ancient temples of India, and in the mysteries of Mithra, the seven-stepped ladder by which the spirits ascended to heaven is a prominent feature, and one of probably far higher antiquity than the age of Jacob. Did paganism furnish the groundwork for the patriarch's dream? "No man hath seen God at any time." God is "invisible." Yet Jacob saw the invisible God, whom no man hath seen or can see, either standing above a ladder or leaning upon it. True, it was all a dream. Yet God spoke to Jacob; but perhaps that was a delusion too. We find by scripture that God threatens to send to some "strong delusions, that they might believe a lie and be damned." Poor Jacob was much frightened, as any one might be, to dream of God leaning on so long a ladder. What if it had broken and the dreamer underneath it? Jacob's fears were not so powerful but that his shrewdness and avarice had full scope in a sort of half-vow, half-contract, made in the morning. Jacob said, "If God will be with me and will keep me in this way that I go, and will give me bread to eat, and raiment to put on, so that I shall come again to my father's house in peace, then shall the Lord be my God." The inference deducible from this conditional statement is, that if God failed to complete the items enumerated by Jacob, then the latter would have nothing to do with him. Jacob was a shrewd Jew, who would have laughed to scorn the preaching, "Take no thought, saying, what shall we eat? or, what shall we drink? or, wherewithal shall we be clothed?"

After this contract, Jacob went on his journey, and reached the house of his mother's brother, Laban, into whose service he entered. "Diamond cut diamond" would be an appropriate heading to the tale which gives the transactions between Jacob the Jew and Laban the son of Nahor. Laban had two daughters. Rachel, the youngest, was "beautiful and well-favored;" Leah, the elder, was "blear-eyed." Jacob served for the pretty one; but on the wedding-day Laban made a feast, and gave Jacob the ugly Leah instead of the pretty Rachel. Jacob being (according to Josephs) both in drink and in the dark, it was morning ere he discovered his error. After this Jacob served for Rachel also, and then the remainder of the chapter of Jacob's servitude to Laban is but the recital of a series of frauds and trickeries. Jacob embezzled Laban's property, and Laban misappropriated and changed Jacob's wages. In fact, if Jacob had not possessed the advantage of divine aid, he would probably have failed in the endeavor to cheat his master; but God, who says "Thou shalt not covet thy neighbor's house, nor anything that is thy neighbor's," encouraged Jacob in his career of criminality. At last, Jacob, having amassed a large quantity of property, determined to abscond from his employment, and taking advantage of his uncle's absence at sheepshearing, "he stole away unawares," taking with him his wives, his children, flocks, herds, and goods. To crown the whole, Rachel, worthy wife of a husband so fraudulent, stole her father's gods. In the present day the next phase would be the employment of Mr. Sergeant Vericute, of the special detective department, and the issue of bills as follows:

"ONE HUNDRED SHEKELS REWARD,Absconded, with a large amount of property,JACOB, THE JEW.Information to be given to Laban, the Syrian, at Haran, in theEast, or to Mr. Serjeant Vericute, Scotland Yard."

But in those days God's ways were not as our ways. God came to Laban in a dream and compounded the felony, saying, "Take heed thou speak not anything harshly against Jacob."* This would probably prevent Laban giving evidence in a police court against Jacob, and thus save him from transportation or penal servitude. After a reconciliation and treaty had been effected between Jacob and Laban, the former went on his way "and the angel of God met him." Angels are not included in the circle with which I have at present made acquaintance, and I hesitate, therefore, to comment on the meeting between Jacob and the angels. Balaam's ass, at a later period, shared the good fortune which was the lot of Jacob, for that animal also had a meeting with an angel. Jacob was the grandson of the faithful Abraham to whom angels also appeared. Perhaps angelic apparitions are limited to asses and the faithful. On this point I do not venture to assert, and but timidly suggest. It is somewhat extraordinary that Jacob should have manifested no surprise at meeting a host of angels. Still more worthy of note is it that our good translators elevate the same words into "angels" in verse 1, which they degrade into "messengers" in verse 3. John Bellamy, in his translation, says the "angels were not immortal angels," and it is very probable John Bellamy was right.

* Genesis xxxi, 24, Douay version.

Jacob sent messengers before him to Esau, and heard that the latter was coming to meet him followed by 400 men. Jacob, a timorous knave at best, became terribly afraid. He, doubtless, remembered the wrongs inflicted upon Esau, the cruel extortion of the birthright, and the fraudulent obtainment of the dying Isaac's blessing. He, therefore, sent forward to his brother Esau a large present as a peace offering. He also divided the remainder of his flocks, herds, and goods, into two divisions, that if one were smitten, the other might escape; sending these on, he was left alone. While alone he wrestled with either a man, or an angel, or God. The text says "a man," the heading to the chapter says "an angel," and Jacob himself says that he has "seen God face to face." Whether God, angel, or man, it was not a fair wrestle, and were the present editor ofBell's Lifereferee, he would, unquestionably, declare it to be most unfair to touch "the hollow of Jacob's thigh" so as to put it "out of joint," and, consequently, award the result of the match to Jacob. Jacob, notwithstanding the injury, still kept his grip, and the apocryphal wrestler, finding himself no match at fair struggling, and that foul play was unavailing, now tried entreaty, and said, "Let me go, for the day breaketh." Spirits never appear in the daytime, when, if they did appear, they could be seen and examined; they are more often visible in the twilight, in the darkness, and in dreams. Jacob would not let go, his life's instinct for bargaining prevailed, and

probably, because he could get nothing else, he insisted on his opponent's blessing before he let him go. In the Roman Catholic version of the bible there is the following note: Chap, xxxii, 24.A man, etc.

"This was an angel in human shape, as we learn fromOsee(xii, 4). He is calledGod(xv, 28 and 30), because he represented the son of God. This wrestling in which Jacob, assisted by God, was a match for an angel, was so ordered (v. 28) that he might learn by this experiment of the divine assistance, that neither Esau nor any other man should have power to hurt him." How elevating it must be to the true believer to conceive God helping Jacob to wrestle with his own representative. Read prayerfully, doubtless, the spiritual and inner meaning of the text (if it have one) is most transcendental. Read sensibly, the literal and only meaning the text conveys is that of an absurd tradition of an ignorant age. On the morrow Jacob met Esau:

"And Esau ran to meet him, and embraced him, and fell on his neck, and kissed him; and they wept.

"And he said, What meanest thou by all this drove which I met? And he said these are to find grace in the sight of my lord.

"And Esau said, I have enough, my brother; keep that thou hast unto thyself."

The following expressive comment, from the able pen of Mr. Holyoake, deserves transcription: "The last portion of the history of Jacob and Esau is very instructive. The coward fear of Jacob to meet his brother is well delineated. He is subdued by a sense of his treacherous guilt. The noble forgiveness of Esau invests his memory with more respect than all the wealth Jacob won, and all the blessings of the Lord he received. Could I change my name from Jacob to Esau, I would do it in honor of him. The whole incident has a dramatic interest. There is nothing in the Old or New Testament equal to it. The simple magnanimity of Esau is scarcely surpassed by anything in Plutarch. In the conduct of Esau we see the triumph of time, of filial affection, and generosity over a deep sense of execrable treachery, unprovoked and irrevocable injury." Was not Esau a merciful, generous man? Yet God hated him, and shut him out of all share in the promised land. Was not Jacob a mean, prevaricating knave, a crafty, abject cheat? Yet God loved and rewarded him. How great are the mysteries in this bible representation of an all-good and all-loving God thus hating good and loving evil. At the time of the wrestling, a promise was made, which is afterward repeated by God to Jacob, that the latter should not be any more called Jacob, but Israel. This promise was not strictly kept; the name "Jacob" being used repeatedly, mingled with that of Israel in the after part of Jacob's history. Jacob had a large family; his sons are reputedly the heads of the twelve Jewish tribes. We have not much space to

notice them: suffice it to say that one Joseph, who was much loved by his father, was sold by his brethren into slavery. This transaction does not seem to have called for any special reproval from God. Joseph, who from early life was skilled in dreams, succeeded by interpreting the visions of Pharaoh in obtaining a sort of premiership in Egypt; while filling this office he managed to act like the Russells and the Greys of our own time. We are told that he "placedhis father and his brethren, and gave them a possession in the land of Egypt, in the best of the land." Joseph made the parallel still stronger between himself and a more modern head of the Treasury Bench; he not only gave his own family the best place in the land, but he also, by a trick of statecraft, obtained the land for the king, made slaves of the people, and made it a law over the land of Egypt that the king should be entitled to one-fifth of the produce, always, of course, excepting and saving the rights of the priest. Judah, another brother, sought to have burned a woman by whom he had a child. A third, named Reuben, was guilty of the grossest vice, equaled only by that of Absalon the son of David; of Simeon and Levi, two more of Jacob's sons, it is said that "Instruments of cruelty were in their habitations;" their conduct, as detailed in the 34th chapter of Genesis, alike shocks by its treachery and its mercilessness. After Jacob had heard that his son Joseph was governor in Egypt, but before he had journeyed farther than Beer-sheba, God spake unto him in the visions of the night, and probably forgetting that he had given him a new name, or being more accustomed to the old one, said, "Jacob, Jacob," and then told him to go down into Egypt, where Jacob died after a residence of about seventeen years, when 147 years of age. Before Jacob died he blessed, first the sons of Joseph, and then his own children, and at the termination of his blessing to Ephraim and Manasseh we find the following speech addressed to Joseph: "Moreover, I have given to thee one portion above thy brethren, which I took out of the hand of the Amorite with my sword and with my bow." This speech implies warlike pursuit on the part of Jacob, of which the bible gives no record, and which seems incompatible with his recorded life. The sword of craft and the bow of cunning are the only weapons in the use of which he was skilled. When his sons murdered and robbed the Hivites, fear seems to have been Jacob's most prominent characteristic. It is not my duty, nor have I space here, to advocate any theory of interpretation, but it may be well to mention that many learned men contend that the whole history of Jacob is but an allegory. That the twelve patriarchs but typify the twelve signs of the zodiac, as do the twelve great gods of the Pagans, and twelve apostles of the gospels.

From the history of Jacob it is hard to draw any conclusions favorable to the man whose life is narrated. To heap additional epithets on his memory would be but waste of time and space. I conclude by regretting that if God loved one brother and hated another, he should have so unfortunately selected for his love the one whose whole career shows him in a most despicable light.

NEW LIFE OF ABRAHAM.

Most undoubtedly father Abraham is a personage whose history should command our attention, if only because he figures as the founder of the Jewish race—a race which, having been promised protection and favor by Deity, appear to have experienced little else besides the infliction, or sufferance of misfortune and misery. Men are taught to believe that God, following out a solemn covenant made with Abraham, suspended the operations of Nature to aggrandize the Jews; that he promised always to bless and favor them if they adhered to his worship and obeyed the priests. The promised blessings were, usually, political authority, individual happiness and sexual power, long life, and great wealth; the threatened curses for idolatry or disobedience: disease, loss of property and children, mutilation, death. Among the blessings: the right to kill, plunder, and ravish their enemies, with protection, while pious, against any subjection to retaliatory measures. And all this because they were Abraham's children!

Abraham is an important personage. Without Abraham, no Jesus, no Christianity, no Church of England, no bishops, no tithes, no church rates. But for Abraham England would have lost all these blessings. Abraham was the great-grandfather of Judah, the head of the tribe to which God's father, Joseph, belonged.

In gathering materials for a short biographical sketch, we are at the same time comforted and dismayed by the fact that the only reliable account of Abraham's career is that furnished by the book of Genesis, supplemented by a few brief references in other parts of the bible, and that, outside "God's perfect and infallible revelation to man," there is no reliable account of Abraham's existence at all. We are comforted by the thought that Genesis is unquestioned by the faithful, and is at present protected by Church and State against heretic assaults; but we are dismayed when we think that, if Infidelity, encouraged by Colenso and Kalisch, upsets Genesis, Abraham will have little historical claim on our attention Some philologists have asserted that Brama and Abraham are alike corruptions of Abba Rama, or Abrama, and that Sarah is identical with Sarasvati. Abram, is a Chaldean compound, meaning father of the elevated, or exalted father [————] is a compound of Chaldee and Arabic, signifying father of a multitude. In part V of his work Colenso mentions that Adonis was formerly identified with Abram, "high father," Adonis being the personified sun.

Leaving incomprehensible philology for the ordinary authorized version of our bibles, we find that Abraham was the son of Terah. The text does not expressly state where Abraham was born, and I can not therefore describe his birthplace with that accuracy of detail which a true believer might desire, but I may add that he "dwelt in old time on the other side of the flood." (Joshua xxiv, 2, 3.) The situation of such dwelling involves a geographical problem most unlikely to be solved unless the inquirer is "half seas over." Abraham was born when Terah, his father, was seventy years of age; and, accord-ing to Genesis, Terah and his family came forth out of Ur of the

Chaldees, and went to Haran and dwelt there. We turn to the map to look for Ur of the Chaldees, anxious to discover it as possibly Abraham's place of nativity, but find that the translators of God's inspired word have taken a slight liberty with the text by substituting "Ur of the Chaldees" for "Aur Kasdim," the latter being, in plain English,the light of the magi, or conjurers, or astrologers. [————] is stated by Kalisch to have been made the basis for many extraordinary legends, as to Abraham's rescue from the flames.

Abraham, being born—according to Hebrew chronology, 2,083 years after the creation, and according to the Septuagint 3,549 years after the event—when his father was seventy, grew so slowly that when his father reached the good old age of 205 years, Abraham had only arrived at 75 years, having, apparently, lost no less than 60 year's growth during his father's lifetime. St. Augustine and St Jerome gave this up as a difficulty inexplicable. Calmet endeavors to explain it, and makes it worse. But what real difficulty is there? Do you mean, dear reader, that it is impossible Abraham could have lived 135 years, and yet be only 75 years of age? Is this your objection? It is a sensible one, I admit, but it is an Infidel one. Eschew sense, and, retaining only religion, ever remember that with God all things are possible. Indeed, I have read myself that gin given to young children stunts their growth; and who shall say what influence of the spirit prevented the full development of Abraham's years? It is a slight question whether Abraham and his two brothers were not born the same year; if this be so, he might have been a small child, and not grown so quickly as he would have otherwise done. "The Lord" spoke to Abraham, and promised to make of him a great nation, to bless those who blessed Abraham, and to curse those who cursed him. I do not know precisely which Lord it was that spake unto Abraham. In the Hebrew it says it was [————] Jeue, or, as our translators call it, Jehovah; but as God said (Exodus vi, 2) that by the name "Jehovah was I not known" to either Abraham, Isaac, or Jacob, we must conclude either that the omniscient Deity had forgotten the matter, or that a counterfeit Lord had assumed a title to which he had no right. The word Jehovah, which the book of Exodus says Abraham did not know, is nearly always the name by which Abraham addresses or speaks of the Jewish Deity.

Abraham having been promised protection by the God of Truth, initiated his public career with a diplomacy of statement worthy of Talleyrand, Thiers, or Gladstone. He represented his wife Sarah as his sister, which, if true, is a sad reproach to the marriage. The ruling Pharaoh, hearing the beauty of Sarah commended, took her into his house, she being at that time a fair Jewish dame, between 60 and 70 years of age, and he entreated Abraham well for her sake, and he had sheep and oxen, asses and servants, and camels. We do not read that Abraham objected in any way to the loss of his wife. The Lord, who is all-just, finding out that Pharaoh had done wrong, not only punished the king, but also punished the king's household, who could hardly have interfered with his misdoings. Abraham got his wife back, and went away much richer by the

transaction. Whether the conduct of father Abraham in pocketing quietly the price of the insult—or honor—offered to his wife is worthy of modern imitation, is a question I leave to be discussed by Convocation when it has finished with the Athanasian Creed. After this transaction we are not surprised to hear that Abraham was very rich in "silver and gold." So was the Duke of Marlborough after the King had taken his sister in similar manner into his house. In verse 19 of chapter xii, there is a curious mistranslation in our version. The text is: "It is for that I had taken her for my wife," our version has: "I might have takenher." The Douay so translates as to take a middle phrase, leaving it doubtful whether or not Pharaoh actually took Sarah as his wife. In any case, the Egyptian king acted well throughout. Abraham plays the part of a timorous, contemptible hypocrite. Strong enough to have fought for his wife, he sold her. Yet Abraham was blessed for his faith, and his conduct is our pattern!

Despite his timorousness in the matter of his wife, Abraham was a man of wonderful courage and warlike ability. To rescue his relative, Lot:—with whom he could not live on the same land without quarreling, both being religious—he armed 318 servants, and fought with four powerful kings, defeating them and recovering the spoil. Abraham's victory was so decisive that the king of Sodom, who fled and fell (xiv, 10) in a previous encounter, now met Abraham alive (see v, 17), to congratulate him on his victory. Abraham was also offered bread and wine by Melchisedek, King of Salem, priest of the Most High God. Where was Salem? Some identify it with Jerusalem, which it can not be, as Jebus was not so named until after the time of the Judges (Judges xix, 10). How does this King, of this unknown Salem, never heard of before or after, come to be priest of the Most High God? These are queries for divines—orthodox disciples believe without inquiring. Melchisedek was most unfortunate as far as genealogy is concerned. He had no father. I do not mean by this that any bar sinister defaced his escutcheon. He not only was without a father, but without mother also; he had no beginning of days or end of life, and is therefore probably at the present time an extremely old gentleman, who would be an invaluable acquisition to any antiquarian association fortunate enough to cultivate his acquaintance. God having promised Abraham a numerous family, and the promise not having been in any part fulfilled, the patriarch grew uneasy and remonstrated with the Lord, who explained the matter thoroughly to Abraham when the latter was in a deep sleep, and a dense darkness prevailed. Religions explanations come with greater force under these or similar conditions. Natural or artificial light and clear-sightedness are always detrimental to spiritual manifestations.

Abraham's wife had a maid named Hagar, and she bore to Abraham a child named Ishmael; at the time Ishmael was born, Abraham was 86 years of age. Just before Ishmael's birth Hagar was so badly treated that she ran away. As she was only a slave, God persuaded Hagar to return, and humble herself to her mistress.

Thirteen years afterward God appeared to Abraham, and instituted the rite of circumcision—which rite had been practiced long before by other nations—and again renewed the promise. The rite of circumcision was not only practiced by nations long anterior to that of the Jews, but appears, in many cases, not even to have been pretended as a religious rite. (See Kalisch, Genesis, p. 386; Cahen, Genese, p. 43) After God had "left off talking with him, God went up from Abraham." As God is infinite, he did not, of course, go up; but still the bible says God went up, and it is the duty of the people to believe that he did so, especially as the infinite Deity then and now resides habitually in "heaven," wherever that may be. Again the Lord appeared to Abraham, either as three men or angels, or as one of the three; and Abraham, who seemed hospitably inclined, invited the three to wash their feet, and to rest under the tree, and gave butter and milk and dressed calf, tender and good, to them, and they did eat; and after the inquiry as to where Sarah then was, the promise of a son is repeated. Sarah—then by her own admission an old woman, stricken in years—laughed when she heard this, and the Lord said, "Wherefore did Sarah laugh?" and Sarah denied it, but the Lord said, "Nay, but thou didst laugh." The three then went toward Sodom, and Abraham went with them as a guide; and the Lord explained to Abraham that some sad reports had reached him about Sodom and Gomorrah, and that he was then going to find out whether the report was reliable. God is infinite, and was always therefore at Sodom and Gomorrah, but had apparently been temporarily absent; he is omniscient, and therefore knew everything which was happening at Sodom and Gomorrah, but he did not know whether or not the people were as wicked as they had been represented to him. God, Job tells us, "put no trust in his servants, and his angels he charged with folly." Between the rogues and the fools, therefore, the all-wise and all-powerful God seems to be as liable to be mistaken in the reports made to him as any monarch might be in reports made by his ministers. Two of the three men, or angels, went on to Sodom, and left the Lord with Abraham, who began to remonstrate with Deity on the wholesale destruction contemplated, and asked him to spare the city if fifty righteous should be found within it. God said, "If I find fifty righteous within the city, then will I spare the place for their sakes." God being all-wise, he knew there were not fifty in Sodom, and was deceiving Abraham. By dint of hard bargaining, in thorough Hebrew fashion, Abraham, whose faith seemed tempered by distrust, got the stipulated number reduced to ten, and then "the Lord went his way."

Jacob Ben Chajim, in his introduction to the Rabbinical bible, p. 28, tells us that the Hebrew text used to read in verse 22: "And Jehovah still stood before Abraham;" but the scribes altered it, and made Abraham stand before the Lord, thinking the original text offensive to Deity.

The 18th chapter of Genesis has given plenty of work to the divines. Augustin contended that God can take food, though he does not require it. Justin compared "the eating of God with the

devouring power of the fire." Kalisch sorrows over the holy fathers "who have taxed all their ingenuity to make the act of eating compatible with the attributes of Deity."

In the Epistle to the Romans, Abraham's faith is greatly praised. We are told, iv, 19, 20, that:

"Being not weak in faith, he considered not his own body now dead, when he was about an hundred years old, neither yet the deadness of Sarah's womb."

"He staggered not at the promise of God through unbelief; but was strong in faith, giving glory to God."

Yet, so far from Abraham giving God glory, we are told in Genesis, xvii, 17, that:

"Abraham fell upon his face, and laughed, and said in his heart, shall a child be born unto him that is an hundred years old, and shall Sarah, that is ninety years old, bear?"

The Rev. Mr. Boutell says that "the declaration which caused Sarah to 'laugh,' shows the wonderful familiarity which was then permitted to Abraham in his communications with God."

After the destruction of Sodom and Gomorrah, Abraham journeyed south and sojourned in Gerar, and either untaught or too well taught by his previous experience, again represented his wife as his sister, and Abimelech, king of Gerar, sent and took Sarah. As before, we find neither remonstrance nor resistance recorded on the part of Abraham. This time God punished,a laMalthus, the women in Abimelech's house for an offense they did not commit, and Sarah was again restored to her husband, with sheep, oxen, men-servants, and women-servants, and money. Infidels object that the bible says Sarah "was old and well stricken in age;" that "it had ceased to be with her after the manner of women;" that she was more than ninety years of age; and that it is not likely King Abimelech would fall in love with an ugly old woman. We reply, "chacun a son gout?" It is clear that Sarah had not ceased to be attractive, as God resorted to especial means to protect her virtue from Abimelech. At length Isaac is born, and his mother Sarah now urges Abraham to expel Hagar and her son, "and the thing was very grievous in Abraham's sight because of his son;" the mother being only a bondwoman does not seem to have troubled him. God, however, approving Sarah's notion, Hagar is expelled, "and she departed and wandered in the wilderness, and the water was spent in the bottle, and she cast the child under one of the shrubs." She had apparently carried the child, who being at least more than fourteen, and according to some calculations as much as seventeen years of age, must have been a heavy child to carry in a warm climate.

God never did tempt any man at any time, but he "did tempt Abraham" to kill Isaac by offering him as a burnt offering. The doctrine of human sacrifice is one of the holy mysteries of Christianity, as taught in the Old and New Testament. Of course, judged from a religious or biblical standpoint, it can not be wrong, as, if it were, God would not have permitted Jephtha to sacrifice his daughter by offering her as a burnt offering, nor have tempted Abraham to sacrifice his son, nor have said in Leviticus, "None devoted, which shall be devoted of men, shall be redeemed; but shall surely be put to death" (xxvii, 29), nor have in the New Testament worked out the monstrous sacrifice of his only son Jesus, at the same time son and begetting father.

Abraham did not seem to be entirely satisfied with his own conduct when about to kill Isaac, for he not only concealed from his servants his intent, but positively stated that which was not true, saying, "I and the lad will go yonder and worship, and come again to you." If he meant that he and Isaac would come again to them, then he knew that the sacrifice would not take place. Nay, Abraham even deceived his own son, who asked him where was the lamb for the burnt offering? But we learn from the New Testament that Abraham acted in this and other matters "by faith," so his falsehoods and evasions, being results and aids of faith, must be dealt with in an entirely different manner from transactions of every-day life. Just as Abraham stretched forth his hand to slay his son, the angel of the Lord called to him from heaven, and prevented the murder, saying, "Now I know that thou fearest God, seeing thou hast not withheld thy son." This would convey the impression that up to that moment the angel of the Lord was not certain upon the subject.

In Genesis xiii, God says to Abraham, "Lift up now thine eyes, and look from the place where thou art northward, and southward, and eastward and westward. For all the land which thou seest, to thee will I give it, and to thy seed for ever. Arise, walk through the land, in the length of it, and in the breadth of it, for I will give it unto thee." Yet, as is admitted by the Rev. Charles Boutell, in his "Bible Dictionary," "The only portion of territory in that land of promise, of which Abraham became possessed" was a graveyard, which he had bought and paid for. Although Abraham was too old to have childrenbeforethe birth of Isaac, he had many childrenafterIsaac is born. He lived to "a good old age," and died "full of years," but was yet younger than any of those who preceded him, and whose ages are given in the bible history, except Nahor.

Abraham gave "all that he had to Isaac," but appears to have distributed the rest of the property among his other children, who were sent to enjoy it somewhere down East.

According to the New Testament, Abraham is now in Paradise, but Abraham in heaven is scarcely an improvement upon Abraham on-earth. When he was entreated by an unfortunate in hell for a drop of water to cool his tongue, father Abraham replied, "Son, remember that in thy

life-time thou receivedst thy good things, and now thou art tormented," as if the reminiscence of past good would alleviate present and future continuity of evil.

NEW LIFE OF MOSES.

The "Life of Abraham" was presented to our readers, because, as the nominal founder of the Jewish race, his position entitled him to that honor. The "Life of David," because, as one of the worst men and worst kings ever known, his history might afford matter for reflection to admirers of monarchical institutions and matter for comment to the advocates of a republican form of government. The "Life of Jacob" served to show how basely mean and contemptibly deceitful a man might become, and yet enjoy God's love. Having given thus a brief outline of the career of the patriarch, the king, and the knave, the life of a priest naturally presents itself as the most fitting to complement the present quadrifid series.

Moses, the great grandson of Levi, was born in Egypt, not far distant from the banks of the Nile, a river world-famous for its inundations, made familiar to ordinary readers by the travelers who have journeyed to discover its source, and held in bad repute by strangers, especially on account of the carnivorous Saurians who infest its waters. The mother and father of our hero were both of the tribe of Levi, and were named Jochebed and Amram. The infant Moses was, at the age of three months, placed in an ark of bulrushes by the river's brink. This was done in order to avoid the decree of extermination propounded by the reigning Pharaoh against the male Jewish children. The daughter of Pharaoh, coming down to the river to bathe, found the child and took compassion upon him, adopting him as her son. Of the early life of Moses we have but scanty record. We are told in the New Testament that he was learned in the wisdom of the Egyptians,* and that, "when he was come to years he refused by faith** to be called the son of Pharaoh's daughter." Perhaps the record from which the New Testament writers quoted has been lost; it is certain that the present version of the Old Testament does not contain those statements. The record which is lostmayhave been God's original revelation to man, and of which our biblemaybe an incomplete version. I am little grieved by the supposition that a revelation may have been lost, being, for my own part, more inclined to think that no revelation has ever been made. Josephus says that, when quite a baby, Moses trod contemptuously on the crown of Egypt. The Egyptian monuments and Exodus are both silent on this point. Josephus also tells us that Moses led the Egyptians in war against the Ethiopians, and married Tharbis, the daughter of the Ethiopian monarch. This also is omitted both in Egyptian history and in the sacred record. When Moses was grown, according to the Old Testament, or when he was 40 years of age according to the New, "it came into his heart to visit his brethren the children of Israel." "And he spied an Egyptian smiting a Hebrew." "And he looked this way and that way, and when he saw that there was no man, he slew the Egyptian, and hid him in the sand." The New Testament says that he did it, "for

he supposed that his brethren would understand how that God, by his hand, would deliver them."***

* Acts, vii, 21.** Hebrews, xi, 24.*** Acts, vii, 25.

But this is open to the following objections: The Old Testament says nothing of the kind; there was no man to see the homicide, and as Moses hid the body, it is hard to conceive how he could expect the Israelites to understand a matter of which they not only had no knowledge whatever, but which he himself did not think was known to them; if there were really no man present, the story of the after accusation against Moses needs explanation: it might be further objected that it does not appear that Moses at that time did even himself conceive that he had any mission from God to deliver his people. Moses fled from the wrath of Pharaoh, and dwelt in Midian, where he married the daughter of one Reuel, or Jethro. This name is not of much importance, but it is strange that if Moses wrote the books of the Pentateuch he was not more exact in designating so near a relation. While acting as shepherd to his father-in-law, "he led the flock to the back side of the desert," and "the angel of the Lord appeared to him in a flame of fire:" that is, the angel was either a flame, or was the object which was burning, for this angel appeared in the midst of a bush which burned with fire, but was not consumed. This flame appears to have been a luminous one, for it was a "great sight," and attracted Moses, who turned aside to see it. But the luminosity would depend on substance ignited and rendered inacandescent. Is the angel of the Lord a substance susceptible of ignition and incandescence? Who knoweth? If so, will the fallen angels ignite and burn in hell! God called unto Moses out of the midst of the bush. It is hard to conceive an infinite God in the middle of a bush; yet as the law of England says that we must not "deny the Holy Scriptures of the Old and New Testaments to be of divine authority," in order not to break the law, I advise all to believe that, in addition to being in the middle of a bush, the infinite and all-powerful God also sat on the top of a box, dwelt sometimes in a tent, afterward in a temple; although invisible, appeared occasionally; and being a spirit without body or parts, was hypostatically incarnate as a man. Moses, when spoken to by God, "hid his face, for he was afraid to look upon God." If Moses had known that God wasinvisiblehe would have escaped this fear.

God told Moses that the cry of the children of Israel had reached him, and that he hadcome downto deliver them, and that Moses was to lead them out of Egypt. Moses does not seem to have placed entire confidence in the phlegmonic divine communication, and asked, when the Jews should question him on the name of the Deity, what answer should he make? It does not appear from this that the Jews, if they had so completely forgotten God's name, had much preserved the recollection of the promise comparatively so recently made to Abraham, to Isaac, and to Jacob. The answer given according to our version is "I am that I am;" according to the

Douay, "I am who am." God, in addition, told Moses that the Jews should spoil the Egyptians of their wealth; but even this promise of plunder so congenial to the nature of a bill-discounting Jew of the bible type, did not avail to overcome the scruples of Moses. God therefore taught him to throw his rod on the ground, and thus transform it into a serpent, from which pseudo-serpent Moses at first fled in fear, but on his taking it by the tail it resumed its original shape, Moses, with even other wonders at command, still hesitated; he had an impediment in his speech. God cured this by the appointment of Aaron, who was eloquent, to aid his brother. God directed Moses to return to Egypt, but his parting words must somewhat have damped the future legislator's hope of any speedy or successful ending to his mission. God said, "I will harden Pharaoh's heart that he shall not let the people go." On the journey back to Egypt God met Moses "by the way in the inn, and sought to kill him." I am ignorant as to the causes which prevented the omnipotent Deity from carrying out his intention; the text does not explain the matter, and I am not a bishop or a D. D., and I do not therefore feel justified in putting my assumptions in place of God's revelation. Moses and Aaron went to Pharaoh, and asked that the Jews might be permitted to go three days' journey in the wilderness; but the King of Egypt not only refused their request, but gave them additional tasks, and in consequence Moses and Aaron went again to the Lord, who told them, "I appeared unto Abraham, unto Isaac, and unto Jacob by the name of God Almighty; but by my name Jehovah was I not known unto them." Whether God had forgotten that the name of Jehovah was known to Abraham, or whether he was here deceiving Moses and Aaron, are points the solution of which I leave to the faithful, referring them to the fact that Abraham called a place* Jehovah-Jireh.

* Genesis xxii, 14

After this Moses and Aaron again went to Pharaoh and worked wonderfully in his presence. Thaumaturgy is coming into fashion again, but the exploits of Moses far exceeded any of those performed by Mr. Home or the Davenport brothers. Aaron flung down his rod, and it became a serpent; the Egyptian magicians flung down their rods, which became serpents also; but the rod of Aaron, as though it had been a Jew money-lender or a tithe collecting parson, swallowed up these miraculous competitors, and the Jewish leaders could afford to laugh at their defeated rival conjurors. Moses and Aaron carried on the miracle-working for some time. All the water of the land of Egypt was turned by them into blood, but the magicians did so with their enchantments, and it had no effect on Pharaoh. Then showers of frogs, at the instance of Aaron, covered the land of Egypt; but the Egyptians did so with their enchantments, and frogs abounded still more plentifully. The Jews next tried their hands at the production of lice, and here —to the glory of God be it said—the infidel Egyptians failed to imitate them. It is written that "cleanliness is next to godliness," but we can not help thinking that godliness must have been far from cleanliness when the former so soon resulted in lice. The magicians were now entirely

discomfited. The preceding wonders seem to have affected all the land of Egypt; but in the next miracle the swarms of flies sent were confined to Egyptians only, and were not extended to Goshen, in which the Israelites dwelt.

The next plague in connection with the ministration of Moses and Aaron was that "all the cattle of Egypt died." After "all the cattle" were dead, a boil was sent, breaking forth with blains upon man and beast. This failing in effect, Moses afterward stretched forth his hand and smote "both man and beast" with hail, then covered the land with locusts, and followed this with a thick darkness throughout the land—a darkness whichmighthave been felt. Whether it was felt is a matter on which I am unable to pass an opinion. After this, the Egyptians being terrified by the destruction of their first-born children, the Jews, at the instance of Moses, borrowed of the Egyptians jewels of silver, jewels of gold, and raiment; and they spoiled the Egyptians. The fact is, that the Egyptians were in the same position as the payers of church rates, tithes, vicars' rates, and Easter dues: they lent to the Lord's people, who are good borrowers, but slow when repayment is required. They prefer promising you a crown of glory to paying you at once five shillings in silver. Moses led the Jews through the Red Sea, which proved a ready means of escape, as may be easily read in Exodus, which says that the Lord "made the sea dry land" for the Israelites, and afterward not only overwhelmed in it the Egyptians who sought to follow them, but, as Josephus tells us, the current of the sea actually carried to the camp of the Hebrews the arms of the Egyptians, so that the wandering Jews might not be destitute of weapons. After this the Israelities were led by Moses into Shur, where they were without water for three days, and the water they afterward found was too bitter to drink until a tree had been cast into the well. The Israelites were then fed with manna, which, when gathered on Friday, kept for the Sabbath, but rotted if kept from one week day to another. The people grew tired of eating manna, and complained, and God sent fire among them and burned them up in the uttermost parts of the camp; and after this the people wept and said, "Who shall give us flesh to eat? We remember the fish we did eat in Egypt freely; the cucumbers and the melons and the leeks and the onions and the garlic; but now there is nothing at all beside this manna before our eyes." This angered the Lord, and he gave them a feast of quails, and while the flesh was yet between their teeth, ere it was chewed, the anger of the Lord was kindled, and he smote the Jewish people with a very great plague.*

* Numbers xi.

The people again in Rephidim were without water, and Moses therefore smote the Rock of Horeb with his rod, and water came out of the rock. At Rephidim the Amalekites and the Jews fought together, and while they fought, Moses, like a prudent general, went to the top of a hill, accompanied by Aaron and Hur, and it came to pass that when Moses held up his hands Israel

prevailed, and when he let down his hands Amalek prevailed. But Moses' hands were heavy, and they took a stone and put it under him, and he sat thereon, and Aaron and Hur stayed up his hands, the one on the one side and the other on the other side, and his hands were steady until the going down of the sun, and Joshua discomfited Amalek, and his people with the edge of the sword. How the true believer ought to rejoice that the stone was so convenient, as otherwise the Jews might have been slaughtered, and there might have been no royal line of David, no Jesus, no Christianity. That stone should be more valued than the precious black stone of the Moslem; it is the corner-stone of the system, the stone which supported the Mosaic rule. God is everywhere, but Moses wentupunto him, and the Lord called to himoutof a mountain and came to himina thick cloud, and descended on Mount Sinaiina fire, in consequence of which the mountain smoked, and the Lordcame down upon the topof the mountain and called Mosesupto him; and then the Lord gave Moses the Ten Commandments, and also those precepts which follow, in which Jews are permitted to buy their fellow-countrymen for six years, and in which it is provided that, if the slave-master shall give his six-year slave a wife, and she bear him sons or daughters, that the wife and the children shall be the property of her master. In these precepts it is also permitted that a man may sell his own daughter for the most base purposes. Also that a master may beat his slave so that if he do not die until a few days after the ill-treatment, the master shall escape justice because the slave is his money. Also that Jews may buy strangers and keep them as slaves for ever. While Moses was up in the mount the people clamored for Aaron to make them gods. Moses had stopped away so long that the people gave him up for lost. Aaron, whose duty it was to have pacified and restrained them, and to have kept them in the right faith, did nothing of the kind. He induced them to bring all their gold, and then made it into a calf, before which he built an altar, and then proclaimed a feast. Manners and customs change. In those days the Jews did see the God that Aaron took their gold for, but now the priests take the people's gold, and the poor contributors do not even see a calf for their pains, unless indeed they are near a mirror at the time when they are making their voluntary contributions. And the Lord told Moses what happened, and said, "I have seen this people, and behold it is a stiff-necked people. Now, therefore, let me alone that my wrath may wax hot against them, and that I may consume them." Moses would not comply with God's request, but remonstrated, and expostulated, and begged him not to afford the Egyptians an opportunity of speaking against him. Moses succeeded in changing the unchangeable, and the Lord repented of the evil which he thought to do unto his people.

Although Moses would not let God's "wrath wax hot" his own "anger waxed hot," and he broke, in his rage, the two tables of stone which God had given him, and on which the Lord had graven and written with his own finger. We have now no means of knowing in what language God wrote, or whether Moses afterward took any pains to rivet together the broken pieces. It is almost to be wondered at that the Christian Evidence Societies have not sent missionaries to

search for these pieces of the tables, which may even yet remain beneath the mount. Moses took the calf which they had made and burned it with fire and ground it to powder and strewed it upon water and made the children of Israel drink of it. After this Moses armed the priests and killed 3,000 Jews, "and the Lord plagued the people because they had made the calf which Aaron had made."* Moses afterward pitched the tabernacle without the camp; and the cloudy pillar in which the Lord went, descended and stood at the door of the tabernacle; and the Lord talked to Moses "face to face, as a man would to his friend."** And the Lord then told Moses, "Thou canst not see my face, for there shall no man see me and live."*** Before this Moses and Aaron and Nadab and Abihu, and seventy of the elders of Israel, "saw the God of Israel, and there was under his feet, as it were, a paved work of sapphire stone,... and upon the nobles of the children of Israel he laid not his hand; also they saw God, and did eat and drink."****

* Exodus xxxii, 35.** Ib. xxxiii, 11.*** Ib. xxxiii, 20.**** Ib. xxiv,9.

Aaron, the brother of Moses, died under very strange circumstances. The Lord said unto Moses, "Strip Aaron of his garments and put them upon Eleazar, his son, and Aaron shall be gathered unto his people and shall die there." And Moses did as the Lord commanded, and Aaron died there on the top of the mount, where Moses had taken him. There does not appear to have been any coroner's inquest in the time of Aaron, and the suspicious circumstances of the death of the brother of Moses have been passed over by the faithful.

When Moses was leading the Israelites over Moab, Balak the King of the Moabites sent to Balaam in order to get Balaam to curse the Jews. When Balak's messengers were with Balaam, God came to Balaam also, and asked what men they were. Of course God knew, but he inquired for his own wise purposes, and Balaam told him truthfully. God ordered Balaam not to curse the Jews, and therefore the latter refused, and sent the Moabitish messengers away. Then Balak sent again high and mighty princes under whose influence Balaam went mounted on an ass, and God's anger was kindled against Balaam, and he sent an angel to stop him by the way; but the angel did not understand his business well, and the ass first ran into a field, and then close against the wall, and it was not until the angel removed to a narrower place that he succeeded in stopping the donkey; and when the ass saw the angel she fell down. Balaam did not see the angel at first; and, indeed we may take it as a fact of history that asses have always been the most ready to perceive angels.

Moses may have been a great author, but we have little means of ascertaining what he wrote in the present day. Divines talk of Genesis to Deuteronomy as the five books of Moses, but Eusebius, in the fourth century, attributed them to Ezra, and Saint Chrysostom says that the name of Moses has been affixed to the books without authority, by persons living long after him.

It is quite certain that if Moses lived 3,300 years ago, he did not write in square letter Hebrew, and this because the character has not existed so long. It is indeed doubtful if it can be carried back 2,000 years. The ancient Hebrew character, though probably older than this, yet is comparatively modern among the ancient languages of the earth.

It is urged by orthodox chronologists that Moses was born about 1450 B. C., and that the Exodus took place about 1401 B. C. Unfortunately "there are no recorded dates in the Jewish Scriptures that are trustworthy." Moses, or the Hebrews, not being mentioned upon Egyptian monuments from the twelfth to the seventeenth century B. C. inclusive, and never being alluded to by any extant writer who lived prior to the Septuagint translation at Alexandria (commencing in the third century B. C.), there are no extraneous aids, from sources alien to the Jewish Books through which any information, worthy of historical acceptance, can be gathered elsewhere about him or them.*

Moses died in the land of Moab when he was 120 years of age. The Lord buried Moses in a valley of Moab, over against Bethpeor, but no man knoweth of his sepulcher unto this day. Josephus says that "a cloud came over him on the sudden and he disappeared in a certain valley." The devil disputed about the body of Moses, contending with the Archangel Michael;** but whether the devil or the angel had the best of the discussion, the bible does not tell us.

De Beauvoir Priaulx,*** looking at Moses as a counselor, leader, and legislator, says: "Invested with this high authority, he announced to the Jews their future religion, and announced it to them as a state religion, and as framed for a particular state, and that state only.

* Gliddon's Types of Mankind: Mankind's Chronology, p. 711.** Jude, v. 9.*** Questiones Mosaicæ, p. 488.

He gave this religion, moreover, a creed so narrow and negative—he limited it to objects so purely temporal, he crowded it with observances so entirely ceremonial or national—that we find it difficult to determine whether Moses merely established this religion in order that by a community of worship he might induce in the tribe-divided Israelites that community of sentiment which would constitute them a nation; or, whether he only roused them to a sense of their national dignity, in the hope that they might then more faithfully perform the duties of priests and servants of Jehovah. In other words, we hesitate to decide whether in the mind of Moses the state was subservient to the purposes of religion, or religion to the purposes of state."

The same writer observes* that, according to the Jewish writings, Moses "is the friend and favorite of the Deity. He is one whose prayers and wishes the Deity hastens to fulfill, one to

whom the Deity makes known his designs. The relations between God and the prophet are most intimate. God does not disdain to answer the questions of Moses, to remove his doubts, and even occasionally to receive his suggestions, and to act upon them even in opposition to his own predetermined decrees."

* Questiones Mosaicæ p. 418.

NEW LIFE OF JONAH

Jonah was the son of Amittai of Gath-hepher, which place divines identify with Gittah-hepher of the Children of Zebulun. Dr. Iuman says that Gath-hepher means "the Heifer's trough." Gesenius translates it "the wine-press of the well." Bible dictionaries say that Gath-hepher is the same as el-Meshhad, and affirm that the tomb of Jonah was "long shown on a rocky hill near the town." The blood of Saint Januarius is shown in Naples to this day. Nothing is known of the sex or life of Amittai, except that Jonah was his or her son, and that Gath-hepher was her or his place of residence; but to a true believer these two facts, even though standing utterly alone, will be pregnant with instruction. To the skeptic and railer, Amittai is as an unknown quantity in an algebraic problem. Jonah was not a very common proper name, [————] means a dove, and some derive it from the Arabic root—to be weak, gentle; so that one meaning of Jonah, according to Gesenius, would be feeble, gentle bird. The prophet Jonah was by no means a feeble, gentle bird; he was rather a bird of prey. Certainly it was his intention to become a bird of passage. The date of the birth of Jonah is not given; the margin of my bible dates the book of Jonah B. C. cir. 862, and my bible dictionary fixes the date of the matter to which the book relates at "about B. C. 830." If from any reason either of these dates should be disagreeable to the reader, he can choose any other date without fear of anachronism. Jonah was a prophet; so is Dr. Cumming, so is Brigham Young; there is no evidence that Jonah followed any other profession. Jonah's profit probably hardly equaled that realized by the Archbishop of Canterbury, but he had money enough to pay his fare "from the presence of the Lord" to Tarshish. The exact distance of this voyage may be easily calculated by remembering that the Lord is omnipresent, and then measuring from his boundary to Tarshish. The fare may be worked out by the differential calculus after evening prayer.

The word of the Lord came to Jonah; when or how the word came the text does not record, and to any devout mind it is enough to know that it came. The first time in the world's history that the word of the Lord ever came to anybody, may be taken to be when Adam and Eve "heard the voice of the Lord" "walking in the Garden" of Eden "in the cool of the day." Between the time of Adam and Jonah a long period had elapsed; but human nature, having had many prophets, was very wicked. The Lord wanted Jonah to go with a message to Nineveh. Nineveh was apparently

a city of three days' journey in size. Allowing twenty miles for each day, this would make the city about 60 miles across, or about 180 miles in circumference. Some faint idea may be formed of this vast city, by adding together London, Paris, and New York, and then throwing in Liverpool, Manchester, Glasgow, Edinburgh, Marseilles, Naples, Spurgeon's Tabernacle. Jonah knowing that the Lord did not always carry out his threats or perform his promises, did not wish to go to Nineveh, and "rose up to flee to Tarshish from the presence of the Lord," The Tarshish for which Jonah intended his flight was either in Spain or India or elsewhere. I am inclined, after deep reflection and examination of the best authorities, to give the preference to the third-named locality. When Cain went "out of the presence of the Lord," he went into the Land of Nod, but whether Tarshish is in that or some other country there is no evidence to determine. To get to Tarshish, Jonah—instead of going to the port of Tyre, which was the nearest to his reputed dwelling, and by far the most commodious—went to the more distant and less convenient port of Joppa, where he found a ship going to Tarshish; "so he paid the fare thereof, and went down into it, to go with them into Tarshish, from the presence of the Lord." Jonah was, however, very short-sighted. Just as in the old Greek mythology, winds and waves are made warriors for the gods, so the God of the Hebrews "sent out a great wind into the sea, and there was a mighty tempest in the sea, so that the ship was like to be broken." Luckily she was not an old leaky vessel, over-laden and heavily insured; one which the sanctimonious owners desired to see at the bottom, and which the captain did not care to save. Christianity and civilization were yet to bring forth that glorious resultant, a pious English ship-owner, with a newly-painted, but, under the paint, a worn and rusty iron vessel, long abandoned as unfit, but now fresh named, and so insured that Davy Jones' locker becomes the most welcome haven of refuge. "The mariners were afraid.... and cast forth the wares" into the sea to lighten the ship. But where was Jonah during this noise? Men trampling on deck, hoarse and harsh words of command, and the fury of the storm troubled not our prophet. Sea-sickness, which spares not the most pious, had no effect upon him. "Jonah was gone down into the sides of the ship, and he lay and was fast asleep." The battering of the waves against the sides disturbed not his devout slumbers; the creaking of the vessel's timbers spoiled not his repose. Despite the pitching and rolling of the vessel Jonah "was fast asleep." Had he been in the comfortable berth of a Cunarder, it would not have been easy to sleep through such a storm. Had he been in the hold of a smaller vessel on the Bay of Biscay, finding himself now with his head lower than his heels, and now with his body playing hide and seek among loose articles of cargo, it would have required great absence of mind to prevent waking. Had he only been on an Irish steamer carrying cattle on deck, between Bristol and Cork, with a portion of the bulwarks washed away, and a squad of recruits "who cried every man to his God," he would have found the calmness of undisturbed slumber difficult. But Jonah was on board the Joppa and Tarshish boat, and he "was fast asleep." As the crew understood the theory of storms, they of course knew that when there is a tempest at sea it is sent by God, because he is offended by some one on board the vessel. Modern scientists scout

this notion, and pretend to track storm waves across the world, and to affix storm signals in order to warn mariners. They actually profess to predict atmospheric changes, and to explain how such changes take place. Church clergymen know how futile science is, and how potent prayers are, for vessels at sea. The men on the Joppa vessel said, "every one to his fellow, Come, and let us cast lots, that we may know for whose cause this evil is upon us. So they cast lots, and the lot fell upon Jonah." It was always a grave question in sacred metaphysics as to whether God directed Jonah's lot, and, if yes, whether the casting of lots is analogous to playing with loaded dice. The Bishop of Lincoln, who understands how far cremation may render resurrection awkward, is the only divine capable of thoroughly resolving this problem. For ordinary Christians it is enough to know that the lot fell upon Jonah.

Before the crew commenced casting lots to find out, they had cast lots of their wares overboard, so that when the lot fell on Jonah it was much lighter than it would have been had the lot fallen upon him during his sleep. Still, if not stunned by the lot which fell upon him, he stood convicted as the cause of the tempest and the crews. "Then said they unto him, Tell us, we pray thee, for whose cause this evil is upon us; What is thine occupation? and whence comest thou? what is thy country? and of what people art thou? And he said unto them, I am an Hebrew; and I fear the Lord, the God of heaven, which hath made the sea and the dry land. Then were the men exceedingly afraid, and said unto him, Why hast thou done this? For the men-knew that he fled from the presence of the Lord, because he had told them. Then said they unto him, What shall we do unto thee, that the sea may be calm unto us? for the sea wrought, and was tempestuous. And he said unto them, Take me up, and cast me forth into the sea; so shall the sea be calm unto you; for I know that for my sake this great tempest is upon you. Nevertheless the men rowed hard to bring it to the land; but they could not; for the sea wrought, and was tempestuous against them. Wherefore they cried unto the Lord, and said, We beseech thee, O Lord, we beseech thee, let us not perish for this man's life, and lay not upon us innocent blood: for thou, O Lord, hast done as it pleased thee. So they took up Jonah, and cast him forth into the sea: and the sea ceased from her raging." No pen can improve this story; it is so simple, so natural, so child-like. Every one has heard of casting oil on troubled waters. It stands to reason that a fat prophet would produce the same effect. What a striking illustration of the power of faith it will be when bishops leave their own sees in order to be in readiness to calm an ocean storm. Or if not a bishop, at least a curate; and even a lean curate, for with sea air, a ravenous appetite, and a White Star Line cabin bill of fare of breakfast, lunch, dinner, tea, and supper, fatness would soon be arrived at. In the interests of science I should like to see an episcopal prophet occasionally thrown overboard during a storm. The experiment must in any case be advantageous to humanity; should the tempest be stilled, then the ocean would be indeed the broad way, not leading to destruction; should the storm not be conquered, there would even then be promotion in the Church, and happiness to many at the mere cost of one bishop. "Now the Lord had

prepared a great fish to swallow up Jonah." Jesus says the fish was a whale. A whale would have needed preparation, and the statement has an air ofvraisemblance. The fish did swallow Jonah. "Jonah was in the belly of the fish three days and three nights." Poor Jonah! and poor fish! Poor Jonah, for it can scarcely be pleasant, even if you escape suffocation, to be in a fish's belly with too much to drink, and no room to swallow, and your solids either raw or too much done. Poor fish! for even after preparation it must be disagreeable to have one's poor stomach turned into a sort of prayer meeting. Jonah was taken in; but the fish found that taking in a parson was a feat neither easy nor healthy. After Jonah had uttered guttural sounds from inside the fish's belly for three days and three nights, the Lord spake unto the fish, and the fish was sick of Jonah, "and it vomited out Jonah upon the dry land." Some skeptics urged that a whale could not have swallowed Jonah; but once, at Todmorden, a Church of England clergyman, who had been curate to the Reverend Charles Kingsley, got rid of this as an objection by assuring us that he should have equally believed the story had it stated that Jonah had swallowed the whale. And then the word of the Lord came to Jonah once more, and this time Jonah obeyed. He was to take God's message to the citizens of Nineveh. "And Jonah began to enter into the city a day's journey, and he cried, and said, Yet forty days, and Nineveh shall be overthrown." Should Jonah come to London in the present day with a similar message, he would meet scant courtesy from our clergy. A foreigner and using a strange tongue, he would probably find himself in Colney Hatch or Hanwell. To come to England in the name of Mahomet or Buddha, or Osiris or Jupiter, would have little effect. But the Ninevites do not seem even to have raised the question that the God of the Hebrews was not their God. They listened to Jonah, and "the people of Nineveh believed God, and proclaimed a fast, and put on sackcloth, from the greatest of them even to the least of them. For word came unto the king of Nineveh, and he arose from his throne, and he laid his robe from him, and covered him with sackcloth and sat in ashes. And he caused it to be proclaimed and published through Nineveh by the decree of the king and his nobles, saying, Let neither man nor beast, herd nor flock, taste anything; let them not feed, nor drink water: but let man and beast be covered with sackcloth, and cry mightily unto God: yea, let them turn every one from his evil way, and from the violence that is in their hands." The consumption of sackcloth for covering every man and beast must have been rather large, and the Nineveh sackcloth manufacturers must have had enormous stocks on hand to supply the sudden demand. The city article of theNineveh Times, if such a paper existed, would probably have described "sackcloth firm, with a tendency to rise." Man and beast, all dressed in or covered with sackcloth! It would be sometimes difficult to distinguish a Ninevite man from a Ninevite beast, the dress being similar for all. This is a difficulty, however, other nations have shared with the Ninevites. Men and women may sometimes be seen in London dressed in broadcloth and satins, and, though their clothing is distinguishable enough, their conduct is sometimes so beastly that the naked beasts are the more respectable.

Nineveh was frightened, and Nineveh moaned, and Nineveh determined to do wrong: no more. "And God saw their works, that they turned from their evil way; and God repented of the evil that he had said that he would do unto them; and he did it not." God, the unchangeable, changed his purpose, and spared the city, which in his infinite wisdom he had doomed. "But it displeased Jonah exceedingly, and he was very angry." It was enough to vex a saint to be sent to prophesy the destruction of the city in six weeks, and then nothing at all to happen. "And he prayed unto the Lord, and said, I pray thee, O Lord, was not this my saying, when I was yet in my country? Therefore I fled before unto Tarshish." Jonah did not like to be a discredited prophet and cried, "Therefore now, O Lord, take, I beseech thee, my life from me; for it is better for me to die than to live. Then said the Lord, Doest thou well to be angry?" Jonah, knowing the Lord, was still curious and uncertain as well as angry. He was a prophet and a skeptic. "So Jonah went out of the city, and sat on the east side of the city, and there made him a booth, and sat under it in the shadow, till he might see what would become of the city. And the Lord God prepared a gourd, and made it to come up over Jonah, that it might be a shadow over his head, to deliver him from his grief. So Jonah was exceeding glad of the gourd. But God prepared a worm when the morning rose the next day, and it smote the gourd that it withered. And it came to pass, when the sun did arise, that God prepared a vehement east wind; and the sun beat upon the head of Jonah, that he fainted, and wished in himself to die, and said, It is better for me to die than to live. And God said to Jonah, Doest thou well to be angry for the gourd? And he said, I do well to be angry, even unto death. Then said the Lord, Thou hast had pity on the gourd, for the which thou hast not labored, neither madest it grow; which came up in a night, and perished in a night: And should not I spare Nineveh, that great city, wherein are more than sixscore thousand persons that can not discern between their right hand and their left hand; and also much cattle?" The Lord seems to have overlooked that Jonah had more pity on himself than the gourd, whose only value to him was as a shade from the sun. Jonah, too, might have reminded the Lord that there were more than 120,000 persons similarly situated at the deluge and at the slaughter of the Midianites, and that the "much cattle" had never theretofore been reckoned in the divine decrees of mercy.

Here ends the new life of Jonah. Of the prophet's childhood we know nothing; of his middle age no more than we have here related; of his old age and death we have nothing to say. It is enough for good Christians to know that "Jonas was three days and three nights in the whale's belly; so shall the Son of Man be three days and three nights in the heart of the earth." According to Jesus the story of Jonah is as true as Gospel.

WHO WAS JESUS CHRIST?

Many persons will consider the question heading this pamphlet as one to which the Gospels have given a sufficient answer, and that no further inquiry is necessary. We, in reply, point out

that while the general Christian body affirm that Jesus was God incarnate on earth, the Unitarian Christians, less in numerical strength, but numbering a large proportion of the more intelligent and humane, absolutely deny this divinity; and even in the earliest ages of the Christian Church heretics were found who scrupled not to deny that Jesus had ever existed in the flesh. Under these circumstances, it is well to prosecute the inquiry to the uttermost, that our faith may rest on sure foundations.

The history of Jesus Christ is contained in four books, or gospels. We know not with any degree of certainty, and have now no means of knowing, when these gospels were written, we know not where they were written, and we know not by whom they were written. Until after the year A. D. 200, no author, except Irenæus, professes to mention any gospels by Matthew, Mark, Luke, or John, and there is no sufficient evidence to identify the gospels we have with the writings to which Irenseus refers. The Church has, however, kindly provided us with an author for each gospel, and the early Fathers have proved there ought to be four gospels, because there are four seasons, four principal points to the compass, etc. Our duty is simply to believe. With regard to the gospel first in order, it is true that divines themselves disagree as to the language in which it was written. Some allege that the original was in Hebrew, others deny that our Greek version has any of the characters of a translation. This increases our difficulty, but if we wish for temporal welfare we must believe with the party which is most fashionable, and if we simply wish for truth, we had better disregard all parties and avoid their creeds. Our authorized English translation of the four gospels is made from the received Greek version; this version was made at Alcala in Spain, and the MSS. from which it was obtained were afterward sold by the pious Christians and manufactured into sky-rockets by one Torjo, a firework maker. So that the same Christians who threaten us with the pains of hell if we reject the gospels, actually condemned their own books to brimstone and fire. The only variation in the mode of burning is this—the holy MSS., when made into sky-rockets, were shot upward and burnt in their ascent to the heavenly regions, and we are to burn in our descent into the lower regions of the bottomless pit.

We do not know the hour, the day, the month, or the year, in which Jesus was born. The only point on which divines generally agree is, that he was not born on Christmas Day. The Oxford chronology places the matter in no clearer light, and more than thirty learned authorities give us a period of over seven years difference in their reckoning. The place of his birth is also uncertain, as may be ascertained by careful reference to the text. For instance, the Jews in the very presence of Jesus reproached him that he ought to have been born at Bethlehem, and he never ventured to say, "I was born there." (John vii, 41, 42, 52.)

Jesus was the son of David the son of Abraham (Matthew i), and his descent from Abraham is traced through Isaac, who was born of Sarai (whom the writer of the Epistle to Galatians, chap,

iv, v. 24, says was a covenant and not a woman), and ultimately through Joseph, who was not only not his father, but is not shown to have had any relationship to Jesus at all, and through whom the genealogy should not be traced. There are two genealogies in the four gospels which have the merit of contradicting each other, and these in part may be collated with the Old Testament genealogy, which has the advantage of agreeing with neither. Much prayer and faith will be required in this introduction to the history of Jesus. The genealogy of Matthew possesses peculiar points of interest to a would-be believer. It is self-contradictory, counts thirteen names as fourteen without explanation, and omits the names of three kings without apology. Matthew (i, 13), says Abiud was the son of Zorobabel. Luke says Zorobabel's son was Rhesa. The Old Testament contradicts both, and gives Meshullam and Hananiah and Shelomith, their sister (1 Chron. iii, 19), as the names of Zorobabel's children. Some Greek MSS. insert "Joram" into Luke iii, 33. I do not know whether we shall be damned for omitting or for inserting Joram: those who believe had better look to this. Jesus was born without a father after his mother had been visited by the angel Gabriel, who "came in unto her" with a message from God. His reputed father, Joseph, had two fathers, one named Jacob, the other named Heli. The divines feeling this to be a difficulty, have kindly invented a statement that Heli was the father of Mary. The birth of Jesus was miraculously announced to Mary and to Joseph by visits of an angel, but they so little regarded the miraculous annunciation that they marveled soon after at things spoken by Simeon, which were much less wonderful in character. Jesus was the Son of God, or God manifest in the flesh, and his birth was first discovered by some wise men or astrologers. The God of the bible, who is a spirit, had previously said that these men were an abomination in his sight, and he therefore, doubtless, preferred them to be his first visitors in the flesh to keep up his character for incomprehensibility. These men sawhisstar in the East, but it did not tell them much, for they were obliged to come and ask information from Herod the king. Herod inquired of the chief priests and scribes; and it is evident Jeremiah was right, if he said, "The prophets prophecy falsely and the priests bear rule by their means," for these chief priests, like the Brewin Grants and the Brindleys of the present day, misquoted to suit their purposes, and invented a false prophecy by omitting a few words from, and adding a few words to, a text until it suited their purpose. The star, after they knew where to go, and no longer required its aid, led the wise men and went before them, until it came and stood over where the young child was. The story will be better understood if the reader will walk out at night and notice some star, and then see how many houses it will be over. The writer of the third gospel does not appear to have been aware of the star story, and he therefore invents an angel who tells some shepherds; but as this last named adventure does not appear to have happened in the reign of Herod at all, perhaps Jesus was born twice. After the wise men had left Jesus, an angel warned Joseph to flee with him and Mary into Egypt, and Joseph did fly and remained there with the young child and his mother until the death of Herod; and this was done to fulfill a prophecy. On referring to Hosea (xi, 1), we find the words have no reference whatever to Jesus, and that, therefore, either the tale of

the flight is invented as a fulfillment of the prophecy, or the prophecy manufactured to support the tale of the flight. The Jesus of the third gospel never went into Egypt at all in his childhood; perhaps there were two Jesus Christs?

When Jesus began to be about thirty years of age he was baptized by John in the river Jordan. John, who knew him, according to the writer of the first gospel, forbade him directly he saw him; but, according to the writer of the fourth gospel, he knew him not, and had, therefore, no occasion to forbid him. God is an "invisible" "spirit," whom no man hath seen (John i, 18), or can see. (Exodus xxxiii, 20); but John, who was a man, saw the spirit of God descending like a dove. God is everywhere, but at that time was in heaven, from whence he said, "This is my beloved Son, in whom I am well pleased." Although John heard this from God's own mouth, he did not always believe it, but sometime after sent two of his disciples to Jesus to inquire if he were really the Christ (Matthew xi, 2, 3).

Immediately after the baptism, Jesus was led up of the spirit into the wilderness to be tempted of the devil. I do not know anything about either "the spirit" or "the devil" here mentioned, and the writer does not explain anything about them; he speaks of them familiarly, as old acquaintances. Jesus fasted forty days and forty nights, and in those days he did eat nothing. Of course it would be difficult to find a more severe fast—forty days and nights is a long period to abstain from food. Moses fasted twice that period. Such fasts take place in religious books, but they are seldom found in every-day life. Such fasts are nearly miraculous. Miraculous events are events which never happened in the past, do not take place in the present, and never will occur in the future. Jesus was God, and by his power as God fasted. This all must believe. The only difficulty is, to understand on the hypothesis of his divinity, what made him hungry. When Jesus was hungry the devil tempted him by offering him stones, and asking him to make them bread. We have heard of men having hard nuts to crack, but that stones should be offered to a hungry man for extempore bread-making hardly seems a probable temptation. Which temptation came next is a matter of doubt. The Holy Ghost, which the clergy assert inspired Matthew and Luke, does not appear to have inspired them both alike, and they relate the story of the temptation in different order. According to one, the devil next taketh Jesus to the pinnacle of the temple and tempts him to throw himself to the bottom, by quoting Scripture that angels should bear him in their arms. Jesus was, however, either a disbeliever in Scripture, or remembered that the devil, like other gentlemen in black, grossly misquoted to suit his purpose, and the temptation failed. The devil then took Jesus to an exceedingly high mountain, from whence he showeth him all the kingdoms of the world, and the glory thereof, in a moment of time, which was very quick. It is urged that this did not include a view of the antipodes, but only referred to the kingdoms then known. If this be true, it must have been a long look from Judea to China, which was then a known kingdom. The eye of faith will, however, see things afar off and sometimes will also see

things which are not. The mountain must have been very high—much higher than the diameter of the earth; it must have been solid in proportion, therefore would have capsized the earth in its revolutions, if even temporarily placed upon it. The devil then offered Jesus, who was the same as God, and therefore omnipotent, all the kingdoms of the world, if he, Jesus the omnipotent God, would fall down and worship his own creature, the devil. Some object that if God is the creator and omnipotent ruler of the world, then the devil would have no control over the kingdoms of the world, and that the offer could be no temptation as it was made to Jesus, who was both God omnipotent and all-wise, as well as man. These objectors may easily be answered by asserting that it requires a proper submission of the intellect, and an abhorrence of worldly reason, in order properly to understand these books. After this Jesus taught the multitudes. His teachings will form the subject of a separate tract. We are here only endeavoring to answer our preliminary question by a narration of his history.

After the temptation, Jesus is alleged to have worked many miracles, casting out devils, and otherwise creating marvels among the inhabitants of Judea. Bedevilment is now at a sad discount, and if a second Jesus of Nazareth were in this heretical age to boast that he possessed the power of casting out devils, he would stand a fair chance of expiating his offense by a three months' penance with hard labor in the highly polished interior of some borough jail. Now if men be sick and they have a little wisdom, the physician is resorted to, who administers medicine to cure the disease. If men have much wisdom they study physiology, while they have health, in order to prevent sickness altogether. In the time of the early Christians prayer and faith (James v, 14, 15) occupied the position of utility since usurped by rhubarb, jalap,et similibus. Men who had lost their sight in the time of Christ were attacked not by disease but by the devil; we have heard of men seeing double who have allowed spirits to get into their heads. In the days of Jesus one spirit would make a man blind, or deaf, or dumb; occasionally a number of devils would get into a man and drive him mad. We do not doubt this, nor do we ask our readers to doubt. We are grieved to be obliged to add that although we do not doubt the story of devils, neither do we believe them. Our state of mind is neither that of doubt, nor of absolute conviction of their correctness. On one occasion, Jesus met either one man (Mark v, 2) or two men (Matthew viii, 28) possessed with devils. I am not in a position to advance greater reasons for believing that it was one man who was possessed than for believing there were two in the clutches of the devils. The probabilities are equal—that is, the amount of probability is not greater upon the one side than upon the other—that is, there is no probability on either side. The devils knew Jesus and addressed him by name. Jesus was not so familiar with the imp, or imps, and we find inquired the name of the particular devil he was addressing. The answer given in Latin would induce a belief that the devils usually spoke in that tongue. This may be an error, but, of course, it is well to give consideration to every particular when we know we are to be eternally damned if we happen to believe the wrong statement. Jesus wanted to cast out the devils, this

they do not seem to have cared about, but they appear to have had a decided objection to being cast out of the country. Whether Palestine was the native country of the devils, and that therefore they were loth to quit it, I know not, but it is likely enough, as Christianity is alleged to have had its rise there. A compromise was agreed to, and at their own request the devils were transferred to a herd of swine. People who believe this may be said to "go the whole hog." The Jesus of the four gospels is also alleged to have fed large multitudes of people under circumstances of a most ultra-thaumaturgic character. To the first book of Euclid is, prefixed an axiom that "the whole is greater than its part." John Wesley is alleged to have eschewed mathematics lest it should lead him to Infidelity. John Wesley was wise, for if any man be foolish enough to accept Euclid's axiom, he will be compelled to reject the miraculous feeding of 5,000 people with five loaves and two small fishes. It is difficult under any circumstances to perform a miracle. The original difficulty is rather increased than diminished by the assertion that after the multitude had been fed, twelve baskets full of fragments remained. Perhaps the loaves were very large or the baskets very small.

Jesus is related to have walked on the sea at a time when it was very stormy, and when, to use the words of the text, "the sea arose by reason of a great wind that blew." Walking on the water is a great feat if it be calm, but when the waves run high it is still more wonderful. Perhaps it was because Jesus must have been often engulfed by the angry waves, that one sect prefers baptism by complete immersion. We admire this miracle; we know how difficult it is for a man to keep his head above water in the affairs of life.

The miracle of turning water into wine at Cana, in Galilee, is worthy of considerable attention, in the endeavor to answer the question, Who was Jesus Christ? Jesus and his disciples had been called to a marriage feast, and when there the company fell short of wine. The mother of Jesus to whom the Catholics offer worship, and pay great adoration, informed Jesus of the deficiency. Jesus, who was very meek and gentle, answered her in the somewhat uncourteous and unmeaning phrase, "Woman, what have I to do with thee? mine hour is not yet come." His mother seemed to have expected a miracle by her conduct, yet if the fourth gospel speak the truth, that was the beginning of miracle working on the part of Jesus. Perhaps something had previously happened which is not recorded, and which would explain this apparent inconsistency. We must exert our faith to fill up any little gap which may be in the way of salvation. Jesus having obtained six waterpots full of water, turned them into wine. Teetotalers who reject spirits in bottles, but accept spiritual teachings, and who can not believe God would specially provide means of drunkenness, urge that this wine was not of intoxicating quality. We will hope their hypothesis is a correct one, but there is nothing to justify it in our text. In fact, the curious connection between the phrase "well drunk" and the time at which the miracle was performed, would almost warrant the allegation that the guests were already in such a state as

to render unnecessary the administration of further intoxicants. The moral effects of this miracle are not easily conceivable by carnal minds.

Shortly after this Jesus went to the temple, and in a meek and quiet manner, with a scourge of small curds drove thereout the cattle dealers and money changers who had assembled there in the ordinary course of their business. It is hardly probable that the Jews would have permitted this without violent resistance to so rough a course of procedure. The writer of the fourth gospel placed this event very early in the public life of Jesus. The writer of the third gospel fixes the occurrence much later. Perhaps it happened twice, or perhaps they have both made a mistake in the time.

The Jesus of the four gospels is alleged to have been God all-wise; being hungry, he went to a fig-tree, when the season of figs was not yet come. Of course there were no figs upon the tree, and Jesus then caused the tree to wither away. This is an interesting account to a true orthodox trinitarian. Such a one will believe: first, that Jesus was God, who made the tree, and prevented it from bearing figs; second, that God the all-wise, who is not subject to human passions, being hungry, went to the fig-tree, on which he knew there would be no figs, expecting to find some there; third, that God the all-just then punished the tree because it did not bear figs in opposition to God's eternal ordination. This account is a profound mystery to a truly religious man. He bow's his head, flings his carnal reason away, and looks at the matter in a prayerful spirit, with an eye of faith. Faith as a grain of mustard seed will remove a mountain. The only difficulty is to get the grain of faith; all is easy when that is done. The "eye of faith" is a great help, it sometimes enables men to see that which does not exist. Jesus had a disciple named Peter, who, having much faith, was a great rascal and denied his leader in his hour of need. Jesus was previously aware that Peter would be a rascal, and he gave him the keys of the kingdom of heaven, and told him that whatsoever be bound on earth should be bound in heaven. Many an honest man has been immured in a dungeon, and has had the key turned on him by a rascally jailor. It is to be regretted that the like should be promised for all eternity. Peter was to have denied Jesus three times before the cock should crow (Matt. 26, 34). The cock was doubtless an infidel cock, and would not wait. He crowed before Peter's second denial (Mark xiv, 68).

Commentators urge that the words used do not refer to the crowing of any particular cock, but to a special hour of the morning called "cockcrow." The commentators have but one difficulty to get over, and that is, that if the gospel be true, their explanation is false.

Peter's denial becomes the more extraordinary when we remember that he had seen Moses, Jesus, and Elias talking together, and had heard a voice from a cloud say, "This is my beloved son, in whom I am well pleased." If Peter could thus deny Jesus after having heard God vouch his

divinity, and if Peter not only escapes punishment but gets the office of gatekeeper to heaven, how much should we escape punishment and obtain reward, who only deny because we can not help it, and who have no corroborative evidence of sight or hearing to compel our faith?

The Jesus of the first gospel promised that, as Jonas was three days and three nights in the whale's belly, so he (Jesus) would be three days and three nights in the heart of the earth. Yet he was buried on Friday evening, and was out of the grave before Saturday was over. Of course this is susceptible of explanation; you must have faith and believe that in some other language something else was said which ought to be translated differently. Or, if you can not believe thus, then you must have faith until you stretch the one day and part of another day, and one night and part of another night, into three days and three nights.

Our orthodox translators have made Jesus perform a curious equestrian feat on his entry into Jerusalem. The text says, they "brought the ass and the colt and put on them their clothes and set him thereon." Perhaps this does not mean that he rode on both at one time.

On the cross, the Jesus of the four gospels, who was God, cried out, "My God, my God, why hast thou forsaken me?" God can not forsake himself. Jesus was God himself. Yet God forsook Jesus, and the latter cried out to know why he was forsaken. This is one of the mysteries of the holy Christian religion which, "unless a man rightly believe without doubt he shall perish everlastingly."

At the crucifixion of Jesus wonderful miracles took place. "The graves were opened, and many bodies of the saints which slept arose and came out of the grave after his resurrection and appeared unto many." We do not know which saints these were. Whether they numbered among them St. Abraham, who permitted his wife to incur the risk of dishonor, and who accepted riches to gild his shame; who turned his wife into the desert with one bottle of water and some bread. Saint Lot, of whom the less said the purer our pages; Saint Judah, who wanted to burn alive a woman he had gotten with child; Saint Jacob, the liar and cheat; Saint Joseph, the model prime minister, who bought the people's rights with their own corn; Saint Moses, the conjuror, who killed 3,000 Jews because his own brother Aaron had persuaded them to make a golden calf; Saint Jael, the blessed above all women, because she drove most treacherously a nail into the skull of a sleeping guest; Saint Samson, who slew one thousand men with the jawbone of an ass; Saint Gideon, who frightened a large body of Midianites, with trumpets, pitchers, and lanterns. Poor Midianites, they had all been exterminated long before Gideon's time; it must have been an extraordinary providence to bring them into life in order to frighten them; but God's ways are not as our ways. This is a digression—in plain language, we do not know who "the saints" were. They "appeared unto many," but there is not the slightest evidence

that any one ever saw them. Their "bodies" came out of the graves, so we suppose that the bodies of the saints do not decompose like those of ordinary human beings. As the saints rose, so did Jesus. As they had their bodies, so had he. He must have much changed in the grave, for his disciples did not know him when he stood on the shore (John xxi, 4).

According to the first gospel Jesus appeared to two women after his resurrection, and afterward met eleven of his disciples by appointment on a mountain in Galilee. We do not know when the appointment was made; the only verse on which divines rely as being capable of bearing this construction is Matt, xxxi, 32, and that voice is silent both as to place and time—in fact, gives no promise of any meeting whatever. According to the second gospel, he appeared first to one women, and when she told the disciples they did not believe it. Yet we are bound to unhesitatingly accept that which the disciples of Jesus rejected. We have an advantage which perhaps the disciples lacked. We have several different stories of the same event, and we can select that which appears to us the most probable. The disciples might have been so unfortunate as to have only one account. By the second gospel we learn that instead of the eleven going to Galilee after Jesus, he came to them as they sat at meat. In the third gospel, wo are told that he first appeared to two of his disciples at Emmaus, and they did not know him until they had been a long time in his company—in fact, according to the text, it was evening before they recognized him, so we suppose the light of faith supplied the want of the light of day. Unfortunately directly they saw him they did not see him, for as soon as they knew him he vanished out of their sight. He immediately afterward appeared to the eleven at Jerusalem, and not at Galilee, as stated in the first Gospel. Jesus asked for some meat, and the disciples gave him a portion of a broiled fish and of a honeycomb, and he did eat. In these degenerate days it is hard to believe in a ghost eating fried fish, yet we must try to do it for our soul's sake, which otherwise may be burned for ever in the fire that is never quenched. There is certainly nothing more improbable in God the Son eating broiled fish after he was dead, than there is in believing God the Father ate dressed calf, tender and good, prepared for him by Abraham (videGenesis xviii). A truly pious and devout mind will not look at the letter which killeth, but for the spirit which maketh alive. Jesus was afterward taken up into heaven, a cloud received him, and he was missed. God of course is everywhere, and heaven is not more above than below, but it is necessary we should believe that Jesus has ascended into heaven to sit on the right hand of God, who is infinite and has no right hand. Our question at the commencement was, "Who was Jesus Christ?" Was he a man?—surely not. Born without a father, in the lifetime of Herod, according to Luke. Residing in Egypt, according to Matthew, at a period in which, if Luke be true, he never could have visited Egypt at all. His whole career is, not simply a series of improbabilities, not simply a series of absurdities, but, in truth, a series of fables destitute of foundation in fact.

Who was Christ? born of a virgin. So was Chrishna, the Hindoo god incarnate. The story of Chrishna is identical in many respects with that of Jesus. The story of Chrishna was current long prior to the birth of Jesus. The story of Chrishna is believed by the inhabitants of Hindostan and disbelieved by the English, who say it is a myth, a fable. We add that both are equally true, and that both are equally false.

Who was Jesus Christ? A man or a myth? His history being a fable, is the hero a reality? Do you allege that it was impossible to forge books so large as the gospels? then the answer is that Christians were skilled in the art of forging epistles, gospels, acts, decrees of councils, etc. Will you urge that this only applies to the Romish Church? Then you will admit that your stream runs from a polluted fountain? Who was Jesus Christ? Who was Saint Patrick, who excelled the reptiles from Ireland? Who was Fin ma coul? Who was Odin? Perhaps there was a man who really lived and performed some special actions attracting popular attention, but beyond this Jesus Christ is a fiction.

WHAT DID JESUS TEACH?

The doctrines of Jesus may be sought for and found in a small compass. Four thin gospels are alleged to contain nearly the entirety of his sayings, and as most Englishmen are professedly Christians, it might be fairly supposed that the general public were conversant with Christ's teachings. This, however, is not the case. The bulk of professors believe from custom rather than from reading. They profess a faith as they follow a fashion—because others have done so before them. What did Jesus teach? Manly self-reliant resistance of wrong, and practice of right? No; the key-stone of his whole teaching may be found in the text, "Blessed are the poor in spirit, for theirs is the kingdom of heaven."*

* Matthew v, 3.

Is poverty of spirit the chief among virtues, that Jesus gives it the prime place in his teaching? Is poverty of spirit a virtue at all? Surely not. Manliness of spirit, honesty of spirit, fullness of rightful purpose, these are virtues; but poverty of spirit is a crime. When men are poor in spirit, then do the proud and haughty in spirit oppress and trample upon them, but when men are true in spirit and determined (as true men should be) to resist and prevent evil, wrong, and injustice whenever they can, then is their greater opportunity for happiness here, and no lesser fitness for the enjoyment of further happiness, in some may-be heaven, hereafter. Are you poor in spirit, and are you smitten; in such case what did Jesus teach? "Unto whom that smiteth thee on the one cheek, offer also the other."* 'Twere better far to teach that "he who courts oppression shares the crime." Rather say, if smitten once, take careful measure to prevent a future smiting. I

have heard men preach passive resistance, but this teaches actual invitation of injury, a course degrading in the extreme.

Shelley breathed higher humanity in his noble advice:

"Stand ye calm and resolute,Like a forest close and mute,With folded arms and looks, which areWeapons of an unvanquished war."

There is a wide distinction between the passive resistance to wrong and the courting of further injury at the hands of the wrongdoer. I have in no case seen this better illustrated than in Mr. George Jacob Holyoake's history of his imprisonment in Gloucester Jail,** where passive resistance saved him from the indignity of a prison dress, and also from compulsory attendance at morning prayer in the prison chapel, which in his case would have been to him an additional insult. But the teaching of Jesus goes much beyond this kind of conduct; the poverty of spirit principle is enforced to the fullest extent—"Him that taketh away thy cloak, forbid not to take thy coat also. Give to every man that asketh of thee, and from him that taketh away thy goods, ask them not again."*** Poverty of person is the only possible sequence to this extraordinary manifestation of poverty of spirit.

* Luke vi, 29.** "Last trail by Jury for Atheism."*** Luke vi, 29, 30.

Poverty of person is attended with many unpleasantnesses; and if Jesus knew that poverty of goods would result from his teaching, we might expect some notice of this. And so there is—as if he wished to keep the poor content through their lives with poverty, he says, "Blessed be ye poor for yours is the kingdom of God."* "But woe unto you that are rich, for you have received your consolation."** He pictures one in hell, whose only related vice is that in life he was rich; and another in heaven, whose only related virtue is that in life he was poor.*** He at another time tells his hearers that it is as difficult for a rich man to get into heaven as for a camel to go through the eye of a needle.**** The only intent of such teaching could be to induce the poor to remain content with the want and misery attendant on their wretched state in this life, in the hope of a higher recompense in some future life. Is it good to be content with poverty? Nay, 'tis better far to investigate the cause of such poverty, with a view to its cure and prevention. The doctrine is a most horrid one which declares that the poor shall not cease from the face of the earth. Poor in spirit and poor in pocket. With no courage to work for food, or money to purchase it! We might well expect to find the man who held these doctrines with empty stomach also; and what does Jesus teach?—"Blessed are ye that hunger now, for ye shall be filled."***** He does not say when the filling shall take place, but the date is evidently postponed until the time when you will have no stomachs to replenish. It is not in this life that the hunger is to be sated. Do you doubt

me, turn again to your Testament and read, "Woe unto you that are full, for ye shall hunger."****** This must surely settle the point.

* Luke vi, 20.** Luke vi, 24.*** Luke xvi, 19—81.**** Luke xviii, 25.***** Luke vi, 21.****** Luke vi, 25.

It would be but little vantage to the hungry man to bless him by filling him, if, when he had satisfied his appetite, he were met by a curse which had awaited the completion of his repast. Craven in spirit, with an empty purse and hungry mouth—what next? The man who has not manliness enough to prevent wrong will probably bemoan his hard fate, and cry bitterly that so sore are the misfortunes he endures. And what does Jesus teach?—"Blessed are ye that weep now, for ye shall laugh."* Is this true, and if true, when? "Blessed are they that mourn, for they shall be comforted."** Aye, but when? Not while they mourn and weep. Weeping for the past is vain; 'tis past, and a deluge of tears will never wash away its history. Weeping for the present is worse than vain—it obstructs your sight. In each minute of your life the aforetime future is present-born, and you need dry and keen eyes to give it and yourself a safe and happy deliverance. When shall they that mourn be comforted? Are slaves that weep salt teardrops on their steel shackles comforted in their weeping? Nay, but each pearly overflow, as it falls, rusts mind as well as fetter. Ye who are slaves and weep, will never be comforted until ye dry your eyes and nerve your arms, and, in the plenitude of your manliness,

"Shake your chains to earth like dew,Which in sleep have fallen on you."

Jesus teaches that the poor, the hungry and the wretched shall be blessed? This is not so. The blessing only comes when they have ceased to be poor, hungry and wretched. Contentment under poverty, hunger and misery is high treason, not to yourself alone, but to your fellows. These three, like foul diseases, spread quickly wherever humanity is stagnant and content with wrong.

* Luke vi, 31.** Matthew v, 4.

What did Jesus teach? "Thou shalt love thy neighbor as thyself."* So far well, but how if thy neighbor will not hear thy doctrine when thou preacheth the "glad tidings of great joy" to him? Then forgetting all thy love, and with bitter hatred that a theological disputant alone can manifest, thou "shalt shake off the dust from your feet," and by so doing make it more tolerable in the day of judgment for the land of Sodom and Gomorrah than for your unfortunate neighbor who has ventured to maintain an opinion of his own, and who will not let you be his priest.** It is, indeed, a mockery to speak of love, as if love to one another could result from the dehumanizing

and isolating faith required from the disciple of Jesus. Ignatius Loyola in this, at least, was more consistent than his Protestant brethren. "If any man come unto me, and hate not his father, and mother, and wife, and children, and brethren, and sisters, yea, and his own life also, he can not be my disciple."*** "Think not that I am come to send peace on earth. I came not to send peace, but a sword. For I am come to set men at variance against his father, and the daughter against her mother, and the daughter-in-law against her mother-in-law, and a man's foes they shall be of his own household.****" "Every one that hath forsaken houses, or brethren, or sisters, or father or mother, or wife or children, or lands for my sake, shall receive an hundred fold, and shall inherit everlasting life."***** The teaching of Jesus is, in fact, save yourself by yourself. The teaching of humanity should be, to save yourself save your fellow.

* Matthew xix, 19.** Matthew x, 14,15.*** Luke xiv, 26.**** Matthew x, 84—86.***** Matthew xix, 29.

The human family is a vast chain, each man and woman a link. There is no snapping off one link and preserving for it an entirety of happiness; our joy depends on our brother's also. But what does Jesus teach? That "many are called, but few are chosen;" that the majority will inherit an eternity of misery, while it is but the minority who obtain eternal happiness. And on what is the eternity of bliss to depend? On a truthful course of life? Not so. Jesus puts Father Abraham in Heaven, whose reputation for faith outstrips his character for veracity. The passport througli Heaven's portals is faith. "He that believeth and baptized shall be saved, and he that believeth not, shall be damned."* Are you married? Have you a wife you love? She dies and you. You from your first speech to your last had ever said, "I believe," much as a clever parrot might say it, if well taught. You had never examined your reasons for your faith for, like a true believer should, you distrusted the efficacy of your carnal reason. You said, therefore, "I believe in God and Jesus Christ," because you had been taught to say it, and you would have as glibly said, "I believe in Allah, and in Mahomet his prophet," had your birthplace been a few degrees more eastward, and your parents and instructors Turks. You believed in this life and awake in Heaven. Your much-loved wife did not think as you did—she could not. Her organization, education and temperament were all different from your own. She disbelieved because she could not believe. She was a good wife, but she disbelieved, A good and affectionate mother, but she disbelieved. A virtuous and kindly woman, but she disbelieved. And you are to be happy for an eternity in Heaven, while she is writhing in agony in Hell.

* Mark xvi,16.

If true, I could say with Shelley, of this Christianity, that it

"Peoples earth with demons, hell with men,And heaven with slaves."

It is often urged that Jesus is the Savior of the world, that he brought redemption without let or stint to the whole human race. But what did Jesus teach? "Go not into any way of the Gentiles, and into any city of the Samaritan enter ye not."* These were his injunctions to those whom he first sent out to preach. "I am not sent but unto the lost sheep of the house of Israel," is his hard answer to the poor Syrophenician woman who is entreating succor for her child. Christianity, as first taught by Jesus, was for the Jews alone, and it is only upon his rejection by them that the world at large has the opportunity of salvation afforded it. "He came unto his own and his own received him not,"** Why should the Jews be more God's own than the Gentiles? Is God the creator of all? and did he create the descendant of Abraham with greater right and privilege than all other men? Then, indeed, is great and grievous injustice done. You and I had no choice whether we would be born Jews or Gentiles; yet to the accident of such a birth is attached the first offer of a salvation which if accepted, shuts out all beside. The Kingdom of Heaven is a prominent feature in the teachings of Jesus, and it may be well to ascertain, as precisely as we can, the picture drawn by God incarnate of his own special domain. 'Tis likened to a wedding feast, to which the invited guests coming not, servants are sent out into the highways to gather all they can find—both good and bad. The King comes in to see his motley array of guests, and findeth one without a wedding garment.

* Matt. x, 5.** John i, 11.

The King inquired why he came into the feast without one, and the man, whoso attendance has been compulsorily enforced, is speechless. And who can wonder? he is a guest from necessity, not choice, he neither chose the fashion of his coming or his attiring. Then comes the King's decree, the command of the all-merciful and loving King of Heaven: "Bind him hand and foot, and cast him into outer darkness; there shall be weeping and gnashing of teeth." Commentators urge that it was the custom to provide wedding garments for all guests, and that this man is punished for his nonacceptance of the customary and ready robe. The text does not warrant this position, but assigns, as an explanation of the parable, that an invitation to the heavenly feast will not insure its partakal, for that many are called, but few are chosen. What more of the Kingdom of Heaven? "There shall be joy in Heaven over one sinner that repenteth, more than over ninety and nine just persons which need no repentance."* Nay, it is urged that the greater sinner one has been, the better saint he makes, and the more he has sinned, so much the more he loves God. "To whom little is forgiven, the same loveth little."** Is not this indeed asserting that a life of vice, with its stains washed away by a death-bed repentance, is better than a life of consistent and virtuous conduct? Why should the fatted calf be killed for the prodigal son?*** Why should men be taught to make to themselves friends of the mammon of unrighteousness?

These ambiguities, these assertions of punishment and forgiveness of crime, instead of directions for its prevention and cure, are serious detractions from a system alleged to have been inculcated by one for whom his followers claim divinity.

* Luke xv, 7.** Luke 7, 47.*** Luke xv, 27.

Will you again turn back to the love of Jesus as the redeeming feature of the whole? Then, I ask you, read the story of the fig-tree* withered by the hungry Jesus. The fig-tree, if he were all-powerful God, was made by him, he limited its growth and regulated its development. He prevented it from bearing figs, expected fruit where he had rendered fruit impossible, and in hisinfinite lovewas angry that the tree had not upon it that which it could not have. Tell me the love expressed in that remarkable speech which follows one of his parables, and in which he says: "For, I say unto you, that unto every one which hath shall be given, and from him that hath not, even that which he hath shall be taken away from him. But those, mine enemies, which would not that I should reign over them, bring them hither, and slay them before me."** What love is expressed by that Jesus who, if he were God, represents himself as saying to the majority of his unfortunate creatures (for it is the few who are chosen): 'Depart from me, ye cursed, into everlasting fire, prepared for the devil and his angels.'***

* Matt xxi, 18-22; Mark xi, 12-24.** Luke xix, 26,17.*** Matt, xxv, 41.

Far from love is this horrid notion of eternal torment. And yet the popular preachers of to-day talk first of love and then of

"Hell, a red gulf of everlasting fire,Where poisonous and undying worms prolongEternal misery to those hapless slaves,Whose life has been a penance for its crimes."

In reading the sayings attributed to Jesus, all must be struck by the passage which so extraordinarily influenced the famous Origen.* If he understood it aright, its teachings are most terrible. If he understood it wrongly, what are we to say for the wisdom of teaching which expresses so vaguely the meaning which it rather hides than discovers by its words? The general intent of Christ's teaching seems to be an inculcation of neglect of this life, in the search for another. "Labor not for the meat which perisheth, but for that meat which en-dureth unto everlasting life."** "Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on.... take no thought, saying, what shall we eat? or what shall we drink? or wherewithal shall we be clothed?.... But seek ye first the Kingdom of God and his righteousness, and all these things shall be added unto you." The effect of these texts, if fully carried out, would be most disastrous; they would stay all scientific discoveries, prevent all

development of man's energies. It is in the struggle for existence here that men are compelled to become acquainted with the conditions which compel happiness or misery. It is only by the practical application of that knowledge, that the wants of society are understood and satisfied, and disease, poverty, hunger, and wretchedness, prevented. Jesus substitutes "I believe," for "I think," and puts "watch and pray," instead of "think and act." Belief is made the most prominent feature, and is, indeed, the doctrine which pervades, permeates, and governs all Christianity. It is represented that, at the judgment, the world will be reproved "Of sin because they believe not." This teaching is most disastrous; man should be incited to active thought: belief is a cord which would bind him to the teachings of an uneducated past.

* Matt. xix, 12.** Matt, xxiv, 41.

Thought, mighty thought, mighty in making men most manly, will burst this now rotting cord, and then—shaking off the cobwebbed and dust-covered traditions of dark old times, humanity shall stand crowned with a most glorious diadem of facts, which, like gems worn on a bright summer's day, shall grow more resplendent as they reflect back the rays of truth's meridian sun. Fit companion to blind belief in slave-like prayer. Men pray as though God needed most abject entreaty ere he would grant them justice. What does Jesus teach on this? What is his direction on prayer? "After this manner pray ye: Our Father, which art in heaven." Do you think that God is the Father of all, when you pray that he will enable you to defeat some other of his children, with whom your nation is at war? And why "which art in Heaven?" Where is Heaven? you look upward, and if you were at the antipodes, would look upward still. But that upward would be downward to us. Do you know where Heaven is, if not, why say "which art in Heaven?" Is God infinite, then he is in earth also, why limit him to Heaven? "Hallowed be thy name." What is God's name? and if you know it not, how can you hallow it? How can God's name be hallowed even if you know it? "Thy kingdom come." What is God's kingdom, and will your praying bring it quicker? Is it the Judgment day, and do you say "Love one another," pray for the more speedy arrival of that day on which God may say to your fellow, "depart ye cursed into everlasting fire?" "Thy will be done on earth, as it is in heaven." How is God's will done in heaven? If the devil be a fallen angel, there must have been rebellion even there. "Give us this day our daily bread," Will the prayer get it without work? No. Will work get it without the prayer? Yes? Why pray then for bread to God, who says, "Blessed be ye that hunger.... woe unto you that are full?" "And forgive us our debts, as we forgive our debtors." What debts have you to God? Sins? Samuel Taylor Coleridge says, "A sin is an evil which has its ground or origin in the agent, and not in the compulsion of circumstances. Circumstances are compulsory, from the absence of a power to resist or control them: and if the absence likewise be the effect of circumstances.... the evil derives from the circumstances.... and such evil is not sin."* Do you say that you are independent of all circumstances, that you can control them, that you have a free will? Mr. Buckle says that the

assertion of a free will "involves two assumptions, of which the first, though possibly true, has never been proved, and the second is unquestionably false. These assumptions are that there is an independent faculty, called consciousness, and that the dictates of that faculty are infallible."** "And lead us not into temptation, but deliver us from evil." Do you think God will possibly lead you into temptation? if so, you can not think him all-good, if not all-good he is not God, if God, the prayer is a blasphemy.

* "Aids to Reflection," 1843, p. 200.** "History of Civilization," vol. i, p. 14.

I close this paper with the last scene in Jesus' life, not meaning that I have—in these few pages—fully examined his teachings; but hoping that enough is even here done to provoke inquiry and necessitate debate, Jesus, according to the general declaration of Christian divines, came to die, and what does he teach by his death? The Rev. F. D. Maurice it is, I think, who well says, "That he who kills for a faith must be weak, that he who dies for a faith must be strong." How did Jesus die? Giordano Bruno, and Julius Caesar Vanini, were burned for Atheism. They died calm, heroic defiant of wrong. Jesus, who could not die, courted death, that he, as God, might accept his own atonement, and might pardon man for a sin which he had not committed, and in which he had no share. The death he courted came, and when it came he could not face it, but prayed to himself that he might not die. And then, when on the cross, if two of the gospels do him no injustice, his last words—as there recorded—were a bitter cry of deep despair, "My God, my God, why hast thou forsaken me?" The Rev. Enoch Mellor, in his work on the Atonement, says, "I seek not to fathom the profound mystery of these words. To understand their full import would require one to experience the agony of desertion they express." Do the words, "My God, my God, why hast thou forsaken me?" express an "agony" caused by a consciousness of "desertion?" Doubtless they do; in fact, if this be not the meaning conveyed by the despairing death-cry, then there is in it no meaning whatever. And if those words do express a "bitter agony of desertion," then they emphatically contradict the teachings of Jesus. "Before Abraham was, I am." "I and my father are one." "Thou shalt not tempt the Lord thy God." These were the words of Jesus, words conveying (together with many other such texts) to the reader an impression that divinity was claimed by the man who uttered them. If Jesus had indeed been God, the words "My God, my God," would have been a mockery most extreme. God could not have deemed himself forsaken by himself. The dying Jesus, in that cry, confessed himself either the dupe of some other teaching, a self-deluded enthusiast, or an arch-imposter, who, in the bitter cry, with the wide-opening of the flood-gates through which life's stream ran out, confessed aloud that he, at least, was no deity, and deemed himself a God-forsaken man. The garden scene of agony is fitting prelude to this most terrible act. Jesus, who is God, prays to himself, in "agony he prayed most earnestly."* He refuses to hear his own prayers, and he, the omnipotent, is forearmed against his coming trial by an angel from heaven, who "strengthened" the great Creator. Was Jesus the son of God?

Praying, he said, "Father, the hour is come, glorify thy Son, that thy Son also may glorify thee."** And was he glorified? His death and resurrection most strongly disbelieved in the very city where they happened, if, indeed, they ever happened at all. His doctrines rejected by the only people to whom he preached them. His miracles denied by the only nation where they are alleged to have been performed; and he himself thus on the cross, crying out, "My God, my God, why hast thou forsaken me?" Surely no further comment is needed on this head, to point more distinctly to the most monstrous mockery the text reveals.

* Luke, xxii, 44.** John, xvii, 2.

To those who urge that the course I take is too bold, or that the problems I deal with are two deep or sacred, I will reply in Herschel's version of Schiller,

Wouldst thou reach perfection's goal,Stay not! rest not!Forward strain,Hold not hand, and draw not rein.Perseverance strikes the mark,Expansion clears whatever is dark,Truth in the abyss doth dwell,My say is said—now fare the well.

THE TWELVE APOSTLES.

All, good Christians, indeed all Christians—for are there any who are not models of goodness?—will desire that their fellow-creatures who are unbelievers should have the fullest possible information, biographical or otherwise, as to the twelve persons specially chosen by Jesus to be his immediate followers. It is not for the instruction of the believer that I pen this brief essay; he would be equally content with his faith in the absence of all historic vouchers. Indeed a pious worshiper would cling to his creed not only without testimony in its favor, but despite direct testimony against it. It is to those not within the pale of the church that I shall seek to demonstrate the credibility of the history of the twelve apostles. The short biographical sketch here presented is extracted from the first five books of the New Testament, two of which at least are attributed to two of the twelve. It is objected by heretical men who go as far in their criticisms on the Gospels as Colenso does with the Pentateuch, that not one of the gospels is original or written by any of the apostles; that, on the contrary, they were preceded by numerous writings, since lost or rejected, these in their turn having for their basis the oral tradition which preceded them. It is alleged that the four gospels are utterly anonymous, and that the fourth gospel is subject to strong suspicions of spuriousness. It would be useless to combat, and I therefore boldly ignore these attacks on the authenticity of the text, and proceed with my history. The names of the twelve are as follows: Simon, surnamed Peter; Andrew, his brother; James and John, the sons of Zebedee; Andrew; Philip; Bartholomew; Matthew; James, the son of Alphaeus; Simon, the Canaanite; Judas Iscariot; and a twelfth, as to whose name there is some

uncertainty; it was either Lebbaeus, Thaddaeus, or Judas. It is in Matthew alone (x, 3) that the name of Lebbaeus is mentioned thus: "Lebbaeus, whose surname was Thaddaeus." We are told, on this point, by able biblicists, that the early MSS. have not the words "whose surname was Thaddaeus," and that these words have probably been inserted to reconcile the gospel according to Matthew with that attributed to Mark. How good must have been the old fathers who sought to improve upon the Holy Ghost by making clear that which inspiration had left doubtful! In the English version of the Rheims Testament used in this country by our Roman Catholic brethren, the reconciliation between Matthew and Mark is completed by omitting the words "Lebbaeus whose surname was," leaving only the name "Thaddaeus" in Matthew's text. This omission must be correct, being by the authority of an infallible church. If Matthew x, 3, and Mark iii, 18, be passed as reconciled, although the first calls the twelfth disciple Lebbaeus, and the second gives him the name Thaddaeus, there is yet the difficulty that in Luke vi, 16, corroborated by John xiv, 22, there is a disciple spoken of as "Judas, not Iscariot." "Judas, the brother of James." Commentators have endeavored to clear away this last difficulty by declaring that Thaddaeus is a Syriac word, having much the same meaning as Judas. This has been answered by the objection that if Matthew's Gospel uses Thaddæus in lieu of Judas, then he ought to speak of Thaddaeus Iscariot, which he does not; and it is further objected also that while there are some grounds for suggesting a Hebrew original for the gospel attributed to Matthew, there is not the slightest pretense for alleging that Matthew wrote in Syriac. It is to be hoped that the unbelieving reader will not stumble on the threshold of his study because of a little uncertainty as to a name. What is in a name? The Jewish name which we read as Jesus is really Joshua, but the name to which we are most accustomed seems the one we should adhere to.

Simon Peter being the first named among the disciples of Jesus, deserves the first place in this notice. The word "Simon" may be rendered, if taken as a Greek name,flatnoseorugly. Some of the ancient Greek and Hebrew names are characteristic of peculiarities in the individual, but no one knows whether Peter's nose had anything to do with his name. Simon is rather a Hebrew name, but Peter is Greek, signifying arockorstone. Peter is supposed to have the keys of the kingdom of heaven, and his second name may express his stony insensibility to all appeals by infidels for admittance to the celestial regions. Lord Byron's "Vision of Judgment" is the highest known authority as to Saint Peter's celestial duties, but this nobleman's poems are only fit for very pious readers. Peter, ere he became a parson, was by trade a fisher, and when Jesus first saw Peter, the latter was in a vessel fishing with his brother Andrew, casting a net into the sea of Galilee, Jesus walking by the sea said to them, "Follow me, and I will make you fishers of men."* The two brothers did so, and they became Christ's disciples. The successors of Peter have since reversed the apostles' early practice: instead of now casting their nets into the sea, the modern representatives of the disciples of Jesus draw the sees into their nets, and, it is believed, find the

result much more profitable. When Jesus called Peter no one was with him but his brother Andrew; a little further on, the two sons of Zebedee were in a ship with their father mending nets. This is the account of Peter's call given in the gospel according to Matthew, and as Matthew was inspired by the Holy Ghost, who is identical with God the Father, who is one with God the Son, who is Jesus, the account is doubtless free from error. In the Gospel according to John, which is likewise inspired in the same manner, from the same source, and with similar infallibility, we learn that Andrew was originally a disciple of John the Baptist, and that when Andrew first saw Jesus, Peter was not present, but Andrew went and found Peter who, if fishing, must have been angling on land, telling him "we have found the Messiah," and that Andrew then brought Peter to Jesus, who said, "Thou art Simon, the son of Jonas; thou shalt be called Cephas." There is no mention in this gospel narrative of the sons of Zebedee being a little further on, or of any fishing in the sea of Galilee. This call is clearly on land, whether or not near the sea of Galilee does not appear. In the Gospel according to Luke, which is as much inspired as either of the two before-mentioned gospels, and, therefore equally authentic with each of them, we are told** that when the call took place, Jesus and Peter were both at sea. Jesus had been preaching to the people, who, pressing upon him, he got into Simon's ship, from which he preached.

* Matthew iv, 18-22.** Luke v, 1-11.

After this he directed Simon to put out into the deep and let down the nets. Simon answered, "Master, we have toiled all night and taken nothing; nevertheless, at thy word I will let down the net." No sooner was this done than the net was filled to breaking, and Simon's partners, the two sons of Zebedee, came to help, when, at the call of Jesus, they brought their ships to land, and followed him. From these accounts the unbeliever may learn that when Jesus called Peter, either both Jesus and Peter were on the land, or one was on land and the other on sea, or both of them were at sea. He may also learn that the sons of Zebedee were present at the time, having come to help to get in the great catch, and were called with Peter; or that they were further on, sitting mending nets with their father, and were called afterward; or that they were neither present nor near at hand. He may also be assured that Simon was in his ship when Jesus came to call him, and that Jesus was on land when Andrew, Simon's brother, found Simon and brought him to Jesus to be called. The unbeliever must not hesitate because of any apparent incoherence or contradiction in the narrative. With faith it is easy to harmonize the three narratives above quoted, especially when you know that Jesus had visited Simon's house before the call of Simon,* but did not go to Simon's house until after Simon had been called.** Jesus went to Simon's house and cured his wife's mother of a fever. Robert Taylor,*** commenting on the fever-curing miracle, says: "St. Luke tells us that this fever had taken the woman, not that the woman had taken the fever, and not that the fever was a very bad fever, or a yellow fever, or a

scarlet fever, but that it was a great fever—that is, I suppose, a fever six feet high at least; a personal fever, a rational and intelligent fever, that would yield to the power of Jesus' argument, but would never have given way to James' powder. So we are expressly told that Jesus rebuked the fever—that is, he gave it a good scolding; asked it, I dare say, how it could be so unreasonable as to plague the poor old woman so cruelly, and whether it wasn't ashamed of itself; and said, perhaps,Get out you naughty, wicked fever, you; and such like objurgatory language, which the fever, not used to being rebuked in such a manner, and being a very sensible sort of fever, would not stand, but immediately left the old woman in high dudgeon." This Robert Taylor, although a clergyman of the Church of England, has been convicted of blasphemy and imprisoned for writing in such wicked language about the bible. Simon Peter, as a disciple, performed many miracles, some when in company with Jesus, and more when separately by himself. These miracles, though themselves un-vouched by any reliable testimony, and disbelieved by the people among whom they worked, are strong evidence in favor of the apostolic character claimed for Peter.

* Luke iv, 88.** Matthew viii, 14.*** Devil's Pulpit, vol. i., p. 148.

On one occasion the whole of the disciples were sent away by Jesus in a ship, the Savior remaining behind to pray. About the fourth watch of the night, when the ship was in the midst of the sea, Jesus went unto his disciples, walking on the sea. Though Jesus went unto his disciples, and as an expeditious way, I suppose, of arriving with them, he would have passed by them, but they saw him, and supposing him to be a spirit, cried out. Jesus bid them be of good cheer, to which Peter answered, "Lord, if it be thou, bid me come unto thee."* Jesus said, "Come," and Peter walked on the water to go to Jesus. But the sea being wet and the wind boisterous, Peter became afraid, and instead of walking on the water began to sink into it, and cried out "Lord save me," and immediately Jesus stretched out his hand and caught Peter.

Some object that the two gospels according to John and Mark, which both record the feat of water-walking by Jesus, omit all mention of Peter's attempt. Probably the Holy Ghost had good reasons for omitting it. A profane mind might make a jest of an Apostle "half seas over," and ridicule an apostolic gatekeeper who could not keep his head above water.

Peter's partial failure in this instance should drive away all unbelief, as the text will show that it was only for lack of faith that Peter lost his buoyancy. Simon is called Bar-Jonah, that is, son of Jonah; but I am not aware if he is any relation to the Jonah who lived under water in the belly of a fish three days and three nights.

It was Simon Peter who, having told Jesus he was the Son of God, was answered, "Blessed art thou Simon Bar-Jonah, flesh and blood hath not revealed it unto thee."** We find a number of disciples shortly before this, and in Peter's presence, telling Jesus that he was the Son of God,*** but there is no real contradiction between the two texts. It was on this occasion that Jesus said to Simon, "Thou art Peter, and upon this rock I will build my Church, and the gates of hell shall not prevail against it, and I will give thee the keys of the kingdom of Heaven; and whatsoever thou shalt bind on earth shall be bound in Heaven, and whatsoever thou shalt loose on earth shall be loosed in Heaven."

* Matt, xiv, 23; Mark vi, 45.** Matt. xvi, 17.*** Matt, xiv, 33.

Under these extraordinary declarations from the mouth of God the Son, the Bishops of Rome have claimed, as successors of Peter, the same privileges, and their pretensions have been, acceded to by some of the most powerful monarchs of Europe.

Under this claim the Bishops, or Popes of Rome, have at various times issued Papal Bulls, by which they have sought to bind the entire world. Many of these have been very successful, but in 1302, Philip the Fair, of France, publicly burned the Pope Boniface's Bull after an address in which the States-General had denounced, in words more expressive than polite, the right of the Popes of Rome to Saint Peter's keys on earth. Some deny that the occupiers of the episcopal seat in the seven-hilled city are really of the Church of Christ, and they point to the bloody quarrels which have raged between men contending for the Papal dignity. They declare that those Vicars of Christ have more than once resorted to fraud, treachery, and murder, to secure the Papal dignity. They point to Stephen VII, the son of an unmarried priest, who cut off the head of his predecessor's corpse; to Sergius III, convicted of assassination; to John X, who was strangled in the bed of his paramour Theodora; to John XI, son of Pope Sergius III, famous only for his drunken debauchery; to John XII, found assassinated in the apartments of his mistress; to Benedict IX, who both purchased and sold the Pontificate; to Gregory VII,pseudolover of the Countess Matilda, and the author of centuries of war carried on by his successors. And if these suffice not, they point to Alexander Borgia, whose name is but the echo of crime, and whose infamy will be as lasting as history.

It is answered, "by the fruit ye shall judge of the tree." It is useless to deny the vine's existence because the grapes are sour. Peter, the favored disciple, it is declared was a rascal, and why not his successors? They have only to repent, and there is more joy in heaven over one sinner that repenteth, than over ninety and nine righteous men. Such language is very terrible, and arises from allowing the carnal reason too much freedom.

All true believers will be familiar with the story of Peter's sudden readiness to deny his Lord and teacher in the hour of danger, and will easily draw the right moral from the mysterious lesson here taught, but unbelievers may be a little puzzled by the common infidel objections on this point. These objections, therefore, shall be first stated, and then refuted in the most orthodox fashion. It is objected that all the denials were to take place before the cock should crow,* but that only one denial actually took place before the cock crew.** That the first denial by Peter that he knew Jesus, or was one of his disciples, was at the door to the damsel,*** but was inside while sitting by the fire,**** that the second denial was to a man, and apparently still sitting by the fire,***** but was to a maid when he was gone out into the porch. That these denials, or, at any rate, the last denial, were all in the presence of Jesus,****** who turned and looked at Peter, but that the first denial was at the door, Jesus being inside the palace, the second denial out in the porch, Jesus being still inside,******* and the third denial also outside.

* Matt. xxvi, 34.** Luke xxii, 34.*** John xiii, 38.**** Mark xiv, 68.***** John xviii, 17.****** Luke xxii, 57., Luke xxii, 58., Luke xxii, 61.******* Mark xiv, 69.

The refutation of these paltry objections is simple, but as none but an infidel would need to hear it, we refrain from penning it. None but a disciple of Paine, or follower of Voltaire, would permit himself to be drawn to the risk of damnation on the mere question of when some cock happened to crow, or the particular spot on which a recreant apostle denied his master.

Two of the twelve apostles, whose names are not, given, saw Jesus after he was dead, on the road to Emmaus, but they did not know him; toward evening they knew him, and he vanished out of their sight. In broad daylight they did not know him; at evening time they knew him. While they did not know him they could see him; when they did know him they could not see him. Well may true believers declare that the ways of the Lord are wonderful. One of the apostles, Thomas called Didymus, set the world an example of unbelief. He disbelieved the other disciples when they said to him "we have seen the Lord," and required to see Jesus, though dead, alive in the flesh, and touch the body of his crucified master. Thomas the apostle had his requirements complied with—he saw, he touched, and he believed. The great merit is to believe without any evidence— "He that believeth and is baptized, shall be saved, he that believeth not shall be damned." How it was that Thomas the Apostle did not know Jesus when he saw him shortly after near the sea of Tiberias, is another of the mysteries of the Holy Christian religion. The acts of the apostles after the death of Jesus deserve treatment in a separate paper; the present essay is issued in the meantime to aid the Bishop of London in his labors to stem the rising tide of infidelity.

THE ATONEMENT.

"Quel est donc ce Dieu qui fait mourir Dieu pour apaiserDieu?"

Adam's sin is the corner-stone of Christianity; the keystone of the arch. Without the fall there is no redeemer, for there is no fallen one to be redeemed. It is, then, to the history of Adam that the examinant of the atonement theory should first direct his attention. To try the doctrine of the atonement by the aid of science would be fatal to Christianity. As for the man, Adam, 6,000 years ago the first of the human race, his existence is not only unvouched for by science, but is actually questioned by the timid, and challenged by the bolder exponents of modern ethnology. The human race is traced back far beyond the period fixed for Adam's sin. Egypt and India speak for humanity busy with wars, cities and monuments, prior to the date given for the garden scene in Eden. The fall of Adam could not have brought sin upon mankind, and death by sin, if hosts of men and women had lived and died ages before the words "thou shalt surely die" were spoken by God to man. Nor could all men inherit Adam's misfortune, if it be true that it is not to one center, but to many centers of origin that we ought to trace back the various races of mankind. The theologian who finds no evidence of death prior to the offense shared by Adam and Eve is laughed to scorn by the geologist who point to the innumerable petrifactions on the earth's bosom, which with a million tongues declare more potently than loudest speech thai organic life in myriads of myriads was destroyed incalculable ages before man's era on our world.

Science, however, has so little to offer in support of any religious doctrine, and so much to advance against all purely theologic tenets, that we turn to a point giving the Christian greater vantage ground; and, accepting for the moment his premises, we deny that he can maintain the possibility of Adam's sin, and yet consistently affirm the existence of an All-wise, All-powerful, and All-good God. Did Adam sin? We will take the Christian's bible in our hands to answer the question, first defining the word sin. What is sin? Samuel Taylor Coleridge says, "A sin is an evil which has its ground or origin in the agent, and not in the compulsion of circumstances...." An act to be sin must be original, and a state or act that has not its origin in the will may be calamity, deformity, or disease, but sin it can not be. It is not enough that the act appears voluntary, or that it has the most hateful passions or debasing appetite for its proximate cause and accompaniment. All these may be found in a madhouse, where neither law nor humanity permit us to condemn the actor of sin. The reason of law declared the maniac not a free agent, and the verdict follows, of courseNot guilty?Did Adam sin?

The bible story is that a Deity created one man and one woman; that he placed them in a garden wherein he had also placed a tree which was good for food, pleasant to the eyes, and a tree to be desired to make one wise. That although he had expressly given the fruit of every tree bearing seed for food, he, nevertheless, commanded them not to eat of the fruit of this attractive tree, under penalty of death. Supposing Adam to have at once disobeyed this injunction, would it have

been sin? The fact that God had made the tree good for food, pleasant to the eyes, and a tree to be desired to make one wise, would have surely been sufficient circumstance of justification on the God-created inducement to partake of its fruit. The inhibition lost its value as against the enticement. If the All-wise had intended the tree to be avoided, would he have made its allurements so overpowering to the senses? But the case does not rest here. In addition to all the attractions of the tree, and as though there were not enough, there is a subtle serpent, gifted with suasive speech, who, either wiser or more truthful than the All-perfect Deity, says that although God has threatened immediate death as the consequence of disobedience to his command, yet they "shall not die; for God doth know that in the day ye eat thereof your eyes shall be opened, and ye shall be as gods, knowing good and evil." The tempter is stronger than the tempted, the witchery of the serpent is too great for the spellbound woman, the decoy tree is too potent in its temptations; overpersuaded herself by the honey-tongued voice of the seducer, she plucks the fruit and gives to her husband also. And for this their offspring are to suffer! The yet unborn children are to be the victims of God's vengeance on their parents' weakness—though he had made them weak; though, indeed, he had created the tempter sufficiently strong to practice upon this weakness, and had arranged the causes predisposing man and woman to commit the offense—if, indeed, it be an offense to pluck the fruit of a tree which gives knowledge to the eater. It is for this fall that Jesus is to atone. He is sacrificed to redeem the world's inhabitants from the penalties for a weakness (for sin it was not) they had no share in. It was not sin, for the man was influenced by circumstances pre-arranged by Deity, and which man was powerless to resist or control. But if man was so influenced by such circumstances, then it was God who influenced man—God who punished the human race for an action to the commission of which he impelled their progenitor.

Adam did not sin. He ate of the fruit of a tree which God had made good to be eaten. He was induced to this through the indirect persuasion of a serpent God had made purposely to persuade him. But even if Adam did sin, and even he and Eve, his wife, were the first parents of the whole human family, what have we to do with their sin? We, unborn when the act was committed and without choice as to coming into the world. Does Jesus atone for Adam's sin? Adam suffered for his own offense; he, according to the curse, was to eat in sorrow of the fruit of the earth all his life as punishment for his offense. Atonement, after punishment, is surely a superfluity. Did the sacrifice of Jesus serve as atonement for the whole world, and, if yes, for all sin, or for Adam's sin only? If the atonement is for the whole world, does it extend to unbelievers as well as to believers in the efficacy? If it only includes believers, then what has become of those generations who, according to the bible, for 4,000 years succeeded each other in the world without faith in Christ because without knowledge of his mission? Should not Jesus have come 4,000 years earlier, or, at least, should he not have come when the ark on Ararat served as monument of God's merciless vengeance, which had made the whole earth a battle-field,

whereon the omnipotent had crushed the feeble, and had marked his prowess by the innumerable myriads of decayed dead? If it be declared that, though the atonement by Jesus only applies to believers in his mission so far as regards human beings born since his coming, yet that it is wider in its retrospective effect, then the answer is that it is unfair to those born after Jesus to make faith the condition precedent to the saving efficacy of atonement, especially if belief be required from all mankind posterior to the Christian era, whether they have heard of Jesus or not. Japanese, Chinese, savage Indians, Kaffirs, and others, have surely a right to complain of this atonement scheme, which insures them eternal damnation by making it requisite to believe in a Gospel of which they have no knowledge. If it be contended that belief shall only be required from those to whom the gospel of Jesus has been preached, and who have had afforded to them the opportunity of its acceptance, then how great a cause of complaint against Christian missionaries have those peoples who, without such missions, might have escaped damnation for unbelief. The gates of hell are opened to them by the earnest propagandist, who professes to show the road to heaven.

But does this atonement serve only to redeem the human family from the curse inflicted by Deity in Eden's garden for Adam's sin, or does it operate as satisfaction for all sin? If the salvation is from the punishment for Adam's sin alone, and if belief and baptism are, as Jesus himself affirms, to be the sole conditions precedent to any saving efficacy in the much-lauded atonement by the Son of God, then what becomes of a child that only lives a few hours, is never baptized, and, never having any mind, consequently never has any belief? Or what becomes of one idiot born who, throughout his dreary life, never has mental capacity for the acceptance, or examination of, or credence in, any religious dogmas whatever? Is the idiot saved who can not believe? Is the infant saved that can not believe? I, with some mental faculties tolerably developed, can not believe. Must I be damned? If so, fortunate short-lived babe! lucky idiot! That the atonement should not be effective until the person to be saved has been baptized is at least worthy of comment; that the sprinkling a few drops of water should quench the flames of hell is a remarkable feature in the Christian's creed.

"One can't but think it somewhat drollPump-water thus should cleanse a soul."

How many fierce quarrels have raged on the formula of baptism among those loving brothers in Christ who believe he died for them! How strange an idea that, though God has been crucified to redeem mankind, it yet needs the font of water to wash away the lingering stain of Adam's crime.

One minister of the Church of England, occupying the presidential chair of a well-known training college for church clergymen in the north of England, seriously declared, in the presence of a

large auditory and of several church dignitaries, that the sin of Adam was so potent in its effect that if a manhad never been born, he would yet have been damned for sin!That is, he declared that man existed before birth, and that he committed sin before he was born; and if never born, would, notwithstanding, deserve to suffer eternal torment for that sin!

It is almost impossible to discuss seriously a doctrine so monstrously absurd, and yet it is not one whit more ridiculous than the ordinary orthodox and terrible doctrine that God, the undying, in his infinite love, killed himself under the form of his son to appease the cruel vengeance of God, the just and merciful, who, without this, would have been ever vengeful, unjust and merciless. The atonement theory, as presented to us by the bible, is in effect as follows: God creates man, surrounded by such circumstances as the divine mind chose, in the selection of which man had no voice, and the effects of which on man were all foreknown and predestined by Deity. The result is man's fall on the very first temptation, so frail the nature with which he was endowed, or so powerful the temptation to which he was subjected. For this fall not only does the All-merciful punish Adam, but also his posterity; and this punishment went on for many centuries, until God, the immutable, changed his purpose of continual condemnation of men for sins they had no share in, and was wearied with his long series of unjust judgments on those whom he created in order that he might judge them. That, then, God sent his son, who was himself and was also his own father, and who was immortal, to die upon the cross, and, by this sacrifice, to atone for the sin which God himself had caused Adam to commit, and thus to appease the merciless vengeance of the All-merciful, which would otherwise have been continued against men yet unborn for an offense they could not have been concerned in or accessory to. Whether those who had died before Christ's coming are redeemed the bible does not clearly tell us. Those born after are redeemed only on condition of their faith in the efficacy of the sacrifice offered, and in the truth of the history of Jesus's life. The doctrine of salvation by sacrifice of human life is the doctrine of a barbarous and superstitous age; the outgrowth of a brutal and depraved era. The God who accepts the bloody offering of an innocent victim in lieu of punishing the guilty culprit shows no mercy in sparing the offender: he has already satiated his lust for vengeance on the first object presented to him.

Yet sacrifice is an early and prominent, and, with slight exception, an abiding feature in the Hebrew record—sacrifice of life finds appreciative acceptance from the Jewish Deity. Cain's offering of fruits is ineffective but Abel's altar, bearing the firstlings of his flock, and the fat thereof, finds respect in the sight of the Lord. While the face of the earth was disfigured by the rotting dead, after God in his infinite mercy had deluged the world, then it was that the ascending smoke from Noah's burnt sacrifice of bird and beast produced pleasure in heaven, and God himself smelled a sweet savor from the roasted meats. To reach atonement for the past by sacrifice is worse than folly—it is crime. The past can never be recalled, and the only

reference to it should be that, by marking its events, we may avoid its evil deeds and improve upon its good ones. For Jesus himself—can man believe in him? —in his history contained in anonymous pamphlets uncorroborated by contemporary testimony?—this history, in which, in order to fulfill a prophecy which does not relate to him, his descent from David is demonstrated by tracing through two self-contradictory genealogies the descent of Joseph who was not his father—this history, in which the infinite God grows, from babyhood and hus cradle through childhood to manhood, as though he were not God at all—this history, full of absurd wonders, devils, magicians, and evil spirits, rather fit for an Arabian Night's legend than the word of God to his people—this history, with its miraculous raisings of the dead to life, disbelieved and contradicted by the people among whom they are alleged to have been performed; but, nevertheless, to be accepted by us to-day with all humility—this history, with the Man-God subject to human passions and infirmities, who comes to die, and who prays to his heavenly father (that is, to himself) that he will spare him the bitter cup of death—who is betrayed, having himself, ere he laid the foundations of the world, predestined Judas to betray him, and who dies, being God immortal crying with his almost dying breath, "My God! my God! why hast thou forsaken me?"

WERE ADAM AND EVE OUR FIRST PARENTS?

This question, Were Adam and Eve our first parents? is indeed one of most grave importance. If the answer be a negative one, it is, in fact, a denial of the whole scheme of Christianity. The Christian theory is that Adam, the common father of the whole human race, sinned, and that by his sin he dragged down all his posterity to a state from which redemption was needed; and that Jesus is, and was, the Redeemer, by whom all mankind are and were saved from the consequences of the fall of Adam. If Adam, therefore, be proved not to be the first man—if it be shown that it is not to Adam the various races of mankind are indebted for their origin, then the whole hypothesis of fall and redemption is dissipated.

In a pamphlet like the present it is impossible to give any statement and analysis of the various hypotheses as to the origin of the human race. I frankly admit that my only wish and intent is, to compel people to examine the bible record for themselves, instead of making it their fetich, bowing down before it without thought. I am inclined to the opinion that the doctrine of a plurality of sources for the various types of the human race is a correct one; that wherever the conditions for life have been found, there also has been the degree of life resultant on those conditions. My purpose in this essay is not to demonstrate the correctness of my own thinking, but rather to illustrate the incorrectness of the Geneiacal teaching. Were Adam and Eve our first parents? On the one hand an answer in the affirmative to this question can be obtained from the bible, which asserts Adam and Eve to be the first man and woman made by God, and fixes the

date of their making about 6,000 years, little more or less, from the present time. On the other hand, it seems to me that science emphatically declares man to have existed on the earth for a far more extended period; affirms that, as far as we can trace man, we find him in isolated groups, diverse in type, till we lose him in the ante-historic period; and, with nearly equal distinctness, denies that the various existing races find their common parentage in one pair. It is only on the first point that I attack the bible chronology of man's existence. I am aware that compilations based upon the authorized version of the Old Testament Scriptures are open to objection, and that while from the Hebrew 1,656 years represent the period from Adam to the Deluge generally acknowledged, the Samaritan Pentateuch only yields for the same period 1,307 years, while the Septuagint version furnishes 2,242 years; there is, I am also informed, on the authority of a most erudite Egyptologist, a fatal objection to the Septuagint chronology—i. e., that it makes Methusaleh outlive the flood.*

The deluge occurred, according to the Septuagint, in the year of the world 2,242, and, by adding up the generations previous to Methusaleh's—

Adam.....230Seth.....205Enos.....190Cainan.....170Malaleel.....165Jared.....162Enoch.....165.....1287*

Sharpe's History of Egypt, page 196.

—we shall find that he was born in the year of the world 1,287. He lived 969 years, and therefore died in 2,256. But this is fourteen years after the deluge.

The Rev. Dr. Lightfoot, who wrote about 1,644, fixes the month of the creation at September, 5,572 years preceding the date of his book, and says that Adam was expelled from Eden on the day in which he was created.* In the LondonEthnological Journal, for which I am indebted to the kindness of its Editor, an able ethnologist and careful thinker, the reader will find a chronology of Genesis ably and elaborately examined. At present, for our immediate purpose, we will take the ordinary. English bible, which gives the following result:

From Adam to Abraham (Gen. v and xi)..... 2008From Abraham to Isaac (Gen. xxi, 5)..... 100From Isaac to Jacob (Gen. xxv, 26)..... 60From Jacob going into Egypt (Gen. xlvii, 9)..... 130Sojourn in Egypt (Exod. xii, 41)..... 480Duration of Moses* leadership (Exod. vii, 7; xxxi, 2). 40Thence to David, about..... 400From David to Captivity, fourteen generations (27),about twenty-two reigns.....478Captivity to Jesus, fourteen generations, about..... 5934234 Less disputed 230 years of sojourn in Egypt.....230

4004 From Adam to Abraham the dates are certain, if we take the bible statement, and there is certainly no portion of the orthodox text, except the period of the Judges, which will admit any considerable extension of the ordinary Oxford chronology.

* Harmony of the Four Evangelists, and Harmony of the OldTestament.

The book of Judges is not a book of history. Everything in it is recounted without chronological order. It will suffice to say, that the ciphers which we find in the book of Judges, and in the first book of Samuel, yield us, from the death of Joshua to the commencement of the reign of Saul, the sum total of 500 years, which would make, since the exode from Egypt, 565 years; whereas the first book of Kings counts but 480 years, from the going out of Egypt down to the foundation of the temple under Solomon. According to this we must suppose that several of the Judges governed simultaneously.*

* Munk's Palestine, p. 231.

In reading Alfred Maury's profound essay on the classification of tongues, I was much struck with the fact that he, in his philological researches, traces back some of the ancient Greek mythologies to a Sanscrit source. He has the following remark, worthy of earnest attention: "The God of Heaven, or the sky, is called by the GreeksZeus Pater; and let us here notice that the pronunciation of Z resembles very much that of D, inasmuch as the word Zeus becomes in the genitiveDios. The Latins termed the same GodDies-piter, or Jupiter Now in the Veda the God of Heaven is called Dyash-pitai." What is this but the original of our own Christian God, the father, the [———] (Jeue) pater of the Old Testament? I introduce this remark for the purpose of shaking a very commonly entertained opinion that the Hebrew Records, whether or not God-inspired, are at any rate the most antique, and are written in a primitive tongue. Neither is it true that Hebrew mythology is the most ancient, nor the Hebrew language the most primitive; on the contrary, the mythology is clearly derived, and the language in a secondary or tertiary state.

What is the value of this book of Genesis, which is the sole authority for the hypothesis that Adam and Eve, about 5,865 years ago, were the sole founders of the peoples now living on the face of the earth? Written we know not by whom, we know not when, and we know not in what language. If we respect the book, it must be from its internal merits; its author is to us unknown. Eusebius, Chrysostom, and Clemens Alexandrinus alike agree that the name of Moses should not stand at the head of Genesis as the author of the book. As to its internal merit Origen did not hesitate to declare the contents of the first and second chapters of Genesis to be purely figurative. Our translation of it has been severely criticised by the learned and pious Bellamy, and by the more learned and less pious Sir William Drummond. Errors almost innumerable have been

pointed out, the correctness of the Hebrew text itself questioned, and yet this book is an unerring guide to the students of ethnology. They may do anything, everything, except stray out of the beaten track. We have, therefore, on the one hand, an anonymous book, which indeed does not take you back so much as 6,000 years, for at least 1,600 years must be deducted for the Noachian deluge, when the world's inhabitants were again reduced to one family, one race, one type. On the other hand, we have now existing Eskimo men, of the Arctic realm; Chinamen, of the Asiatic realm; Englishmen, of the European realm; Sahara negroes, of the African realm; Fuegians, of the American realm; New Zealanders, of the Polynesian realm; the Malay, representative of the realm which bears his name; the Tasmanian, of the Australian realm, with other families of each realm too numerous for mention here; dark and fair, black-skinned and white-skinned, woolly-haired and straight-haired; low forehead, high forehead; Hottentot limb, Negro limb, Caucasian limb. Do all these different and differing structures and colors trace their origin to one pair? To Adam and Eve, or rather to Noah and his family? Or are they (the various races) indigenous to their nature, soils, and climates? And are these various types naturally resultant, with all their differences, from the differing conditions for life persistent to and consistent with them?

The question, then, really is this: Have the different races of men all found their common parent in Noah, about 4,300 years ago? Assuming the unity of the races or species of men now existing, there are but three suppositions on which the diversity now seen can be accounted for:

"1. A miracle, or direct act of the Almighty, in changing one type into another.

"2. The gradual action of physical causes, such as climate, food, mode of life, etc.

"3. Congenital or accidental varieties."*

We may fairly dismiss entirely from our minds the question of miracle. Such a miracle is nowhere recorded in the bible, and it lies upon any one hardy enough to assert that the present diversity has a miraculous origin to show some kind of reasons for his faith, some kind of evidence for our conviction, and until this is done we have no reason to dwell on the first hypothesis.

Of the permanence of type under its own climatic conditions—that is, in the country to which it is indigenous—we have overwhelming proof in the statue of an ancient Egyptian scribe, taken from a tomb of the fifth dynasty, 5,000 years old, and precisely corresponding to the Fellah of the present day.**

* "Types of Mankind," Dr. Nott, p. 57.** M. Pulzsky on Iconography—"Indigenous Races," p. 111.

The sand had preserved the color of the statuette, which, from its portrait-like beauty, marks a long era of art-progress preceding its production. It antedates the orthodox era of the flood, carries us back to a time when, if the bible were true, Adam was yet alive, and still we find before it kings reigning and ruling in mighty Egypt. Can the reader wonder that these facts are held to impeach the orthodox faith?

On the second point Dr. Nott writes: "It is a commonly received error that the influence of a hot climate is gradually exerted on successive generations, until one species of mankind is completely changed into another.... This idea is proven to be false.... A sunburnt cheek is never handed down to succeeding generations. The exposed parts of the body are alone tanned by the sun, and the children of the white-skinned Europeans in New Orleans, Mobile, and the West Indies are born as fair as their ancestors, and would remain so if carried back to a colder climate."*

Pure negroes and negresses, transported from Central Africa to England, and marrying among themselves, would never acquire the characteristics of the Caucasian races; nor would pure Englishmen and Englishwomen, emigrating to Central Africa, and in like manner intermarrying, ever become negroes or negresses. The fact is, that while you don't bleach the color of the dark-skinned African by placing him in London, you bleach the life out of him; andvice versawith the Englishman.**

* "Types of Mankind," p. 58.** "Indigenous Races of the Earth," p. 458. The allegeddiscovery of white-skinned negroes in Western Africa doesnot affect this question: it is not only to the color of theskin, but also the general negro characteristics that theabove remarks apply.

For a long time there has been ascribed to man the faculty of adapting himself to every climate. The following facts will show the ascription a most erroneous one: "In Egypt the austral negroes are, and the Caucasian Memlooks were, unable to raise up even a third generation; in Corsica French families vanish beneath Italian summers. Where are the descendants of the Romans, the Vandals, or the Greeks in Africa? In Modern Arabia, 1830 years after Mahomed Ali had got clear of the Morea war, 18,000 Arnaots (Albanians) were soon reduced to some 400 men. At Gibraltar, in 1817, a negro regiment was almost annihilated by consumption. In 1841, during the three weeks on the Niger, 130 Europeans out of 145 caught African fever, and 40 died; out of 158 negro sailors only eleven were affected, and not one died. In 1809 the British Expedition to Walchereen failed in the Netherlands through marsh fever. About the same time, in St. Domingo, about 15,000 French soldiers died from malaria. Of 30,000 Frenchmen, only 8,000 survived exposure to that Antillian island; while the Dominicanized African negro, Tous-saint L'Overture, retransported to Europe, was perishing from the chill of his prison in France."

On the third point we again quote Dr. Nott: "The only argument left, then, is that of congenital varieties or peculiarities, which are said to spring up and be transmitted from parent to child, so as to form new races. Let us pause for a moment to illustrate this fanciful idea. The negroes of Africa, for example, are admitted not to be offsets from some other race which have been gradually blackened and changed in a moral and physical type by the action of climate, but it is asserted that 'once, in the flight of ages,' some genuine little negro, or rather many such, were born of Caucasian, Mongol, or other light-skinned parents, and then have turned about and changed the type of the inhabitants of a whole continent. So, in America, the countless aborigines found on this continent, which we have reason to believe were building mounds before the time of Abraham, are the offspring of a race changed by accidental or congenital varieties. Thus, too, old China, India, Australia, Oceana, etc., all owe their types, physical and mental, to congenital and accidental varieties, and are descended from Adam and Eve! Can human credulity go further, or human ingenuity invent any argument more absurd?"

But even supposing these objections to the second and third suppositions set aside, there are two other propositions which, if affirmed, as I believe they may be, entirely overthrow the orthodox assertion "that Adam and Eve, six thousand years ago, were the first pair; and that all diversities now existing must find their common source in Noah—less than four thousand three hundred years from the present time." These two are as follows.

1. That man may be traced back on the earth long prior to the alleged Adamic era.

2. That there are diversities traceable as existing among the human race four thousand five hundred years ago as marked as in the present day.

To illustrate the position that man may be traced back to a period long prior to the Adamic era, we refer our readers to the chronology of the late Baron Bunsen, who, while allowing about 22,000 years for man's existence on earth, fixes the following dates, after a patient examination of the Nilotic antiquities:

Egyptians under a republican form..... 10,000 B. C.Ascension of Bytis, the Theban, first Priest King. 9,085Elective Kings in Egypt..... 7,280Hereditary Kings in Upper and Lower Egypt (adouble empire) form..... 5,143*

* Nott and Gliddon, "Indigenous Races," page 687.

The assertion of such an antiquity for Egypt is no modern hypothesis. Plato puts language into the mouth of an Egyptian first claiming in that day an antecedent 10,000 years for painting and

sculpture in Egypt. This has long been regarded as fabulous because it was contrary to the Hebrew chronology.

If this be the result of the researches into Egyptian archæology, the reader will scarcely be surprised to find me endeavoring from other sources to get corroborative evidence of a still more astonishing character.

There are few who now pretend that the wholecreation (?)took place 6,000 years ago, although if it be true that God made all in six days, and man on the sixth, then the universe would only be more ancient than Adam by some five days. To state the age of the earth at 6,000 years is simply preposterous, when we ascertain that it would require about 4,000,000 of years for the formation of the fossiliferous rocks alone, and that 15,000,000 of years have been stated as a moderate estimate for the antiquity of our globe. The deltas of the great rivers afford corroboration to our position as to man's duration. The delta of the Nile, formed by immense quantities of sedimentary matter, which in like manner is still carried down and deposited, has not perceptibly increased during the last 3,000 years. "In the days of the earliest Pharaohs, the delta, as it now exists, was covered with ancient cities and filled with a dense population, whose civilization must have required a period going back far beyond any date that has yet been assigned to the deluge of Noah, or even to the creation of the world."*

From borings which have been made at New Orleans to the depth of 600 feet, from excavations for public works, and from examinations in parts of Louisiana, where the range between high and low water is much greater than it is at New Orleans, no less than ten distinct cypress forests divided from each other by eras of aquatic plants, etc., have been traced, arranged vertically above each other; and from these and other data it is estimated by Dr. Benet Dowler that the age of the delta is at least 158,000 years; and in the excavations above referred to human remains have been found below the further forest level, making it appear that the human race existed in the delta of the Mississippi more than 57,000 years ago.**

It is further urged, by the same competent writer, that human bones discovered on the coast of Brazil near Santas, and on the borders of a lake called Lagoa Santa, by Captain Elliott and Dr. Lund, thoroughly incorporated with a very hard breccia, every one in a fossil state, demonstrate that aboriginal man in America antedates the Mississippi alluvia, and that he can even boast a geological antiquity, because numerous species of animals have become extinct since American humanity's first appearance.***

* Gliddon's "Types of Mankind," page 335.** "Types," pages 336 to 369.*** "Types," pages 350 and 357.

With reference to the second point, as to the possibility of tracing back the diversities of the Human Race to an antediluvian date, it is simply sufficient to point on the one side to the remains of the American Indian disentombed from the Mississippi forests, and on the other to the Egyptian monuments, tombs, pyramids, and stuccoes, revealing to us Caucasian men, and Negro men, their diversities as marked as in the present day. Sir William Jones, in his day, claimed for Sanscrit literature a vast antiquity, and asserted the existence of the religions of Egypt, Greece, India, and Italy, prior to the Mosaic era. So far as Egypt is concerned the researches of Lepsius, Bunsen, Champollion, Lenormant, Gliddon, and others, have fully verified the position of the learned president of the Asiatic Society.

We have Egyptian statues of the third dynasty, going back far beyond the 4,300 years, which would give the orthodox era of the deluge, and taking us over the 4,500 years fixed by our second proposition. The fourth dynasty is rich in pyramids, tombs, and statues; and, according to Lepsius, this dynasty commenced 3,426 B. C, or about 5,287 years from the present date.

In reading a modern work on the orthodox side,* I have been much pained by the constant assumption that the long chronologists must be in error, because their views do not coincide with orthodox teachings. Orthodox authors treat their heterodox brethren as unworthy of credit, because of their heterodoxy. The writer asserts** that the earliest reference to the Negro tribes is in the era of the 12th dynasty. Supposing for a moment this to be correct, I ask what even then will be the state of the argument? The 12th dynasty, according to Lepsius, ends about 4,000 years ago. The orthodox chronology fixes the deluge about 300 years earlier. Will any sane man argue that there was sufficient lapse of time in three centuries for the development of Caucasian and Negro man from one family?

* "Archaia," by Dr. Dawson.** "Archaia," page 306.

The fact is that we trace back the various types of man now known, not to one center, not to one country, not to one family, not to one pair, but we trace them to different centers, to distinct countries, to separate families, probably to many pairs. Wherever the conditions for life are found, there are living beings also. The conditions of climate, soil, etc., of Central Africa, differ from those of Europe. The indigenous races of Central Africa differ from those of Europe.

Without pretending, in the present limited essay, to do more than index some of the most prominent features of the case, I yet hope that enough is here stated to interest my readers in the prosecution of future inquiry upon the important question which serves as the title to these pages. I put forward no knowledge from myself, but am ready to listen to the teachings of wiser men; and while I shrink from the ordinary orthodox assertion of Adamic unity of origin,

accompanied as it is by threats of pains and penalties if rejected, I am yet ready to receive it, if it can be presented to me associated with facts, and divested of those future hell-fire torments and present societarian persecutions which now form its chief, if not sole, supports.

The rejection of the bible account of the peopling of the world involves also the rejection, as has been already remarked, of the entire scheme of Christianity. According to the orthodox rendering of both New and Old Testament teaching, all men are involved in the curse which followed Adam's sin. But if the account of the Fall be mythical, not historical; if Adam and Eve—supposing them to have ever existed—were preceded on the earth by many nations and empires, what becomes of the doctrine that Jesus came to redeem mankind from a sin committed by one who was not the common father of all humanity?

Reject Adam, and you can not accept Jesus. Refuse to believe Genesis, and you can not give credence to Matthew, Mark, Luke, John and Paul. The Old and New Testaments are so connected together that to dissolve the union is to destroy the system. The account of the Creation and Fall of Man is the foundation-stone of the Christian Church. If this stone be rotten, the superstructure can not be stable. It is therefore most important that those who profess a faith in Christianity should consider facts which so vitally and materially affect the creed they hold.

A PLEA FOR ATHEISM.

Gillespie says that "an Atheist propagandist seems a nondescript monster created by Nature in a moment of madness." Despite this opinion, it is as the propagandist of Atheism that I pen the following lines, in the hope that I may succeed in removing some few of the many prejudices which have been created against not only the actual holders of Atheistic opinions, but also against those wrongfully suspected of entertaining such ideas. Men who have been famous for depth of thought, for excellent wit, or great genius, have been recklessly assailed as Atheists by those who lacked the high qualifications against which the spleen of the calumniators was directed. Thus, not only has Voltaire been without ground accused of Atheism, but Bacon, Locke, and Bishop Berkeley himself, have, among others, been denounced by thoughtless or unscrupulous pietists as inclining to Atheism, the ground for the accusation being that they manifested an inclination to improve human thought.

It is too often the fashion with persons of pious reputation to speak in unmeasured language of Atheism as favoring immorality, and of Atheists as men whose conduct is necessarily vicious, and who have adopted atheistic views as a disparate defiance against a Deity justly offended by the badness of their lives. Such persons urge that among the proximate causes of Atheism are

vicious training, immoral and profligate companions, licentious living, and the like. Dr. John Pye Smith, in his "Instructions on Christian Theology," goes so far as to declare that "nearly all the Atheists upon record have been men of extremely debauched and vile conduct." Such language from the Christian advocate is not surprising, but there are others who, professing great desire for the spread of Freethought, and with pretensions to rank among acute and liberal thinkers, declare Atheism impracticable, and its teachings cold, barren, and negative. In this brief essay I shall except to each of the above allegations, and shall endeavor to demonstrate that Atheism affords greater possibility for human happiness than any system yet based on Theism, or possible to be founded thereon, and that the lives of true Atheists must be more virtuous, because more human, than those of the believers in Deity, the humanity of the devout believer often finding itself neutralized by a faith with which it is necessarily in constant collision. The devotee piling the faggots at theauto de feof a heretic, and that heretic his son, might, notwithstanding, be a good father in every respect but this. Heresy, in the eyes of the believer, is highest criminality, and outweighs all claims of family or affection.

Atheism, properly understood, is in nowise a cold, barren negative; it is, on the contrary, a hearty, fruitful affirmation of all truth, and involves the positive assertion and action of highest humanity.

Let Atheism be fairly examined, and neither condemned—its defense unheard—on theex parteslanders of the professional preachers of fashionable orthodoxy, whose courage is bold enough while the pulpit protects the sermon, but whose valor becomes tempered with discretion when a free platform is afforded and discussion claimed; nor misjudged because it has been the custom to regard Atheism as so unpopular as to render its advocacy impolitic. The best policy against all prejudice is to assert firmly the verity. The Atheist does not say "There is no God," but he says, "I know not what you mean by God: I am without idea of God; the word 'God' is to me a sound conveying no clear or distinct affirmation. I do not deny God, because I can not deny that of which I have no conception, and the conception of which by its affirmer is so imperfect that he is unable to define it to me." If you speak to the Atheist of God as a creator, he answers that the conception of creation is impossible. We are utterly unable to construe it in thought as possible that the complement of existence has been either increased or diminished, much less can we conceive an absolute origination of substance. We can not conceive either, on the one hand, nothing becoming something, or on the other, something becoming nothing. The Theist who speaks of God creating the universe, must either suppose that Deity evolved it out of himself, or that he produced it from nothing. But the Theist can not regard the universe as evolution of Deity, because this would identify Universe and Deity, and be Pantheism rather than Theism. There would be no distinction of substance—in fact, no creation. Nor can the Theist regard the universe as created out of nothing, because Deity is, according to him, necessarily eternal and infinite. His existence being eternal and infinite, precludes the possibility of the

conception of vacuum to be filled by the universe if created. No one can even think of any point of existence in extent or duration and say here is the point of separation between the creator and the created. Indeed, it is not possible for the Theist to imagine a beginning to the universe. It is not possible to conceive either an absolute commencement, or an absolute termination of existence; that is, it is impossible to conceive a beginning before which you have a period when the universe has yet to be: or to conceive an end, after which the universe, having been, no longer exists. It is impossible in thought to originate or annihilate the universe. The Atheist affirms that he cognizes to-day effects, that these are at the same time causes and effects—causes to the effects they precede, effects to the causes they follow. Cause is simply everything without which the effect would not result, and with which it must result. Cause is the means to an end, consummating itself in that end. The Theist who argues for creation must assert a point of time, that is, of duration, when the created did not yet exist. At this point of time either something existed or nothing; but something must have existed, for out of nothing nothing can come. Something must have existed, because the point fixed upon is that of the duration of something. This something must have been either finite or infinite; if finite, it could not have been God; and if the something were infinite, then creation was impossible, as it is impossible to add to infinite existence.

If you leave the question of creation and deal with the government of the universe, the difficulties of Theism are by no means lessened. The existence of evil is then a terrible stumbling-block to the Theist. Pain, misery, crime, poverty, confront the advocate of eternal goodness, and challenge with unanswerable potency his declaration of Deity as all-good, all-wise, and all-powerful. Evil is either caused by God, or exists independently; but it can not be caused by God, as in that case he would not be all-good; nor can it exist independently, as in that case he would not be all-powerful. Evil must either have had a beginning, or it must be eternal; but, according to the Theist, it can not be eternal, because God alone is eternal. Nor can it have had a beginning, for if it had it must either have originated in God, or outside of God; but, according to the Theist, it can not have originated in God, for he is all-good, and out of all-goodness evil can not originate; nor can evil have originated outside of God, for, according to the Theist, God is infinite, and it is impossible to go outside of or beyond infinity.

To the Atheist this question of evil assumes an entirely different aspect. He declares that evil is a result, but not a result from God or Devil. He affirms that by conduct founded on knowledge of the laws of existence it is possible to ameliorate and avoid present evil, and, as our knowledge increases, to prevent its future recurrence.

Some declare that the belief in God is necessary as a check to crime. They allege that the Atheist may commit murder, lie, or steal, without fear of any consequences. To try the actual

value of this argument, it is not unfair to ask, Do Theists ever steal? If yes, then in each such theft, the belief in God and his power to punish has been inefficient as a preventive of the crime. Do Theists ever lie or murder? If yes, the same remark has farther force—hell-fire failing against the lesser as against the greater crime. The fact is that these who use such an argument overlook a great truth—i.e., that all men seek happiness, though in very diverse fashions. Ignorant and miseducated men often mistake the true path to happiness, and commit crime in the endeavor to obtain it. Atheists hold that by teaching mankind the real road to human happiness, it is possible to keep them from the by-ways of criminality and error. Atheists would teach men to be moral now, not because God offers as an inducement reward by and by, but because in the virtuous act itself immediate good is insured to the doer and the circle surrounding him. Atheism would preserve man from lying, stealing, murdering now, not from fear of an eternal agony after death, but because these crimes make this life itself a course of misery.

While Theism, asserting God as the creator and governor of the universe, hinders and checks man's efforts by declaring God's will to be the sole directing and controlling power, Atheism, by declaring all events to be in accordance with natural laws—that is, happening in certain ascertainable sequences—stimulates man to discover the best conditions of life, and offers him the most powerful inducements to morality. While the Theist provides future happiness for a scoundrel repentant on his death bed, Atheism affirms present and certain happiness for the man who does his best to live here so well as to have little cause for repenting hereafter.

Theism declares that God dispenses health and inflicts disease, and sickness and illness are regarded by the Theist as visitations from an angered Deity, to be borne with meekness and content. Atheism declares that physiological knowledge may preserve us from disease by preventing our infringing the law of health, and that sickness results not as the ordinance of offended Deity, but from ill-ventilated dwellings and workshops, bad and insufficient food, excessive toil, mental suffering, exposure to inclement weather, and the like—all these finding root in poverty, the chief source of crime and disease; that prayers and piety afford no protection against fever, and that if the human being be kept without food he will starve as quickly whether he be Theist or Atheist, theology being no substitute for bread.

When the Theist ventures to affirm that his God is an existence other than and separate from the so-called material universe, and when he invests this separate, hypothetical existence with the several attributes of omniscence, omnipresence, omnipotence, eternity, infinity, immutability, and perfect goodness, then the Atheist, in reply says, "I deny the existence of such a being."

It becomes very important, in order that injustice may not be done to the Theistic argument, that we should have—in lieu of a clear definition, which it seems useless to ask for—the best possible

clue to the meaning intended to be conveyed by the word God. If it were not that the word is an arbitrary term, invented for the ignorant, and the notions suggested by which are vague and entirely contingent upon individual fancies, such a clue could be probably most easily and satisfactorily obtained by tracing back the word "God," and ascertaining the sense in which it was used by the uneducated worshipers who have gone before us; collating this with the more modern Theism, qualified as it is by the superior knowledge of to-day. Dupuis says: "The word God appears intended to express the force universal, and eternally active, which endows all nature with motion according to the laws of a constant and admirable harmony; which develops itself in the diverse forms of organized matter, which mingles with all, gives life to all; which seems to be one through all its infinitely varied modifications, and inheres in itself alone."

In the "Bon Sens" of Cure Meslier, it is asked, "Qu'est ce que Dieu?" and the answer is: "It is an abstract word coined to designate the hidden force of Nature, or rather it is a mathematical point having neither length, breadth, nor thickness."

The orthodox fringe of the Theism of to-day is Hebraistic in its origion—that is, it finds its root in the superstition and ignorance of a petty and barbarous people nearly destitute of literature, poor in language, and almost entirely wanting in high conceptions of humanity. It might, as Judaism is the foundation of Christianity, be fairly expected that the ancient Jewish Records would aid us in our search after the meaning to be attached to the word "God." the most prominent words in Hebrew rendered God or Lord in English are [————]Jeue, and [————]Aleim. The first word, Jeue, called by our orthodox Jehovah, is equivalent to "that which exists," and indeed embodies in itself the only possible trinity in unity—i. e. past, present, and future. There is nothing in this Hebrew word to help you to any such definition as is required for the sustenance of modern Theism. The most you can make of it by any stretch of imagination is equivalent to the declaration "I am, I have been, I shall be." The word [——] is hardly ever spoken by religious Jews, who actually in reading substitute for it, Adonai, an entirely different word. Dr. Wall notices the close resemblance in sound between the wordYehowaorYeue, or Jehovah, and Jove. In fact [————], Jupiter and Jeue, pater, (God the father) present still closer resemblance in sound. Jove is also [——] or [——] or [——], whence the word Deus and our Deity. The Greek mythology, far more ancient than that of the Hebrews, has probably found for Christianity many other and more important features of coincidence than that of a similarly sounding name. The word [——] traced back affords us no help beyond that it identifies Deity with the universe. Plato says that the early Greeks thought that the only Gods were the sun, moon, earth, stars and heaven. The word Aleim, assists us still less in defining the word God, for Parkhurst translates it as a plural noun signifying "the curser," deriving it from the verbto curse. Finding that philology aids us but little, we must endeavor to arrive at the meaning of the word "God" by another rule. It is utterly impossible to fix the period of the rise of Theism among any

particular people, but it is, notwithstanding, comparatively easy, if not to trace out the development of Theistic ideas, at any rate to point to their probable course of growth among all peoples.

Keightley, in his "Origin of Mythology," says: "Supposing, for the sake of hypothesis, a race of men in a state of total or partial ignorance of Deity, their belief in many gods may have thus commenced. They saw around them various changes brought about by human agency, and hence they knew the power of intelligence to produce effects. When they beheld other and greater effects, they ascribed them to some unseen being, similar but superior to man." They associated particular events with special unknown beings (gods), to each of whom they ascribed either a peculiarity of power, or a sphere of action not common to other gods. Thus one was god of the sea, anothor god of war, another god of love, another ruled the thunder and lightning; and thus through the various elements of the universe and passions of humankind, so far as they were then known.

This mythology became modified with the advancement of human knowledge. The ability to think has proved itself oppugnant to and destructive of the desire to worship. Science has razed altar after altar heretofore erected to the unknown gods, and pulled down deity after deity from the pedestals on which ignorance and superstition had erected them. The priest who had formerly spoken as the oracle of God lost his sway, just in proportion as the scientific teacher succeeded in impressing mankind with a knowledge of the facts around them. The ignorant who had hitherto listened unquestioning during centuries of abject submission to their spiritual preceptors, at last commenced to search and examine for themselves, and were guided by experience rather than by church doctrine. To-day it is that advancing intellect which challenges the reserve guard of the old armies of superstition, and compels a conflict which humankind, must in the end have great gain by the forced enunciation of the truth.

From the word "God" the Theist derives no argument in his favor; it teaches nothing, defines nothing, demonstrates nothing, explains nothing. The Theist answers that this is no sufficient objection, that there are many words which are in common use to which the same objection applies. Even admitting that this were true, it does not answer the Atheist's objection. Alleging a difficulty on the one side is not a removal of the obstacle already pointed out on the other.

The Theist declares his God to be not only immutable, but also infinitely intelligent, and says: "Matter is either essentially intelligent, or essentially non-intelligent; if matter were essentially intelligent, no matter could be without intelligence; but matter can not be essentially intelligent, because some matter is not intelligent, therefore matter is essentially non-intelligent: but there is intelligence, therefore there must be a cause for the intelligence, independent of matter; this

must be an intelligent being—i.e.., God." The Atheist answers, I do not know what is meant, in the mouth of the Atheist, by "matter." "Matter," "substance," "existence," are three words having the same signification in the Atheist's vocabulary. It is not certain that the Theist expresses any very clear idea when he uses the words "matter" and "intelligence." Reason and understanding are sometimes treated as separate faculties, yet it is not unfair to presume that the Theist would include them both under the word intelligence. Perception is the foundation of the intellect. The perceptive faculty, or perceptive faculties, differs or differ in each animal, yet in speaking of matter that Theist uses the word "intelligence" as though the same meaning were to be understood in every case. The recollection of the perceptions is the exercise of a different faculty from the perceptive faculty, and occasionally varies disproportionately; thus an individual may have great perceptive faculties, and very little memory, or the reverse, yet memory, as well as perception, is included in intelligence. So also the faculty of comparing between two or more perceptions; the faculty of judging and the faculty of reflecting—all these are subject to the same remarks, and all these and other faculties are included in the word intelligence. We answer, then, that "God" (whatever that word may mean) can not be intelligent. He can never perceive; the act of perception results in the obtaining a new idea, but if God be omniscient his ideas have been eternally the same. He has either been always and always will be perceiving, or he has never perceived at all. But God can not have been always perceiving, because if he had he would always have been obtaining fresh knowledge, in which case he must have some time had less knowledge than now; that is he would have been less perfect; that is, he would not have been God: he can never recollect or forget, he can never compare, reflect nor judge. There can not be perfect intelligence without understanding; but following Coleridge, "understanding is the faculty of judging according to sense." The faculty of whom? Of some person, judging according to that person's senses? But has "God" senses? Is there anything beyond "God" for "God" to sensate? There can not be perfect intelligence without reason. By reason we mean that faculty or aggregation of faculties which avails itself of past experience to predetermine, more or less accurately, experience in the future, and to affirm truths which sense perceives, experiment verifies, and experience confirms. To God there can be neither past nor future, therefore to him reason is impossible. There can not be perfect intelligence without will, but has God will? If God wills, the will of the all-powerful must be irresistible; the will of the infinite must exclude all other wills.

God can never perceive. Perception and sensation are identical. Every sensation is accompanied by pleasure or pain. But God, if immutable, can neither be pleased nor pained. Every fresh sensation involves a change in mental and perhaps in physical condition. God, if immutable, can not change. Sensation is the source of all ideas, but it is only objects external to the mind which can be sensated. If God be infinite there can be no objects external to him, and therefore sensation must be to him impossible. Yet without perception where is intelligence?

God can not have memory or reason—memory is of the past, reason for the future, but to God immutable there can be no past, no future. The words past, present, and future, imply change; they assert progression of duration. If God be immutable, to him change is impossible. Can you have intelligence destitute of perception, memory, and reason? God can not have the faculty of judgment—judgment implies in the act of judging a conjoining or disjoining of two or more thoughts, but this involves change of mental condition. To God, the immutable, change is impossible. Can you have intelligence, yet no perception, no memory, no reason, no judgment? God can not think. The law of the thinkable is that the thing thought must be separated from the thing which is not thought. To think otherwise would be to think of nothing—to have an impression with no distinguishing mark, would be to have no impression. Yet this separation implies change, and to God, immutable, change is impossible. Can you have intelligence without thought? If the Theist replies to this that he does not mean by infinite intelligence as an attribute of Deity an infinity of the intelligence found in a finite degree of humankind, then he is bound to explain, clearly and distinctly, what other "intelligence" he means, and until this be done the foregoing statements require answer.

The Atheist does not regard "substance" as either essentially intelligent or the reverse. Intelligence is the result of certain conditions of existence. Burnished steel is bright—that is, brightness is the necessity of a certain condition of existence. Alter the condition, and the characteristic of the condition no longer exists. The only essential of substance is its existence. Alter the wording of the Theist's objection. Matter is either essentially bright, or essentially non-bright. If matter were essentially bright, brightness should be the essence of all matter; but matter can not be essentially bright, because some matter is not bright, therefore matter is essentially non-bright; but there is brightness, therefore there must be a cause for this brightness independent of matter; that is, there must be an essentially bright being—i.e., God.

Another Theistic proposition is thus stated: "Every effect must have a cause; the first cause universal must be eternal:ergo, the first cause universal must be God." This is equivalent to saying that "God" is "first cause." But what is to be understood by cause? Defined in the absolute, the word has no real value. "Cause," therefore, cannot be eternal. What can be understood by "first cause?" To us the two words convey no meaning greater than would be conveyed by the phrase "round triangle." Cause and effect are correlative terms—each cause is the effect of some precedent; each effect the cause of its consequent. It is impossible to conceive existence terminated by a primal or initial cause. The "beginning," as it is phrased, of the universe, is not thought out by the Theist, but conceded without thought. To adopt the language of Montaigne, "Men make themselves believe that they believe." The so-called belief inCreationis nothing more than the prostration of the intellect on the threshold of the unknown. We can only cognize the ever-succeeding phenomena of existence as a line in continuous and eternal evolution. This line

has to us no beginning; we trace it back into the misty regions of the past but a little way; and however far we may be able to journey, there is still the great beyond Then what is meant by "universal cause?" Spinoza gives the following definition of cause, as used in its absolute signification: "By cause of itself I understand that, the essence of which involves existence, or that, the nature of which can only be considered as existent." That is, Spinoza treats "cause" absolute and "existence" as two words having the same meaning. If his mode of defining the word be contested, then it has no meaning other than its relative signification, of a means to an end. "Every effect must have a cause." Every effect implies the plurality of effects, and necessarily that each effect must be finite; but how is it possible from a finite effect to logically deduce a universal, i.e., infinite, cause?

There are two modes of argument presented by Theists, and by which, separately or combined, they seek to demonstrate the being of a God. These are familiarly known as the argumentsa priorianda posteriori.

The a posteriori argument has been popularized in England by Paley, who has ably endeavored to bide the weakness of his demonstration under an abundance of irrelevant illustration. The reasoning of Paley is very deficient in the essential points where it most needed strength. It is utterly impossible to prove by it the eternity or infinity of Deity. As an argument founded on analogy, the design argument, at the best, could only entitle its propounder to infer the existence of a finite cause, or, rather, of a multitude of finite causes. It ought not to be forgotten that the illustrations of the eye, the watch, and the man, even if admitted as instances of design, or, rather, of adaptation, are instances of eyes, watches, and men, designed or adapted out of pre-existing substance, by a being of the same kind of substance, and afford, therefore, no demonstration in favor of a designer, alleged to have actually created substance out of nothing, and also alleged to have created a substance entirely different from himself. Thea posterioriargument can never demonstrate infinity for Deity. Arguing from an effect finite in extent, the most it could afford would be a cause sufficient for that effect, such cause being possibly finite in extent and duration. And as the argument does not demonstrate God's infinity, neither can it, for the same reason, make out his omniscience, as it is clearly impossible to logically claim infinite wisdom for a God possibly only finite. God's omnipotence remains unproved for the same reason, and because it is clearly absurd to argue that God exercises power where he may not be. Nor can thea posterioriargument show God's absolute freedom, for, as it does nothing more than seek to prove a finite God, it is quite consistent with the argument that God's existence is limited and controlled in a thousand ways. Nor does this argument show that God always existed; at the best the proof is only that some cause, enough for the effect, existed before it, but there is no evidence that this cause differs from any other causes, which are often as transient as the effect itself. And as it does not demonstrate that God

has always existed, neither does it demonstrate that he will always exist, or even that he now exists. It is perfectly in accordance with the arguement, and with the analagy of cause and effect that the effect may remain after the cause has ceased to exist. Nor does the argument from design demonstrate one God. It is quite consistent with this argument that a separate cause existed for each effect, or mark of design, discovered, or that several causes contributed to some or one of such effects. So that if the argument be true, it might result in a multitude of petty deities, limited in knowledge, extent, duration, and power; and, still worse, each one of this multitude of gods may have had a cause which would also be finite in extent and duration, and would require another, and so on, until the design argument loses the reasoner among an innumerable crowd of deities, none of whom can have the attributes claimed for God.

The design argument is defective as an argument from analogy, because it seeks to prove a Creator God who designed, but does not explain whether this God has been eternally designing, which would be absurd; or, if he at some time commenced to design, what then induced him so to commence. It is illogical, for it seeks to prove an immutable Deity by demonstrating a mutation on the part of Deity.

It is unnecessary to deal specially with each of the many writers who have used from different standpoints thea posterioriform of argument in order to prove the existence of Deity. The objections already stated apply to the whole class; and, although probably each illustration used by the theistic advocate is capable of an elucidation entirely at variance with his argument, the main features of objection are the same. The argumenta posterioriis a method of proof in which the premises are composed of some position of existing facts, and the conclusion asserts a position antecedent to those facts. The argument is from given effects to their causes. It is one form of this argument which asserts that man has a moral nature, and from this seeks to deduce the existence of a moral governor. This form has the disadvantage that its premises are illusory. In alleging a moral nature for man, the Theist overlooks the fact that the moral nature of man differs somewhat in each individual, differs considerably in each nation, and differs entirely in some peoples. It is dependent on organization and education: these are influenced by climate, food, and mode of life. If the argument from man's nature could demonstrate anything, it would prove a murdering God for the murderer, a lascivious God for the licentious man, a dishonest God for the thief, and so through the various phases of human inclination. Thea prioriarguments are methods of proof in which the matter of the premises exists in the order of conception antecedently to that of the conclusion. The argument is from cause to effect. Among the prominent Theistic advocates relying upon thea prioriargument in England are Dr. Samuel Clarke, the Rev. Moses Lowman, and William Gillespie. As this last gentleman condemns his predecessors for having utterly failed to demonstrate God's existence, and as his own treatise

on the "Necessary Existence of God" comes to us certified by the praise of Lord Brougham and the approval of Sir William Hamilton, it is to Mr. William Gillespie that the reader shall be directed.

The propositions are first stated entirely, so that Mr. Gillespie may not complain of misrepresentation:

1. Infinity of extension is necessarily existing.

2. Infinity of extension is necessarily indivisible. Corollary.—Infinity of extension is necessarily immovable.

3. There is necessarily a being of infinity of extension.

4. The being of infinity of extension is necessarily of unity and simplicity.

Sub-proposition.—The material universe is finite in extension.

5. There is necessarily but one being of infinity of expansion.

Part 2, Proposition 1.—Infinity of duration is necessarily existing.

2. Infinity of duration is necessarily indivisible. Corollary.—Infinity of duration is necessarily immovable.

3. There is necessarily a being of infinity of duration.

4. The being of infinity of duration is necessarily of unity and simplicity.

Sub-proposition.—The material universe is finite in duration.

Corollary.—Every succession of substances is finite in duration.

5. There is necessarily but one being of infinity of duration.

Part 3, Proposition 1.—There is necessarily a being of infinity of expansion and infinity of duration.

2. The being of infinity of expansion and infinity of duration is necessarily of unity and simplicity.

Division 2, Part 1.—The simple sole being of infinity of expansion and of duration is necessarily intelligent and all-knowing.

Part 2.—The simple sole being of infinity of expansion and of duration, who is all-knowing, is necessarily all-powerful.

Part 3.—The simple sole being of infinity of expansion and of duration, who is all-knowing and all-powerful, is necessarily entirely free.

Division 3.—The simple sole being of infinity of expansion and of duration, who is all-knowing, all-powerful, and entirely free, is necessarily completely happy.

Sub-proposition.—The simple sole being of infinity of expansion and of duration, who is all-knowing, all-powerful, entirely free, and completely happy, is necessarily perfectly good.

The first objection against the foregoing arguments is that it seeks to prove too much. It affirms one existence (God) infinite in extent and duration, and another entirely different and distinct existence (the material universe) finite in extent and duration. It therefore seeks to substantiate everything and something more. The first proposition is curiously worded, and the argument to demonstrate it is undoubtedly open to more than one objection.

Mr. Gillespie has not defined infinity, and it is possible therefore his argument may be misapprehended in this paper. Infinite signifies nothing more than indefinite. When a person speaks of infinite extension he can only mean to refer to the extension of something to which he has been unable to set limits. The mind can not conceive extensionper se, either absolute or finite. It can only conceive something extended. It might be impossible mentally to define the extension of some substance. In such a case its extension would be indefinite; or, as Mr. Gillespie uses the word, infinite. No one can therefore possibly have any idea of infinity of extension. Yet it is upon the existence of such an idea, and on the impossibility of getting rid of it, that Mr. Gillespie grounds his first proposition. If the idea does not exist, the argument is destroyed at the first step.

Mr. Gillespie argues that it is utterly beyond the power of the human mind to conceive infinity of extension non-existent. He would have been more correct in asserting that it is utterly beyond the power of the human mind to conceive infinity of extension at all, either existent or non-existent. Extension can only be conceived as quality of substance. It is possible to conceive

substance extended. It is impossible in thought to limit the possible extension of substance. Mr. Gillespie having asserted that we can not but believe that infinity of extension exists, proceeds to declare that it exists necessarily. For, he says, everything the existence of which we can not but believe, exists necessarily. It is not necessary at present to examine what Mr. Gillespie means by existing necessarily; it is sufficient to have shown that we do not believe in the existence of infinity of extension, although we may and do believe in the existence of substance, to the extension of which we may be unable to set limits. But, says Mr. Gillespie, "everything the existence of which we can not but believe is necessarily existing." Then as we can not but believe in the existence of the universe (or, to adopt Mr. Gillespie's phrase, the material universe), the material universe exists necessarily. If by "anything necessarily existing," he means anything the essence of which involves existence, or the nature of which can only be considered as existent, then Mr. Gillespie, by demonstrating the necessary existence of the universe, refutes his own later argument, that God is its creator. Mr. Gillespie's argument, as before remarked, is open to misconception, because he has left us without any definition of some of the most important words he uses. To avoid the same objection, it is necessary to state that by substance or existence I mean that which is in itself and is conceived per se—that is, the conception of which does not involve the conception of anything else as antecedent to it. By quality, that by which I cognize any mode of existence. By mode, each cognized condition of existence. Regarding extension as quality of mode of substance, and not as substance itself, it appears absurd to argue that the quality exists otherwise than as quality of mode.

The whole of the propositions following the first are so built upon it, that if it fails they are baseless. The second proposition is, that infinity of extension is necessarily indivisible. In dealing with this proposition, Mr. Gillespie talks of thepartsof infinity of extension, and winds up by saying that he means parts in the sense of partial consideration only. Now not only is it denied that you can have any idea of infinity of extension, but it is also denied that infinity can be the subject of partial consideration. Mr. Gillespie's whole proof of this proposition is intended to affirm that the parts of infinity of extension are necessarily indivisible from each other.

I have already denied the possibility of conceiving infinity in parts; and, indeed, if it were possible to conceive infinity in parts, then that infinity could not be indivisible, for Mr. Gillespie says that, by indivisible, he means indivisible, either really or mentally. Now each part of anything conceived is, in the act of conceiving, mentally separated from, either other parts of, or from the remainder of, the whole of which it is part. It is clearly impossible to have a partial consideration of infinity, because the part considered must be mentally distinguished from the unconsidered remainder, and, in that case, you have, in thought, the part considered finite, and the residue certainly limited, at least, by the extent of the part under consideration.

If any of the foregoing objections are well-founded, they are fatal to Mr. Gillespie's argument.

The argument in favor of the corollary to the second proposition is that the parts of infinity of extension are necessarily immovable among themselves; but if there be no such thing as infinity of extension—that is, if extension be only a quality and not necessarily infinite; if infinite mean only indefiniteness or illimitability, and if infinity can not have parts—this argument goes for very little. The acceptance of the argument that the parts of infinity of extension are immovable is rendered difficult when the reader considers Mr. Gillespie's sub-proposition (4) that the parts of the material universe are movable and divisible from each other. He urges that a part of the infinity of extension or of its substratum must penetrate the material universe and every atom of it. But if infinity can have no parts, no part of it can penetrate the material universe. If infinity have parts (which is absurd), and if some part penetrate every atom of the material universe, and if the part so penetrating be immovable, how can the material universe be considered as movable, and yet as penetrated in every atom by immovability? If penetrated be a proper phrase, then, at the moment when the part of infinity was penetrating the material universe, the part of infinity so penetrating must have been in motion. Mr. Gillespie's logic is faulty. Use his own language, and there is either no penetration, or there is no immovability.

In his argument for the fourth proposition, Mr. Gillespie—having by his previous proposition demonstrated (?) what he calls a substratum for the before demonstrated (?) infinity of extension—says, "it is intuitively evident that the substratum of infinity of extension can be no more divisible than infinity of extension." Is this so? Might not a complex and divisible substratum be conceived by us as possible to underlie a (to us) simple and indivisible indefinite extension, if the conception of the latter were possible to us? There can not be any intuition. It is mere assumption, as, indeed, is the assumption of extension at all, other than as the extension of substance. In his argument for proposition 5, Gillespie says that "any one who asserts that he can suppose two or more necessarily existing beings, each of infinity of expansion, is no more to be argued with than one who denies, Whatever is, is." Why is it more difficult to suppose this than to suppose one being of infinity, and, in addition to this infinity, a material universe? Is it impossible to suppose a necessary being of heat, one of light, and one of electricity, all occupying the same indefinite expansion? If it be replied that you can not conceive two distinct and different beings occupying the same point at the same moment, then it must be equally impossible to conceive the material universe and God existing together.

The second division of Mr. Gillespie's argument is also open to grave objection. Having demonstrated to his own satisfaction an infinite substance, and also having assumed in addition a finite substance, and having called the first an infinite "being"—perhaps from a devout objection to speak of God as substance—Mr. Gillespie seeks to prove that the infinite being is

intelligent. He says: "Intelligence either began to be, or it never began to be. That is never began to be is evident in this, that if it began to be, it must have had a cause; for whatever begins to be must have a cause. And the cause of intelligence must be of intelligence; for what is not of intelligence can not make intelligence begin to be. Now intelligence being before intelligence began to be is a contradiction. And this absurdity following from the supposition that intelligence began to be, it is proved that intelligence never began to be: to wit, is of infinity of duration." Mr. Gillespie does not condescend to tell us why "what is not of intelligence cannot make intelligence begin to be;" but it is not unfair to suppose that he means that of things which have nothing in common one can not be the cause of the other. Let us apply Mr. Gillespie's argument to the material universe, the existence of which is to him so certain that he has treated it as a self-evident proposition.

The material universe—that is, matter—either began to be, or it never began to be. That it never began to be is evident in this, that if it began to be, it must have had a cause; for whatever begins to be must have a cause. And the cause of matter must be of matter; for what is not of matter can not make matter begin to be. Now matter being before matter began to be is contradiction. And this absurdity following from the supposition that matter—i. e., the material universe—began to be, it is proved that the material universe never began to be—to wit, is of indefinite duration.

The argument as to the eternity of matter is at least as logical as the argument for the eternity of intelligence. Mr. Gillespie may reply that he affirms the material universe to be finite in duration, and that by the argument for his proposition, part 2, he proves that the one infinite being (God) is the creator of matter. His words are:

"As the material universe is finite in duration, or began to be, it must have had a cause; for whatever begins to be must have a cause. And this cause must be [Mr. Gillespie does not explain why], in one respect or other, the simple sole being of infinity of expansion and duration, who is all-knowing [the all-knowing or intelligence rests on the argument which has just been shown to be equally applicable to matter], inasmuch as what being, or cause independent of that being, could there be? And, therefore, that being made matter begin to be." Taking Mr. Gillespie's own argument, that which made matter begin to be must be of matter, for what is not matter can not make matter begin to be, then Mr. Gillespie's infinite being (God) must be matter. But there is yet another exception to the preposition, which is that the infinite being (God) is all-powerful. Having, as above, argued that the being made matter, he proceeds, "and this being shown, it must be granted that the being is, necessarily, all-powerful." Nothing of the kind need be granted. If it were true that it was demonstrated that the infinite being (God) made matter, it would not prove him able to make anything else; it might show the being cause enough for that

effect, but does not demonstrate him cause for all effects. So that if no better argument can be found to prove God all-powerful, his omnipotence remains unproved.

Mr. Gillespie's last proposition is that the being (God) whose existence he has so satisfactorily (?) made out is necessarily completely happy. In dealing with this proposition, Mr. Gillespie talks of unhappiness as existing in various kinds and degrees. But, to adopt his own style of argument, unhappiness either began to be, or it never began to be. That it never began to be is evident in this, that whatever began to be must have had a cause, for whatever begins to be must have a cause. And the cause of unhappiness must be of unhappiness, for what is not of unhappiness can not make unhappiness begin to be. But unhappiness being before unhappiness began to be is a contradiction; therefore unhappiness is of infinity of duration. But proposition 5, part 2, says there is but one being of infinity of duration. The one being of infinity of duration is therefore necessarily unhappy. Mr. Gillespie's arguments recoil on himself, and are destructive of his own affirmations.

In his argument for the sub-proposition, Mr. Gillespie says that God's motive, or one of his motives, to create, must be believed to have been a desire to make happiness, besides his own consummate happiness, begin to be. That is, God, who is consummate happiness everywhere forever,desiredsomething. That is, he wanted more than then existed. That is, his happiness was not complete. That is, Mr. Gillespie refutes himself. But what did infinite and eternal complete happiness desire? It desired (says Mr. Gillespie) to make more happiness—that is, to make more than an infinity of complete happiness. Mr. Gillespie's proof, on the whole, is at most that there exists necessarily substance, the extension and duration which we can not limit. Part of his argument involves of the use of the verya posteriorireasoning just considered, regarded by himself as utterly worthless for the demonstration of the existence of a being with such attributes as orthodox Theism tries to assert.

If Sir William Hamilton meant no flattery in writing that Mr. Gillespie's works was one of the "very ablest" on the Theistic side, how wretched indeed must, in his opinion, have been the logic of the less able advocates for Theism. Every Theist must admit that if a God exists, he could have so convinced all men of the fact of his existence that doubt, disagreement, or disbelief would be impossible. If he could not do this, he would not be omnipotent, or he would not be omniscient—that is, he would not be God. Every Theist must also agree that if a God exists, he would wish all men to have such a clear consciousness of his existence and attributes that doubt, disagreement, or belief on this subject would be impossible. And this, if for no other reason, because that out of doubts and disagreements on religion have too often resulted centuries of persecution, strife, and misery, which a good God would desire to prevent. If God would not desire this, then he is not all-good—that is he is not God. But as many men have doubts, a large

majority of mankind have disagreements, and some men have disbeliefs as to God's existence and attributes, it follows either that God does not exist, or that he is not all-wise, or that he is not all-powerful, or that he is not all-good.

Every child is born into the world an Atheist; and if he grows into a Theist, his Deity differs with the country in which the believer may happen to be born, or the people among whom he may happen to be educated. The belief is the result of education or organization. Religious belief is powerful in proportion to the want of scientific knowledge on the part of the believer. The more ignorant, the more credulous. In the mind of the Theist "God" is equivalent to the sphere of the unknown; by the use of the Word he answers without thought problems which might otherwise obtain scientific solution. The more ignorant the Theist, the greater his God. Belief in God is not a faith founded on reason, but a prostration of the reasoning faculties on the threshold of the unknown. Theism is worse than illogical; its teachings are not only without utility; but of itself it has nothing to teach. Separated from Christianity with its almost innumerable sects, from Maliometanism with its numerous divisions, and separated also from every other preached system, Theism is a Will-o'-the-wisp, without reality. Apart from orthodoxy, Theism is a boneless skeleton; the various mythologies give it alike flesh and bone, otherwise coherence it hath none. What does Christian Theism teach? That the first man made perfect by the all-powerful, all-wise, all-good God, was nevertheless imperfect, and by his imperfection brought misery into the world, when the all-good God must have intended misery should never come. That this God made men to share this misery—men whose fault was their being what he made them. That this God begets a son, who is nevertheless his unbegotten self, and that by belief in the birth of God's eternal son, and in the death of the undying who died to satisfy God's vengeance, man may escape the consequences of the first man's error. Christian Theism declares that belief alone can save man, and yet recognizes the fact that man's belief results from teaching, by establishing missionary societies to spread the faith. Christian Theism teaches that God, though no respecter of persons, selected as his favorites one nation in preference to all others: that man can do no good of himself or without God's aid, but yet that each man has a free will; that God is all-powerful, but that few go to heaven and the majority to hell; that all are to love God, who has predestined from eternity that by far the largest number of human beings are to be burning in hell for ever. Yet the advocates for Theism venture to upbraid those who argue against such a faith.

Either Theism is true or false. If true, discussion must help to spread its influence; if false, the sooner it ceases to influence human conduct the better for human kind. It will be useless for the clergy to urge that such a pamphlet deserves no reply. It is true the writer is unimportant, and the language in which his thoughts find expression lacks the polish of a Macaulay, and the fervor of a Burke; but they are nevertheless his thoughts, uttered because it is not only his right, but his

duty, to give them utterance. And this Plea for Atheism is put forth challenging the Theists to battle for their cause, and in the hope that the strugglers being sincere, truth may give laurels to the victor and the vanquished; laurels to the victor in that he has upheld the truth; laurels still welcome to the vanquished, whose defeat crowns him with a truth he knew not of before.

IS THERE A GOD?

Some of those who have heard me venture to examine the question of the existence of Deityviva voce, have desired to have my reasons for holding the Atheistic position briefly stated, and while I do not pretend to exhaust the subject in these few pages, I trust to say enough to provoke thought and inquiry. I do not say, "There is no God," and the scarcely polite rejoinder of those who quote the Psalmist can not, therefore, be applied with justice toward myself. I have never yet heard living man give me a clear, coherent definition of the word "God," and I have never read any definition from either dead or living man expressing a definite and comprehensible idea of Deity. In fact, it has always appeared to me that men use that word rather to hide their ignorance than to express their knowledge.*

* In Sir William Hamilton's Essay on Cousin, I find a notequoting Mr. Piesse on Kant, in which the word God standsas the equivalent for a phase of the unknowable.

Climatic conditions often, and diversity of human race always, govern and modify the meaning conveyed by the word. By "God" one nation or sect expresses love; another, vengeance; another, good; another, wisdom; another, fire; another, water; another, air; another, earth; and some even confound their notion of Deity with that of devil. Elihu Palmer well observes: "The Christian world worships three infinite gods, and one omniscient devil." I do not deny "God," because that word conveys to me no idea, and I can not deny that which presents to me no distinct affirmation, and of which the would-be affirmer has no conception. I can not war with a nonentity. If, however, God is affirmed to represent an existence which is distinct from the existence of which I am a mode, and which it is alleged is not thenoumenon, of which the word "I" represents only a specialty ofphenomena, then I deny "God," and affirm that it is impossible "God" can be. That is, I affirm that there is one existence, and deny that there can be more than one. Atheists are sometimes content to say to their opponents, your "proofs" are no proofs, your "evidences" are failures, you do not and can not prove the existence of Deity. This ground may be safe, but the conduct of its occupier is not daring. The swordsman who always guarded and parried, but never ventured cut or thrust, might himself escape unwounded, but he would thus make but little progress toward victory over his opponent.

It is well to show that the position of your antagonist is weak, but it is better to prove that you are strong.

In a paper as limited as the present, it is necessary to be brief both in answer to opponents and in the statements of my own opinions. This is rather intended as the challenging speech of a debate, not as a complete essay on the existence of Deity.

There are two modes in which Theists endeavor to prove the existence of God, and each of these modes is in its turn denounced by Theistic writers—1st, thea priori; 2d, thea posteriori. Of the former, Pearson, in his "Prize Essay on Infidelity," says: "Thea priorimode of reasoning is the exclusive idol of many of the German logicians.... But in their hands this kind of reasoning has completely failed. It conducts the mind to no firm resting place; it bewilders instead of elucidating our notions of God, of man, and the universe. It gives us no divine personal existence, and leaves us floating in a region of mere vague abstractions. Such reasonings are either altogether vain or are not really what they profess to be. In our country the name of Dr. Clarke is chiefly associated with thea prioriargument.... Clarke himself found it necessary to stoop to the argumenta posteriori, and thereby acknowledged the fallacy of attempting to reason exclusivelya priori.... The fate of Dr. Clarke's pretended demonstration, and the result, in so far as theology is concerned, of the transcendental reasoning of the continental philosophers, show the futility of attempting to rise up to the height of the great argument of the existence of God by thea priorimethod alone."

Of the latter, William Gillespie, in his "Treatise on the Necessary Existence of Deity," writes that it "can never make it appear that infinity belongs in any way to God." It "can only entitle us to infer the existence of a being of finite extension, for, by what rule in philosophy can we deduce from the existence of an object finite in extent (and nothing is plainer than that the marks of design which we can discover must be finite in their extent) the existence of a cause of infinity of extension? What, then, becomes of the omnipresence of the Deity, according to those who are content to rest satisfied from the reasoning of experience?... It will be vain to talk of the Deity being present by his energy? although he may not be present by his substance, to the whole universe. For, 'tis natural to ask not so much how it is proved that God is virtually present, though not substantially present, in every part of nature, as what can be meant by being everywhere present by mere energy?" This reasoning can no more make out that the Deity is omnipresent by his virtue, than that he is omnipresent as to his substance.... And, from the inaptitude of the reasoning under consideration to show that immensity, or omnipresence, belongs to God, it will be found to follow, directly and immediately, that his wisdom and power can not be shown to be more than finite, and that he can never be proved to be a free agent.... Omnipresence (let it be only by energy) is absolutely necessary in a being of infinity of wisdom. And therefore, 'the

design argument' is unable to evince that the Deity is in possession of this attribute. It likewise plainly follows, from the inaptitude of this argument to show that God is omnipresent, that thereby we can not prove infinity of power to belong to him. For, if the argument can not make out that the being it discovers is everywhere present, how can it ever make out that he is everywhere powerful? By careful reflection, too, we may perceive that omnipotence of another kind than power, winch can exert itself in all places, requires the existence of immensity. "The design argument" can never evince that God is a free agent....

If we can not prove the immensity or omnipresence of the Deity, we can for that reason never show that he is omniscient, that he is omnipotent, that he is entirely free.... If the Deity can not be proved to be of infinity in any given respect, it would be nothing less than absurd to suppose that he could be proved to be of infinity in any other respect. It "can do no more than prove that at the commencement of the phenomena which pass under its review, there existed a cause exactly sufficient to make the effects begin to be. That this cause existed from eternity, the reasonings from experience by no means show. Nay, for aught they make known, the designer himself may not have existed long before those marks of design which betoken his workmanship." This reasoning "can not prove that the God whom it reveals has existed from all eternity, therefore, for anything it intimates, God may at some time cease to be, and the workmanship may have an existence when the workman hath fallen into annihilation.... Such reasonings can never assure us of the unity of the Deity." Whether there be one God or not, the argument from experience doth by no means make clear. It discovers marks of design in the phenomena of nature, and infers the existence of at least one intelligent substance sufficient to produce them. Further, however, it advances not our knowledge. Whether the cause of the phenomena be one God or many Gods, it pretends not to determine past all doubt.... But did this designer create the matter in which the design appeared? Of this the argument can not convince us, for it does no more than infer a designing cause from certain appearances, in the same way we would infer from finding some well-contrived machine in a desert that a human being had left it there.... Now, because this reasoning can not convince us of such a creation, it can not convince us there is not a plurality of deities, or of the causes of things.... If we can not prove the eternity of God, it is not possible we can prove the unity of God. To say that, for anything we know to the contrary, he may have existed from all eternity, being much the same as saying that, for anything we know to the contrary, there may be another God or many Gods beside." Sir W. Hamilton considered that the only valid arguments for the existence of a God, and for the immortality of the human soul, rest on the ground of man's moral nature.

Dr. Lyman Beecher issued, some few years since, a series of lectures on Atheism, without merit or fairness, and which are here only alluded to as fairly illustrating a certain class of orthodox opposition. His statements of Atheistic opinions are monstrous perversions, and his answers are

directed against the straw man built together by himself. The doctrine of "almighty chance" which Dr. Beecher attacks, is one which I never heard an educated Atheist teach, and the misrepresentation of Freethought objects is so obvious that it can only be effectual with those who have never freed themselves from the trammels which habit and fashion-faith bound upon them in their infancy, and which have strengthened with their growth. The Rev. J. Orr, in his "Treatise on Theism," says, "All inquiry about chance is, however, impertinent in the present day. The idea is an infantine one, possible of entertainment only in the initial state of human knowledge. Chance isnotthe position relied upon by modern Atheism. And when, therefore, the Theist expends the artillery of his argument upon this broken down and obsolete notion, he is intermeddling with the dead, and after accomplishing the destruction of the venerable fallacy, the modern Atheist will likely ask him to come down to the nineteenths century and meet him there."

The only attempt at argument in Dr. Beecher's book is founded on the assumption:

1st. That there is an existence called matter.

2d. That there are certain effects perceivable which can not result from matter.

3d. That therefore there is a God the cause for these effects. Where are there any Materialists who accept Dr. Beecher's limitation of matter? It is a word I do not use myself.

On the question of evil, Coleridge, in his "Aids to Reflection," says: "1st. That evil must have had a beginning, since otherwise it must either be God or a co-eternal and co-equal rival with God. 2d. That it could not originate in God; for if so, it would at once be evil and not evil, or God would be at once God—that is, infinite goodness—and not God." If God be infinite goodness, can evil exist at all? It is necessary above all that we should understand the meaning of each word we use. Some men talk as if their words were intended rather to conceal than to express their ideas. So far as this essay is concerned I will endeavor to avoid this difficulty by explicitly defining each special word I use. Dugald Stewart, indeed, says, "That there are many words used in philosophical discourse which do not admit of logical definition, is abundantly manifest. This is the case with all those words that signify things un-compounded, and consequently unsusceptible of analysis—a proposition, one should think, almost self-evident; and yet it is surprising how very generally it has been overlooked by philosophers."

The advantages, however, accruing from frequent definitions are very great; at the least they serve to explain what was meant by the persons using the word, whereas sometimes two men confuse each word by using words to which each attaches an opposite or a dissimilar value.

Men will talk of "First Cause," and "Intelligent First Cause." Do they know what they mean? I confess I do not, and from the manner in which they use the words, the most charitable conclusion is that they use them because others have done so, and for no worse or better reason. They talk of the "Beauties of Creation," and "Works of the Great Creator." If by creation is meant the origin of existence, then each utterance of the phrase is an absurdity. The human mind is utterly incapable of construing it in thought as possible that the complement of existence has either been increased or diminished. Man can neither conceive nothing becoming something nor something becoming nothing.

Definitions.—1. By existence, or substance, I mean that which is in itself and is conceivedper se—that is, the conception of which does not require the conception of anything else as antecedent to it. Whenever I use the words universe or matter, I use them in the same sense as representing the totality of existence. Existence can only be known in its modes, and these by their attributes. 2. By attribute, I understand that by which I cognize any mode of existence. Hardness, brightness, color, life, form, etc., are attributes of conditional existence. 3. By mode, I understand each cognized condition or accident of existence. 4. By eternity I mean indefinite duration; that is duration which is to me illimitable. 5. By infinity, I mean indefinite extension. The axioms, so far as I shall give them, are in the precise language of Spinoza. "1. Everything which is, is in itself, or in some other thing.. 2. That which cannot be conceived through anotherper aliud, must be conceivedper se. 3. From a given determinate cause, the effect necessarily follows; and,vice versa, if no determinate cause be given, no effect can follow. 4. The knowledge of an effect depends on a knowledge of the cause, and includes it. 5. Things that have nothing in common with each other, can not be understood by means of each other—that is, the conception of one does not involve the conception of the other."

Propositions.—Existence is prior to its modes. This follows from definitions 1 and 3, because modes of existence are conceived relatively and in dependence on existence, which is absolutely precedent in such conception. Existences having different attributes have nothing in common with each other. This is founded on definition 1. Existences have nothing in common with each other, can not be the cause of, or affect one another. If they have nothing in common, they can not be conceived by means of each other (per axiom 5), and they can not be conceived as relating to each other, but must be conceivedper se(per definition 1); and as (per axiom 4) the knowledge of an effect depends on the knowledge of the cause and includes it, it is impossible to conceive any existence as an effect, so long as you can not conceive it in relation to any other existence. By "cause" in the absolute, I mean "existence." In its popular or relative sense, I use "cause" as an effect of some precedent causative influence, itself the cause of some consequent effect, as the means toward an end, in the accomplishment of which end it completes itself.

What fact is there so certain that I may base all my reasonings upon it? My existence is this primary fact; this, to me, indubitable certainty. I am. This logic can neither prove nor disprove. The very nature of proof is to make a proposition more clear to the mind than it was before, and no amount of evidence can in-crease my conviction of the certainty of my own existence. I do not affirm that I am in existence, but I affirm that there is existence. This existence is either eternal, that is, unlimited in duration, that is, indefinite in duration; or else it had a beginning, that is, it has been created. If created, then such creation must be by some existence the same as itself, or by some existence differing from itself. But it can not have been created by any existence the same as itself, because to imagine such, would be to conceive no more than a continuance of the same existence—there would be no discontinuity. "But," says S. T. Coleridge, "where there is no discontinuity, there can be no origination." And it can not have been created by any existence differing from itself, because things which have nothing in common with one another can not be the cause of, or affect, one another. Therefore, this existence has not been created, that is, its duration is indefinite—that is, you can not conceive a beginning—that is, it is eternal. This eternal existence is either infinite in extent, that is, is unlimited in extent, or it is finite, that is, limited. If limited, it must be limited by an existence the same as itself, or by an existence differing from itself. But the same arguments which applied to a limitation of duration, also apply to a limitation of extension. Therefore, this existence is unlimited in extent; that is, is infinite and eternal—that is, there is only one existence. It is at this point that Atheism separates from Pantheism. Pantheism demonstrates one existence, but affirms for it infinite attributes. Atheism denies that attributes can be infinite. Attributes are but the distinguishing characteristics of modes, and how can that be infinite which is only the quality of finity? Men do not talk of infinite hardness or of infinite softness; yet they talk of infinite intelligence. Intelligence is not an existence, and the word is without value unless it strictly comprehend, and is included in, that which is intelligent. The hardness of the diamond, the brilliancy of the burnished steel, have no existence apart from the diamond or the steel. I, in fact, affirm that there is only one existence, and that all we take cognizance of is mode, or attribute of mode, of that existence.

I have carefully abstained from using the words "matter" and "spirit." Dr. Priestly says: "It has generally been supposed that there aretwo distinct kinds of substancein human nature, and they have been distinguished by the termsmatter, andspirit, ormind. The former of these has been said to be possessed of the property ofextension, viz., of length, breadth and thickness, and also ofsolidityor impenetrability, and consequently of avis inertiæ; but it is said to be naturally destitute of all other powers whatever. The latter has of late been defined to be a substance entirely destitute of all extension, or relation to space, so as to have no property in common with matter; and therefore to be properlyimmaterial, but to be possessed of the powers of perception, intelligence, and self-motion. Matter is alleged to be that kind of substance of which our bodies are composed, whereas the principle of perception and thought belonging to us is

said to reside in a spirit, or immaterial principle, intimately united to the body; while higher orders of intelligent beings, and especially the Divine Being, are said to be purely immaterial. It is maintained that neither matter nor spirit (meaning by the latter the subject of sense and thought) correspond to the definitions above mentioned. For that matter is not thatinertsubstance that it has been supposed to be; that powers ofattraction or repulsionare necessary to its very being, and that no part of it appears to beimpenetrableto other parts; I therefore define it to be a substance possessed of the property of extension, and powers of attraction or repulsion; and since it has never yet been asserted that the powers ofsensationandthoughtare incompatible with these (solidity or impenetrability, and, consequently, avis inertiæ, only having been thought to be repugnent to them), I therefore maintain that we have no reason to suppose that there are in man two substances so distinct from each other as have been represented. It is likewise maintained that the notion of two substances that have no common property, and yet are capable of intimate connection and mutual action, is absurd."

I do not conceivespirit or mindas an existence. By the wordmind, I simply express the totality of perception, observation, collection, and recollection of perceptions, reflection and various other mental processes. Dugald Stewart, in his "Essay on Locke," says: "We are conscious of sensation, thought, desire, volition, but we are not conscious of the existence of the mind itself."

It is urged that the idea of God is universal. This is not only not true, but I, in fact, deny that any coherent idea exists in connection with the word "God." The chief object to which the emotions of any people were directed in ancient times became their God. When these emotions were combined with vague traditions, and a priesthood became interested in handing down the traditions, and increasing the emotions, then the object becoming sacred was hallowed and adored, and uncertain opinions formed the basis of a creed. Any prominent phenomenon in the universe, which was not understood, was personified, as were also the various passions and phases of humanity. These, in time, were preached as religious truths, and thus diverted the people from inquiry into the natural causes of phenomena, which they accounted for as ordained by God, and when famine or pestilence occurred, instead of endeavoring to remove its cause or using preventive measures against a recurrence of the evil, they sought to discover why the supernatural power was offended, and how it might be appeased, and ascribing to it their own passions and emotions, they offered prayers and sacrifices. These errors becoming institutions of the country, the people, prompted by their priests, regarded all those who endeavored to overturn them by free and scientific thought and speech as blasphemers, and the Religion of each State has, therefore, always been opposed to the education of the people.

Archbishop Whately, in his "Elements of Rhetoric," part 1, chap, ii, sec. 5, urges that "those who represent God or Gods as malevolent, capricious, or subject to human passions and vices, are invariably to be found among those who are brutal and uncivilized." We admit this, but ask is it not the fact that both the Old and New Testament teachings do represent God as malevolent, capricious, and subject to human passions and vices—that is, are not these bible views of God relics of a brutal and uncivilized people?

There is, of course, not room in a short essay like the present to say much upon the morality of Atheism, and it should therefore suffice to say, that truth and morality go hand in hand. That that is moral which tends to the permanent happiness of all. The continuance of falsehood never can result in permanent happiness; and therefore if Atheism be truthful, it must be moral, if it be against falsehood, it must tend to human happiness.

Yet if quoting great names will have effect, Lord Bacon, who is often quoted against Atheism, also says: "Atheism leaves a man to sense, to philosophy, to natural piety, to laws, to reputation, all of which may be guides to an outward moral virtue,though religion were not; but superstition dismounts all these, and erecteth an absolute monarchy in the mind of men; therefore Atheism never did perturb states, for it makes men wary of themselves as looking no further; and we see the times inclined to Atheism, as the times of Augustus Caesar were civil times; but superstition has been the confusion of many states." George Combe says: "I have known men in whom the reasoning organs were amply developed and well cultivated, who assured me that they could not reach the conviction of the being of a God. I have known such men equal in point of integrity and practical benevolence to the most orthodox believers." In the West Riding of Yorkshire, among the men themselves, a wealthy employer bore favorable testimony to the conduct and intelligence of Atheistic working men. Nay, even the fanatical Dr. Lyman Beecher is obliged to concede that Atheism made converts among "females of education and refinement—females of respectable standing in society."

HAS MAN A SOUL?

[This lecture was originally delivered to the SheffieldSecular Society, and was printed from the reporter's noteswithout efficient correction from myself, I, at that time,suffering under a severe attack of acute rheumatism. Thelecture has since been often re-delivered; and threeeditions having been exhausted, I have again corrected andrevised the present edition. It is not intended as an answerto the question which forms the title, but it is intended toprovoke thought upon this important subject.]

What do you mean by soul? What is the soul? Is it I? Is it the body? Is it apart from the body? Is it an attribute of the body? Has it a separate and distinct existence from the body? What is the soul? If I ask one of those who claim to be considered orthodox men, they will tell me that the soul is a spirit—that the soul lives after the body is dead. They will tell me that the soul is immortal, and that the body is mortal; that the soul has nothing whatever in common with the body; that it has an existence entirely independent of the body. They will tell me that after the body has decayed—after the body has become re-absorbed in the universe, of which it is but a part, that the soul still exists. Is there any proof of the existence of the same individual soul apart from all material conditions? I have endeavored to examine this subject, and, up to the present time, I have not found one iota of proof in support of the positions thus put forward. I have no idea of any existence except that of which I am part. I am. Of my own existence I am certain I think. I am. But what is it that thinks? Is it my soul? Is it "me," and yet distinct from me? I am but a mode of existence. I am only part of the great universe. The elements of which I am composed are indissolubly connected with that great existence which is around me and within me, and which I help to make up. If men tell me I am a compound, and not a compound—a mixture, and not a mixture—a joining together, and not a joining together—of two entirely different existences, which they call "matter" and "spirit," I am compelled to doubt those men. The ability to think is but an attribute of a certain modification of existence. Intelligence is a word by which we express the sum of certain abilities, always attending a certain mode of existence. I find intelligence manifested so far as organization is developed. I never find intelligence without animal organization. I find intelligence manifested in degree, only so far as I find a higher or lower type of organization—that is, I find man's intellectual faculties limited by his organization. But the orthodox tell me that my soul has an immaterial existence, independent of all organization—independent of all climatic conditions—independent of all education. Is that so? When does the soul come into man? When does it go out of man? If the soul is immortal, why is it that standing here, in the prime of health and strength, if part of that roof should fall fracturing my skull, and pressing upon my brain—how is it, if my soul is not subject to material conditions, that it then ceases to act? Is the plaster roof more powerful than my immortal soul? Or is it that intelligence is the necessary result of a certain condition of existence, and that the moment you destroy that condition—the moment you destroy the organization—the result ceases to be realizable? By the course of reasoning you adopt (says the orthodox objector) you reduce man to the same level as the beasts. And why not? I stand on the river's bank, I see there a man full grown, possessed of the physical figure of man, but an idiot—an idiot from his birth upward—one who could not, even if he would, think and act as other men. A little child is there playing on the bank, and the idiot, having large destructive propensities, has thrust the child into the water, and he stands there jabbering and gesticulating while the little child is drowning in the river. And see how half-vacantly, half-triumphantly, he points to the helpless child. A Newfoundland dog has come to the bank; it jumps in and brings the child out and saves its life. Yet theologians tell me that the idiot

has a soul, and that the Newfoundland dog has not one. I can not understand these nice distinctions, which make the man so superior to the beast in matters in which he is positively inferior. Man has doubtless an organization on the whole far superior intellectually to that of any other animal, but he is only superior by virtue of his superior organization and its consequent susceptibility for development or education. Many brutes can see more clearly than man; but they possess not the capability for the manufacture of telescopes to aid their vision. Many brutes can run more swiftly, but they manifest no capacity for the subjugation of a steam power which far outstrips their speed. But man himself, a well-organized, thoughtful, intelligent, well-educated man, by a fall from a horse, by a tile from a roof, may receive an injury to his nervous encephalic apparatus, and may be, even while a man in shape, as low as the brute in the imbecility of his reason, and inferior to the brute in physical strength. There is as much difference between different races of men, there is, in fact, more difference between a pure Caucasian and a Sahara negro, than between the Sahara negro and the infant chimpanzee.

When did the soul come into the body? Has it been waiting from all eternity to occupy each body the moment of birth? Is this the theory that is put forward to man—that there are many millions of souls still waiting, perhaps, in mid air, 'twixt heaven and earth, to occupy the still unborn babes? Is that the theory? Or do you allege that God specially creates souls for each little child at the moment it is born or conceived? Which is the theory put forward? Is it that the soul being immortal—being destined to exist for ever, has existed from all eternity? If not, how do you know that the soul is to exist for ever; when it only comes into existence with the child? May not that which has recently begun to be, soon cease to be? In what manner does the soul come into the child? Is it a baby's soul, and does it grow with the child? or, does it possess its full power the moment the child is born? When does it come into the child? Does it come in the moment the child begins to form, or is it the moment the child is born into the world? Whence is it this soul comes? Dr. Cooper, quoting Lawrence on the "Functions of the Brain," says: "Sir Everard Home, with the assistance of Mr. Bauer and his microscope, has shown us a man eight days old from the time of conception, about as broad and a little longer than a pin's head. He satisfied himself that the brain of this homunculus was discernible. Could the immaterial mind have been connected with it at this time? Or was the tenement too small even for so etherial a lodger? Even at the full period of uterogestation, it is still difficult to trace any vestiges of mind: and the believers in its separate existence have left us quite in the dark on the precise time when they suppose this union of soul and body to take place." Many of those who tell me that man has a soul, and that it is immortal—that man has a soul, and that the beast has not one—forget or ignore the fact that at a very early stage in the formation of the brain the state of the brain corresponds to that of the avertebrated animal, or animal that is without vertebra. If the brain had stopped in its first month's course of formation, would the child have had a soul? If it would have had a soul, then have avertebrated animals souls also? If you tell me it would not have had a

soul, then I ask, How do you know it? and I ask you what ground you have for assuming that the soul did not begin to form with the formation of the brain? I ask you whether it was pre-existing, or at what stage it came? In the second month this brain corresponds then to the brain of an osseous fish. Supposing the development of the child had been then stopped, had it a soul at that time? If so, have fishes souls? Again, if you tell me that the child had not a soul, then, I ask, why not? How do you know it had not? What ground have you for alleging that the soul did not exist in the child? We go on still further, and in the third month we find that brain corresponds then to that of a turtle, and in the fourth to that of a bird; and in the fifth month, to an order termedrodentia; sixth, to that of theruminantia; seventh, to that of thedugitigrada; eighth, to that of thequadrumana; and not till the ninth month does the brain of the child attain a full human character. I, of course, here mean to allege no more than Dr. Fletcher, who says, in his "Rudiments of Physiology," quoted by the author of the "Vestiges of Creation": "This is only an approximation to the truth; since neither is the brain of all osseous fishes, of all turtles, of all birds, nor of all the species of any of the above order of mammals, by any means precisely the same; nor does the brain of the human fetus at any time precisely resemble, perhaps, that of any individual whatever among the lower animals. Nevertheless it may be said to represent, at each of the above-named periods, the aggregate, as it were, of the brains of each of the tribes stated."

Now, should a birth have taken place at any of the eight stages, would the child thus prematurely born have had a soul? That is the question I propose to you. You who affirm that man has a soul, it lies upon you, here, without charging me with blasphemy—without charging me with ignorance—without charging me with presumption—it lies upon you who affirm, to state the grounds for your belief. At which stage, if at any, did the soul come into the child? At the moment of the birth? Why when a child is born into the world it can scarcely see—it can not speak—it can not think—but after a short time I jingle my keys, and it begins to give faint smiles; and after a few weeks, it is pleased with the jingling of my keys. Is it the soul which is learning to appreciate the sound of the jingling keys, and pleased with them? Is it the immaterial and immortal soul amused and pleased with my bundle of keys? Where is the soul? How is it that the soul can not speak the moment the child is born—can not even think? How is it, that if I keep that child without telling it any thing of its soul until it become fourteen or fifteen years of age, it would then speak and think as I had taught it to speak and think; and if I kept it without the knowledge of a soul, it would have no knowledge of a soul at that age? How is that? Rajah Brooke, at a missionary meeting in Liverpool, told his hearers there that the Dyaks, a people with whom he was connected, had no knowledge of God, of a soul, or of any future state. How is it that the Dyaks have got this soul and yet live knowing nothing whatever about it? And the Dyaks are by no means the only people who live and die knowing nothing of any immortal and immaterial soul. Again you tell me that this soul is immortal. Do you mean that it has eternally existed—has never been created? If so, you deny a God who is the creator of all things. If the

soul began at some time to exist, where is the evidence that it will not also at some time cease to exist? It it came into existence with the body's birth, why not cease with the body's death? You say the soul is immaterial; do you mean that it is susceptible to material conditions or do you not? If susceptible to material conditions, what do you mean by its being immortal and immaterial? If not susceptible to material conditions, then explain to me how it is that under good conditions it prospers and advances, and under bad conditions deteriorates and recedes. If a child is born in some of the back streets of our city, and lives on bad food in a wretched cellar, it grows up a weak and puny pale-faced child. If allowed to crawl into existence on the edge of a gutter, imperfectly educated, in fact mis-educated, it steals—steals, perhaps, to live—and it becomes an outcast from society. Is this immortal soul affected by the bodily conditions? or is the soul originally naturally depraved? And if the soul is primarily naturally depraved, why is God so unjust as to give a naturally depraved soul to any body? If not, how is it that this immortal soul, when the body is kept without food, permits the man who has no money to buy food, to steel to satisfy his hunger? You allege that the soul moves my body. You assert that matter is inert, unintelligent; that it is my active, intelligent soul that moves and impels my inert and non-intelligent body. Is my immortal soul hindered and controlled by the state of my body's general health? Does my soul feel hungry and compel my body to steal? Some theologians declare that my soul is immaterial—that there is no means by which I can take any cognizance whatever of it. What does that mean, except that they know nothing whatever about it? Sir W. Hamilton admits that we are entirely ignorant as to the connection between soul and body. Yet many who in so many words admit that they have no knowledge, but only faith in the soul's existence, are most presumptuous in affirming it, and in denouncing those who dispute their affirmation. It is an easy method to hide ignorance, by denouncing your opponent as an ignorant blasphemer.

Joseph Priestley, in his book upon matter and spirit, quotes from Hallet's discourses, as follows; "I see a man move and hear him speak for some years. From his speech I certainly infer that he thinks, as I do. I then see that man is a being who thinks and acts. After some time the man falls down in my sight, grows cold and stiff, and speaks and acts no more. Is it not then natural to conclude that he thinks no more; as the only reason I had to believe that he did think was his motion and his speech. And now that his motion and speech have ceased, I have lost the only way of proving that he had the power of thought. Upon this sudden death, one visible thing, the one man, has greatly changed. Whence could I infer that the same being consisted of two parts, and that the inward part continues to live and think, and flies away from the body? When the outward part ceases to live and move, it looks as if the wholemanwas gone, and that he, with all his powers, ceases at the same time. His motion and thought both die together, as far as I can discern. The powers of thought, of speech and motion, equally depend upon the body, and run the same fate in case of declining age. When a man dies through old age, I perceive his powers of speech, motion, and thought decay and die together, and by the same degrees. That moment

he ceases to move and breathe he appears to cease to think, too. When I am left to my reason it seems to me that my power of thought depends as much upon the body as my sight and hearing. I could not think in infancy; my power of thought, of sight, and of feeling are equally liable to be obstructed by the body. A blow on the head has deprived a man of thought, who could yet see, and feel and move; so naturally the power of thinking seems as much to belong to the body as any power of man whatsoever. Naturally there appears no more reason to suppose that a man can think out of the body than he can hear sounds and feel cold out of the body."

What do those mean who say that man is made up of two parts—matter and mind? I know of only one existence. I find that existence manifested variously, each mode having certain variations of attributes by which it is cognized. One of these attributes, or a collection of certain attributes, I find in, or with, certain modifications of that existence, that is, in or with animal life—this attribute, or these attributes, we call intelligence. In the same way that I find upon the blade of a knife brightness, consequent upon a certain state of the metal, so do I find in man, in the beast, different degrees, not of brightness, but of intelligence, according to their different states of organization. I am told that the mind and the body are separate from one another. Are the brightness and steel of the knife separate? Is not brightness the quality attaching to a certain modification of existence—steel? Is not intelligence a quality attaching to a certain modification of existence—man? The word brightness has no meaning, except as relating to some bright thing. The word intelligence, no meaning, except as relating to some intelligent thing. I take some water and drop it upon the steel, in due course the process of oxidation takes place and the brightness is gone. I drop into man's brain a bullet; the process of destruction of life takes place, and his intelligence is gone. By changing the state of the steel we destroy its brightness, and by disorganizing the man destroy his intelligence. Is mind an entity or result? an existence or a condition? Surely it is but the result of organic activity, a phenomenon of animal life. Dr. Engledue says: "In the same way as organism generally has the power of manifesting, when the necessary stimuli are applied, the phenomena which are designated life; so one individual portion—brain, having peculiar and distinct properties, manifests on the application of its appropriate stimuli a peculiar and distinct species of action. If the sum of all bodily function—life, be not an entity, how can the product of the action of one portion of the body—brain, be an entity? Feeling and intelligence are but fractional portions of life." I ask those who are here to prove that man has a soul, to do so apart from revelation. If the soul is a part of ourselves, we require no supernatural revelation to demonstrate its existence to us. D'Holbach says: "The doctrine of spirituality, such as it now exists, affords nothing but vague ideas; it is rather a poisoner of all ideas. Let me draw your attention to this: The advocates of spirituality do not tell you anything, but in fact prevent you from knowing anything. They say that spirit and matter have nothing in common, and that mortal man can not take cognizance of immortality. An ignorant man may set himself up as an orator upon such a matter. He says you have a soul—an immortal soul. Take care you don't lose

your soul. When you ask him what is my soul, he says he does not know—nobody knows—nobody can tell you. This is really that which they do. What is this doctrine of spirituality? What does it present to the mind? A substance unsubstantial that possesses nothing of which our senses enable us to take cognizance." Theologians urge that each of us has a soul superior to all material conditions, and yet a man who speaks can not communicate by his speaking soul so freely with that man who is deaf and dumb; the conditions cramp that which is said to be uncontrolled by any conditions. If you cut out a man's tongue, the soul no longer speaks. If you put a gag in his mouth, and tie it with a handkerchief, so that he can not get it out, his soul ceases to speak. The immaterial soul is conquered by a gag, it can not utter itself, the gag is in the way. The orthodox say that the soul is made by God; and what do you know about God? Why just as much as we know about the soul. And what do you know about the soul? Nothing whatever. How is it that if the soul is immaterial, having nothing in common with matter, that it is only manifest by material means? and how is it that it is incased and inclosed in my material frame? They affirm that my soul is a spirit—that I receive the same spirit from God. How is it that my spirit is now by myself, and by my mortal body, denying its own existence? Is my mortal soul acting the hypocrite, or is it ignorant of its own existence, and can not help itself to better knowledge? And if it can not help itself, why not, if it is superior to the body? and if you think it a hypocrite, tell me why.

What is meant by the declaration that man is a compound of matter and spirit?—things which the orthodox assert have nothing in common with one another. Of the existence of what you call matter you are certain, because you and I, material beings, are here. Are you equally certain of the existence of mind, as an existence independent and separate from matter? and if you are, tell me why. Have you ever found it apart from matter? If so, when and where? Have you found that the mind has a separate and distinct existence? if so, under what circumstances? and tell me—you who define matter as unintelligent, passive, inert, and motionless—who talk of thevis inertiæof matter—tell me what you mean when you give these definitions to it? You find the universe, and this small portion of it on which we are, ceaselessly active. Why do you call it passive, except it be that you want courage to search for true knowledge as to the vast capabilities of existence, and, therefore, invent such names as God and Soul to account for all difficulties, and to hide your ignorance? What do you mean by passive and inert matter? You tell me of this world—part of a system—that system part of another—that of another—and point out to me the innumerable planets, the countless millions of worlds, in the universe. You, who tell me of the vast forces of the universe, what do you mean by telling me that that is motionless? What do you mean by yet pointing to the immeasurable universe and its incalculably mighty forces and affirming that they are incapable of every perceptible effect? You, without one fact on which to base your theory, strive to call into existence another existence which must be more vast, and which you allege produces this existence and gives its powers to it. Sir Isaac Newton

says: "We are to admit no more causes of things than are sufficient to explain appearances." What effect is there which the forces of existence are incapable of producing?

Why do you come to the conclusion that the forces of the universe are incapable of producing every effect of which I take cognizance? Why do you come to the conclusion that intelligence is not an attribute—why? What is there which enables you to convert it into a separate and distinct existence? Is there anything? Is it spirit? What is spirit? That of which the mortal man can know nothing, you tell me—that it is nothing which his senses can grasp—that is, no man, but one who disregards his senses, can believe in it, and that it is that which no man's senses can take cognizance of. If a man who uses his senses can never by their aid take cognizance of spirit, then as it is through the senses alone man knows that which is around him, you can know nothing about spirit until you go out of your senses. When I speak of the senses, I do not limit myself to what are ordinarily termed man's five senses—I include all man's sensitive faculties, and admit that I do not know the extent of, and am not prepared to set a limit to, the sensitive capabilities of man. I have had personal experience in connection with psycho-magnetic phenomena of faculties in man and woman not ordinarily recognized, and am inclined to the opinion that many men have been made converts to the theories of spiritualism because their previous education had induced them to set certain arbitrary limits to the domains of the natural. When they have been startled by phenomena outside these conventional limitations they at once ascribed them to supernatural influences rather than reverse their previous rules of thinking.

Some urge that the soul is life. What is life? Is it not the word by which we express the aggregate normal functional activity of vegetable and animal organisms necessarily differing in degree, if not in kind, with each different organization? To talk of immortal life and yet to admit the decay and destruction of the organization, is much the same as to talk of a square circle. You link together two words which contradict each other. The solution of the soul problem is not so difficult as many imagine. The greatest difficulty is, that we have been trained to use certain words as "God," "matter," "mind," "spirit," "soul," "intelligence," and we have been further trained to take these words as representatives of realities, which, in fact, they do not represent. We have to unlearn much of our school lore. We have specially to carefully examine the meaning of each word we use. The question, lies in a small compass. Is there one existence or more? Of one existence I am conscious, because I am a mode of it. I know of no other existence. I know of no existence but that existence of which I am a mode. I hold it to be capable of producing every effect. It is for the man who alleges that there is another, to prove it. I know of one existence. I do not endeavor to demonstrate to you my existence, it needs no demonstration—I am My existence is undeniable. I am speaking to you You are conscious of my existence. You and I are not separate entities, but modes of the same existence. We take cognizance of the existence

which is around us and in us, and which is the existence of which we are modes. Of the one existence we are certain. It is for those who affirm that the universe is "matter," and who affirm that there also exists "spirit," to remember that they admit the one existence I seek to prove, and that the onus lies on them to demonstrate a second existence—in fact, to prove there is the other existence which they term spiritual. There can not exist two different substances or existences having the same attributes, or qualities. There can not be two existences of the same essence, having different attributes, because it is by the attributes alone that we can distinguish the existences. We can only judge of the substance by its modes. We may find a variety of modes of the same substance, and we shall find points of union which help to identify them, the one with the other—the link which connects them with the great whole. We can only judge of the existence of which we are a part (in consequence of our peculiar organization) under the form of a continuous chain of causes and effects—each effect a cause to the effect it precedes, each cause an effect of the causative influence which heralded its advent. The remote links of that line are concealed by the darkness of the far off past. Nay, more than this, the mightiest effort of mind can never say,This is the first cause. Weakness and ignorance have said it—but why? To cloak their weakness, to hide their ignorance. Knaves have said it—but why? To give scope to their cunning, and to enable them to say to the credulous, "Thus far shalt thou go and no farther." The termination is in the as yet unknowable future; and I ask you, presumptuous men, who dare to tell me of God and soul, of matter and creation—when possessed you the power to sunder links of that great chain and write, "In the beginning?" I deny that by the mightiest effort of the strongest intellect man can ever say of any period, at this point substance began to be—before this existence was not.

Has man a soul? You who tell me he has a soul, a soul independent of material conditions, I ask you how it is that these immortal souls strive with one another to get mortal benefits? Has man a soul? If man's soul is not subject to material conditions, why do I find knavish souls?—Why slavish souls?—tyrannous souls? Your doctrine that man has a soul prevents him from rising. When you tell him that his soul is not improvable by material conditions, you prevent him from making himself better than he is. Man's intelligence is a consequence of his organization. Organization is improvable, the intelligence becomes more powerful as the organization is fully developed, and the conditions which surround man are made more pure. And the man will become higher, truer, and better when he knows that his intelligence is an attribute, like other attributes, capable of development, susceptible of deterioration, he will strive to effect the first and to guard against the latter.

Look at the number of people putting power into the hands of one man, because he is a lord—surely they have no souls. See the mass cringing to a wretched idol—surely these have no souls. See men forming a pyramid of which the base is a crushed and worn-out people, and the apex a

church, a throne, a priest, a king, and the frippery of a creed—have those men souls? Society should not be such a pyramid, it should be one brotherly circle, in which men should be linked together by a consciousness that they are only happy so linked, conscious that when the chain is broken, then the society and her peace is destroyed. What we teach is not that man has a soul apart and independent of the body, but that he has an ability, an intelligence, an attribute of his body, capable of development, improvable, more useful, according as he elevates himself and his fellows. Give up blind adhesion to creeds and priests, strive to think and follow out in action the result of your thoughts. Each mental struggle is an enlargement of your mind, an addition to your brain power, an increase of your soul—the only soul you have.

LABOR'S PRAYER.

"Give us this day our daily bread" is the entreaty addressed by the tiller of the soil to the "Our Father," who has promised to answer prayer. And what answer cometh from heaven to this the bread winner's petition? Walk among the cotton workers of Lancashire, the cloth-weavers of Yorkshire, the Durham pitmen, the Staffordshire puddlers, the Cornish miners, the London dock laborers, go anywhere where hands are roughened with toil, where foreheads are bedewed with sweat of work, and see the Lord's response to the prayer, the father's answer to his children! The only bread they get is the bread they take; in their hard struggle for life-sustenance the loaves come but slowly, and heaven adds not a crust, even though the worker be hungry, when he rises from his toil-won meal. Not even the sight of pale-faced wife, and thin forms of half-starved infants can move to generosity the Ruler of the world. The laborer may pray, but, if work be scant and wages low, he pines to death while praying. His prayer gives no relief, and misery's answer is the mocking echo to his demand.

It is said by many a pious tongue that God helps the poor; the wretchedness of some of their hovel houses, found alas! too often, in the suburbs of our wealthiest cities, grimy black, squalid, and miserable; the threadbare raggedness of their garments; the unwholesomeness of the food they eat; the poisoned air they breathe in their narrow wynds and filthy alleys; all these tell how much God helps the poor. Do you want to see how God helps the poor? go into any police court when some little child-thief is brought up for hearing; see him shoeless, with ragged trousers, threadbare, grimy, vest hardly hanging to his poor body, shirt that seems as though it never could have been white, skin dull brown with dirt, hair innocent of comb or brush, eye ignorantly, sullenly-defiant, yet downcast; born poor, born wretched, born in ignorance, educated among criminals, crime the atmosphere in which he moved; and society his nurse and creator, is now virtuously aghast at the depravity of this its own neglected nursling, and a poor creature whom God alone hath helped. Go where the weakly wife in a narrow room huddles herself and little children day after day; and where the husband crowds in to lie down at night; they are poor and

honest, but their honesty bars not the approach of disease, fever, sorrow, death—God helps not the line of health to their poor wan cheeks. Go to the county workhouse in which is temporarily housed the wornout farm laborer, who, while, strength enough remained, starved through weary years with wife and several children on eight shillings per week—it is thus God helps the poor. And the poor are taught to pray for a continuance of this help, and to be thankful and content to pray that to-morrow may be like to-day, thankful that yesterday was no worse than it was, and content that to-day is as good as it is. Are there many repining at their miseries, the preacher, with gracious intonation, answers rebukingly that God, in his wisdom, has sent these troubles upon them as chastisement for their sins. So, says the church, all are sinners, rich its well as poor; but rich sinners feel that the chastising rod is laid more lightly on their backs than it is upon those of their meaner brethren. Weekday and Sunday it is the same contrast; one wears fustian, the other broadcloth; one prepares for heaven in the velvet cushioned pew, the other on the wooden benches of the free seats. In heaven it will be different—all there above are to wear crowns of gold and fine linen, and, therefore, here below the poor man is to be satisfied with the state of life into which it has pleased God to call him. The pastor, who tells him this, looks upon the laborer as an inferior animal, and the laborer by force of habit regards the landowner and peer, who patronizes his endeavors, as a being of a superior order. Is there no new form of prayer that labor might be taught to utter, no other power to which his petition might be addressed? Prayer to the unknown for aid gives no strength to the prayer. In each beseeching he loses dignity and self-reliance, he trusts to he knows not what, for an answer which cometh he knows not when, and mayhap may never come at all. Let labor pray in the future in another fashion and at another altar. Let laborer pray to laborer that each may know labor's rights, and be able to fulfill labor's duties. The size of the loaf of daily bread must depend on the amount of the daily wages, and the laborer must pray for better wages. But his prayer must take the form of earnest, educated endeavor to obtain the result desired. Let workmen, instead of praying to God in their distress, ask one another why are wages low? how can wages be raised? can we raise our own wages? having raised them, can we keep them fixed at the sum desired? What causes produce a rise and fall in wages? are high wages beneficial to the laborer? These are questions the pulpit has no concern with. The reverend pastor will tell you that the "wages of sin is death," and will rail against "filthy lucre;" but he has no inclination for answering the queries here propounded. Why are wages low? Wages are low because the wage-winners crowd too closely. Wages are low because too many seek to share one fund. Wages are lower still because the laborer fights against unfair odds; the laws of the country, overriding the laws of humanity, have been enacted without the laborer's consent, although his obedience to them is enforced. The fund is unfairly distributed as well as too widely divided. Statutes are gradually being modified, and the working man may hope for ampler justice from the employer in the immediate future than was possible in the past, but high and healthy wages depend on the working man himself. Wages can be raised by the work-ing classes exercising a moderate degree of caution in

increasing their numbers. Wages must increase when capital increases more rapidly than population, and it is the duty of the working man, therefore, to take every reasonable precaution to check the increase of population and to accelerate the augmentation of capital.

Can working-men, by combination, permanently raise the rate of wages? One gentleman presiding at a meeting of the National Association for the Promotion of Social Science for the discussion of the labor question, very fairly said, "It is not in the power of the men alone, or of the masters alone, or of both combined, to say what shall be the amount of wages at any particular time in any trade or country. The men and the masters are, at most, competitors for the division, at a certain rate, of a certain fund, provided by [themselves and] others—that is, by the consumers. If that fund is small, no device can make the rate of profit or rate of wages higher." This is in theory quite correct, if it means that no device can make the total divisible greater than it is, but not if it refers to the increase of profit or wages by partial distribution. In practice, although it is true that if the fund be small and the seekers to share it be many, the quotient to each must be necessarily very small, yet it is also true that a few of the competitors—i.e.the capitalists, may and do absorb for their portions of profits an improper and unfairly large amount, thus still further reducing the wretchedly small pittance in any case receivable by the mass of laborers. It is warmly contended that the capitalist and laborer contend for division of the fund appropriable in fair and open field; that the capitalist has his money to employ, the man his labor to sell; that if workmen are in excess of the capitalist's requirements, so that the laborer has to supplicate for employment, wages can not rise, and will probably fall; but that if, on the contrary, capital has need to invite additional laborers, then wages must rise. That is the law of supply and demand brought prominently forward. In great part this is true, but it is not true that capital and labor compete in fair and open field, any more than it is true that an iron-clad war vessel, with heavy ordnance, would compete in fair field with a wooden frigate, equipped with the material in use thirty years ago. Capital is gold-plated, and carries too many guns for unprotected labor.

The intelligent capitalist makes the laws affecting master and servant, which the uneducated laborer must obey, but has no effective voice to alter. The capitalist forms the government of the country, which in turn protects capital against labor; this government the laborer must sustain, and dares not modify. The capitalist does combine, and has combined, and the result of this combination has been an unfair appropriation of the divisible fund. Why should not the laborer combine also? The answer is truly that no combination of workmen can increase the rate of wages, if at the same time the number of laborers increases more rapidly than the capital out of which their wages must be paid. But the men may combine to instruct one another in the laws of political economy; they may combine to apply their knowledge of those laws to the contracts between employer and employed. They may combine to compel the repeal of unjust enactments under which an unfair distribution of the labor fund is not only possible but certain.

Organizations of laborers are, therefore, wise and necessary; the object of such organizations should be the permanent elevation and enfranchisement of the members. No combination of workmen, which merely dictates a temporary cessation from labor, can ultimately and permanently benefit the laborer; while it certainly immediately injures him and deteriorates his condition, making his home wretched, his family paupers. Nor can even co-operative combination, praiseworthy as it certainly is, to procure for the laborer a larger share of the profits of his labor permanently benefit him, except in so far that temporarily alleviating his condition, and giving him leisure for study, it enables him to educate himself; unless, at the same time, the co-operator is conscious that the increase or reduction in the amount of wages depends entirely on the ratio of relation preserved between population and its means of subsistence, the former always having a tendency to increase more rapidly than the latter. It is with the problem of too many mouths for too little bread that the laborer has really to deal: if he must pray, it should be for more bread and for fewer mouths. The answer often given by the workman himself to the advocate of Malthusian views is, that the world is wide enough for all, that there are fields yet unplowed broad enough to bear more corn than man at present could eat, and that there is neither too little food nor are there too many mouths; that there is, in fact, none of that over-population with which it is sought to affright the working man. Over-population in the sense that the whole world is too full to contain its habitants, or that it will ever become too full to contain them, is certainly a fallacy, but overpopulation is a lamentable truth in its relative sense. We find evidences of over-population in every old country of the world. The pest of over-population is the existence of poverty, squalor, wretchedness, disease, ignorance, misery, and crime. Low rate of wages, and food dear, here you have two certain indices of relative over-population. Wages depending on the demand for and supply of laborers, wherever wages are low it is a certain sign that there are too many candidates for employment in that phase of the labor market. The increased cost of production of food, and its consequent higher price, also mark that the cultivation has been forced, by the numbers of the people to descend to less productive soils. Poverty is the test and result of over-population.

It is not against some possible increase of their numbers, which may produce possibly greater affliction, that the working men are entreated to agitate. It is against the existing evils which afflict their ranks, evils alleged by sound students of political economy to have already resulted from inattention to the population question, that the energies of the people are sought to be directed, The operation of the law of population has been for centuries entirely ignored by those who have felt its adverse influence most severely. It is only during the last thirty years that any of the working classes have turned their attention to the question; and only during the last few years that it has to any extent been discussed among them. Yet all the prayers that labor ever uttered since the first breath of human life, have not availed so much for human happiness as will the earnest examination by one generation of this, the greatest of all social questions, the root of

all political problems, the foundation of all civil progress. Poor, man must be wretched. Poor, he must be ignorant. Poor, he must be criminal; and poor he must be till the cause of poverty has been ascertained by the poor man himself and its cure planned by the poor man's brain, and effected by the poor man's hand.

Outside his own rank none can save the poor. Others may show him the abyss, but he must avoid its dangerous brink himself. Others may point out to him the chasm, but he must build his own bridge over. Labor's prayer must be to labor's head for help from labor's hand to strike the blow that severs labor's chain, and terminates the too long era of labor's suffering.

During the last few years our daily papers, and various periodicals, magazines, and reviews have been more frequently, and much less partially, devoted than of old to the discussion of questions relating to the laborer's condition, and the means of ameliorating it. In the Legislative Assembly debates have taken place which would have been impossible fifty years since. Works on political economy are now more easily within the reach of the working man than they were some years ago. People's editions are now published of treatises on political economy which half a century back the people were unable to read. It is now possible for the laborer, and it is the laborer's duty, to make himself master of the laws which govern the production and distribution of wealth. Undoubtedly there is much grievous wrong in the mode of distribution of wealth, by which the evils that afflict the poorest stragglers are often specially and tenfold aggravated. The monopoly of land, the serf state of the laborer, are points requiring energetic agitation. The grave and real question is, however, that which lies at the root of all, the increase of wealth as against the increase of those whom it subsists. The leaders of the great trades unions of the country, if they really desire to permanently increase the happiness of the classes among whom they exercise influence, can speedily promote this object by encouraging their members to discuss freely the relations of labor to capital; not moving in one groove, as if labor and capital were necessarily antagonistic, and that therefore labor must always have rough-armed hand to protect itself from the attacks of capital; but, taking new ground, to inquire if labor and capital are bound to each other by any and what ties, ascertaining if the share of the laborer in the capital fund depends, except so far as affected by inequality in distribution, on the proportion between the number of laborers and the amount of the fund. The discussing, examining, and dealing generally with these topics, would necessarily compel the working man to a more correct appreciation of his position.

Any such doctrine as that "the poor shall never cease out of the land;" or that we are to be content with the station in life into which it has pleased God to call us; or that we are to ask and we shall receive, must no longer avail. Schiller most effectively answers the advocates of prayer:

"Help, Lord, help!Look with pity down!A paternoster pray;What God does, that is justly done,His grace endures for aye.""Oh, mother! empty mockery,God hath not justly dealt by me:Have I not begged and prayed in vain;What boots it now to pray again?"

Labor's only and effective prayer must be in life action for its own redemption; action founded on thought, crude thought, and sometimes erring at first, but ultimately developed into useful thinking, by much patient experimenting for the right and true.

POVERTY: ITS EFFECTS ON THE POLITICAL CONDITION OF THE PEOPLE.

"Political Economy does not itself instruct how to make a nation rich, but whoever would be qualified to judge of the means of making a nation rich must first be a political economist."—John Stuart Mill.

"The object of political economy is to secure the means of subsistence of all the inhabitants, to obviate every circumstance which might render this precarious, to provide everything necessary for supplying the wants of society, and to employ the inhabitants so as to make the interests accord with their supplying each other's wants."—Sir James Stewart.

On one occasion in the world's history, a people rose searching for upright life, who had previously, for several generations, depressed by poverty and its attendant hand-maidens of misery, prowled hunger-striken and disconsolate, stooping and stumbling through the byways of existence. A mighty revolution resulted in much rough justice and some brutal vengeance, much rude right, and some terrific wrong. Among the writers who have since narrated the history of this people's struggle, some penmen have been assiduous and hasty to search for, and chronicle the errors, and have even not hesitated to magnify the crimes of the rebels; while they have been slow to recognize the previous demoralizing tendency of the system rebelled against. In this pamphlet it is proposed to very briefly deal with the state of the people in France immediately prior to the grand convulsion which destroyed the Bastile Monarchy, and set a glorious example of the vindication of the rights of man against opposition the most formidable that can be conceived; believing that even in this slight illustration of the condition of the masses in France who sought to erect on the ruins of arbitrary power the glorious edifice of civil and religious liberty, an answer may be found to the question: "What is the effect of poverty on the political condition of the people."

In taking the instance of France, it is not that the writer for one moment imagines that poverty is a word without meaning in our own lands. The clamming factory hands in the Lancanshire valleys, the distressed ribbon weavers of Conventry, and the impoverished laborers in various

parts of Ireland and Scotland would be able to give us a definition of the word fearful in its distinctness. But in England poverty is happily partial, while in France in the eighteenth century poverty was universal outside the palaces of the nobles and the mansions of the church, where luxury, voluptuousness, and effeminacy were regnant. In the seventeenth and eighteenth centuries travelers in France could learn from "the sadness, the solitude, the miserable poverty, the dismal nakedness of the empty cottages, and the starving, ragged population, how much men could endure without dying." On the one side a discontented, wretched, hungry mass of tax-providing slaves, and on the other a rapacious, pampered, licentious, spendthrift monarchy. This culminated in the refusal of the laborers to cultivate the fertile soil because, the tax-gatherer's rapacity left an insufficient remnant to provide the cultivator with the merest necessaries of life. Then followed "uncultivated fields, unpeopled villages, and houses dropping to decay;" the great cities—as Paris, Lyons, and Bordeaux—crowded with begging skeletons, frightful in their squallid disease and loathsome aspect.

Even after the National Assembly had passed some measures of temporary alleviation, the distress in Paris itself was so great that at the gratuitious distributions of bread "old people have been seen to expire with their hand stretched out to receive the loaf, and women waiting in their turn in front of the baker's shop were prematurely delivered of dead children in the open streets." The great mass of the people were as ignorant as they were poor; were ignorant indeed because they were poor. Ignorance is the pauper's inalienable heritage. When the struggle is for the means of subsistence, and these are only partially obtained, there is little hope for the luxury of a leisure hour in which other emotions can be cultivated than those of the mere desires for food and rest—sole results of the laborious monotonousness of machine work; a round of toil and sleep closing in death—the only certain refuge for the worn out laborer. Without the opportunity afforded by the possession of more than will satisfy the immediate wants, there can be little or no culture of the mental faculties. The toiler badly paid and ill-fed, is separated from the thinker. Nobly-gifted, highly-cultured though the poet may be, his poesy has no charms for the father to whom one hour's leisure means short food for his hungry children clamoring for bread. The picture gallery, replete with the finest works of our greatest masters, is forbidden ground to the pitman, the plowman, the poor pariahs to whom the conceptions of the highest art-treasures are impossible. The beauties of nature are almost equally inaccessible to the dwellers in the narrow lanes of great cities. Out of your narrow wynds in Edinburgh and Glasgow, and on to the moor and mountain-side, ye poor, and breathe the pure life-renewing breezes. Not so; the moors are for the sportsmen and peers, not peasants; and a Scotch Duke—emblem of the worst vices of a corrupt and selfish, but fast-decaying House of Lords—closes miles of heather against the pedestrian's foot. But even this paltry oppression is unneeded. Duke Despicable is in unholy alliance with King Poverty, who mocks at the poor mother and her wretched, ragged family, when from the garret or cellar in a great Babylon wilderness they set

out to find green fields and new life. Work days are sacred to bread, and clothes, and rent; hunger, inclement weather, and pressing landlord forbid the study of nature 'twixt Monday morn and Saturday night, and on Sunday God's ministers require to teach a weary people how to die, as if the lesson were not unceasingly inculcated in their incessant toil. Oh! horrid mockery; men need teaching how to live. According to religionists, this world's bitter misery is a dark and certain preface, "just published," to a volume of eternal happiness, which for 2,000 years has been advertised as in the press and ready for publication, but which after all may never appear. And notwithstanding that every-day misery is so very potent, mankind seem to heed it but very little. The second edition of a paper containing the account of a battle in which some 5,000 were killed and 10,000 wounded, is eagerly perused, but the battle in which poverty kills and maims hundreds of thousands, is allowed to rage without the uplifting of a weapon against the common enemy.

The poor in France were awakened by Rousseau's startling declaration that property was spoliation, they knew they had been spoiled, the logic of the stomach was conclusive, empty bellies and aching brains were the predecessors of a revolution which sought vengeance when justice was denied, but which full-stomached and empty-headed Tories of later days have calumniated and denounced.

Warned by the past, ought we not to-day to give battle to that curse of all old countries—poverty? The fearful miseries of the want of food and leisure which the poor have to endure are such as to seriously hinder their political enfranchisement. Those who desire that men and women shall have their rights of citizens, should be conscious how low the poor are trampled down, and how incapable poverty renders them for the performance of the duties of citizenship. So that the question of political freedom is really determined by the wealth or poverty of the masses; to this extent, at any rate, that a poverty-stricken people must necessarily, after that state of pauperism has existed for several generations, be an ignorant and enslaved people.

The problem is, how to remove poverty, as it is only by the removal of poverty that the political emancipation of the nation can be rendered possible. It has been ascertained that the average food of the agricultural laborer in England is about half that alloted by the jail dietary to sustain criminal life. So that the peasant who builds and guards his master's haystack gets worse fed and worse lodged than the incendiary convicted for burning it down.

How can this poverty be removed and prevented?

I quote the reply from one who has written most elaborately in elucidation of the views of Malthus and Mill: "There is but one possible mode of preventing any evil—namely, to seek for

and remove its cause. The cause of low wages, or in other words of Poverty, is overpopulation; that is, the existence of too many people in proportion to the food, of too many laborers in proportion to the capital. It is of the very first importance that the attention of all who seek to remove poverty should never be diverted from this great truth. The disproportion between the numbers and the food is theonly real causeof social poverty. Individual cases of poverty may be produced by individual misconduct, such as drunknness, ignorance, laziness, or disease; but these and all other accidental influences must be wholly thrown out of the question in considering the permanent cause, and aiming at the prevention of poverty. Drunknness and ignorance, moreover, are far more frequently theeffectthan the cause of poverty. Population and food, like two runners of unequal swiftness chained together, advance side by side; but the ratio of increase of the former is so immensely superior to that of the latter, that it is necessarily greatlychecked; and the checks are of course either more deaths or fewer births—that is, either positive or preventive."

Unless thenecessityof the preventive or positive checks to population be perceived; unless it be clearly seen, that they must operate in one form, if not in another; and thatthough individuals may escape them, the race can not; human society is a hopeless and insoluble riddle.

Quoting John Stuart Mill, the writer from whom the foregoing extracts have been made, proceeds:

"The great object of statesmanship should be to raise the habitual standard of comfort among the working classes, and to bring them into such a position as shows them most clearly that their welfare depends upon themselves. For this purpose he advises that there should be, first, an extended scheme of national emigration, so as to produce a striking and sudden improvement in the condition of the laborers left at home, and raise their standard of comfort; also that the population truths should be disseminated as widely as possible, so that a powerful public feeling should be awakened among the working classes against undue procreation on the part of any individual among them—a feeling which could not fail greatly to influence individual conduct; and also that we should use every endeavor to get rid of the present system of labor—namely, that of employers, and employed, and adopt to a great extent that of independent or associated industry. His reason for this is, that a hired laborer, who has no personal interest in the work he is engaged in, is generally reckless and without foresight, living from hand to mouth, and exerting little control over his powers of procreation; whereas the laborer who has a personal stake in his work, and the feeling of independence and self-reliance which the possession of property gives, as, for instance, the peasant proprietor, or member of a copartnership, has far stronger motives for self-restraint, and can see much more clearly the evil effects of having a large family."

The end in view in all this is the attainment of a greater amount of happiness for humankind. The rendering life more worth the living, by distributing more equally than at present its love, its beauties, and its charms. In one of his most recent publications, Mr. John Stuart Mill observes:

"In a world in which there is so much to interest, so much to enjoy, and so much also to correct and improve, every one who has a moderate amount of moral and intellectual requisites is capable of an existence which may be called enviable; and unless such a person, through bad laws, or subjection to the will of others, is denied the liberty to use the sources of happiness within his reach, he will not fail to find tins enviable existence, if he escape the positive evils of life, the great sources of physical and mental suffering, such as indigence, disease, and the unkindness, worthlessness, or premature loss of objects of affection. Yet no one whose opinion deserves a moment's consideration, can doubt that most of the great positive evils of the world are in themselves removable, and will, if human affairs continue to improve, be in the end reduced within narrow limits. Poverty, in any sense implying suffering, may be completely extinguished by the wisdom of society, combined with the good sense and providence of individuals. Even that most intractable of enemies, disease, may be indefinitely reduced in dimensions by good physical and moral education and proper control of noxious influences, while the progress of science holds out a promise for the future of still more direct conquests over this detestable foe."

In a former pamphlet, "Jesus, Shelly, and Malthus," the reader's attention was entreated to this grave question. In a few pages it is impossible to do more than erect a fingerpost to point out a possible road to a given end. To attempt in a narrow compass to give complete details, would be as unwise as it would be unavailing. My desire is rather to provoke discussion among the masses than to obtain willing auditors among the few, and I affirm it, therefore, as a proposition which I am prepared to support, "That the political conditions of the people can never be permanently reformed until the cause of poverty has been discovered and the evil itself prevented and removed."

WHY DO MEN STARVE?

Why is it that human beings are starved to death, in a wealthy country like England, with its palaces, its cathedrals, and its abbeys; with its grand mansions, and luxurious dwellings, with its fine inclosed parks, and strictly guarded preserves; with its mills, mines, and factories; with its enormous profits to the capitalist; and with its broad acres and great rent rolls to the landholder? The feet that men, old, young, and in the prime of life; that women, and that children, do so die, is indisputable. The paragraph in the daily journals, headed "Death from Starvation," or "Another Death from Destitution," is no uncommon one to the eyes of the careful reader.

In a newspaper of one day, December 24, 1864, may be read the verdict of a London jury that "the deceased, Robert Bloom, died from the mortal effects of effusion on the brain and disease of the lungs, arising from natural causes, but the said death was accelerated by destitution, and by living in an ill-ventilated room, and in a court wanting in sanitary requirements;" and the verdict of another jury, presided over by the very Coroner who sat on the last case, "that the deceased, Mary Hale, was found dead in a certain room from the mortal effects of cold and starvation;" as also the history of a poor wanderer from the Glasgow City Poor House found dead in the snow.

In London, the hive of the world, with its merchant millionaires, even under the shadow of the wealth pile, starvation is as busy as if in the most wretched and impoverished village; busy, indeed, not always striking the victim so obtrusively that the coroner's inquest shall preserve a record of the fact, but more often busy quietly, in the wretched court and narrow lane, up in the garret, and down in the cellar, stealing by slow degrees the life of the poor.

Why does it happen that Christian London, with its magnificent houses for God, has so many squalid holes for the poor? Christianity from its thousand pulpits teaches, "Ask and it shall be given to you," "who if his son ask bread, will he give him a stone?" yet with much prayer the bread is too frequently not enough, and it is, alas! not seldom that the prayer for bread gets the answer in the stone of the paved street, where he lays him down to die. The prayer of the poor outcast is answered by hunger, misery, disease, crime and death, and yet the Bible says, "Blessed be ye poor."' Ask the orthodox clergyman why men starve, why men are poor and miserable; he will tell you that it is God's will; that it is a punishment for man's sins. And so long as men are content to believe that it is God's will that the majority of humankind should have too little happiness, so long will it be impossible effectually to get them to listen to the answer to this great question.

Men starve because the great bulk of them are ignorant of the great law of population, the operation of which controls their existence and determines its happiness or misery. They starve because pulpit teachers have taught them for centuries to be content with the state of life in which it has pleased God to call them, instead of teaching them how to extricate themselves from the misery, degradation, and ignorance which a continuance of poverty entails.

Men starve because the teachers have taught heaven instead of earth, the next world instead of this. It is now generally admitted by those who have investigated the subject that there is a tendency in all animated life to increase beyond the nourishment nature produces. In the human race, there is a constant endeavor on the part of its members to increase beyond the means of subsistence within their reach. The want of food to support this increase operates, in the end, as a positive obstacle to the further spread of population, and men are starved because the great

mass of them have neglected to listen to one of nature's clearest teachings. The unchecked increase of population is in a geometrical ratio, the increase of food for their subsistence is in an arithmetical ratio. That is, while humankind would increase in proportion as 1, 2, 4, 8,16, 32, 64, 128, 256, food would only increase as 1, 2, 3,4, 5, 6, 7, 8, 9. The more the mouths the less the proportion of food. While the restraint to an increase of population is thus a want of food, and starvation is the successful antagonist of struggling human life, it is seldom that this obstacle operates immediately—its dealing is more often indirectly against its victims. Those who die of actual famine are few indeed compared with those who die from various forms of disease, induced by scarcity of the means of subsistence. If any of my readers doubt this, their doubts may be removed by a very short series of visits to the wretched homes of the paupers of our great cities. Suicide is the refuge mainly of those who are worn out in a bitter, and, to them, a hopeless struggle against accumulated ills. Disease, suffering, and misery are the chief causes of the prevalence of suicide in our country, and suicide is therefore one form, although comparatively minute, in which the operation of the law of population may be traced.

From dread of the pangs of poverty, men, women, and children are driven to unwholesome occupations, which destroy not only the health of the man and woman actually employed, but implant the germs of physical disease in their offspring. A starving woman seeking food mixes white lead with oil and turpentine for a paltry pittance, which provides bare existence for her and those who share it; in a few weeks, she is so diseased she can work no longer, and the hospital and grave in turn receive her. Men and women are driven to procure bread by work in lead mines; they rapidly dig their own graves, and not alone themselves, but their wretched offspring, are death-stricken as the penalty; the lead poisons the blood of parent and child alike. Young women and children work at artificial flower-making, and soon their occupation teaches that Scheele's and Schweenfurth green, bright and pleasing colors to the eye, are death's darts too often fatally aimed.

The occupation may be objected to as unhealthy; but the need for food is great, and the woman's or child's wages, wretchedly little though they are, yet help to fill the mouths at home: so the wage is taken till the worker dies. Here, again, the checks to an increase of population all stop short of starvation—the victims are poisoned instead of starved. So where some forty or fifty young girls are crowded into a badly ventilated work-room, not large enough for half the number, from early in the morning till even near midnight, when orders press; or in some work-room where slop clothes are made, and twenty-five tailors are huddled together in a little parlor scarce wide enough for three—they work to live, and die slowly while they work. They are not starved, but is this sort of asphyxiation much better? The poor, are not only driven to unhealthy, but also to noisome, dwellings. There are in London, Liverpool, Glasgow, Edinburgh, Manchester, and other large cities, fearful alleys, with wretched houses, and small ill-ventilated rooms, each

room containing a family, the individuals of which are crowded together under conditions so wretched that disease, and often speedy death, is the only possible result. In the East of London, ten, eleven, and, in some cases, fourteen persons have been found sleeping in one wretched little room. Is it wonderful that some of these misery-stricken ones die before they have time to starve? From poverty the mother, obliged to constantly work that the miserable pittance she gets may yield enough to sustain bare life, is unable properly to nurse and care for baby-child, and often quick death, or slow but certain disease, ending ultimately in the grave, is the result.

The poor live by wages. Wages popularly signify the amount of money earned by the laborer in a given time; but the real value of the money-wages is the amount in quantity and quality of the means of subsistence which the laborer can purchase with that money. Wages may be nominally high, but really low, if the food and commodities to be purchased are, at the same time, dear in price. An undue increase of population reduces wages in more than one way; it reduces them in effect, if not in nominal amount, by increasing the price of the food to be purchased; and it also reduces the nominal amount, because the nominal amount depends on the amount of capital at disposal for employ, and the number of laborers seeking employment. No remedies for low wages, no scheme for the prevention and removal of poverty, can ever be efficacious until they operate on and through the minds and habits of the masses.

It is not from rich men that the poor must hope for deliverance from starvation. It is not to charitable associations the wretched must appeal. Temporary alleviation of the permanent evil is the best that can be hoped for from such aids. It is by the people that the people must be saved. Measures which increase the dependence of the poor on charitable aid can only temporarily benefit one portion of the laboring class while injuring another in the same proportion; and charity, if carried far, must inevitably involve the recipients in ultimate ruin and degradation by destroying their mutual self-reliance. The true way to improve the worker, in all cases short of actual want of the necessaries of life, is to throw him entirely on his own resources, but at the same time to teach him how he may augment those resources to the utmost. It is only by educating the ignorant poor to a consciousness of the happiness possible to them, as a result of their own exertions, that you can induce them effectually to strive for it. But, alas! as Mr. Mill justly observes, "Education is not compatible with extreme poverty. It is impossible effectually to teach an indigent population." The time occupied in the bare struggle to exist leaves but few moments and fewer opportunities for mental cultivation to the very poor.

The question of wages and their relation to capital and population, a question which interests a poor man so much, is one on which he formerly hardly ever thought at all, and on which even now he thinks much too seldom. It is necessary to impress on the laborer that the rate of wages depends on the proportion between population and capital. If population increases without an

increase of capital, wages fall; the number or competitors in the labor market being greater, and the fund to provide for them not having increased proportionately, and, if capital increases without an increase of population, wages rise. Many efforts have been made to increase wages, but none of them can be permanently successful which do not include some plan for preventing a too rapid increase of laborers. Population has a tendency to increase, and has increased faster than capital; this is evidenced by the poor and miserable condition of the great body of the people in most of the old countries of the world, a condition which can only be accounted for upon one of two suppositions, either that there is a natural tendency in population to increase faster than capital, or that capital has, by some means, been prevented from increasing as rapidly as it might have done. That population has such a tendency to increase that, unchecked, it would double itself in a small number of years—say twenty-five—is a proposition which most writers of any merit concur in, and which may be easily proven. In some instances, the increase has been even still more rapid. That capital has not increased sufficiently is evident from the existing state of society. But that it could increase under any circumstances with the same rapidity as is possible to population is denied. The increase of capital is retarded by an obstacle which does not exist in the case of population.. The augmentation of capital is painful. It can only be effected by abstaining from immediate enjoyment. In the case of augmentation of population precisely the reverse obtains. There the temporary and immediate pleasure is succeeded by the permanent pain. The only possible mode of raising wages permanently, and effectually benefiting the poor, is by so educating them that they shall be conscious that their welfare depends upon the exercise of a greater control over their passions.

In penning this brief paper, my desire has been to provoke among the working classes a discussion and careful examination of the teachings of political economy, as propounded by Mr. J. S. Mill and those other able men who, of late, have devoted themselves to elaborating and popularizing the doctrines enunciated by Malthus. While I am glad to find that there are some among the masses who are inclined to preach and put in practice the teachings of the Malthusian School of political economists, I know that they are yet few in comparison with the great body of the working classes who have been taught to look upon the political economist as the poor man's foe. It is nevertheless among the working men alone, and, in the very ranks of the starvers, that the effort must be made to check starvation. The question is again before us: How are men to be prevented from starving? Not by strikes, during the continuance of which food is scarcer than before. No combinations of workmen can obtain high wages if the number of workers is too great. It is not by a mere struggle of class against class that the poor man's ills can be cured. The working classes can alleviate their own sufferings. They can, by co-operative schemes, which have the advantage of being educational in their operation, temporarily and partially remedy some of the evils, if not by increasing the means of subsistence, at any rate by securing a larger portion of the result of labor to the proper sustenance of the laborer. Systems

of associated industry are of immense benefit to the working classes, not alone or so much from the pecuniary improvement they result in, but because they develop in each individual a sense of dignity and independence which he lacks as a mere hired laborer. They can permanently improve their condition by taking such steps as shall prevent too rapid an increase of their numbers, and, by thus checking the supply of laborers, they will, as capital augments, increase the rate of wages paid to the laborer. The steady object of each working man should be to impress on his fellow-worker the importance of this subject. Let each point out to his neighbor not only the frightful struggle in which a poor man must engage who brings up a large family, but also that the result is to place in the labor market more claimants tor a share of the fund which has hitherto been found insufficient to keep the working classes from death by starvation.

The object of this pamphlet will be amply attained if it serve as the means of inducing some of the working classes to examine for themselves the teachings of Political Economy. All that is at present needed is that laboring men and women should be accustomed, both publicly and at home, to the consideration and discussion of the views and principles first openly propounded by Mr. Malthus, and since elaborated by Mr. Mill and other writers. The mere investigation of the subject will of itself serve to bring to the notice of the masses many facts hitherto entirely ignored by them. All must acknowledge the terrible ills resulting from poverty, and all therefore are bound to use their faculties to discover if possible its cause and cure. It is more than folly for the working man to permit himself to be turned away from the subject by the cry that the Political Economists have no sympathy with the poor. If the allegation were true, which it is not, it would only afford an additional reason why this important science should find students among those who most need aid from its teachings.

THE LAND QUESTION.

LARGE ESTATES INIMICAL TO THE WELFARE OF THE PEOPLE

Property in land differs from ordinary property. Wealth, which is the accumulated result of labor, is sometimes, but not often, accumulated in the hands of the laborer, and is more frequently accumulated in the hands of some person who has purchased the result of the laborers toil. Such personal wealth is capable of indefinite increase; and the exclusive right to its disposal is protected in the hands of its possessor, so long as he does not avail himself of this legal protection to use the wealth mischievously to his fellows. There would be no incentive in the laborer to economy, or to increased exertion, unless the State gave him reasonable protection in the enjoyment of his savings. Unfortunately, to obtain the protection of the authorities, he has in this country to give up an unreasonably large portion of his earnings to defray the cost of local and imperial Government. During the reign of her present Majesty, imperial taxation alone has

increased from about £48,000,000 to £73,833,000. The State has no right to interfere with a man's daily disposition of his personal wealth, merely on the ground that he might have used it more advantageously for his fellows. With land it is quite different; it is limited in extent, and the portions of it capable of producing food with ease to the cultivator are still more limited. Every individual member of the commonwealth has an indefeasible interest in the totality of the land, and no man ought to assert an absolute freehold in land hostile to the interest of his fellow. The land is part of the general soil of the State, and should be held subject to the general welfare of the citizens. No man has a right so to hold land that his tenure is detrimental to the happiness of the dwellers upon it or around it. This principle is already recognized in much of our legislation. A man can not say to a railway company—which has obtained the usual compulsory powers of taking land—"You shall not cross my private estate;" the law would answer, if he did, by saying, "The railway is for the good of the State; you as an individual must give way to the general good, and must lose your land, receiving a fair and reasonable money value for it." This principle should be applied more widely: and if it be for the good of the commonwealth that some of the enormous land monopolies of this country should be broken up, no statesman ought to be deterred by the mere dread of interfering with the so-called rights of private property.

Mr. Mill says: "When the 'sacredness of property' is talked of, it should always be remembered that any such sacredness does not belong in the same degree to landed property. No man made the land. It is the original inheritance of the whole species. Its appropriation is wholly a question of general expediency. When private property in land is not expedient it is unjust." The possession of land involves and carries with it the duty of cultivating that land, and, in fact, individual proprietorship of soil is only defensible so long as the possessor can show improvement and cultivation of the land he holds. To quote again from Mr. John Stuart Mill: "The essential principle of property being to assure to all persons what they have produced by their labor, and accumulated by their abstinence, this principle can not apply to that which is not the produce of labor, the raw material of the earth." Mr. Mill urges that property in land "is only valid in so far as the proprietor of the land is its improver." "In no sound theory of private property was it ever contemplated that the proprietor of land should be merely a sinecurist quartered upon it." Yet, in England and Wales alone, the landlords who received for rent, in the year 1800, £22,500,000, now receive about £67,000,000, and for this have no obligation on them to cultivate. The holding cultivable land in an uncultivated condition in this overcrowded country ought to be made a statutory misdemeanor, the penalty for which should be the forfeiture to the State of the land so left uncultivated, at, say, a twenty years' purchase of its annual return in the neglected or misapplied state in which it was found at the time of conviction. The true theory of landholding should be that the State should be the only freeholder, all other tenures being limited in character; and cultivation ought to be a special condition of tenancy.... The holder of land should either cultivate it with his own hands, or, as would be most frequently the case, by the

hands of others; but in the latter case, the landed proprietor is bound to allow the agricultural laborer to live by his labor. By living I mean that the laborer should have healthy food, shelter, and clothing, and sufficient leisure in which to educate himself and his family, besides the necessary leisure for rest from his labors. At present agricultural laborers do not live; they only drag wearily through a career but little higher in any respect than—and often not half so comfortable as—that of many of the other animals on the estate....

Little boys and girls, in the Midland, Eastern, Southern, and Southwestern counties of England, go into the fields to work, in some instances, soon after six years of age; in very many cases before they are seven years old, and in nearly all cases before they have attained eight. It is true, that the work at first may be the comparatively idle work of scaring birds or tending sheep, but it involves exposure of the child's yet delicate frame in the cold and damp of spring, and then to the heat of the summer sun, from day-dawn to evening. This too often results in the stunted growth and diseased frame found so frequently among the English poor. I say nothing of the demoralization of children consequent on their employment, without regard to sex, in the field gangs. I pass by the fact that work at this early age utterly incapacitates them, as a body, for mental effort. It is enough to declare that no child ought to have to work on the land until he is ten years of age, and if I am told that the fathers—only earning, in the majority of instances, from nine to thirteen shillings per week—need the additional petty wage these wretched babes may bring home, then again I answer, that it is to the landholder's enormous income that the State ought to look for the means of educating the too often worse than savages who are reared on his estate, and who by their labors swell his rent-roll.

That a few landed proprietors should have gigantic incomes, while the mass of the people are so poor—that in Gloucester, the Rev. Mr. Frazer describes "type after type of social life almost degraded to the level of barbarism"—that near Lavenham, "the cottages are unfit for human habitation"—that in Norfolk the Parliamentary returns speak of their dwellings in one as "miserable," in a second as "deplorable," in a third as "detestable," in a fourth as "a disgrace to a Christian community;" while near Docking, we are told, in consequence of the overcrowding of the wretched poor, "the whole atmosphere is sensual, and human nature is degraded into something below the level of the swine." This is a state of things that if the landholders will not redress willingly they must be made to remedy before it is too late.

A few men have vast estates and excessive incomes; the millions have seldom an inch of land until they inherit the grave, and have a starvation wage out of which a proportion is taken back for rent. Take the vast property of the Marquis of Westminster, whose income is credibly stated at something near a million a year; or that of the Duke of Devonshire, amounting to 96,000 acres in the county of Derby alone, without regarding his Irish or other estates; or that of the Duke of

Norfolk, whose Sussex estate is fifteen miles in circuit; or that of the Duke of Sutherland, which stretches across and contains the whole of Sutherlandshire from sea to sea; or that of the Marquis of Bute, on which £2,000,-000 sterling were spent by his trustees during his minority; or that of the Marquis of Breadalbane, who is said to be able to ride from his own door one hundred miles straight to the sea on his own freehold land; or those of the Duke of Richmond and Lord Leconfield, who between them own nearly the whole of the eastern portion of the county of Sussex, containing nearly 800 square miles. And such estates have a tendency to increase rather than to diminish. In Northumberland, the Ducal proprietor, whose titular rank is derived from the county, is a constant purchaser of any lands put up for sale. Mr. Bright, in 1864, spoke of one nobleman who devoted £80,000 a year of his income to the purchase of additional land.

These large properties must all be broken up; they paralyze the people, and they corrupt their possessors. We prefer that the breaking up shall be voluntary and gradual, but it must begin at once, for hungry bellies are multiplying daily.

The State ought to put the peasantry in possession of the land, and this might be done in several ways at the same time.

1. There is the Prussian Land System, a modification of which might be made to work well here, and which since 1850 has enabled the smallest occupiers of peasants' land to acquire the proprietorship at twenty years' purchase; the amount of which is paid to the landlord, not in money, but in rent debentures issued by authority of the State, and bearing four per cent, interest, and gradually redeemable by means of the one per cent, difference, which at compound interest extinguishes the principal in a little over forty-one years. The Prussian peasant has, however, two other options: he may pay less by one-tenth to the State bank than the rent he formerly paid to his landlord, in which case the purchase debentures take fifty-six years to redeem; or he may, if he can raise the cash, compel his landlord to accept eighteen years' purchase money of the annual rent. By this means nearly 100,000 peasant proprietors have been created in Prussia. Kent debentures to the extent of many millions have been issued to the landholders, and in less than nineteen years more than one-eighth of the debentures issued have been entirely redeemed and extinguished.

2. The Legislature should declare that leaving cultivable land uncultivated gave the Government the right to take possession of such land, assessing it by its actual return for the last live years, and not by its real value, and handing to the proprietor the amount of, say, twenty years' purchase in Consolidated Stock, redeemable in a limited term of years. The land so taken should not be sold at all, but should be let out to persons willing to become cultivators, on sufficiently

long terms of tenancy to fairly recoup his labor and capital to the cultivator, who should yearly pay into the National Treasury, in lieu of all other imperial taxes, a certain proportion of the value of the annual produce.

3. The game laws should be abolished. Game preserving in England is not only injurious, in that it diverts land capable of corn-bearing from the purpose it should fulfill, of growing corn to feed the starving, but it is injurious in that it prevents proper cultivation of surrounding farms, and demoralizes and makes criminals of the neighboring agriculturial laborers, creating for them a kind and degree of crime which would be otherwise unknown. Poaching, which is so severely punished, is actually fostered and encouraged by the very landholders who punish it. Pheasants and partridges' eggs are bought to stock preserves; the gamekeepers who buy these eggs shut their eyes to the mode in which they have been procured. The lad who was encouraged to procure the eggs finds himself in jail when he learns that shooting or trapping pheasants gains a higher pecuniary reward than leading the plow horse, or trimming the hedge, or grubbing the plantation. Poaching is the natural consequence of rearing a large number of rabbits, hares, partridges, and pheasants, in the midst of an underpaid, underfed, badly-housed, and deplorably ignorant body of people. The brutal outrages of gamekeepers of which we read so much are the regretable but easily-traceable measure of retaliation for a system which takes a baby child to work in the fields soon after six years of age, which trains all his worst propensities and deadens and degrades his better faculties, which keeps him in constant wretchedness, and tantalizes him with the sight of hundreds of acres on which game runs and flies well-fed, under his very nose, while he limps ill-fed along the muddy lane which skirts the preserve—game, which is at liberty to come out of its covert and eat and destroy the farmer's crop, but which is even then made sacred by the law, and fenced round by covenants, as in a Leitrim lease. The game laws must go; they starve our population by using land which might be golden to the autumn sun with the waving crop of wheat, barley, and rye; they feed our prisons, and rear a criminal class in our midst, who have to be prosecuted and guarded at great cost, and all because hares and pheasants are higher in the landowners' eyes than human beings.

5. Any person holding more than, say, 5,000 acres of land, should be taxed at a far heavier rate than those having smaller holdings. That is, presuming, in order to take a figure as basis, the land-tax on 5,000 acres to be at the rate of 1s. per acre, then on every acre above that quantity it should be 2s. per acre up to 10,000 acres, and from thence 5s. per acre up to 15,000 acres, and from thence 10s. per acre up to 20,000 acres, so as to discourage all extravagantly large holdings.

6. The law of primogeniture should be repealed; the settlement of property, except for a widow and her children, be entirely prohibited and some limitation should be put on the power of devise,

so as to prevent, say, the Marquis of Westminster from leaving the bulk of his property to his eldest son, while the younger ones are left as noble paupers, to be provided with places and pensions by the nation. Land should be made as easily and as cheaply transferable as any personal chattel.

The present land monopoly must be broken by legislation, or it will be destroyed by revolution.

PRICE THREEPENCE.

MR. BRADLAUGH'S AUTOBIOGRAPHY.

At the request of many friends, and by way of farewell address on leaving for America, I, for the first time in my life, pen a partial autobiographical sketch. I do not pretend that the narrative will be a complete picture of my life, I only vouch the accuracy of the facts so far as I state them. I have not the right in some cases to state political occurrences in which others now living are involved, nor have I the courage of Jean Jacques Rousseau, to photograph my inner life. I shall therefore state little the public may not already know. I was born on the 26th September, 1833, in a small house in Bacchus Walk, Hoxton. My father was a solicitor's clerk with a very poor salary, which he supplemented by law writing. He was an extremely industrious man, and a splendid penman. I never had the opportunity of judging his tastes or thoughts, outside his daily labours, except in one respect, in which I have followed in his footsteps. He was passionately fond of angling. Until 1848 my life needs little relation. My schooling, like that of most poor men's children, was small in quantity, and, except as to the three R's, indifferent in quality. I remember at seven years of age being at a national school in Abbey Street, Bethnal Green; between seven and nine I was at another small private school in the same neighbourhood, and my "education" was completed before I was eleven years of age at a boys' school in Coalharbour Street, Hackney Road. When about twelve years of age I was first employed as errand lad in the solicitor's office where my father remained his whole life through. After a little more than two years in this occupation, I became wharf clerk and cashier to a firm of coal merchants in Britannia Fields, City Road. While in their employment the excitement of the Chartist movement was at its height in England, and the authorities, frightened by the then huge continental revolution wave, were preparing for the prosecution of some of the leaders amongst the Chartists. Meetings used to be held almost

continuously all day on Sunday, and every week-night in the open air on Bonner's Fields, near where the Consumption Hospital now stands. These meetings were in knots from fifty to five hundred, sometimes many more, and were occupied chiefly in discussions on theological, social, and political questions, any bystander taking part. The curiosity of a lad took me occasionally in the week evenings to the Bonner's Fields gatherings. On the Sunday I, as a member of the Church of England, was fully occupied as a Sunday-school teacher. This last-named fashion of passing Sunday was broken suddenly. The Bishop of London was announced to hold a confirmation in Bethnal Green. The incumbent of St. Peter's, Hackney Road, the district in which I resided, was one John Graham Packer, and he, desiring to make a good figure when the Bishop came, pressed me to prepare for confirmation, so as to answer any questions the Bishop might put. I studied a little the Thirty-nine Articles of the Church of England, and the four Gospels, and came to the conclusion that they differed. I ventured to write the Rev. Mr. Packer a respectful letter, asking him for aid and explanation. All he did was to denounce my letter to my parents as Atheistical, although at that time I should have shuddered at the very notion of becoming an Atheist, and he suspended me for three months from my office of Sunday-school teacher. This left me my Sundays free, for I did not like to go to church while suspended from my teacher's duty, and I, instead, went to Bonner's Fields, at first to listen, but soon to take part in some of the discussions which were then always pending there.

At the commencement I spoke on the orthodox Christian side, but after a debate with Mr. J. Savage, in the Warner Place Hall, in 1849, on the "Inspiration of the Bible," I found that my views were getting very much tinged with Freethought, and in the winter of that year, at the instigation of Mr. Packer, to whom I had submitted the "Diegesis" of Robert Taylor, I—having become a teetotaler, which in his view brought out my infidel tendencies still more vigorously—had three days given me by my employers, after consultation with my father, to "change my opinions or lose my situation." I am inclined to think now that the threat was never intended to have been enforced, but was used to terrify me into submission. At that time I hardly knew what, if any,

opinions I had, but the result was that sooner than make a show of recanting, I left home and situation on the third day, and never returned to either.

I was always a very fluent speaker, and now lectured frequently at the Temperance Hall, Warner Place, Hackney Road, at the small Hall in Philpot Street, and in the open air in Bonner's Fields, where at last on Sunday afternoons scores of hundreds congregated to hear me. My views were then Deistical, but rapidly tending to the more extreme phase into which they ultimately settled. I now took part in all the gatherings held in London on behalf of the Poles and Hungarians, and actually fancied that I could write poetry on Kossuth and Mazzini.

It was at this time I made the acquaintance of my friend and co-worker, Mr. Austin Holyoake, at his printing office in Queen's Head Passage, and I remember him taking me to John Street Institution, where, at one of the pleasant Saturday evening gatherings, I met the late Mrs. Emma Martin. At Mr. Austin Holyoake's request, Mr. George Jacob Holyoake, to my great delight, presided at one of my lectures in Philpot Street, and I felt special interest in the number of the *Reasoner* which contained a brief reference to myself and that lecture.

I wrote my first pamphlet, "A Few Words on the Christian's Creed," about the middle of 1850, and was honoured by Dr. Campbell of the *British Banner* with a leading article vigorously assailing me for the lectures I had then delivered. After leaving home I was chiefly sheltered by Mrs. Sharples Carlile, with whose children, Hypatia, Theophila, and Julian, I shared such comforts as were at her disposal. Here I studied hard everything which came in my way, picking up a little Hebrew and an imperfect smattering of other tongues. I tried to earn my living as a coal merchant, but at sixteen, and without one farthing in my pocket, the business was not extensive enough to be profitable. I got very poor, and at that time was also very proud. A subscription offered me by a few Freethinkers shocked me, and awakened me to a sense of my poverty; so telling no one where I was going, I went away, and on the 17th of December, 1850, was, after some difficulty, enlisted in the Seventh Dragoon Guards. With this corps I remained until October, 1853, being ultimately appointed orderly-room clerk; the regiment, during the whole of the

time I remained in it, being quartered in Ireland. While I was in the regiment I was a teetotaler, and used often to lecture to the men in the barrack-room at night, and I have more than once broken out of Portobello barracks to deliver teetotal speeches in the small French Street Hall, Dublin. Many times have I spoken there in my scarlet jacket, between James Haughton and the good old father, the Rev. Dr. Spratt, a Roman Catholic priest, then very active in the cause of temperance. While I was in the regiment my father died, and in the summer of 1853 an aunt's death left me a small sum, out of which I purchased my discharge, and returned to England, to aid in the maintenance of my mother and family.

I have now no time for the full story of my army life, which, however, I may tell some day. Before I left the regiment I had won the esteem of most of the privates, and of some of the officers. I quitted the regiment with a "very good character" from the Colonel, but I am bound to add, that the Captain of my troop would not have concurred in this character had he had any voice in the matter. The Lieutenant-Colonel, C. P. Ainslie, earned an eternal right to grateful mention at my hands by his gentlemanly and considerate treatment. I cannot say the same for my Captain, who did his best to send me to gaol, and whom I have not yet quite forgiven.

On returning to civilian life, I obtained employment in the daytime with a solicitor named Rogers, and in the evening as clerk to a Building Society; and soon after entering this employ I began again to write and speak, and it was then I, to in some degree avoid the efforts which were afterwards made to ruin me, took the name "Iconoclast," under which all my anti-theological work down to 1868 was done. I give Mr. Rogers' name now for he is dead, and malice cannot injure him. Many anonymous letters were sent to him to warn him of my irreligious opinions; he treated them all with contempt, only asking me not to let my propaganda become an injury to his business.

Soon after my discharge from the army I had a curious adventure. While I was away a number of poor men had subscribed their funds together and had erected a Working Man's Hall, in Goldsmiths' Row, Hackney Road. Not having any legal advice, it turned out that they had been entrapped into erecting their building on freehold ground

without any lease or conveyance from the freeholder, who asserted his legal right to the building. The men consulted me, and finding that under the Statute of Frauds they had no remedy, I recommended them to offer a penalty rent of £20 a year. This being refused, I constituted myself into a law court, and without any riot or breach of the peace, I, with the assistance of a hundred stout men, took every brick of the building bodily away, and divided the materials, so far as was possible, amongst the proper owners. I think I can see now the disappointed rascal of a freeholder when he only had his bare soil left once more. He did not escape unpunished, for to encourage the others to contribute, he had invested some few pounds in the building. He had been too clever: he had relied on the letter of the law, and I beat him with a version of common-sense justice.

I lectured once or twice a week in the small Philpot Street Hall, very often then in the Hall of Science, City Road, and then in the old John Street Institution, until I won myself a name in the party and through the country. In 1855 I had my first notable adventure with the authorities in reference to the right of meeting in Hyde Park, and subsequently gave evidence before the Royal Commission ordered by the House of Commons, presided over by the Right Hon. Stuart Wortley. I was very proud that day at Westminster, when, at the conclusion of my testimony against the authorities, the Commissioner publicly thanked me, and the people who crowded the Court of Exchequer cheered me, for the manner in which I denied the right of Sir Richard Mayne, the then Chief Commissioner of Police, to issue the notices forbidding the people to meet in the Park. This was a first step in a course in which I have never flinched or wavered.

In 1856 I undertook, with others, the publication of a series of papers, entitled "Half-Hours with Freethinkers," the late John Watts being one of my co-workers. I also by myself commenced the publication of my "Commentary on the Pentateuch," which has since been entirely re-written, and now forms my "Bible: what it is."

During the autumn of 1857 I paid my first lecturing visit to Northampton.

Early in 1858, when Mr. Edward Truelove was suddenly arrested for publishing the pamphlet, "Is Tyrannicide Justifiable?" I became Honorary Secretary to the Defence, and

was at the same time associated with the conduct of the defence of Simon Bernard, who was arrested at the instigation of the French Government for alleged complicity in the Orsini tragedy. It was at this period I gained the friendship of poor Bernard, which, without diminution, I retained until he died; and also the valued friendship of Thomas Allsop, which I still preserve. My associations were from thenceforward such as to encourage in me a strong and bitter feeling against the late Emperor Napoleon. Whilst he was in power I hated him, and never lost an opportunity of working against him until the *decheance* came. I am not sure now that I always judged him fairly; but nothing, I think, could have tempted me to either write or speak of him with friendliness or kindliness during his life. *Le sang de mes amis etait sur son âme.* Now that the tomb covers his remains, my hatred has ceased; but no other feeling has arisen in its place. Should any of his family seek to resume the Imperial purple, I should remain true to my political declarations of sixteen years since, and should exert myself to the uttermost to prevent France falling under another Empire. I write this with much sadness, as 1870 to 1873 have dispelled some of my illusions held firmly during the fifteen years which preceded. I had believed in such men as Louis Blanc, Ledru Rollin, Victor Hugo, as possible statesmen for France. I was mistaken. They were writers, talkers, and poets; good men to ride on the stream, or to drown in honest protest, but lacking force to swim against, or turn back, the tide by the might of their will. I had believed too in a Republican France, which is yet only in the womb of time, to be born after many pangs and sore travailing.

In 1859 I saw Joseph Mazzini for the first time, and remained on terms of communication with the great Italian patriot until the year 1869, from time to time bringing him correspondence from Italy, where my business sometimes took me. After 1869 we found ourselves holding diverse opinions on the Franco-Prussian question—Mazzini went for Prussia, I for France—and I never saw him again.

In June, 1858, I held my first public formal theological debate with the Rev. Brewin Grant, B.A., at that time a Dissenting Minister at Sheffield. Mr. Grant was then a man of some ability, and if he could have forgotten his aptitudes as a circus jester, would have been a redoubtable

antagonist. During this year I was elected President of the London Secular Society, in lieu of Mr. George Jacob Holyoake, who had theretofore led the English Freethought party, but who has of late years devoted himself more completely to general journalistic work.

In November, 1858, I commenced editorial duties with the *Investigator*, formerly conducted by the late Robert Cooper, which I continued until August, 1859. It had but a small circulation, and was financially a very great failure. For the encouragement of young propagandists, I may here insert a little anecdote of my early lecturing experience. I had lectured in Edinburgh in mid-winter; the audience was small, the profits microscopical. I, after paying my bill at the Temperance Hotel, where I then stayed, had only a few shillings more than my Parliamentary fare to Bolton, where I was next to lecture. I was out of bed at five on a freezing morning, and could have no breakfast, as the people were not up. I carried my luggage (a big tin box, corded round, which then held books and clothes, and a small black bag), for I could not spare any of my scanty cash for a conveyance or porter. The train from Edinburgh being delayed by a severe snow-storm, the corresponding Parliamentary had left Carlisle long before our arrival. In order to reach Bolton in time for my lecture, I had to book by a quick train, starting in about three-quarters of an hour, but could only book to Preston, as the increased fare took all my money, except 4½d. With this small sum I could get no refreshment in the station, but in a little shop in the street outside I got a mug of hot tea and a little hot meat pie. From Preston, I got with great difficulty on to Bolton, handing my black bag to the station-master there, as security for my fare from Preston, until the morning. I arrived in Bolton about quarter to eight; the lecture commenced at eight, and I, having barely time to run to my dgings, and wash and change, went onto the platform cold nd hungry. I shall never forget that lecture; it was in an ld Unitarian Chapel. We had no gas, the building seemed full of a foggy mist, and was imperfectly lit with candles. Everything appeared cold, cheerless, and gloomy. The most amusing feature was that an opponent, endowed with extra piety and forbearance, chose that evening to specially attack me for the money-making and easy life I was leading. Peace to that opponent's memory, I have never seen him

since. It was while in Scotland on this journey I made the acquaintance, and ultimately won the friendship, of the late Alexander Campbell, of Glasgow—a generous, kindly-hearted old Socialist Missionary, who, at a time when others were hostile, spoke encouragingly to me, and who afterwards worked with me for a long period on this journal.

Occasionally, the lectures were interfered with by the authorities, but this happened oftener in the provinces than in London. In March, 1859, I was to have lectured in the Saint Martin's Hall on "Louis Napoleon," but the Government—on a remonstrance by Count Walewski, as to language used at a previous meeting, at which I had presided for Dr. Bernard—interfered; the hall was garrisoned by police, and the lecture prevented. Mr. Hullah, the then proprietor, being indemnified by the authorities, paid damages for his breach of contract, to avoid a suit which I at once commenced against him. Later in the same month I held a debate in Northampton with Mr. John Bowes, a rather heavy, but well-meaning, old gentleman, utterly unfitted for platform controversy. The press now began to deal with me tolerably freely, and I find "boy," "young man," and "juvenile appearance" very frequent in the comments. My want of education was an especial matter for hostile criticism, the more particularly so when the writer had neither heard nor seen me.

Discussions now grew on me so thick and fast that even some of the most important debates may perhaps escape notice in this imperfect chronicling. At Sheffield I debated with a Reverend Dr. Mensor, who styled himself a Jewish Rabbi. He was then in the process of gaining admission to the Church of England, and had been put forward to show my want of scholarship. We both scrawled Hebrew characters for four nights on a black board, to the delight and mystification of the audience, who gave me credit for erudition, because I chalked the square letter characters with tolerable rapidity and clearness. At Glasgow I debated with a Mr. Court, representing the Glasgow Protestant Association, a glib-tongued missionary, who has since gone to the bad; at Paisley with a Mr. Smart, a very gentlemanly antagonist; and at Halifax with the Rev. T. D. Matthias, a Welsh Baptist Minister, unquestionably very sincere. All these were formal debates, and were reported with tolerable fulness in the various local journals.

In the early part of 1860 I, aided by my friends at Sheffield, Halifax, and other parts of England, projected the *National Reformer* in small shares. Unfortunately, just after the issue of its prospectus, Joseph Barker returned from America, and was associated with me in the editorship. The arrangement was peculiar, Mr. Barker editing the first half of the paper and I the second. It was not precisely a happy union, and the unnatural alliance came to an end in a very brief period. In August, 1861, I officially parted company with Joseph Barker as editor. We had been practically divorced for months before: the first part of the paper usually contained abuse of those who wrote in the second half. He came to me originally at Sheffield, pretending to be an Atheist and a Republican, and soon after pretended to be a Christian, and spoke in favour of slavery. I am sometimes doubtful as to how far Mr. Barker deluded himself, as well as others, in his various changes of theological and political opinions. If he had had the slightest thoroughness in his character, he would have been a great man; as it is, he is only a great turn-coat.

In June, 1860, I debated again with the Reverend Brewin Grant, every Monday for four weeks, at Bradford, and during this debate had a narrow escape of my life. In one of my journeys to London, the Great Northern train ran through the station at King's Cross, and many persons were seriously injured. I got off with some trifling bruises and a severe shaking.

Garibaldi having at this time made his famous Marsala effort, I delivered a series of lectures in his aid, and am happy to be able to record that, though at that time very poor, I sent him one hundred guineas as my contribution by my tongue. This money was chiefly sent through W. H. Ashurst, Esq., now Solicitor to the General Post Office, and amongst the few letters I preserve, I have one of thanks from "G. Garibaldi," for what I was then doing for Italy.

In this year I debated for four nights with Dr. Brindley, an old antagonist of the Socialists, at Oldham; for two nights with the Rev. Dr. Baylee, the President of St. Aidan's College, at Birkenhead, where a Church of England curate manufactory was for some time carried on; and for two nights with the Rev. Dr. Rutherford, of Newcastle. Dr. Rutherford has since so identified himself with the cause of

the Tyneside workers, that I read with regret any harsh words that escaped me in that debate. Although during late years I have managed to keep all my meetings free from violence or disorder, this was not always so. In October, 1860, I paid my first visit to Wigan, and certainly lectured there under considerable difficulty, and incurred personal danger, the resident clergy actually inciting the populace to physical violence, and part destruction of the building I lectured in. I, however, supported by one courageous woman and her husband, persevered, and, despite bricks and kicks, visited Wigan again and again, until I had, *bon gré mal gré*, improved the manners and customs of the people, so that I am now a welcome speaker there. I could not improve the morals of the clergy, as the public journals have recently shown, but that was their misfortune not my fault. In the winter of 1860, I held two formal debates in Wigan, all of which were fully reported in the local journals; one with Mr. Hutchings, a respectable Nonconformist layman, and the other with the Rev. Woodville Woodman, a Swedenborgian divine.

Early in 1861 I visited Guernsey in consequence of an attempt made by the Law Courts of the Island to enforce the blasphemy laws against a Mr. Stephen Bendall, who had distributed some of my pamphlets to the Guernseyites, and had been condemned to imprisonment in default of finding sureties not to repeat the offence. Not daring to prosecute me, although challenged in writing, the authorities permitted drink and leave of absence to be given to soldiers in the garrison, on condition they should try to prevent the lecture, and the house in which I lectured was broken into by a drunken and pious mob, shouting "Kill the Infidel." My antagonists were fortunately as cowardly as they were intolerant, and I succeeded in quelling the riot, delivering my lecture in spite of all opposition, although considerable damage was done to the building.

Shortly after this I visited Plymouth, where the Young Men's Christian Association arranged to prosecute me. They were, however, a little too hasty, and had me arrested at an open air meeting when I had scarcely commenced my speech, having only uttered the words—"Friends, I am about to address you on the Bible." Having locked me up all night, and refused bail, it was found by their legal adviser that a blunder had been committed, and a charge of "ex-

citing a breach of the peace, and assaulting the constable in the execution of his duty," was manufactured. It was tolerably amusing to see the number of dinners, suppers, and breakfasts, all accompanied with pots or cups of Devonshire cream, sent in to the Devonport Lock-up, where I was confined, by various friends who wanted to show their sympathy. The invented charge, though well sworn to, broke down after two days' hearing, under the severe cross-examination to which I subjected the witnesses. I defended myself, two lawyers appeared against me, and seven magistrates sat on the bench, predetermined to convict me. Finding that the evidence of the whole of the witnesses whom I wished to call was to be objected to because unbelievers in hell were then incompetent as witnesses according to English law, I am pleased to say that several Nonconformists, disgusted with the bigotry and pious perjury of my prosecutors, came forward. The result was a triumphant victory, and a certificate of dismissal which I wrung from the reluctant bench of great unpaid. I was not yet satisfied; some of the magistrates had tried to browbeat me, and I announced in court that I would deliver the lecture I had been prevented from delivering to an audience assembled in the borough, and that I should sue at law the Superintendent of Police who had arrested me. The first portion of my defiance was the most difficult to give effect to; not a hall could be hired in Devonport, and nearly all the convenient open land being under military jurisdiction, it was impossible to procure the tenancy of a field for an open-air meeting. I, however, fulfilled my promise, and despite the police and military authorities combined, I delivered my lecture to an audience assembled in their very teeth. Devonport, Stonehouse, and Plymouth form one garrisoned and fortified town, divided by the River Tamar. All the water to the sea is under the separate jurisdiction of Saltash, some miles distant. I obtained a large boat on which a temporary platform was built, and this boat was quietly moored in the River Tamar on the Devonport side, about two fathoms from the shore. Placards were issued stating that, acting under legal advice, I should address the meeting and deliver the prevented lecture "near to the Devonport Park Gates." Overwhelming force was prepared by the Devonport authorities, and having already erred by too great haste, this time they determined to let

me fairly commence my lecture before they arrested me. To their horror I quietly walked past the Park Gates where the crowd was waiting, and passing down a bye-lane to the river side, stepped into a little boat, was rowed to the large one, and then delivered my lecture, the audience who had followed me, standing on an open wharf, all within the jurisdiction of the Borough of Devonport, and I being about 9 feet outside the borough. The face of the Mayor ready to read the riot act, the superintendent with twenty-eight picked policemen to make sure of my arrest, and a military force in readiness to overawe any popular demonstration—all these were sights to remember. I am afraid the Devonport Young Men's Christian Association did not limit themselves to prayers and blessings on that famous Sunday.

As I had promised, the authorities refusing any apology for the wrongful arrest, I commenced an action against Superintendent Edwards, by whom I had been taken into custody. The borough magistrates indemnified their officer and found funds to resist me. I fought with very little help save from one tried, though anonymous friend, for Joseph Barker, my co-editor, but not co-worker, in our own paper, discouraged any pecuniary support. The cause was made a special jury one, and came on for trial at Exeter Assizes. Unfortunately I was persuaded to brief counsel, and Sir Robert Collier, my leader, commenced his speech with an expression of sorrow for my opinions. This damaged me very much, although I won the case easily after a long trial. The jury, composed of Devonshire landowners, only gave me a farthing damages, and Mr. Baron Channell refused to certify for costs. I was determined not to let the matter rest here, and myself carried it to the Court *in Banco*, where I argued it in person for two whole days, before Lord Chief Justice Erle and a full bench of Judges. Although I did not succeed in improving my own position, I raised public opinion in favour of free speech, and the enormous costs incurred by the borough authorities, and which they had to bear, have deterred them from ever again interfering either with my lectures, or those of any other speaker, and I now have crowded audiences in the finest hall whenever I visit the three towns. These proceedings cost me several hundred pounds, and burthened me with a debt which took long clearing off.

In 1862 I held a four nights' discussion with a Dissenting

clergyman, the Rev. W. Barker. My opponent was probably one of the most able and straightforward amongst my numerous antagonists. About this time a severe attack of acute rheumatism prostrated me, and having soon after to visit Italy, I, at first under medical advice, adopted the habit of drinking the light Continental wines, and although continuing an advocate of sobriety, I naturally ceased to take part in any teetotal gatherings.

In the struggle between the Northern and Southern States of America, my advocacy and sympathies went with what I am glad to say was the feeling of the great mass of the English people—in favour of the North; and my esteemed friend, and then contributor, W. E. Adams, furnished most valuable aid with his pen in the enlightenment of public opinion, at a time when many of our aristocracy were openly exulting in what they conceived to be the probable break-up of the United States Republic. During the Lancashire cotton famine I lectured several times in aid of the fund.

I began now also to assume a much more prominent position in the various English political movements, and especially to speak on the Irish Church and Irish Land questions. On the Irish question, I owe much to my late co-worker and contributor, poor Peter Fox André, a thoroughly honest and whole-souled man, whose pen was always on the side of struggling nationalities.

One of the disadvantages connected with a public career is, that every vile scoundrel who is too cowardly to face you openly can libel you anonymously. I have had, I think, my full share of this kind of annoyance. Most of the slanders I have treated with utter contempt, and if I had alone consulted my own feelings, should probably never have pursued any other course. Twice, however, I have had recourse to the judgment of the law—once in the case of a clergyman of the Church of England, who indulged in a foul libel affecting my wife and children. This fellow I compelled to retract every word he had uttered, and to pay £100, which, after deducting the costs, was divided amongst various charitable institutions. The reverend libeller wrote me an abject letter, begging me not to ruin his prospects in the Church by publishing his name; I consented, and he has since repaid my mercy by losing no opportunity of being offensive. He is a prominent contributor to the

Rock, and a fierce ultra-Protestant. He must have greater confidence in my honour than in his own, or fear of exposure would compel him to greater reticence. The other case arose during the election, and will be dealt with in its proper order.

It was my fortune to be associated with the Reform League from its earliest moments until its dissolution. It is hardly worth while to repeat here the almost stereotyped story of the successful struggle made by the League for Parliamentary Reform. E. Beales, Esq., was the President of the League, and I was one of its Vice-Presidents, and continued nearly the whole time of its existence a member of its executive. The whole of my services and journeys were given to the League without the slightest remuneration, and I repeatedly, and according to my means, contributed to its funds. When I resigned my position on the executive I received from Mr. George Howell, the Secretary, and from Mr. Beales, the President, the most touching and flattering letters as to what Mr. Beales was pleased to describe as the loyalty and utility of my services to the League. Mr. George Howell concluded a long letter as follows :— "Be pleased to accept my assurance of sincere regards for your manly courage, consistent and honourable conduct in our cause, and for your kindly consideration for myself as Secretary of this great movement on all occasions." These letters have additional value from the fact that Mr. Beales, whom I sincerely respect, differs widely from me in matters of faith, and Mr. Howell is, fortunately, far from having any friendly feeling towards me. It was while on the Executive of this League that I first became intimately acquainted with Mr. George Odger, and had reason to be pleased with the straightforward course he pursued, and the honest work he did as one of the Executive Committee. Mr. John Baxter Langley and Mr. R. A. Cooper were also amongst my most prominent co-workers.

My sympathy with Ireland, and open advocacy of justice for the Irish, nearly brought me into serious trouble. Some who were afterwards indicted as the chiefs of the so-called Fenian movement, came to me for advice. So much I see others have written, and the rest of this portion of my autobiography I may write some day. At present there are men not out of danger whom careless words might imperil, and as regards myself I shall not be guilty of the folly of printing language

which a government might use against me. My pamphlet on the Irish Question, published in 1866, won a voluntary letter of warm approval from Mr. Gladstone, the only friendly writing I ever received from him in my life.

At Huddersfield, the Philosophical Hall having been duly hired for my lectures, pious influence was brought to bear on the lessee to induce him to break his contract. Fortunately, what in law amounted to possession had been given, and on the doors being locked against me, I broke them open, and delivered my lecture to a crowded and most orderly audience. I was arrested, and an attempt was made to prosecute me before the Huddersfield magistrates; but I defended myself with success, and defeated with ease the Conservative solicitor, N. Learoyd, who had been specially retained to ensure my committal to gaol.

In 1868 I entered into a contest with the Conservative Government which, having been continued by the Gladstone Government, finished in 1869 with a complete victory for myself. According to the then law every newspaper was required to give sureties to the extent of £800 against blasphemous or seditious libel. I had never offered to give these sureties, as they would have probably been liable to forfeiture about once a month. In March, 1868, the Disraeli Government insisted on my compliance with the law. I refused. The Government then required me to stop my paper. I printed on the next issue, "Printed in Defiance of Her Majesty's Government." I was then served with an Attorney-General's information, containing numerous counts, and seeking to recover enormous penalties. I determined to be my own barrister, and while availing myself in consultation of the best legal advice, I always argued my own case. The interlocutory hearings before the Judges in Chambers were numerous, for I took objection to nearly every step made by the Government, and I nearly always succeeded. I also brought the matter before Parliament, being specially backed in this by Mr. Milner Gibson, Mr. John Stuart Mill, and Mr. E. H. J. Craufurd. When the information was called on for trial in a crowded court before Mr. Baron Martin, the Government backed out, and declined to make a jury; so the prosecution fell to the ground. Strange to say, it was renewed by the Gladstone Government, who had the coolness to offer me, by the mouth of Attorney-General Collier, that they would not enforce any penalties if I would

stop the paper, and admit that I was in the wrong. This I declined, and the prosecution now came on for trial before Baron Bramwell and a special jury. Against me were the Attorney-Ceneral, Sir R. Collier, the Solicitor-General, Sir J. D. Coleridge, and Mr. Crompton Hutton. I found that these legal worthies were blundering in their conduct of the trial, and at *nisi prius* I let them obtain a verdict, which, however, I reversed on purely technical grounds, after a long argument, which I sustained before Lord Chief Baron Kelly and a full court sitting in Banco. Having miserably failed to enforce the law against me, the Government repealed the statute, and I can boast that I got rid of the last shackle of the obnoxious English press laws. Mr. J. S. Mill wrote me: "You have gained a very honourable success in obtaining a repeal of the mischievous Act by your persevering resistance." The Government, although beaten, refused to reimburse me any portion of the large outlay incurred in fighting them.

It has always been my ambition to enter Parliament, and at the General Election for 1868 I, for the first time, entered the arena as a candidate. I was beaten; but this is scarcely wonderful. I had all the journals in England except three against me. Every idle or virulent tale which folly could distort or calumny invent was used against me. Despite all, I polled nearly 1,100 votes, and I obtained unasked, but not ungratefully listened to, the public acknowledgments from the Mayor of the borough, also from one of my competitors, Mr. Charles Gilpin, as to the loyal manner in which I had fought the contest through.

During the election struggle libels rained from all sides. One by the late Mr. Capper, M.P., seeking re-election at Sandwich, was the monstrous story, that in the open square at Northampton I had taken out my watch, and defied God to show his power by striking me dead in five minutes. Challenged for his authority, Mr. Capper pretended to have heard the story from Mr. C. Gilpin, M.P., who indignantly denied being any party to the falsehood. I insisted on an apology from Mr. Capper, which being refused, I sued him, but he died soon after the writ was served. The story was not an original invention by Mr. Capper; it had been reported of Abner Kneeland thirty years before, and is still a favourite one with pious missionaries at street corners. A still more outrageous slander was inserted in the *Razor*, a

pseudo-comic weekly. I compelled this journal to give a full apology, but not until after two years' litigation, and a new trial had been ordered. When obliged to recant, the Christian proprietor became insolvent, to avoid payment of the costs. Unfortunately born poor, my life had been one continued struggle, and the burden of my indebtedness was sorely swollen in this and similar contests.

Probably the most severe, and to me certainly the most costly, struggle has been that on the oath question. Formerly it was a fatal objection against the competency of a witness who did not believe in a Deity and in a future state of rewards and punishments. Several attempts had been made to alter the law, but they had all failed; and indeed Sir J. Trevelyan's measures only provided for affirmation, and did not even seek to abolish the incompetency. In a case in which I was plaintiff in the Court of Common Pleas, my evidence was objected to, and I determined to fight the matter through every possible court, and to get the law changed if possible. I personally argued the case before Lord Chief Justice Bovill and a full Bench, in the Court of Common Pleas, and with the aid of the present Mr. Justice Denman and the late Lord Chancellor Hatherly, the law was twice altered in Parliament. Before victory was ultimately obtained I had to carry the case into the Court of Error, and I prepared and sent out at my own cost more than two hundred petitions to Parliament. Ultimately the Evidence Amendment Act, 1869, and the Evidence Further Amendment Act, 1870, gave Freethinkers the right to enter the witness box, and I won my suit. The Christian defendant finished by becoming bankrupt, and I lost a terribly large sum in debt and costs. The original debt and interest were over £300, and the costs of the various proceedings were very heavy.

In the winter of 1870 the Mirfield Town Hall, which had been properly taken and paid for for two nights' lectures, was refused by the proprietors, who barricaded the hall, and obtained a great force of police from the neighbourhood. In order that the law might be clearly settled on this matter, I brought an action to try the question, and although the late Mr. Justice Willes expressed himself strongly in my favour, it was held by Mr. Justice Mellor at *Nisi Prius* that nothing, except a deed under seal or an actual demise, would avail. A mere agreement for a user of a hall was a license revo-

cable at will, even when for a valuable consideration. This convinced me that when hall proprietors break their contracts, I must myself enforce my rights as I did at Huddersfield, and have done in other places.

During the Franco-Prussian struggle I remained neutral until the 4th of September. I was against Bismarck and his blood-and-iron theory, but I was also utterly against the Empire and the Emperor; so I took no part with either. I was lecturing at Plymouth the day the *decheance* was proclaimed, and immediately after wrote my first article in favour of Republican France. I now set to work, and organised a series of meetings in London and the provinces, some of which were co-operated in by Dr. Congreve, Professor Beesly, and other prominent members of the Positivist party. These meetings exercised some little effect on the public opinion in this country, but unfortunately the collapse on the part of France was so complete, and the resources commanded by Bismarck and Moltke so vast, that, except as expressing sympathy, the results were barren. In October, 1870, I, without any previous communication from myself to them, received from the Republican Government at Tours a long and flattering letter, signed by Leon Gambetta, Adolphe Cremieux, Al Glais Bizoin, and Admiral Fourichon, declaring that they, as members of the "Gouvernement de la Defense Nationale, réunis en délégation à Tours," "tiennent à honneur de vous remercier chalereusement du noble concours que vous apportez à la cause de la France." On the 2nd of February, 1871, M. Tissot, the Chargé d'Affaires of France in England, wrote me: "Quant à moi, mon cher ami, je ne puis que constater ici, comme je l'ai deja fait, comme je le ferai en toute occasion, la dette que nous avons contractée envers vous. Vous nous avez donné votre temps, votre activité, votre eloquence, votre âme, la meilleure partie de vous même, en un mot; la France que vous avez été seule à defendre ne l'oubliera jamais." This is probably a too flattering estimate of my services to France, but coming from the official representative of the French Republic, I feel entitled to insert it. In September, 1871, Monsieur Emmanuel Arago, member of the Provisional Government of the 4th of September, wrote the following words upon the letter which had been sent me, as above mentioned, in October, 1870, by the Delegate Government of Tours: "En lisant cette lettre, j'eprouve tres

vivement le regret de n'avoir pu, enfermé dans Paris, joindre ma signature à celles de mes collègues de la délégation de Tours. Mr. Bradlaugh est et sera toujours dans la République notre concitoyen."

During 1870, 1871, and 1872, I held several debates with the Rev. A. J. Harrison, formerly of Huddersfield. The first at Newcastle, in the splendid Town Hall of that place, was attended by about 5,000 persons. The second debate at Bristol, was notable from being presided over by Professor Newman. The third discussion was at Birmingham, and was an attempt at the Socratic method, and the last platform encounter was in the New Hall of Science, London. Of the Rev. Mr. Harrison it is enough I should say that, a few weeks since, when rumour put my life in danger, he was one of the first to write a kindly and unaffected letter of sympathy to Mrs. Bradlaugh.

When the great cry of thanksgiving was raised for the recovery of the Prince of Wales, I could not let it pass without protest. While he lay dangerously ill I had ceased to make any attack on himself or family, but I made no pretence of a grief I did not feel. When the thanksgiving day was fixed, and tickets for St. Paul's were sent by the Lord Chamberlain to working men representatives, I felt it right to hold a meeting of protest, which was attended by a crowded audience in the New Hall of Science.

The "right of meeting" has given me three important occasions of measuring swords with the Government during the last few years, and each time defeat has attended the Government. The first, the Hyde Park meeting, where I acted in accord with Mr. Beales, to whom as chief, let the honour go of this conflict. The second was on the 31st July, 1871, under the following circumstances. A meeting had been held by Mr. G. Odger and some of his friends in Hyde Park, on Sunday, the 30th of July, to protest against the grant to Prince Arthur; this meeting was adjourned until the following evening. Late on the Sunday afternoon, the adjourned meeting was forbidden by the Government. Early on Monday morning Mr. Odger applied to me to give the friends the benefit of my legal knowledge and personal influence. I consented, and the Government persevering, I took my share of the responsibility of the gathering, and signed with Mr. Odger a new notice convening the meeting. The Home Office not

only served us also with a written prohibition, but threatened and prepared to use force. I immediately gave Mr. Bruce notice that the force would be illegal, and that it would be resisted. At the last moment, and in fact only some half hour before the meeting commenced, the Government abandoned its prohibition, and an enormous meeting of a most orderly character was held in absolute defiance of the authorities.

The more recent case was in December, 1872, when finding that Mr. Odger, Mr. Bailey, and others, had been prosecuted under some monstrous and ridiculous regulations invented by Mr. Ayrton, I, on my own responsibility, determined to throw down the gauntlet to the Government. I did this most successfully, and soon after the opening of Parliament the obnoxious regulations were annulled.

It is at present too early to speak of the Republican movement in England, which I have sought, and not entirely without success, to organise on a thoroughly legal basis. It is a fair matter for observation that my lectures on "The Impeachment of the House of Brunswick," have been delivered to crowded audiences assembled in some of the finest halls in England and Scotland, notably the Free Trade Hall, Manchester, the Town Hall, Birmingham, the Town Hall, Northampton, and the City Hall, Glasgow. It is, as far as I am aware, the first time any English citizen has, without tumult or disorder and in buildings belonging to various Municipalities, directly challenged the hereditary right of the reigning family.

In penning the foregoing sketch I had purposely to omit many facts connected with branches of Italian, Irish, and French politics. I have also entirely omitted my own struggles for existence. The political parts are left out because there are secrets which are not my own alone, and which may not bear full telling for many years to come. The second, because I hope that another year or two of hard work may enable me to free myself from the debt load which for some time has hung heavily round me.

THE REAL

REPRESENTATION OF THE PEOPLE.

BY C. BRADLAUGH.

La multitude qui ne se reduit pas à l'unité est confusion. L'unité qui n'est pas multitude est tyrannie.—PASCAL.

La multitude, c'est la société: l'unité, c'est la verité—c'est l'ensemble des lois de justice et de raison qui doivent gouverner la société.—GUIZOT.

Government is a contrivance of human wisdom to provide for human wants. Men have a right that these wants should be provided for by this wisdom.—BUCKLE.

ANY one reading the parliamentary debates of 1793 to 1798, and again those immediately preceding the passing of the Reform Bill in 1832, will at once perceive how much of political power has been conceded by the governing classes to the governed on a pressure from without, and how little concession has been obtained by the people from their rulers from a sense of justice, when the demand has been unaccompanied by a powerful popular agitation. Enlargements of political privileges have been granted not cheerfully, but with fear and murmuring, and after a long and angry resistance. In the late debates on the reform question in the House of Commons, the working classes were, with some justice, upbraided for their apathy, yet when formerly active in their own interest they were not unfrequently the victims of state prosecutions for treasons and misdemeanours. I desire to see renewed political activity, believing that the present enormous and wasteful expenditure of the English Government calls for interference on the part of the people, who are the contributors of the great bulk of the revenue. Such an interference is only usefully practicable when a wide extension of political power has been obtained by the masses, and an alteration of the suffrage has rendered the House of Commons something nearer an assembly of the people's representatives. The unenfranchised are at the present time politically at the mercy of their more favoured brethren, and this subjection of one class to another is most disastrous in its effects on

both. That men educated as are the English people should be controlled without the right to express an effective opinion as to the direction of such control, is a wrong demanding speedy remedy.

Believing it to be impossible that the masses can in the future rest satisfied for a period of any considerable duration without the enactment of some measure of parliamentary reform, and knowing that the attainment of a successful issue on the part of the people to any reform agitation must depend on the justice of the measure agitated for, and on the ability of the agitators to enforce their demands by sound argument, I deem it my duty to bring specially before the working classes, who are most interested in the renewal of a movement for reform, certain views which appear to me of vital importance to them, and which are promulgated by a writer who declares that "the problem of constitutional organism is, in what manner the individuals composing the entire community are to be classed, so that no opinions or interests shall be unheard, or extinguished in representation;" and who quotes with approval the statement of Guizot, that "the object of representative government is to examine publicly the great interests and diverse opinions which, while dividing society, seek to overcome each other, in the just confidence that out of their debates will grow the knowledge and adoption of those laws and measures which best conduce to the interests of the country. This object is only attained by the triumph of a true majority, the minority constantly being present and heard. If the majority is displaced by artifice, the result is falsehood. If the minority is excluded from the discussion, it is an oppression. In either case the principle of representative government is corrupted." The writer to whom I refer is Mr. Thomas Hare, of whom John Stuart Mill, in the supplement to his treatise on Parliamentary Reform, says that "he has raised the principle of the Representation of Minorities to an importance and dignity which no previous thinker had ascribed to it."

Holding, as I do, the opinion that every sane human being unconvicted of crime should have the means of

exercising, through the electoral suffrage, an influence on the management of the public affairs of the state in which he or she is resident, I have been rejoiced to find in Mr. Hare's book an unfailing reply to one of the most vital objections made by those who contend against any considerable extension of the franchise to the masses. This objection was embodied by Mr. Burke in his expression of fear of a democratic majority, and is thus stated by Mr. Mill, who asks, "Why is nearly the whole educated class united in uncompromising hostility to a purely democratic suffrage? Not so much because it would make the most numerous class, that of manual labourers, the *strongest* power; *that* many of the educated classes would think only just. It is because it would make them the *sole* power, because in every constituency the votes of that class would swamp and politically annihilate all other members of the community taken together." That is, the minority who at present govern by the unjust exclusion of the masses from the exercise of the suffrage, claim to perpetuate this injustice, and to retain to themselves the usurped dominance, because they anticipate, at the hands of the people, the same kind of wrong which the masses suffer from them—namely, political annihilation. This political death (which occurring to any body of citizens is a most grievous injury to the state) has terror for the upper 10,000, notwithstanding which, they appear to deem it the rightful fate of the lower 10,000,000. John Stuart Mill says, "A person who is excluded from all participation in political business is not a citizen He has not the feelings of a citizen. To take an active interest in politics is, in modern times, the first thing which elevates the mind to large interests and contemplations; the first step out of the narrow bounds of individual and family selfishness, the first opening in the contracted round of daily occupations. The person who in a free country takes no interest in politics unless from having been taught that he ought not to do so, must be too ill informed, too stupid, or too selfish, to be interested in them; and we may rely on it that he cares as little for anything else which does not

directly concern himself or his personal connections. Whoever is capable of feeling any common interest in his kind, or with his country, is interested in politics; and to be interested in them and not wish for a voice in them is an impossibility. The possession and the exercise of political, and among others of electoral rights, is one of the chief instruments both of moral and intellectual training for the popular mind; and all governments must be regarded as extremely imperfect until every one who is required to obey the laws, has a voice, or the prospect of a voice, in their enactment and administration" At present a fraction only of the community have a right to vote, the user of this right is far from complete, and a majority of the so-called representatives of the people are returned to the House of Commons by a minority of that fraction; so that, in fact, the minority of a minority rule the nation. This is clearly wrong, and the apology by the governing classes that theirs is the educated minority is deprived of much of its force on examination. Educated are the governors? Not so much in the wants of the poor as in the pauper toiler, not so fully in the needs of labour, as is the factory *employé;* in each phase of the labourer's existence various wrongs need remedy, and it is only in the living through these poor men's miseries that men can be educated to their full comprehension. There are many questions in the discussion of which the working classes are most fittingly educated to entitle them to a voice, and on which they have need as well as right to be heard by representatives from their own ranks. The pretence of education on the part of the politician is sometimes a tinsel, covering the most complete ignorance of the political requirements of the nation. An educated minority so misgoverned the uneducated majority of France that at last more than half a century of bitter wretchedness and starvation culminated in the decapitation of a king and a bloody convulsion of the nation. An educated minority in Austria at the present day rule by force against the will of the Hungarian, Venetian, and Gallician peasantry, and revolts and repressions result.

In our own country it has been the educated classes who

have impeded the education of their poorer brethren by the imposition of taxes on knowledge, and a variety of restrictions on the liberty of the press. To use the language of Mr. Buckle, "they could hardly have done worse if they had been the sworn advocates of popular ignorance." Especially have they hindered the diffusion of political information, and the pillory, prison, and transportation were the arguments used against the early instructors of the masses in their duties as citizens. The right to diffuse political knowledge amongst the crowd has been won by slow and painful processes, and in defiance of state trials, government-favouring judges, and county jails. No wonder that the masses have rested ignorant so long.

In England, even now, an educated minority waste in extravagant state expenditure million after million, coined by the hand labour of the political nonentities, who pay the taxes, and are deemed sufficiently educated to obey laws they have no share in making. Amongst the governing classes are some who from mean and selfish motives sustain a state of things which finds sinecures for younger sons; but there are many even in pure Belgravia who would willingly accord to the working man some share in the government, but who fear that if the right of suffrage be attained by the people, it will be used to destroy politically the whole of those in whom political power is at present vested. These urge that in every country, city, and borough the artizans and labourers outnumber the men of property and birth, and they declare their conviction that in a House of Commons returned by universal suffrage, there would be no justice done to the rights of property. If this argument were true to its fullest extent, it would only serve to show that those who have possessed the fullest opportunities for developing the national will, have not used their opportunities for the good of the nation. It can hardly be denied that the governing classes of the country have had to a great extent the power of controlling the education of the people, nor can it be contended that this power has been so advantageously used as it might have been if the real elevation of the masses had been sought.

So that in effect I reply, that even if the result of conceding to the working classes their political rights were as disastrous to the aristocracy as the most timid contemplate, yet even then there is no valid excuse for the withholding such political power from the people. Mr. Hare's proposal, which I desire to have discussed by my readers, meets this objection; and while he does not contend for such an extension of the suffrage as I should consider just, he proposes a scheme under which I conceive it possible to obtain the real representation of the people in the English House of Commons. Mr. Hare looks upon the Parliament House as a place where minorities, heresies, and protests of all sorts should be represented and entitled to a hearing; and in order to attain this he has in a most masterly manner framed a measure which should be fully examined by the people; for so long as the working classes are denied justice, and are not admitted to the suffrage in so ample a manner as to outnumber the upper class electors, it is to the working men that Mr. Hare's bill is peculiarly beneficial; and I trust that even if universal suffrage were obtained to-morrow the people would know that a permanent and progressive democracy can only subsist usefully by permitting its opponents to be heard in the national deliberative assembly. Guizot says that "an electoral system which in the formation of the deliberative assembly annuls in advance the influence and participation of the minorities, destroys the representative government, and would be as fatal to the majority as a law which in a deliberative assembly compelled the minority to remain silent."

At present elections are purely local, and the minority of electors in a particular borough are not only unrepresented, but are misrepresented. Of late several modes have been suggested for giving an effective voice to a minority; by limiting each elector to fewer votes than the number of members to be elected, or allowing him to concentrate all his votes on the same candidate. These various schemes are praiseworthy so far as they go, but they attain the object very imperfectly.

All plans for dividing a merely local representation in

unequal ratios, are limited by the small number of members which can be, and the still smaller which ought to be, assigned to any one constituency. There are considerable objections to the election even of so many as three by every constituent body. This, however, under present arrangements, is the smallest number which would admit of any representation of a minority, and in this case the minority must amount to at least a third of the whole. All smaller minorities would continue, as at present, to be disfranchised; and in a minority of a third, the whole number must unite in voting for the same candidate. There may, therefore, be a minority within the minority who have sacrificed their individual preference, and from whose vote nothing can with certainty be concluded but that they dislike less the candidate they voted for, than they do the rival candidate."* Mr. Hare would have principles represented rather than places, and he would not confine the voters to a local candidate, but would widen their sphere of choice, and permit the vote to be given to any one who was a candidate for election anywhere in the kingdom. That is, supposing there to be in all 658 members of parliament, and a total of 1,316,000 electors throughout the kingdom voting at a particular election, he would divide the latter by the former, thus leaving a quotient of 2000, and he would allow any candidate who obtained 2000 votes throughout the whole kingdom to be returned to parliament. This would much modify the constitution of the House, even without any extension of the suffrage. For example, there are the various Trades' Unions unrepresented in parliament, and although numerically strong, they are spread over a wide surface, and are so weak in suffrage power in any given town or borough, that there is probably no locality where the Trades' Unions would have the ghost of a chance to carry a candidate; but given all Great

* These semi-dissentients might even amount to a majority of the minority; for (as Mr. Hare remarks) if fifty persons agree to combine their strength, who, left to themselves, would have divided their votes among ten candidates, six of the fifty may impose their candidate on all the rest, though perhaps only relatively preferred by them.

Britain, and a hundred votes in one city, and twenty in that borough, and ten in this town, and five in that village, and so on, and the quotient may be attained, and the Trades' Union may pick their best man, and compel parliament to receive him. So with the Co-operative societies, the Odd-Fellows, and other large friendly societies. All these with their wide influences, might gather the necessary number of votes from different corners of the realm. This portion of Mr. Hare's scheme provides for the representation of every minority of not less than 2000 electors and the representation is more nearly equalised than is otherwise possible. Every candidate who is elected can boast that he is the representative of a constituency unanimous in their desire for his return, and no voter can complain that he is misrepresented by a man he has voted against. Some candidates of great popularity will probably get more than the quota of votes required, and if all these were counted for him, the House would be deficient of members, as none are to be returned who do not obtain the quota. To obviate this, Mr. Hare proposes that no more than the necessary quota of votes shall be counted to any candidate, and that whoever obtains that number shall be declared duly elected; all surplus votes being transferred to some one else. For this purpose the elector is to put on his voting paper more than one name, so that if the first named have elsewhere the necessary suffrages, then the vote passes to the second, or in case he shall already have sufficient, then to the third, or fourth, or fifth, or sixth, or seventh, and so on. Thus while the vote would in any case only be counted for one candidate, it would be sure to be counted for some candidate, and would not be thrown away as many votes are at present. John Stuart Mill regards it as certain that this scheme would, if carried out, prodigiously improve the *personnel* of the national representation. "At present, were they ever so desirous, a great majority of the most distinguished men in the country have little or no chance of being elected anywhere as members of the House of Commons. The admirers, and those who would be the supporters, of a person whose claims rest on acknowledged

personal merit, are generally dispersed throughout the country, while there is no place in which his influence would not be far outweighed by that of some local grandee, or *notabilité de clocher*, who neither has, nor deserves to have, the smallest influence anywhere else. If a man of talents and virtue could count as votes for his return all electors in any part of the kingdom, who would like to be represented by him, every such person who is well known to the public would have a probable chance; and under this encouragement nearly all of them, whose position and circumstances were compatible with parliamentary duties, might be willing to offer themselves to the electors. Those voters who did not like either of the local candidates, or who believed that one whom they did not like was sure to prevail against them, would have all the available intellectual strength of the country from whom to select the recipient of their otherwise wasted vote. An assembly thus chosen would contain the élite of the nation."

The improvement anticipated would not be confined to representatives of minorities, better men would be chosen on either side. "A member who had already served in parliament with any distinction, would under this system be almost sure of his re-election. At present the first man in the House may be thrown out of parliament precisely when most wanted, and may be kept out for several years, from no fault of his own, but because a change has taken place in the local balance of parties, or because he has voted against the prejudices or local interests of some influential portion of his constituents." Instances of this have occurred, and will be familiar to the reader. "Under Mr. Hare's system, if he has not deserved to be thrown out, he will be nearly certain to obtain votes from other places, sufficient, with his local strength, to make up the quota of 2000 (or whatever the number may be) necessary for his return to Parliament. Consider next the check which would be given to bribery and intimidation in the return of members to Parliament. Who by bribery and intimidation, could get together 2000 electors from a hundred different parts of the country? Intimidation would have no means

of acting over so large a surface; and bribery requires secresy, and an organised machinery, which can only be brought into play within narrow local limits. Where would then be the advantage of bribing or coercing the 200 or 300 electors of a small borough? They could not of themselves make up the quota, and nobody could know what part of the country the remaining 1700 or 1800 suffrages might come from. In places so large as to afford the number of 2000 electors, bribery or intimidation would have the same chances as at present. But it is not in such places that, even now, these malpractices are successful. As regards bribery (Mr. Hare truly remarks), the chief cause of it is, that in a closely contested election where certain votes are indispensable, the side which cannot secure those particular votes is sure to be defeated. But under Mr. Hare's plan no vote would be indispensable. A vote from any other part of the country would serve the purpose as well: and a candidate might be in a minority at the particular place and yet be returned."

In each election the votes are necessarily given by voting papers, bearing the name and address of the speaker, which are preserved, each quota being kept distinct, and in case of a vacancy occurring by death, or otherwise, the returning officer in direction from the voter is to send a circular letter to each of the electors forming the constituency of the member who had filled the vacant seat with a list of the new candidates, and the candidate obtaining the largest number of suffrages out of such constituency will be returned as duly elected to the vacant seat.

In the event of a member accepting office under government, a circular letter is to be sent to the constituency represented by that member, informing them thereof, and unless in reply at least one fourth express their dissent, the representative who has so accepted office under government will not vacate his seat.

While Mr. Hare's plan does not propose to equalise the electoral districts in any of the modes heretofore suggested, it of course fulfils the whole object of those who desire this equalisation; and, unlike all other schemes, is self-adjusting, the quota being declared at each election as before stated.

There are other points as to the ballot, the suffrage, disqualification of members, &c., upon which some differences of opinion may be expected. Mr. Hare objects to the ballot, and in another pamphlet this shall be fully discussed. The subject is of too much interest to dismiss here in a few lines only. Mr. Hare evidently hopes that undue influence will be so guarded against and checked by the heightened standard of electoral morals induced in the working out of the scheme of personal representation of which he is the author, that he provides for open voting by voting papers, signed by the elector, and these are to be delivered by the voter personally at the polling booth, save under special circumstances.

Mr. Hare's views on the suffrage are that the qualification should be accessible to every man when he acquires a home and settles to an occupation in life. He says with reference to woman, that given the same qualification as the man, there is no sound reason for excluding her from the parliamentary franchise. He would not disqualify judicial officers, clergymen, or officials from becoming representatives. Numerous readers will doubtless agree in thinking that too many probable causes of mischief abound in the adoption of this item. The Judge on the Bench who may have to try a political prisoner should be kept as free as possible from party bias. The system of government in England will most certainly have to undergo a thorough purification before civil service appointments can cease to be regarded as possible wages for ministerial support. He condemns the payment of members, but would limit each candidate's election expenses to £50. This sum would be a sort of guarantee against crowding the lists with sham candidates.

All the present machinery of elections would be thrown out of gear by the successful introduction of Mr. Hare's views. We should no longer have the inhabitants of each place divided into parties seeking to return their candidate against the desire of the political opponent. Instead of the elections being, as now, a contest for power in which some get their representative elected, and some vote and see all

their labours fruitless, and their political effort entirely wasted, we should have the election an endeavour to select the ablest representative, each voter knowing that if he had anywhere in the country a quota of sympathising electors, he was sure of being represented in Parliament by the man of his choice. At present our electoral system divides the voters into adverse parties arrayed under formal names, and prevents the expression of the true and individual opinions of the members of either party. "It lowers the force of thought and conscience, reduces the most valuable electoral elements to inaction, and converts the better motives of those who act into an effort for success, and a mere calculation of the means of accomplishing it." Mr Hare's plan would enable the individual expression of opinion to become a reality, not a sham; it would develop a more self-reliant tone in those electors who at present are crushed out of vigour by the consciousness of their numerical helplessness. It would enable them to enter the House of Commons gathering their votes from east, west, north, and south, who under the present system could never get a majority in any one place, and who yet perhaps are better entitled to rank themselves as representative men in the country than are half the elected members of the Commons House of Parliament.

Those people who have not yet the suffrage right should submit Mr. Hare's views to careful investigation, in order to ascertain whether the bill he proposes would, if enacted, result, as I firmly believe it would, in increasing their opportunities of acquiring the franchise, by placing in Parliament various men having knowledge of and trusted by the people, to whom parliamentary action is at present impossible. Those who hold the reins of government entirely in their own grasp should seriously consider whether it would not be far wiser to carry such a measure now they have the ability, and while there is no hostile popular pressure, than to wait until a stormy reformation has swept them from power, and a manhood suffrage, conceded to the agitated masses to prevent a continuance of riot and revolt, has politically annihilated the classes who have hitherto usurped the

entire government of the state. The governing minority might in a time of political repose, such as the present, gracefully enact Mr. Hare's measure on the ground that it was just and beneficial to the people; although, notwithstanding that it will be equally just in the next generation, its future benefits will be special to themselves. It would, however, be difficult for the minority of high birth and great estates to obtain the enactment for themselves from an irritated and overwhelming majority of a measure which, when themselves powerful, they had refused.

It is desirable that both sides should regard the question of the political enfranchisement of the people as of equal interest and common benefit. To adopt a phrase of Burke's, politics ought to be adjusted to human nature, and the proper business of the government ought to be to ascertain the general wish and requirements of the nation, legislating in accordance therewith. In one of his speeches the eloquent calumniator of the French Revolution said, "The people will have it so, and it is not for their representatives to say nay;" yet either of the members now sitting for Manchester may hear that the non-electors, inhabitants of that city, have assembled to the number of 40,000 in front of the Infirmary, declaring in favour of some measure, and he may, under present circumstances, altogether disregard their united voice, because politically they are dumb. Each individual of the 40,000 may be a tax-paying, law-observing machine, but he is destitute of any rights as a citizen: he has no vote, no voice in the government of his country. The Imperial Parliament is elected without his sanction, he contributes no choice, has no part in its selection; all his duty is to obey its edicts, his privilege to pay and pine.

That a great political struggle is impending, must be evident to every student of history. In every nation of the world, each period of assault by the governed on their governors for the obtainment of some share in the right to manage the business of the nation, has been preceded by a strong expression of heretical views. This is natural, for what is the latter but the manifestation of an education incon-

sistent with political slavery? While the masses are ignorant they believe everything and remain without the suffrage, but as they are gradually educated to confute the delusions of their ancient teachers, the superstitionists who frightened their children with bogey, so they are also educated enough to dispute the dictum of the great landed aristocracy who treat the nation as in its babyhood, and declare it incapable of self-government. At the present moment the nation, by its wide and fast increasing out-uttered heresy, manifests a rapid extension of education, and I therefore do not believe that it will wait for a very long time before its attention is turned to the achievement of some such result as the real representation of the people in Parliament.

No conclusion can be fitter for this brief pamphlet than the renewed recommendation to our readers to obtain for themselves Mr. Hare's volume, of which Mr. Mill says that —"it deserves a high rank among manuals of political thought," and that "the system it embodies will be recognised as alone just in principle, as one of the greatest of all practical improvements, and as the most efficient safeguard of further parliamentary reform."

GEORGE

PRINCE OF WALES;

WITH RECENT CONTRASTS AND COINCIDENCES.

THE LIFE OF GEORGE PRINCE OF WALES,

WITH RECENT CONTRASTS AND COINCIDENCES.

"'God save the King!' It is a large economy
In God to save the like; but if he will
Be saving all the better: for not one am I
Of those who think damnation better still."—BYRON.

GEORGE AUGUSTUS FREDERICK PRINCE OF WALES, was born on August 12th, 1762. He was the son of George III. by the Queen Sophia Charlotte. George III. was thrice married, once privately in 1759, at Curzon Street Chapel, May Fair, to Hannah Lightfoot, a Quakeress, and afterwards on September 18th, 1761, publicly to the Princess Sophia Charlotte of Mecklenberg Strelitz. As Hannah Lightfoot was living at the time of the second marriage, the offspring of that bigamous union would have been illegitimate if George III. had not been King of England. Fortunately it is one of the maxims of our glorious constitution, that the King can do no wrong; besides which, the marriage with Hannah Lightfoot has been positively denied, although it is said that the Earl of Abercorn and Lord Harcourt, amongst others, informed Queen Charlotte of the actuality of the first marriage. I accept the denial, even in the teeth of the fact, for a royal denial, as was shown in the case of the Fitzherbert marriage, of the Duke of York scandal, and of the Mordaunt divorce, is of greater value than any evidence; and in this case I accept the denial of the Lightfoot marriage the more readily, as if the story of that union were true it would cast grave doubts on the right of Her Most Gracious Majesty to reign over us. The only title English monarchs have to their crowns—and it must be admitted that this title is an all-sufficient one—is that of hereditary right. The monarchs of some countries have been selected by their peoples: our kings and queens are bred from special foreign stocks, and inherit the right to reign just as other persons inherit entailed estates, and any blot on the legitimacy would weaken the right. It is some comfort to know that George III. married Queen Charlotte

twice, the second marriage being solemnised at Kew, in 1765; but whether Hannah Lightfoot was then dead or alive is a matter on which it is difficult to express an opinion. At any rate, if there had ever been any doubt as to the legitimacy of George Prince of Wales, the second solemnisation of the marriage with Sophia Charlotte may give all loyal subjects more ease of mind as to the title of the later born members of the Royal Family. Those who argue that Hannah Lightfoot died in 1765, make strange suggestions as to a severe attack of mental disease, which, commencing at this time, although partially repressed, ultimately reappeared, and many years after terminated in the absolute idiocy of George III.

There is a great contrast between the parents of Prince George and those of the present Prince of Wales. The late Prince Consort is known as Albert the Good, and the statues erected through the country testify more strikingly than his many less known grand deeds, to the great esteem in which his memory is held by all loyal Englishmen; but George III. was described by Lord Brougham in the following fashion:—"Of a narrow understanding, which no culture had enlarged; of an obstinate disposition, which no education perhaps could have humanised; of strong feelings in ordinary things, and a resolute attachment to all his own opinions and predilections, George III. possessed much of the firmness of purpose which, being exhibited by men of contracted mind without any discrimination, and as pertinaciously when they are in the wrong as when they are in the right, lends to their characters an appearance of inflexible consistency, which is often mistaken for greatness of mind, and not seldom received as a substitute for honesty. In all that related to his kingly office he was the slave of deep-rooted selfishness; and no feeling of a kindly nature ever was allowed access to his bosom whenever his power was concerned." So one who had a fair opportunity of judging writes of the father, and the criticism may aid us to understand his son. It is said that on some rare occasions, George III. could be privately and munificently generous; the name of the father of our present Prince of Wales figured in many public lists of charitable subscriptions, but

it has never been suggested that he in any way concealed the natural liberality of his disposition. George IV. was by letters patent created Prince of Wales and Earl of Chester; as first born, he was Duke of Cornwall and of Rothesay, Earl of Carrick and Baron of Renfrew. The present Prince of Wales was also created Earl of Dublin, a title afterwards deserved by his praiseworthy exertions at Punchestown Races for the amelioration of the condition of the Irish people. When George Prince of Wales was only nineteen, he became with his brother Frederick, who was not only Duke of York, but was elected Bishop of Osnaburgh when eleven months old, the subject of much hostile comment. One writer says, "at this period the Prince and his eldest brother were associated in dissipation of every species: their love of gaming was proverbial, and their excess of indulgence in voluptuousness was sufficient to drain the resources of the country."

How great the contrast between the conduct of these two royal princes and that of the present Prince of Wales and his brother the Duke of Edinburgh. Omitting the Continental papers, some of which have dared to print suggestions as to the habits of the first, and the Colonial papers, some of which have been wicked enough to charge the second with open and notorious licentiousness, and leaving as unworthy notice Sir Charles Mordaunt's reference to "the previous bad character" of the present heir-apparent, we defy the finger of slander to touch in any of our respectable journals the slightest remark of a depreciatory character against either of our well-beloved royal princes; except some provincial journal like the *Royal Leamington Chronicle*, or cheap paper like *Reynolds's*, all our free and independent press writers agreeing in testifying to the purity of the living scions of the House of Brunswick. George Prince of Wales called himself Florizel, and his *liaison* with Mary Robinson as Perdita was one of the most notorious amongst the escapades of his early life. Mrs. Baddeley states that it commenced when the Prince was little more than fourteen. "But," asks Thackeray, "shall we take the Leporello part, flourish a catalogue of the conquests of this royal Don Juan, and tell the names of the favourites to

whom one after the other Prince George flung his pocket-handkerchief? What purpose would it answer to say how Perdita was pursued, won, deserted, and by whom succeeded?" As Thackeray refrained with George, so we refrain with Albert Edward, and from Broadwood downwards draw a discreet veil of reticence which only hides from those who cannot see:—

> "Who has a thing to bring
> For a gift to our lord the King,
> Our King all Kings above?
> A young girl brought him love;
> And he dowered her with shame,
> With a sort of infamous fame,
> And then with lonely years
> Of penance and bitter tears.
> Love is scarcely the thing
> To bring as a gift for our King."

The marriage of Prince George, in 1786, to Mrs. Fitzherbert, gained additional *éclat* from the fact that George is said to have written a letter to Charles James Fox, authorising him to deny in Parliament that the formal solemnity had ever taken place. Thackeray's answer ought to have been given to Mr. Rolle, in the House of Commons, in lieu of that spoken by C. J. Fox, who is alleged to have been present at the marriage, and yet asserted to the Legislature, if Hansard be reliable, that "it never did happen." The author of "Vanity Fair" says that George "did actually marry Mrs. Fitzherbert according to the rites of the Roman Catholic Church; that her marriage settlements have been seen in London, and that the names of the witnesses to her marriage are known." Yet, of what avail is an author's word against the denial of a Prince? When George attained his majority he had an allowance of £50,000 per annum, together with a grant of £60,000 for furnishing Carlton House. When Albert Edward attained his majority he had £40,000 a year voted him by Parliament, he had the income of the Duchy of Cornwall, exceeding net £60,000 per annum, and he had the enormous accumulations of his minority, amounting to something like a million sterling. Neither George

Prince nor Albert Edward Prince limited his expenditure to the amount of his income. The debts of George came before the Parliament; the pecuniary embarrassments of Albert Edward, although matter of common talk in some circles, are at present better concealed. The House of Commons in 1787, voted about £160,000 for the payment of the Prince of Wales's debts, solemn pledges of economy for the future being given by, and on behalf of, the royal insolvent. It is a question whether the present Parliament would vote, and whether the country would submit to a repetition of such a payment. In 1788, George III. was mad, and no greater proof can be advanced of the perfect and unimpeachable character of our monarchy than the fact that, with an insane head, the Government went on quite as well as when he was in possession of all his faculties. The mere fact that Jamaica had mutinied, that the American Colonies had broken our oppressive yoke, and that Ireland was held by force and fraud, must not be allowed to militate against our approval of George's reign. That war cost during it more than £1,200 000,000, renders the memory of George III. as dear to us, as the King was in life to the members of the London Corresponding Society. I know that one furious Radical, Earl Grey, speaks as if the monarchy were always better without the King than with him, for he declares that "the highly beneficial custom of holding Cabinet Councils without the presence of the Sovereign arose from George I. not knowing English." And Earl Grey had the audacity to publish this in the reign of her present Majesty, whose constant help and aid in the government of the nation is known to be so highly valuable. I once heard a public lecturer, describing the crowned head of this great empire, say—"What is the position which England's monarch occupies in the great vessel of the State? He is not the paddle-wheel nor the screw, neither the mast, the sails, the rigging, the bulwarks, nor the keel; he is the highly decorated figure-head, always costly, not always handsome, and never useful."

In consequence of the state of mind of George III., debates took place in the House of Commons as to the Regency. The friends of the Prince claimed it for him as

a right; Pitt, on the contrary, maintained the terribly revolutionary doctrine, that in the event of incapacity on the part of the reigning monarch, the right to nominate the Regent rested with the Parliament. Everyone will see that this is a most dangerous doctrine, for it is equivalent to declaring that the nation has the legal right to select its own ruler on any vacancy occurring in the occupancy of the throne. Fortunately, the King temporarily recovered his reason. When sane, George III. bitterly disliked his eldest son, and showed that dislike in various fashions—the King and heir apparent were seldom or never seen together. To-day no such division can be shown between the reigning monarch and Crown Prince; and although it is true that on the recent royal visit to the City the Prince of Wales was unavoidably absent, it must not be forgotten that immediately his royal mother had left London for Windsor, Albert Edward delighted all loyal citizens by his attendance the same evening at one of the new theatres. George Prince of Wales was called the first gentleman in Europe; that is, he was so styled while he was alive, although posthumous critics have disputed his claim to the title; no such dispute is, however, likely to arise in any case with reference to the present Prince of Wales. His royal thoughtfulness for his guests, the sons of the Viceroy of Egypt, when a careless coachman had overturned them in the mud, will remain an ineffaceable testimony of his sensitive and well-trained nature. George is said to have been praised, and not unduly, for his highly cultivated mind, his elegant accomplishments, and his personal graces. Albert Edward has been honoured in the cartoon of the *Tomahawk* with a pictorial epitome of *his* elegant accomplishments.

In 1788, 1789, and 1790, in order to raise money, George Prince of Wales, Frederick Duke of York, and William Henry Duke of Clarence, issued joint and several bonds, bearing interest, and payable within six months after either of them should ascend the throne. These bonds were issued to an extent in all of nearly one million sterling nominal, but were of course placed at heavy discount. The holders, who were mostly foreigners, were prevented from being importunate creditors by deportation under the Alien Act

from this country, and by accusations of treason in their own land. In 1794, the Prince of Wales owing then about £650,000, a bargain was made that George should marry his cousin Princess Caroline Louisa of Brunswick, and that the nation should not only pay all his debts, but also increase his annual allowance. George wanted his debts paid, but did not want to marry, and the copy of a letter is preserved, from him to his proposed spouse, in which he asks her to refuse to marry him, tells her that he loves another woman, and finally winds up: "You would find in me a husband who places all his affections upon another. If this secret which I name to you in confidence does not cause you to reject me; if ambition, or any other motive of which I am ignorant, cause you to condescend to the arrangements of my family, learn that, as soon as you shall have given an heir to the throne, I will abandon you, never to meet you more in public." It is wonderful how any woman could have married a man writing her such a letter. George said, "You cannot accuse me of having deceived you." Not only were the £650,000 debts paid, and the Prince's allowance increased from £60,000 to £100,000 per annum, but £71,000 additional was voted for plate, jewels, and marriage sundries, at Carlton House. Six months after the marriage the starving poor cried, "Give us bread," "No famine." King George III. was pelted on his way to open Parliament, and, when he arrived at Westminster, was so frightened "that," says a Parliamentary writer, "his face was flushed and swollen, his eyes were momentarily turned from side to side, and his manner evinced the utmost perturbation." In great fear the Treason and Sedition Acts were hurried through Parliament.

It is alleged that George asked for a glass of brandy after his first interview with his bride elect, and that when he was married, on April 8th, 1795, he did not even remain sober on the wedding-day. No such disgraceful charge could be repeated against Albert Edward, whose constant sobriety, at home and abroad, might serve as an example for loyal temperance lecturers. That *La Cigale* should pretend against our prince, habits more like those of his princely predecessor, is an illustration of the licence of the foreign

press, and that rumour should suggest an instance of public insobriety on the Boulevard des Italiens, shows how far mud may be thrown at royal ermine of the most spotless purity. Thackeray speaks of how George "reeled into chapel to be married; how he hiccupped out his vows of fidelity."

A daughter was born to Prince George on January 7th, 1796. She was named Charlotte Augusta, and immediately after her birth, Prince George, as he threatened, separated himself from his wife.

In 1803, the excesses of Prince George caused him further embarrassment, and £60,000 a-year extra were for three years and a half devoted to the liquidation of his liabilities. Who dare write at length the names of the women—some titled and fashionable—who helped to spend this money? In the Duke of Buckingham's letters, vague references at a later date to one titled dame might be explained in regard to the expenditure of this period:—

"Who has a thing to bring
For a gift to our lord the King?
A harlot brought him her flesh,
Her lusts, and the manifold mesh
Of her wiles intervolved with caprice;
And he gave her his realm to fleece,
To corrupt, to ruin, and gave
Himself for her toy and her slave.
Harlotry's just the thing
To bring as a gift for our king."

The Marchioness of Conyngham, one of the many temporary wives of this modern Solomon, amongst other gifts, had jewels value £80,000. Lady Jersey, another favourite, shared in the work of spoiling the Egyptians. Thackeray says, that the Prince of Wales' turf experiences were unlucky as well as discreditable. He was accused of cheating with his horse Escape, and although of course acquitted, left the Jockey Club in consequence. The Prince living separate from the Princess of Wales, all kinds of rumours were circulated, one allegation being that since the living apart, another and illegitimate child had been born to her, and a Royal Commission, including the Lord Chancellor and Lord Chief Jus-

tice of England, was issued to investigate these slanderous allegations; the official report made is supposed to have thoroughly cleared Princess Caroline's character, and to have demonstrated the most wicked conduct on the part of Queen Sophia Charlotte and Prince George, but King George III. "directed it should be destroyed, and every trace of the proceedings on the affair buried in oblivion." William Cobbett, however, obtained a copy of all the depositions, either from the Princess of Wales, or from Mr. Perceval, and printed them in a special number of his *Political Register*. In a letter printed some time after her acquittal, the Princess of Wales describes the evidence offered against her before the Royal Commissioners, as "the perjuries of my suborned traducers." In 1809, another royal scandal rang through Europe. His Royal Highness the Duke of York was Commander-in-Chief of his Majesty's forces, and it was proved before Parliament, by one of his many repudiated mistresses, a Mrs. Mary Ann Clark, that several sums of money had been paid to that lady by officers desirous of procuring promotion. One sum received by Mrs. Clark was shown, by corroborative testimony, to have been applied in part payment of a jeweller's bill, for which the Duke of York was liable. A note was produced which several witnesses, some of them of most unassailable character, declared to be in the Duke's handwriting, and the contents of which referred to the case. The Duke, however, declared the note to be a forgery, and the House of Commons, by a large majority, acquitted him of any participation in the scandalous corruption which undoubtedly took place.

The Duke of York declared, on "the honour of a Prince," that he knew nothing of the corruption proved at the bar of the House. One member of the House of Commons, Mr. Tierney, replied that "It was easy to conceive that His Royal Highness would have been prompt to declare his innocence upon a vital point; but why declare it upon 'the honour of a Prince?' for the thing had no meaning." Mr. Lyttleton, another member of the Parliamentary Committee, said, "If it were in the power of the House to send down to posterity the character of the Duke of York unsullied—if their proceedings did not extend beyond their journals, he should

almost be inclined to concur in the vote of acquittal, even in opposition to his sense of duty. But though the House should acquit his Royal Highness, the proofs would still remain, and public opinion would be guided by them, and not by the decision of the House. It was in the power of the House to save its own character, but not that of the Commander-in-Chief." Mr. Wilberforce demanded the Duke of York's removal from office as "a reparation to the wounded morality of the country." Lord Temple urged that "His Royal Highness cannot be prudently continued a servant of the public." "Wherever he went the deep murmurs of public indignation would strike his ear." Lord Milton said, "His Royal Highness had given in a letter in which he declared on the honour of a Prince that he was innocent," "to his other guilt his Royal Highness had added that of falsehood." Fortunately for lovers of monarchy, a majority of 364 members against 123 brought in, in effect, a verdict of not guilty, and although the Duke of York resigned his high office, his character was freed from all stain. Now, his Royal Highness George William Frederick Charles Guelph Duke of Cambridge, son of the seventh son of George III., happens to be the present Commander-in-Chief. The nation pays to H.R.H. £12,000 per annum, as a slight mark of gratitude for having been born of Royal blood. It pays him also £4,432 for being Field Marshal Commander-in-Chief, and permits him also to receive another £5,000 a year for performing the task—so distasteful to his honourable nature—of holding four sinecure colonelcies. He has the full character of Brunswick bravery and—inheriting courage from his princely father, whose gallant conduct in leaving his command in Hanover, in 1803, covered his name with glory—has gathered enough of laurels in the Crimea to keep his reputation as a warrior green for ever. Of course, in the pure hands of H.R.H. the Duke of Cambridge, all suspicion of anything like improper influences in the administration of army patronage is out of the question, and any repetition of the Duke of York scandal simply impossible. Nevertheless, the *Belfast News Letter*, in a paragraph which went round the press about twelve months since, said—

"The whisper of a grave scandal has become so loud in circles where reliable information is generally to be found, that it is no longer possible to leave it unnoticed. It relates to a very high personage, whose position ought to place him high above the breath of suspicion, but whose private life is sullied by excesses which threaten to bring disgrace upon the order to which he belongs, and even to sully the ermine of Royalty itself. Had the causes of complaint or of reprobation been confined to private history alone, the probability is that the veil might not have been raised; but it is asserted that a flagrant abuse of patronage has long prevailed in the department over which the person in question holds imperial sway, and that the storm of dissatisfaction is attaining a strength which will probably lead the House of Commons, in the interests of the public, to direct an inquiry into the circumstances of the case. The subject is one of extreme delicacy, but, in a reforming age like the present, if suspicion justly attaches, it would seem but right that those who are responsible for the honour of the administration, whether it be military, naval, or civil, should interfere, ere it be too late, to prevent a great scandal, if not national reproach. It is rumoured that certain facts in connection with the matter have been laid before the chief adviser of the Crown."

His Royal Highness the Duke of Cambridge, ought to regret that neither Colonel Wardle, nor Lord Folkestone, nor Sir Francis Burdett is now in the House of Commons, to move for a parliamentary inquiry into the foundation of the above scandalous statement, for there can be no doubt that the Duke would be thoroughly cleared from all imputation, despite the allegation of the *Queen's Messenger*, that "his department is such an Augean stable of corruption, that it can never be cleansed unless the Serpentine is made to flow through it." Just as His Royal Highness the Duke of York was cleared by the vote of the House of Commons, and as His Royal Highness the Prince of Wales was freed from suspicion by the recent decision in the Mordaunt case, so would the Duke of Cambridge emerge unsullied from the ordeal of a parliamentary inquiry into the present distribution of army patronage. It is no light question; the money value of the preferment distributed in the department over which the Duke presides has already exceeded £2,000,000 sterling, and the central administration of the English army costs nearly three times as much as that of the French

whose forces are at least five times as numerous. In 1810, a tragedy took place in connection with the Royal Family of an almost unparalleled character. His Royal Highness Ernest Augustus Guelph Duke of Cumberland, fifth son of George III.—whom Daniel O'Connell described as "the mighty great liar," and of whom another said that "sensibility and virtue were strangers to his breast"—was wounded in his own room on the night of the 31st May. The wounds are said to have been inflicted by the Duke's valet, Sellis, who was found dead in bed. Sir Everard Home, the physician, says that Sellis clearly killed himself; another account says that Sellis's "head was nearly severed from the body." An inquest was held on Sellis, but the jury not being permitted to see the body, refused to give any verdict, and a second jury was got together who returned a verdict of *felo de se* against Sellis. While it is not possible now to say one word which can clear this mystery, it must not be forgotten as an illustration of the general virtues popularly attributed to the Royal Family, that it was repeatedly alleged that Sellis did not commit suicide; that no evidence was offered showing that he had any reasons for destroying himself, nor was it proved that he had shown any disposition towards such a course. On the contrary, it was urged that "the motive for getting rid of Sellis was the Duke's fear lest the man should reveal a secret inculpating his royal master in a crime of the most horrible description." While there is no reason for even supposing Sellis to have been murdered, it must be admitted that the Duke of Cumberland was extremely unfortunate in the matter of suicides. Twenty years later, Lord Graves committed suicide at a time when his existence interfered with the Duke's intimacy with Lady Graves, and Englishmen may rejoice that, bad as are some of the living Royal Princes, there is not one amongst them whose career can be regarded as coincident with that of the Duke of Cumberland.

In 1811, Prince George was appointed Regent, £100,000 extra being voted to him to enable him to bear the cost of the assumption of regal authority, and public opinion may be not unfairly judged by the following extract from a letter printed by the famous Junius, reproaching him for non-

performance of his duties as ruler, and contrasting the Prince Regent with his father, the poor mad King :—

"It is true we had gained little by the private virtues of a sovereign, since they had neither benefited his people nor taught his children morality; but if not publicly useful, they were a barrier to reproach. He did not stain the throne with vice, nor drown the clamours of the people in the midnight revel. Content himself to walk soberly through his part, he left the busy action of the scene to others, but never shrunk his share in the performance. We did not call him from the stews to the Council-board; from the bed of adultery to the seat of honour. Sir, it is said you plume yourself upon that princely qualification called honour, but is it in the abandonment of every sacred tie or moral obligation? Is it in the open disregard of the world's reproof, and the stoical indifference to the calls of nature and humanity? Is it honour which prompts you to quit the arms of a wife for the endearments of a wanton; or with unblushing effrontery to introduce that wanton before the chaste eye of your Royal Mother? Is it a proof of princely honour to toy away the night in debauchery, the day in lascivious enjoyment, and bid the business of the world stand still? While your country groans in distress, and your people are sinking under their privations, is it a sense of princely honour which bids you revel in profusion, and mock their sorrows with your ostentatious prodigality? It is said you have so far outstripped the boundaries of enjoyment, that luxury and sensuality toil after you in vain; would you be redeemed from a state so calamitously despicable, go visit the abode of your wretched subjects, and take a lesson from patient indigence." "If this afford not an antidote to the listless apathy of your disposition, deign but to hearken to the grievances and wrongs which overwhelm your people, and the sense of apprehension must woo you back to reason."

No Junius lives to-day with fiery pen to scorch the princely vices of another George.

On May 3, 1816, Princess Charlotte of Wales was married to Prince Leopold, of Saxe Coburg. Prince Leopold had been previously married on January 2, 1815, to the Countess of Cohaky, who was alive at the time of the marriage with Princess Charlotte of Wales. That this was another instance of bigamy is an addition to our story so trifling that we pass it by without further comment. The Princess of Wales died in child-bed on the 6th November, 1817; Prince George never communicated the death to her mother, "the most

brutal omission," says Mr. Wynn, in his letter to the Duke of Buckingham, "I ever remember, and one which would attach disgrace in private life."

On the 23rd January, 1820, the Duke of Kent died. On the evening of Friday, the 28th January, 1820, died officially King George III.

> "He died!—his death made no great stir on earth,
> His burial made some pomp; there was profusion
> Of velvet gilding, brass, and no great dearth
> Of aught but tears.
> The new world shook him off; the old yet groans
> Beneath what he and his prepared, if not
> Completed: he leaves heirs on many thrones
> To all his vices, without what begot
> Compassion for him—his tame virtues."

For some time the old King had been blind, deaf, and incurably mad, and yet his Grace of Buckingham and Sir William Knighton, tell us that the news of his death was received by George IV. "with a burst of grief which was very affecting." Living, the son had hated the father; for ten years that father had suffered chronic lunacy, but his good son finds affectionate grief for the dead as recompense for lack of filial love for the living.

In the succeeding month came the Thistlewood conspiracy, chiefly promoted, if not originally concocted, by an infamous scoundrel in the employ of the Castlereagh Government, who used the weaknesses of foolish and desperate men in order to terrify the timid by fear of treason and outrage from pursuing real political reform. Some coincidences quite as fearful, and even more thoroughly the result of police fabrication, might be found in Ireland and England in the present reign. Trials for sedition abounded. Henry Hunt, Sir Francis Burdett, Sir Charles Wolseley, Mr. Joseph Harrison, were all convicted and sentenced during the months of March and April. Colonel McMahon, who had been pimp and pander-general to the vicious appetite of George Prince of Wales, having died, and his private papers having passed into the hands of Mr. William Knighton, a physician, discreet reticence made Sir William Knighton the confidential adviser of the now worn-out and irritable debauchee. Next came the trial of the Queen, before the

House of Lords, for alleged adultery with Bartollomeo Bergami, of which Thackeray says, "As I read her trial in history I vote she is not guilty. I don't say it is an impartial verdict; but as one reads her story, the heart bleeds for the kindly, generous, outraged creature. If wrong there be, let it be at his door who wickedly thrust her from it." In August, 1820, one of Fremantle's letters to the Duke of Buckingham speaks of the treason, sedition, and blasphemy permeating the press, and a few weeks later Lord Cassilis writes, arguing against any reduction of the army, "a soldier less, and we shall have revolution and civil war." In July, 1821, King George IV. was crowned, his Queen, Caroline, whose name had been previously erased from the Liturgy, being refused admittance even to the Coronation ceremony. It was with George as Prince, not George as King that we desired here to deal. Some other time we may take the ten years of his reign from Coronation to death, and try to wade through the intrigues at the Cottage, the influence of Lady —, &c., of which the Buckingham letters say so much and tell so little. It is too much to try to sketch, in a few words, a concluding portrait of the rapidly-corrupting mass of foulness which seldom sat on the throne, or did kingly duty, but which Englishmen prayed for every Sunday, and honoured in their National Anthem,

"God save our gracious King."

"Here," says Thackeray, "was one who never resisted any temptation; never had a desire, but he coddled it and pampered it; if he ever had any nerve, frittered it away among cooks, and tailors, and barbers, and furniture-mongers, and opera dancers," "all fiddling, and flowers, and feasting, and flattery, and folly," "a monstrous image of pride, vanity, and weakness." From the accession of George III. in 1760, to the death of George IV., in 1830, the Royal Family of England received from the national treasury no less than £92,090,807.

A LETTER FROM A FREEMASON

TO GENERAL H.R.H. ALBERT EDWARD,

PRINCE OF WALES,

Duke of Saxony, Cornwall, and Rothesay; Earl of Dublin, Colonel 10th Hussars, Colonel-in-Chief of the Rifle Brigade, Captain-General and Colonel of the Hon. Artillery Company, K.G., G.C.S.I., K.T., G.C.B., K.P., etc., etc., etc.

TO BR.·. H.R.H. THE PRINCE OF WALES.

DEAR BR.·.—I do not ask you to pardon this, to the profane, perhaps an apparently too familiar style of address, although I do pray pardon if I have unintentionally omitted many of your numerous titles in the formal superscription to this letter. I have never written before to a Prince, and may lack good manners in thus inditing; but to my brother Masons I have often written, and know they love best a plain, fraternal greeting, if the purpose of the epistle be honest.

You have voluntarily on your part, and unsought on my side, commenced by accepting me as a brother, and you have cemented this fraternity by specially swearing to protect me on appeal in my hour of danger; and though history teaches me that sworn promises are less well kept than steadfast, manly pledges, and that Princes' oaths are specially rotten reeds to lean upon; yet in the warmth of newly created brother, I am inclined to believe you brother—for we are brethren, you and I—not brothers perhaps as we should be of the same common humanity—for in this land I know that Princes are no fair mates for those who are pauper born; but we are brothers by your own choice, members of the same fraternity by your own joining; men self-associated in the same grand Masonic brotherhood, and it is for that reason I write you this letter. You, though now a Past Grand Master, are but recently a free and accepted Master

Mason, and probably yet know but little of the grand traditions of the mighty organisation whose temple doors have opened to your appeal. My knowledge of the mystic branch gained amongst the Republicans of all nations is of some years' older date. You are now, as a Freemason, excommunicate by the Pope—so am I. It is fair to hope that the curse of the Church of Rome may have a purifying and chastening effect on your future life, at least as efficacious as the blessing of the Church of England has had on your past career. You have entered into that illustrious fraternity which has numbered in its ranks Swedenborg, Voltaire, and Garibaldi. These are the three who personify grand Idealism and Poetic Madness; Wit and Genius, and true Humanity; manly Energy, sterling Honesty, and hearty Republicanism. My sponsor was Simon Bernard—yours, I hear, was the King of Sweden.

In writing, dear brother, I do not address you as a Prince of Wales, for some of our Princes of Wales have been drunken, riotous spendthrifts, covered in debt, and deep in dishonour; but you, dear brother, instead of being such an one, figure more reputably as the erudite member of a Royal Geographical Society, or as a steady fellow of the Worshipful Company of Fishmongers. Happily there is no fear that in your case a second Doctor Doran may have to pen the narrative of a delicate investigation. If Junius were alive to-day, his pen would not dare to repeat its fierce attack on another Prince of Wales. Junius charged George, Prince of Wales, with quitting the arms of his wife for the endearments of a wanton, with toying away the night in debauchery, and with mocking the sorrows of the people with an ostentatious prodigality. But your pure career, your sober and virtuous life, would win laudations even from Junius's ghost. You are an English gentleman, as well as Prince of Wales; a good and kind husband in spite of being Prince of Wales; with you woman's honour is safe from attack, and sure of protection. The draggled and vice-stained plumes on your predecessors' escutcheons have been well cleaned and straightened by modern journalism, and the Prince of Wales' feathers are no longer (like the Bourbon fleur de lis) the heraldic ornament of a race of princes *sans foi, sans mœurs.* Fit were you as profane to make the journeys to the Altar, for fame writes you as sober and chaste,

as high-minded and generous, as kind-hearted and truthful. These are the qualities, oh Albert Edward, which hid your disability as Prince, when you knelt bare-kneed in our audience chamber. The brethren who opened your eyes to the light, overlooked your title as Prince of Wales in favour of your already famous manhood. Your career is a pleasant contrast to that of George Prince of Wales. Yet because you are as different from the princes whose bodies are dust, while their memories still remain to the historian as visible monuments of shame, I write to you, not as English Prince, but as brother Master Mason. Nor do I address you in your right as one of Saxony's princes, for amongst my memories of other men's readings, I have thoughts of some in Saxony's electoral roll, who were lustful, lecherous, and vile; who were vicious sots and extravagant wasters of their peoples' earnings, who have lured for their seraglios each fresh face that came within their reach: while you, though Duke of Saxony, have joined a brotherhood whose main intent is the promotion of the highest morality. I do not indeed regard your title of Duke at all in writing you, for when we find a Duke of Newcastle's property in the hands of Sheriffs' Officers, his title a jest for bankruptcy messengers, and the Duke of Hamilton's name an European byeword, it is pleasant to be able to think that the Duke of Cornwall and Rothesay is not as these Dukes are; that this Duke is not a runner after painted donzels, that he has not written cuckold on the forehead of a dozen husbands, that he is not deep in debt, has not, like these Dukes, scattered gold in filthy gutters, while deaf to the honest claims of justice. We know, brother, that you would never have voluntarily enrolled yourself in the world's grandest organisation, if you had been as these. It would have been perjury if you had done so—perjury which, though imperially honoured at the Tuileries, would be scouted with contempt by a Lancashire workman.

I do not write to you as Earl of Dublin, for Ireland's English-given earls have been as plagues to her vitals and curses to her peoples. For 700 years, like locusts, they have devoured the verdure of her fields, and harassed the tillers of her soil. From the Earl of Chepstow to the Earl of Dublin, is the mere journeying from iron gauntlet to greedy glove—take and hold; and Irish peasantry, in deep

despair, unable to struggle, have learned to hate the Earls with whom English rule has blessed them. Nor even is this letter sent to you as Knight of the Garter, for when I read "*Honi soit qui mal y pense*," I shrink from calculating the amount of evil that might fall upon some people in the world who occupy their thoughts with princes who are Gartered Knights. Nor do I pen this to you as Colonel either of Cavalry, Infantry, or Artillery, for I can but wonder at and admire the glorious military feats which, though your modesty has hidden them, have nevertheless entitled you to command your seniors, one at least with a Waterloo medal on his breast. Our history tells us of a warrior "Black Prince," who killed many foes; it can also in the future write of you as a gallant soldier before whom pheasant, plover, and pigeon could make no stand.

I write to you as a fellow Master Mason, as to one on an equality with myself, so long as you are true to your Masonic pledge, less than myself whenever you forget it. I address this epistle to you as fellow-member of a body which teaches that man is higher than king; that humanity is beyond church and creed; that true thought is nobler than blind faith, and that virile, earnest effort is better far than dead or submissive serfdom.

The Grand Lodge of England has just conferred upon you a dignity you have done nothing to earn; but you saw light in Sweden, and that initiation should have revealed to you that the highest honour will be won by manly effort, not squeezed from slavish, fawning sycophancy. Freemasonry is democracy, are you a Democrat? Freemasonry is Freethought, are you a Freethinker? Freemasonry is work for human deliverance, are you a worker? I know you may tell me in England of wine-bibbing, song-singing, meat-eating, and white kid glove-wearing fashionables who say "Shibboleth," make "royal salutes," and call this Freemasonry; but these are mere badge-wearers, who lift their legs awkwardly over the coffin in which truth lies buried, and who never either know the grand secret, or even work for its discovery. Come with me to-day, and I will show you, even in this country, lodges where the brethren work day and night to break through conventional fetters, where they toil hourly to break down imperial and princely shams, where as a prince they would scorn you, and where as
